The question whether the Mayor was right in allowing the Commissioners to have counsel or not is hardly a legal question. It is only by a powerful stretch of the imagination that the Mayor can be regarded as a court. He has no rules of procedure, no power of summoning witnesses, and no power of committal for contempt. Counsel, therefore, are hardly needed in any proceeding before him, unless it is a very long and complicated one, which the non-professional mind could not be expected to arrange or follow with clearness. The question whether Cherry Street has been recently cleaned, or, if not, why not, and whether gambling-houses are open in Barclay Street with the knowledge of the police, and, if so, why so, can hardly be said to be of that nature, or to require professional aid to answer on the part of the Commissioners. In fact, the proceeding appears to be on the part of the Mayor a purely executive one, intended in the main for the satisfaction of the Governor, and the subject-matter of the enquiry to be very simple. On the other hand, the Police Commissioners are officers so high placed and charged with so much responsibility that it can hardly tend to promote discipline in the force or promote public confidence in the Mayor's use of his discretion to turn them out neck and heels, as if they were delinquent porters in a store. They ought to have formal charges and specifications, and time to consider them and to collect evidence in their own defence; but most certainly, in so far as the trial is intended to satisfy the people of the city that they have done their duty, their own story would be worth ten speeches from counsel. If there be anything of which New-Yorkers are sick in all that relates to the government of the city it is "counsel." They have long been accustomed to see the punishment of outrageous offences on the part of officials made indefinitely remote by the appearance of "counsel" on the scene.

The Court of Appeals decided on Tuesday that the city must go on paying its share of the money for the completion of the Brooklyn Bridge. The expense of this wholly unnecessary litigation is part of the price we have to pay for the luxury of being governed by "Boss" Kelly, and is a good illustration of the results of "Boss" government. He chose to refuse to pay this money, as Comptroller, contrary to the plain language of the law and the advice of the Corporation Counsel, although the case was so clearly against him that the Supreme Court judges decided it without leaving the bench. Not content with this, he immediately appealed it to the Court of Appeals. With the view taken of these proceedings as a "move" to discipline Brooklyn Democrats who were suspected of "Tildenism," we have nothing to do. Whether the motive was bad or good, it brought out in a strong light the grotesque unfitness of Kelly for such a position as he holds. During the past year or two, since he got full control of the city government, he has been using his power in the old way, filling the offices with his creatures and dependents, without the remotest regard to their fitness (indeed his conception of an office-holder does not involve the idea of fitness), and has been getting the system into just that state which makes the production of new Tweeds and Sweenys merely a question of time. His behavior makes his present horror and indignation at Mayor Cooper's course, known as "Tilden's moves," peculiarly amusing. When a "boss" calls Tammany together to denounce the dangers with which we are

threatened by the "insatiate ambition of one man," it certainly implies an astonishing confidence in the perpetual gullibility of the public. We wish we could believe that there was any truth in the story that the Mayor intended to remove Kelly from his position as Comptroller.

The Surrogate's opinion in the Vanderbilt will case contains a careful review of the evidence on both sides, and is judicial in tone, though some of the remarks in the decision would probably make lawyers a little more sensitive than those engaged in attempting to break the will appear to be, wince. The evidence introduced by the contestants was offered to show—first, the unsoundness of the late "Commodore's" mind, as indicated and produced by a number of physical ailments; second, the impairment of his mind as indicated by his irrational behavior, and an alleged "monomania for wealth and fame"; third, an alleged fraud practised upon his father by William H. Vanderbilt respecting communications from the spirit of his dead wife; fourth, undue influence. The opinion proceeds to show that there was not the slightest evidence of undue influence or of insanity, and that the testimony with regard to the spiritual communications was of no weight; and to decide that as "it would be an unworthy affectation to pretend that, in the opinion of the court, there existed even a *primâ-facie* cause for the revocation of the probate of the instruments when the contestant rested," the will must consequently stand. The Surrogate very justly observes that the trial of this cause has excited a good deal of interest, "because there is a very deep solicitude on the part of all classes to know whether the will of such a man as the decedent was believed to have been could be successfully assailed; in short, whether any will could be made which would successfully resist the assaults of dissatisfied heirs and next of kin. . . . In fact, the right to make any testamentary disposition has been felt to be on trial in this proceeding." Decedents as a class, may, perhaps, give up the ghost less anxiously for this decision; but what will puzzle a good many simple-minded people will be to know why the case, if there was nothing in it, was permitted to remain on trial for months and months.

Archbishop Purcell has addressed to "his friends and the public" through the press an explanation of his present unfortunate financial position. He says that he began his episcopal life in Cincinnati so poor that he had to borrow $300 for his travelling expenses and those of his students and domestics. He then went on borrowing for "the many wants of a new diocese" until he had run up a debt of $1,000,000 "in equity," which, through compound interest he thinks, has now reached $3,600,000. He does not explain, however, why it is not "equitable" for the poor lenders to charge interest on interest which they did not draw, but left in his hands as a further loan. The uses to which he devoted the money were, substantially, the expenses of his diocese, including the maintenance of a theological seminary, in which he not only paid the salaries of the professors, but "fed, clothed, and educated the seminarians," and bought a library of sixteen thousand volumes, besides philosophical apparatus, built an orphan asylum, several churches and a cathedral. In fact, he seems to have done wonders with the means at his disposal, but he curiously enough makes no account of the fact that it was other people's money he was using and that they expected to get it back. He winds up with a piteous appeal to the public as an unfortunate "old missionary bishop whose race is nearly run." Catholics ought certainly to help him out of his difficulties, but there ought to be no more using of deposits for ecclesiastical purposes, and the archbishop must see that lay financiers are not such paltry fellows after all.

The financial event of the week was the suspension on Thursday, the 20th, of all the New Orleans banks, which kept open only for cash payments to the extent of $200 to each depositor. The suspension was resolved upon for the purpose of checking a panic that had arisen because of the failure of the Southern and the Mechanics and Traders' banks, each of these concerns having been brought down by the depreciation in New Orleans City bonds and Louisiana State bonds, which have fallen so heavily in the last few months. Immediately after suspension, currency was ordered from New York, where about $2,500,000 rested subject to New Orleans draft, and on Tuesday, the 25th, or five days previous to the date of resumption first proposed, the New Orleans banks reopened. For a short time the New York market was greatly excited, as it was known that the New York banks, whose surplus reserve had been reduced to less than $4,000,000, could not afford to spare a dollar. About $2,000,000 currency was shipped, but by reason of the gain in specie the bank statement of Saturday showed a slight increase in reserve. The rate for money advanced to sharp 7 per cent. and ruled at 6 to 7 per cent. for demand loans. The Secretary of the Treasury has given fresh promises that he will do all in his power to tide the New York banks over the April stringency. Already the few days of a 7 per cent. money market have driven down the price of 4 per cent. bonds to 99⅛ to 99¼ for coupons, and 98½ to 98¾ for registered, so that they can be bought in the market much cheaper than of the Treasury. All securities have fallen somewhat. Sterling exchange has declined, on account of money being so much higher here than in London, from 4.89½ to 4.85½ to 4.86 for demand bills. The London money market, although very easy at 1½ to 1¾ per cent., was somewhat unsettled late in the week by rumors of bank troubles. Silver early in the week fell to 48¾*d.* to 48⅝*d.*—the lowest price since our remonetization. The closing price was 49¼*d.* per ounce. The bullion value of the 412½-grain dollar was as low as $0.8217, but the close was $0.8295.

Mayor Cooper, it is announced, will receive subscriptions in aid of the sufferers by flood at Szegedin, in Hungary. The disaster occurred in the early morning of Wednesday, the 12th inst., when the swollen waters of the Theiss, on which this important commercial city stands, broke through the inner dikes that make a basin of Szegedin, and in an hour and a half converted it into a lake. The horrors of the situation were aggravated by a violent storm which raged for several days. Some sixty thousand people were rendered houseless and homeless, and sought safety in boats or in the loftier public buildings, or camped upon the principal dike along the river, which happily stood firm. It is estimated that nearly two thousand perished by drowning. Four-fifths of the houses were destroyed, mostly by the direct rush of the flood, and the total loss in property value is estimated at $7,500,000. Several other places higher up in the Theiss valley have shared the fate of Szegedin, in a less degree individually, but together reckoning perhaps as large a number of unfortunates. The survivors are behaving with great fortitude and self-respect, and all the more on this account their distress should appeal to the sympathies of the benevolent.

M. Léon Say's vindication of himself before the Assembly has been complete, and it absolved him by a heavy majority. This is, of course, a help to the Ministry, which has suffered much by its failure either to get rid of M. Marcère itself without suffering him to defend himself before the Chamber, or to make common cause with him when he did defend himself. But its troubles are not over, as M. Jules Ferry is just opening the great fight with the Clericals by the introduction of an Educational Bill, resuming for the state the exclusive right of granting degrees and virtually forbidding the Jesuits to teach in France, where they have twenty-seven colleges and eight hundred and forty-eight teachers. As M. Ferry is a sceptic who was married by civil process, and M. Waddington is a Protestant, the Cabinet will enter on this struggle under some serious disadvantages, and it will certainly be fierce and bitter. There is a growing feeling that it will not come through it unscathed, and that a real Gambetta Ministry is inevitable before long. The Tariff Committee has reported by 22 to 3 in favor of the renewal of the treaties of commerce, which is a victory for the free-traders.

THE DEMOCRATIC CAUCUS.

THE action of the Democrats in caucus at Washington on Saturday leaves us in doubt whether it is intended to force the passage of the political measures upon which the two appropriation bills were made to depend in the last Congress, by adhering to them at all hazards, or whether a door is to be left open for retreat in case the President vetoes them. They have resolved to incorporate those measures—the repeal or modification of the Federal election law, and the proviso prohibiting the approach or presence of troops at the polls on election day—in the regular appropriation bills. They have a sufficient majority in each House to pass the bills in this shape. Do they intend thereupon to adjourn and put upon the President the necessity of approving something which he may be unable, consistently with his oath of office, to approve, under pain of losing the appropriation bills entirely? Or is there a mental reservation that after passing the bills they will wait and see what the President does, and determine their ultimate policy after they shall have learned his? These are serious questions, and it is not impossible that the next national election may turn in part upon the President's right to exercise his discretion and judgment upon all bills presented to him, without constraint or duress laid upon him by a co-ordinate branch of the Government.

It is rather late in the day for Republicans to protest against general legislation in appropriation bills. The mass of legislation enacted in this manner during the past twenty years, if it were segregated and published with the dates and titles of the acts in which it is found, would astonish everybody. Most commonly this method of passing new laws or changing old ones has been adopted for convenience merely, in order to save time and trouble in the press of business. Not infrequently, however, it has been resorted to by one house in order to coerce the other, or to put a pressure on the Executive. Hardly a session passes without some trick of legislation of this kind. In one notable instance the Republicans were guilty of the same offence against the Constitution to which the Democratic caucus now seems determined to commit the party. In 1867 Congress inserted in the Army Appropriation Bill a section prohibiting the President of the United States from issuing any order to any officer of the Army except through the General of the Army at his headquarters in Washington, prohibiting him from ordering or assigning the General of the Army to duty elsewhere than in Washington, and prohibiting any officer inferior to the General from obeying any order of the President not transmitted through that channel, under penalty of imprisonment not less than two nor more than twenty years. A bolder attempt to usurp the constitutional functions of the Executive could hardly be conceived. Yet it was successfully carried out. President Johnson signed the bill under protest two days before the expiration of the session, "lest by withholding his signature the necessary appropriation be defeated." The Stalwarts who voted for this bill, several of whom are still in the Senate, ought to preserve more than Roman gravity when the debate upon the mode of altering or repealing the Federal election law comes on.

What the political consequences might have been if President Johnson had vetoed this bill, or had "pocketed" it, as he had the right to do at that period of the session, can only be matter of conjecture. If the Army had been left without pay or rations very likely the country would have put the blame upon him, since he had no party to sustain him anywhere, and the people were then too intensely preoccupied with the question of Reconstruction to give much attention to mere methods of legislation. The case is widely different now. There is no question before the people at present of more importance or of greater general interest than that raised by the Democratic caucus. The assembling of Congress in extra session has served to fix public attention upon the reasons which led to the failure of the two appropriation bills a fortnight ago, so that men who commonly give small heed to what is going on at Washington if it does not affect their business, will be pretty sure to know what the commotion is about, and to form or borrow ideas as to the right or wrong of it. When Congress meets for a special and particular purpose it sits under a burning-glass. When there is only one measure to be considered—for there is practically only one that the country has any interest in—public attention is apt to concentrate upon it with rapidity and clearness. Hence the chances of committing a blunder and getting away unpunished are vastly less than they were when the Republicans "bull-dozed" President Johnson in 1867.

In a former article (the *Nation*, No. 713) we discussed the subject of legislative coercion as attempted to be exercised by one branch of Congress upon the other, showing that the privilege of independent judgment on the part of each house upon all bills is the essential feature which, in these latter days, distinguishes us from the parliamentary governments of Western Europe, where the popular branch is vastly more powerful than any other member of the body politic. The same remarks are equally applicable to the Executive. He is a part of the law-making power of the United States, and in the line of his prescribed duty cannot be overridden or ignored any more than the Senate or the House. Any party or faction which seeks to put an extinguisher upon him in the way proposed by the more hot-headed members of the Democratic caucus is really bringing forward an innovation of so serious a character that it may be termed revolutionary. The Democratic party is in no position to incur such a charge. If ever a party was on its good behavior the Democratic party is now in that category. It has been entrusted with full legislative power, except as modified by the veto of the Executive, for the first time in nearly twenty years. There are many misgivings on the part of those persons wielding the balance of power who actively or tacitly consented to bring about this result. Their motive in nine cases out of ten was to put the Republican party on the stool of repentance rather than to lift the Democrats into the places of authority. The experiment has not given them unbounded satisfaction. They have seen the bulk of the party madly supporting schemes for debasing the currency and impairing the public credit. It has been proved that the majority of them have no principles which they are not ready to barter for some *ignis fatuus* that resembles success. Such a party, existing by the sufferance rather than the set purpose of the electors, is in no condition to carry extra weight. It has no prestige to fall back upon. The present generation knows it only as the ally of slavery and the open or secret sympathizer with the rebellion. There are a hundred reasons why it cannot safely do what the Republicans did in the case of Andrew Johnson.

To repeal the Federal election law is one thing; to disband the courts and the departments for want of funds is another thing. To prohibit the presence of troops at or near the polls on election day we may concede to be a proper thing to do, although the danger of military usurpation and menace under existing laws is not overpowering. To leave the Army without pay or ammunition, and the Indian frontier unprotected, would be a crime not to be forgiven. While hunting an issue for the next campaign let the party leaders beware lest they start a fiercer one than they were looking for. If the President exercises his lawful discretion to approve or disapprove every measure laid before him, as he probably will, and if in so doing he vetoes an appropriation bill necessary for carrying on the Government, the responsibility for consequences will fall upon those who shall have exceeded their constitutional rights and sought to exercise powers never confided to them. When conflicts arise between Congress and the Executive, the people are prone to side with the latter, unless very good reasons can be shown to the contrary. Even after the great dispute with Andrew Johnson the Republicans came back with a loss of fifteen seats in the House, which is more than the Democrats can afford to lose now. Their worst enemy could not devise a more dangerous pitfall than their own caucus seems to be preparing for them.

THE PLIGHT OF THE ENGLISH FARMERS.

THE English papers have now for nearly a year been containing doleful accounts of the condition of the English farmers. In an article on the agricultural depression in a late number of the *Fort-*

nightly Review, by Mr. W. E. Bear, one of the best authorities in England on farming matters, he gives the result of enquiries made by him as to the condition of agriculture in thirty-nine counties, and the accounts from all are almost as gloomy as possible. In nearly all of them the farmers are described as losing money and heart; the land as declining in quality, and in many counties as going out of cultivation for want of people willing to work it as tenants. In fact, the only county from which cheering accounts were received was Lancashire. In the stock-raising and dairy districts the state of things was not quite as bad as in the grain-growing regions, but it was bad in all. What makes the crisis all the worse is that it has been approaching gradually for ten years. That is, there have not since 1868 been two good seasons in succession, and the last three crops have been decidedly bad, and have been bad without raising prices. Rents, too, which were settled in leases made more than ten years ago, are exorbitantly high for these times. Laborers' wages, owing to their newly-acquired art of combining like the mechanics in the towns, have within ten years risen from twenty to forty per cent. The best cheese, which even five years ago used to bring $16 per cwt., now, owing to American competition, brings only $11, and the poorer cheese, which used to bring $12, is now worth at most only $7, and is for the most part unsalable. To crown all, the importation of foreign, and particularly American, cattle and meat, has begun to weigh heavily upon the only class of farmers who have thus far been able to keep their heads above water—the stock-breeders. The supply of cattle and meat from the United States and Canada is only just beginning, and is thought likely to increase enormously. Poultry, eggs, hay, and straw are, owing to the improvements in the means of communication, pouring in from the Continent in quantities never dreamed of until now. India, too, is becoming a great wheat-producing country. The importation in 1877 was large, and as the supply of wheat-land in that region is practically unlimited, and also the supply of cheap labor, there is no reason why it should not increase steadily for years to come. The improved and extended railroad communication in Rumania, Hungary, and Russia, and Turkey in Europe, of course all goes to increase the competition in grain with which the British farmer has to contend in Europe. From America he does not fear so much in this field. He produces 29½ bushels to the acre against 12 in the United States, and, adding to this the cost of transportation, he calculates that he has a natural protection against the American farmer of $8 an acre, and that he need not fear him as long as the latter cannot as a regular thing deliver wheat in Liverpool at $8 the quarter. It is in cattle, meat, and dairy products that the English farmer now most fears the United States, and it is India he most fears in wheat, as regards the future; but as to the former he is probably mistaken, as it is being discovered at the West that there are enormous wheat-producing areas which have until now not been supposed capable of producing anything.

But the fact seems to be that, whatever the future may have in store for British agriculture in general, there is little chance of any recovery that will come in time to save the present generation of farmers, or save the present agricultural régime. The change which the altered economical conditions of farming in England seem likely to bring about will not only be agricultural but social and political. In spite of all recent modifications the Government of England is to a large extent carried on still by the landholders. Neither the number of the landholders nor the rental of the estates affords an adequate idea of the enormous amount of money which has been invested in land, even by the commercial class, since the passage of the Reform Bill. It is safe to say that within that period few great fortunes have been made in trade, in mining, or manufacturing, of which the larger portion, or at all events a very large portion, has not been put into landed estates. The result has been to raise the price of the fee so much in relation to the rental that it is calculated that it does not now pay over one and a half per cent. on cost or on market value, and did not, even in the prosperous times of a few years ago, pay over two per cent. Nevertheless, the farmers now declare themselves unable to pay their rents; and that they speak truly is proved by the rapidly-increasing number of bankruptcies among them, by the growing difficulty of renting farms at all, and by the growing amount of land which is going out of cultivation. If the payment of one and a half per cent. on the cost of the fee is an intolerable burden, it serves to give an idea of the attractions land has had in England apart from its commercial returns. This value has lain in the social and political weight which the ownership of it has carried with it. The possession of it in fee has put a man in the highest class of society, has given him a prominent share in local government, has increased his chances of a seat in the House of Commons, and, what is perhaps sweeter than all, has surrounded him with a body of respectable dependents in the shape of tenants, each of whom is a sign of his social eminence. Anything which altered the position of this class in England would greatly change the whole political fabric, and any increased difficulty in letting land or any great alteration in the conditions on which it was let would undoubtedly change it; in other words, the disappearance of the country gentleman from English politics and local government, whether a change for the better or the worse, would be a serious change.

Then, too, the farmers have long been—indeed, have been since 1688—the bone and sinew of the Tory party. Without the support it gets from the counties it would not now be able to make a show of existing. So steadfast is this support that even the acquiescence of the party in the policy of free-trade, when protection meant in the main high duties on foreign grain, did not alienate it. And the farmers are good Conservatives largely as a matter of fidelity or good neighborship towards their landlords. The landlords gone, or their influence destroyed, and the cultivators of the soil would be as liable to be swept by the wilder winds of politics as the artisans in the boroughs. But if enough rent cannot be got out of land to pay one and a half per cent. on the purchase money of the fee, of course the landlords must go or else their relations with the actual tillers of the soil must completely change. When owners of land have to go in pursuit of tenants, tenant-farming cannot last very long.

It seems, indeed, all but certain that the fate which long since overtook land-owners in the Eastern States of the Union is at last overtaking those of England. The enormous quantity of cheap fertile land which steam has brought and is bringing into competition with that of the older communities, has made it impossible for land in any of the Eastern States, even in the neighborhood of the great towns, to do more than support the person who works it, and that in a very plain way. It is no exaggeration to say that little, if any, land east of the Alleghenies will now enable a farmer to maintain himself and his family decently and pay rent besides. In New England it has been found that farmers cannot live, even without paying rent, and keep up even the standard of living to which their grandfathers were accustomed; and the farms of that region are rapidly passing into the hands of Irish and Germans, who are willing to work the land more distinctly in the character of peasants. During the last forty years the English farmers have considerably raised their standard of living. The accession to their ranks of large numbers of men with capital, and the general adoption of scientific husbandry, has carried them distinctly, in dress, furniture, tastes, and habits, towards the gentry, and greatly increased the living expenses which have to be got off the land before it can begin to pay rent or interest on the money invested in machinery and manures. This rise in the standard of living has, of course, done much to aggravate the severity of the present crisis. It would not be surprising, therefore, if there was in the next generation of English farmers a distinct return towards the peasant type. In fact, the history of agriculture in the most as well as the least prosperous parts of the world lends strong support to the view that on the whole the farmer cannot anywhere rise much, if any, above the French and Belgian type, and that the land will not yield permanently the means of sharing in the elegances of life, or with much keenness in its intellectual movements.

HOW PARIS IS GOVERNED.—III.

PARIS, March 7, 1879.

WHEN I began my letter on Municipal Paris I little expected that the question of the Prefecture of Police would become so soon a political question. I intended to give you a calm survey of the organization of the French capital; and now it has just happened that the Radicals have made of this delicate matter, the police of Paris, the entering-wedge on the Conservative Republic. They have succeeded so far as to upset the Prefect of Police, M. Gigot, and the Home Minister, M. de Marcère; and their leader in the Chamber of Deputies, M. Clémenceau, has nearly upset the whole Cabinet. He has become the man of the day; he is dreaded, he is admired, he is photographed.

The battle, however, is only just begun, and President Grévy is probably not disposed to give up the rules which have always been observed in the administration of Paris. As my object is to describe these rules, I can do no better than to translate a decree of M. Grévy's of the 18th February, 1879. It is thus worded, and will serve as a type of many presidential decrees:

"*The President of the French Republic:*

"On the proposition of the Home Minister, considering the law of April 14, 1871 [the municipal law passed by the National Assembly]; considering the deliberation dated February 1, 1879, by which the Municipal Council of Paris, taking occasion of declarations of the Prefect of Police concerning the members of his administration, vindicates the right to exercise direct control of the services of the Prefecture of Police, services which it calls essentially municipal;

"Considering that in accordance with the terms of Article I. of the *arrêté* of the consuls of Messidor 12, year viii., which defines the functions of the Prefect of Police, this magistrate fills this office in matters of general police as well as of municipal police under the immediate authority of the ministers, and corresponds directly with them touching the objects which concern their respective departments; considering that the functions of Prefect of Police extend not only to the City of Paris, but also to all the communes of the department of the Seine, and to some communes of the department of Seine-et-Oise;

"In consequence, in claiming a right of direct control over the Prefecture of Police which is not recognized by law, the Municipal Council having exceeded the limit of its attributions, and its deliberation falling under the application of Article XIV. of the law of April 19, 1871;

"The President decrees:

"Article I. The deliberation of the Municipal Council of Paris of February 1, 1879, is declared null;

"Article II. The Home Minister is charged with the execution of the present decree."

This form of a presidential decree will show you that we have an arsenal of laws into which we can plunge our hand; we use daily the decrees of the consuls; Messidor and Fructidor are names heard constantly at the law-courts. Under all our governments, Directory, Empire, Restoration, Second Empire, etc., the principles of the municipal government of Paris have been essentially the same. The Prefect of the Seine and the Prefect of Police have been considered as *Imperial* officers, placed under the direct control of the Cabinet ministers.

The battle which is now beginning on this question is one which may be of long duration. What the radicals really want is to have the government of Paris in their own hands, but it is not with any municipal view; they intend to govern France by means of Paris; they would bring the Chambers back to Paris, have what we call manifestations, give arms to the old battalions of the Commune. If all this could happen, they would not be the masters of Paris only, they would be the masters of the Government. The partisans of a very independent municipal government would be very much mistaken if they applied their theories to Paris. The Commune, the free Commune, which is the dream of M. Clémenceau, is not the quiet, law-abiding little community which philanthropists may dream of; it is the huge revolutionary Commune of the first Revolution, with its clubs, its armed sections. For the present the Government has maintained its principles, while it has sacrificed those who represented those principles at the Prefecture of Police. All the prefects to whom M. Gigot's place has been offered made it a condition that they should receive their orders from the Minister of the Interior and from the Minister of Justice, not from the Municipal Council. Two of them have distinctly refused the post because too much had already been done for the Municipal Council. M. Andrieux, the new Prefect of Police, is said to be an energetic man. He will probably try, at any rate, to get rid of the interference of the Municipal Councillors; but it must be confessed that the movement, to use a French word, which began after the downfall of the Broglie Cabinet is a dangerous one, as far as the Administration is concerned. Parliamentary committees of enquiry may be very useful in matters of political economy, etc.; when these committees interfere with the public administrations they destroy the respect due to hierarchy, they encourage denunciations, they unnerve authority, they favor intrigue. The parliamentary committee which has been sitting now for more than a year on the conduct of the Ministers of the 16th of May has travelled all over France with the pomp and circumstance which belongs in this country to the executive power. The members of this committee have summoned thousands of witnesses, have received thousands of denunciations, have frightened the whole army of public functionaries. Some men have been employed for a whole year in reading and deciphering all the telegraphic despatches of the period of the 16th of May. The report of this committee will soon be placed before the Chambers. I doubt, for my part, if the discoveries which the committee have made will be found very interesting, and if the good produced by this investigation, made by men untrained and liable to be carried away by political passion, will balance the great evil which is produced by a complete perturbation of our very quiet and on the whole very honorable administrative world.

This fashion of inquests has extended to the subject of the police. Some bad characters, turned out of the administration of the police, have written anonymous letters to the *Lanterne*, the journal which Henri Rochefort still edits from Geneva. "Un vieux petit employé" denounced the abuses of our police, the treatment of prisoners, the Bonapartist tendencies of many of the important men of this administration. The Prefect was so much moved by this attack that he got a parliamentary committee appointed, and charged this committee with the mission of making an enquiry. He thus confessed that he was not able to make the enquiry himself. It was curious to find on the committee names of old Republicans who had been conspiring almost all their life and been at war with the police; they now became the judges of their old enemies, and it cannot be much wondered at that the inquest completely failed; all the witnesses summoned said that they were bound by their professional duties, that they did not think themselves justified in revealing secrets which they had always considered it their duty to keep. The police *commissaires* of Paris and their chiefs were willing to give information about the general rules of their administration; they refused, and they refused very justly, to give names, to explain individual cases, to enter into the examination of private affairs which interested the committee particularly.

The Chamber of Deputies is not a court of justice; it was in the power of the National Assembly, which for a time had all the functions of the state in its hand, to institute committees of this sort and to act as a judiciary body. In ordinary times we do not concede such a power to the Chamber; when the ministers are impeached the Constitution gives the Senate the right to judge them. The Deputies, however, who formed M. Gigot's committee became very angry when they could get nothing from the police. They resigned their functions, and this incident was the beginning of the crisis which has ended in the resignation of M. de Marcère, and which threatened at one time to end in the resignation of the whole Cabinet. For the present nothing is changed in the administration of Paris. Some of the best men of our police department have resigned, but the Prefect has kept his attributions and has remained theoretically independent of the Municipal Council.

If I might make a résumé of what I have said so far of the administration of Paris, I would say that Paris has in fact a dualistic government; it has two mayors, called prefects, the Prefect of Police and the Prefect of the Seine. The Prefect of the Police, who is not concerned with the police alone, as I have shown in giving the attributions of the various bureaux of his prefecture, is in daily relations with the President of the Republic, with the Minister of Justice, and with the Minister of the Interior. He is responsible for the peace and good order of the city, but he is also responsible for the execution of all the decrees of the courts of justice; he is in reality a member of the judiciary power as much as a member of the executive power, or he is rather the *trait d'union* between them. His functions are consequently of a particularly delicate character, and their importance can hardly be overvalued. Everything comes to him through the police: the rumors of the great capital, the hidden scandals of political societies, the scandals of the large foreign population of Paris, a population which sometimes contains many important personages. He must sift all this information, and give a constant daily résumé of it to the Home Minister and the Head of the State. He is one of the most important agents of a Government which must perforce remain centralized. As for the Prefect of the Seine, he is in daily communication with the Municipal Council. He presides over its sittings,

he takes part in all its discussions, but as soon as the Council transgresses the limits fixed for its prerogatives by the law he is bound to advise the Home Minister of this infraction, and he can have the illegal deliberations annulled. He is looked upon by the Council as a sort of tyrant, and he ought, nevertheless, to be on good terms with the Council. He is, fortunately, very well supported by what I have called the technical administrators. These men are with him, behind him, always give him the best advice; they are men whom the Council cannot but respect, as they are all well-trained and considerable men.

In my next letter I will enter into those technical services, and begin with the schools of Paris.

Notes.

ROBERT CLARKE & CO., Cincinnati, publish immediately 'The Secret of the Andes,' a romance by F. Hassaurek, formerly U. S. Minister to Ecuador, and author of a very readable work on that country.——Little, Brown & Co., Boston, have in press the 'Memoir and Writings of Benjamin Robbins Curtis, LL.D.,' edited by his son, Benjamin R. Curtis. The first volume will contain the memoir, with which will be printed for the first time Judge Curtis's correspondence with Chief-Justice Taney in relation to the Dred Scott decision. In other respects also the work will be a remarkable one.——A copy of the first American genealogy, entitled the 'Family of Mr. Samuel Stebbins and Mrs. Hannah Stebbins his wife,' one of the two known remaining copies, brought $30 in the late sale of the Brinley Collection. This work was printed in Hartford in 1771, and is about to be reprinted by the New England Historic-Genealogical Society, in a facsimile edition of one hundred copies.——Charles Scribner's Sons have reprinted the useful little book by C. F. Keary, called 'The Dawn of History.' The typography is not very attractive, and in copying page for page even the obvious verbal blunders we pointed out in our review of the book (*Nation*, No. 685) have been retained. On the other hand, an index is now added.——Mrs. Kate N. Doggett's translation of Charles Blanc's 'Grammar of Painting and Engraving,' originally published in 1873–4 by Hurd & Houghton, comes to us now in a still handsome third edition, bearing the imprint of S. C. Griggs & Co., Chicago. It is a work to be praised in itself and as a translation; but it should be remembered that it is only the third book of the original work.——G. P. Putnam's Sons' "Economic Monographs," which, with a more attractive title and less restrictive scope, would fairly represent the German *Zeit- und Streit-Fragen* to which we alluded last week, have just received the following additions: 'Honest Money and Labor,' by Carl Schurz; 'National Banking,' by M. L. Scudder, Jr.; 'Hindrances to Prosperity,' by Simon Sterne; 'International Copyright,' by Geo. Haven Putnam; and 'Free-Trade,' by C. L. Brace.——Prof. C. E. Norton's annotated 'List of the Principal Books relating to the Life and Works of Michael Angelo'; and Mr. Justin Winsor's '*Pietas et Gratulatio*,' a local bit of antiquarianism, constitute Nos. 3 and 4 of the "Bibliographical Contributions" of Harvard University Library.——Houghton, Osgood & Co. send us their well-approved 'Satchel Guide for the Vacation Tourist in Europe,' revised to February 15, 1879.——The Harvard Summer School of Geology begins its first course this year in Cambridge, July 7, and ends at Catskill, N.Y., August 15. A matron accompanies it for the benefit of lady students. Twelve students must constitute the school, and the tuition fee is $25. Mr. W. M. Davis, jr., 15 Sumner St., Cambridge, should be addressed in regard to it. Prof. N. S. Shaler will direct the second course, which will give field-training to men in connection with the Kentucky Geological Survey. Prof. Shaler's address is Cambridge. The fee is the same as above, and the term from June 15 to September 15.——The *Portfolio* for 1879 (J. W. Bouton) contains critical innovations of importance. The Art Chronicle, consisting of news-paragraphs, is a careful and complete summary. The large illustrations for February are from a bad picture by Alma Tadema, called "The Sunflower," and a good one by Miss Gardiner, of Boston, who long since married the art of the professor, M. Bouguereau, whose hand rumor now assigns to her keeping. Mr. Bouton is now receiving subscriptions to *L'Art* for 1879, and those who subscribe before July 1 will be entitled also to an impression on Holland paper of an unusually large etching (21⅝ x 11⅝ inches), by Adolphe Lalauze, of Makart's famous painting, "Entry of Charles V. into Antwerp," the photographs from which were so displeasing to Mr. Anthony Comstock, while the original had the place of honor at the Paris Exposition.——Mr. S. P. Avery's collection of Oriental porcelain, which for six years has formed the most attractive loan at the Metropolitan Museum, has been displaced by the removal of that institution, and is now on view at No. 845 Broadway. With the additions made by the proprietor, it now numbers 1,207 pieces, without any duplicates or pairs. It looks hopeful that the Museum will yet secure the ownership, contributions having been already made towards the purchase, at $35,000. Largely obtained when prices were lower, a dozen years ago, the specimens would now fetch more than that sum at auction.——This month appears a third, entirely revised edition of Prof. Karl Hillebrand's 'Frankreich und die Franzosen,' and early in May the second volume of his 'History of France' is promised.——No. 76 of the Berlin Geographical Society's *Zeitschrift* contains the usual exhaustive catalogue of geographical publications for the past year.

—The illustrated magazines for April scarcely compete with each other in literary merit. In *Lippincott's* a familiar writer, "Porte Crayon," tells of a visit to Jamestown, Williamsburg, and Yorktown—"the shrines of Old Virginia"—thirty years ago; while the Louisiana of to-day is effectively pictured in Miss Annie Porter's second paper on "My Village in the South." "A Lady's Life in Brazil" relates to the suburbs of Pernambuco, where for all that is primitive and slovenly (as of right in a tropical slave-country) the climate makes ample amends. "During a residence of two years our bedroom windows were never closed, while a thin blanket was usually acceptable." As regards fruit, we should suppose the fact contained in the following extract to be not generally known: "When one banana shows signs of ripening on the bunch, the whole tree is cut down and the bunch is carefully put away in a dark place to ripen. A tree will never bear a second bunch, but the old root sends up new shoots, which in a short time are ready for fruit." Mr. Henry James, jr.'s "English Vignettes" embrace the Isle of Wight, Portsmouth, Monmouthshire, and Cambridge, and as usual distinctly add something to the impression made by common repute and the guide-books. Mr. J. Brander Matthews traces briefly the life of Molière in order to separate from it the legends which have clustered about it, and to show how modern criticism has demolished them.

—Mr. Matthews has a more piquant paper in *Scribner's* on the "Actors and Actresses of New York." A writer who declares in his opening paragraph that "There are probably now not only as good actors, but as many good actors, in the United States as in France," is sure of attention, and would be even if his opinions were less weighty than in the present case. Some clever sketches of the subjects of this paper, admirably engraved, accompany the text, but leave a suspicion of inadequacy as regards the portraiture, while in catching the spirit of the *part* Mr. Abbey appears to have been frequently very successful. By far the longest paper in *Scribner's*, and certainly as interesting as any, is Mr. William C. Church's account of the life and inventive triumphs of John Ericsson, largely based upon the elegant volume of 'Contributions to the Centennial Exhibition,' in which Mr. Ericsson has set down his unquestionable claims on the grateful remembrance of posterity—claims which may yet be considerably extended if his years are prolonged. The proverbial enquiry, "Where is Mr. Bergh?" prepares one for the question who he is and what led him to undertake his present humane mission. Mr. C. C. Buel furnishes the desired information, which is not without its surprises, for Mr. Bergh was a dramatic author before he became a professional philanthropist (we use this phrase with entire respect). Mr. William Page speaks with authority on the relations of the human figure to a square of twelve, but with much irrelevant mysticism.

—Mr. Page's bust, rough cast, is represented in *Harper's* along with other beautiful engravings of "Sculpture in America," the fresher pieces being Launt Thompson's ideal statue of Abraham Pierson, and J. Q. A. Ward's Washington (with which Newburyport has just been enriched). Colonel Waring continues his pleasant "Berg und Thal" series; there are some good illustrations of animals in the article on "The Philadelphia Zoo"; Mr. R. H. Stoddard contributes a biographical and partly critical sketch of the late Richard Henry Dana; and a Congressman's letters from Washington in the first years of the century occupy a large space, but none too large. Dr. Samuel Latham Mitchill was a New-Yorker, a member of the House of Representatives in the Seventh, Eighth, Ninth, and Eleventh Congresses, and of the Senate meantime. In politics he was a Republican, but not a blind partisan. He writes to his wife about Jefferson's 'Notes on Virginia' as a new book, and of "Lindley Murray's grammar and book of exercises" as "excellent works of their kind." He describes Thomas Paine at a dinner-party: "a red and rugged face,

which looks as if it had been much hackneyed in the service of the world," with black and lively eyes, fiery-red cheeks and nose; a great talker, and full of entertaining anecdote. Dr. Mitchill was a staunch admirer of Burr while the latter was Vice-President, and stands by him against his calumniators; and though he refuses to sign an address to the Governor of New Jersey begging him to quash the proceedings against Burr for the fatal duel with Hamilton, he weeps "profusely" with his brother Senators when the Vice-President takes his farewell of them. "Burr is one of the best officers that ever presided over a deliberative assembly." Two years later he tells of Burr's Western expedition, and wonders how he will get out of the scrape; "but he is full of cunning and subterfuge, and will reserve for himself a hole to creep out at." Mitchill was a member of the House "Committee on the Memorials concerning Perpetual Motion" (1802). In the Senate he voted with the Federalists on the impeachment of Justice Samuel Chase (March 1, 1805).

—If "Thro' the Dark" at the Fifth Avenue Theatre has not proved a triumphant success, it is not for want of ingenuity and resource on the part of the author, Mr. Steele Mackaye. We are informed by the bills that the "theme of the play" was suggested last summer to Mr. Mackaye in "rather an interesting manner." He was, it seems, rusticating in the New Hampshire mountains, when he one day came across a drunken tramp, who was "carrying out in his outward action the inner drama of some tipsy dream." The laws of New Hampshire on the subject of tramps are, as is well known, extremely severe, and if Mr. Mackaye had let his new-found acquaintance alone, the latter would probably within twenty-four hours have been set to work by the local authorities chopping wood, or breaking stone, or mending the roads. The dramatist, however, believing him to be deserving of a better fate, succeeded in getting him into a hut near by, where he made for him a bed of branches, and left him for the night, first carefully "fastening the hut upon the outside." The next morning he woke the man, and urged him to hasten across the border and save himself from impending penal servitude; the tramp, however, utterly indifferent to his fate, sat down quietly on a stump and told in a "jesting, reckless, God-defying way" the story of his life. Precisely what this story was we are not informed, but whatever it was it excited in his hearer a strong desire "to write a play which should show certain typical characters of the present time face to face with the hard facts of modern civilization." Such a play is "Thro' the Dark." One man, born and bred in honesty, contends with great material adversity; another, born and bred in crime, struggles upward against his surroundings; another, born and bred in luxury, is seen in the toils of those bad passions "which the blessings of civilization so often develop in the human breast," and of the three this man is the only one who is utterly ruined. Thus the purpose of the play is to illustrate dramatically "the fact that the most helpless victims of society are those whom she pets the most." Another type presented in the play is a money-lender, "representing the remorseless energy and sordid cruelty of the money power of the world." The women of the piece illustrate various forms of womanly devotion. We should despair of success in any attempt to give an outline of the plot. If the "theme" sketched above is profound in its appeals to our moral emotions, the plot is no less so in its reliance upon our deep-seated love of theatrical sensation. Of the two, Mr. Mackaye understands sensation better, perhaps, than morality. Murder, abduction, counterfeiting—all lend their aid to heighten the interest. In one act a "double scene" shows on the right the starving engraver's humble lodgings; on the left the luxurious private dining-room of a West End Club-house, in which *Robert Hardy*, the debauchee, is sipping *cognac* and planning crime. One of the scenes shows us the private office of the chief inspector of police, Scotland Yard; another, a thieves' quarter in London; another, the corridors of a prison. The acting was throughout very fair, the best being done by Mr. Joseph Wheelock, who took the difficult part of *Arthur Allston*. "Thro' the Dark," however, cannot be called a success. It suggests several reflections; among others, that it would have been well if the laws of New Hampshire had made it a penal offence to harbor or to aid and abet in the escape of tramps; and also that Mr George Washington Esop might find in the story of the Dramatist and the Tramp a convenient subject for his new series of fables.

—Lecocq's last opera, "Le Petit Duc," has been brought out at Booth's in an English version. In Paris it has already had an immense success, which the beauty of the music and the comicality of the plot amply justify. The scene is laid in the time of Louis Quatorze, the little Duke of Parthenay being married, at the age of eighteen, to *Blanche de Cambry*, also extremely young. The marriage ceremony is hardly over before the bride is carried off to school at the convent of Lunéville. Her young husband, naturally indignant, threatens to horsewhip his tutor, *Frimousse*, whom he suspects of complicity in his wife's removal. He is consoled, however, by the *Chevalier de Montbarry*, who acquaints him with the fact that he is to assume command of the Parthenay regiment, and may lead it to action whenever he pleases. The duke, of course, resolves to lead it at once against the convent and recover his bride. We have then some very amusing scenes in the convent, where *Frimousse* has been appointed Latin tutor to the young ladies who are being "finished" by the worthy directress, the *Marquise de Lansac*. The duke, disguised as a peasant girl, succeeds in effecting an entrance, and, by making love to *Frimousse*, in obtaining an interview with the *Duchess*. He is, however, compelled to beat a retreat, and just about this time war is declared, and the services of his regiment are needed at the front. In the battle which ensues the young colonel distinguishes himself, and in the end the king gives his permission for the duke and his wife to live together. There may be some doubt under what head this opera properly falls. At Booth's it is called a "comic opera," a classification which at once relieves it of the suspicion of impropriety which the word "bouffe" seems to imply; and, indeed, in the English version there is not a word to call a blush to the cheek of the most modest. The acting of the *Duke* and *Duchess* (Miss Florence Ellis and Mlle. Louise Beaudet) was very good, and their singing very fair, though their voices are not powerful enough for such a large theatre as Booth's. Mme. Bauman as the *Directress* and Mr. W. H. Macdonald as *Montbarry* both sang extremely well. All the choruses, too, were well given, and on the whole, as is usually the case with an English company, there was more good singing than one would probably hear from a French company of the same order. Yet, as compared with any probable representation of "Le Petit Duc" by a French troupe, the performance at Booth's is undeniably a little flat. With these reservations, "The Little Duke" is decidedly worth hearing. The airs and choruses, of which the opera is full, struck us, on a first hearing, as prettier than any that even Lecocq has hitherto written.

—Among the musical events of the past week Mr. Pinner's and Dr. Damrosch's fourth concert of chamber music and Mr. Carlberg's fifth symphony concert at Chickering Hall deserve the first mention. The chamber-music concert at the Union League Club Theatre contained two numbers that are new to New York concert-goers—a suite for violin and piano-forte by Carl Goldmark and "Thème original et variations" by Tchaikoffsky. The Goldmark suite is a very melodious composition, and so clear in conception and execution that it cannot fail to be appreciated on a first hearing. It was performed in excellent style by Messrs. Pinner and Damrosch. The Tchaikoffsky variations were played by Mr. Pinner in his best manner. For delicacy of touch, an intelligent and truly artistic and poetical interpretation of modern piano-forte music, this young artist has been without a rival this season. Schumann's Trio in D minor was the most interesting number of the programme. ——The symphony concert at Chickering Hall on Saturday presented compositions of Händel and Haydn, the overture to Mendelssohn's "Midsummer Night's Dream," a piano-forte concerto of Beethoven, and Wagner's "Faust Overture." Miss Josephine Bates, a very charming young pianist, made the bold venture of introducing herself to the New York public with Beethoven's C minor concerto. She has an excellent method and plays with graceful and refined taste, but is entirely wanting in the power and understanding necessary for such a work. The "Faust Overture" received a spirited and brilliant rendering by Mr. Carlberg's orchestra.——Colonel Mapleson's company presented nothing during the past week that calls for any special mention. Madame Gerster delighted her audience in "La Somnambula" and "I Puritani," and Miss Hauk made her last appearance in "Faust." Marchetti's "Ruy Blas" was given a second time, and does not improve upon acquaintance. Were it not for Signor Campanini's and Signor Galassi's admirable acting and singing, this worthless and commonplace work would prove a complete failure.

—We regret to record the sudden death last week of Mr. James Black Hodgskin, a prominent financier of this city, and an unattached journalist whose writings were held in high esteem and were not confined to any one medium. For five years (1867–71) he was a constant and voluminous editorial contributor to the *Nation*, chiefly on financial and economical subjects, his great merit being a singular clearness of style, joined to an easy mastery of statistics and an originality always striking and provo-

cative of useful discussion. He possessed a very ardent temperament, somewhat liable to extremes, but great transparency of character and an earnest and sincere spirit. His father was an English economist of distinction, his mother a native of Germany. Mr. Hodgskin was born in London, and died in the forty-eighth year of his age.

—The *Deutsche Rundschau* for March has an interesting article by Karl Hillebrand on "Halbbildung und Gymnasialreform" (Semi-Culture and the Reform of the Gymnasium)—a theme which, in preceding numbers of that periodical, has been more or less directly treated by Lasker, Du Bois-Reymond, and Fr. Kreyssig. The characteristic feature of all these articles and of various notable publications in the same field (such as H. Bonitz's "Ueber die Reform unseres höheren Schulwesens" in the *Preussische Jahrbücher*, Fr. Nietzsche's "Menschliches, Allzumenschliches," Paul de Lagarde's "Deutsche Schriften") is a pronounced dissatisfaction with the state of popular education in Germany; but while the writers agree as to the disease, they differ widely as to the remedy. Thus, while Fr. Kreyssig sought the panacea in a higher kind of *Realschule*, and Du Bois-Reymond insisted upon a thorough cultivation by the gymnasium of mathematics and the natural sciences, to the detriment, if necessary, of the study of Greek and history, Hillebrand would advance the cause of education by restricting rather than expanding the sphere of the gymnasium. He would reduce the hours of study both in school and at home, and exclude the ancient languages from the first three years of the course, devoting the time gained to recitations from the Bible and German poetry, and bestowing great attention on the grammar and orthography of the mother-tongue. In the first three years the instruction should chiefly tend to the exercise of the memory. During that time he would teach in history mainly dates, in geography mere names—ignoring physical geography entirely—and in zoölogy and botany the simplest classifications. With the introduction of Latin and Greek in the higher classes he, too, would restore mathematics to its rightful place among the disciplinary sciences, leaving henceforth exercises in German style to private zeal. He would find no place in the gymnasium for the inculcation of religious doctrines or for ecclesiastical history, and would even in profane history dwell only on the more important epochs. Briefly, a mathematico-classical training is to enable the student to select with intelligence his further studies, and to infuse him with the "courage of his ignorance," as infinitely preferable to the pretensions of semi-culture. He asks whether a youth of eighteen, possessed of the knowledge which such a training had furnished to Pascal when he left school, would not be sufficiently equipped for all the exigencies of our times.

—This writer has evidently but little hope of seeing the gymnasium remodelled on his plan, but he sees no reason why the spirit of association, so active in Germany, should not imitate the English precedent in this respect and establish schools—the "Nationalschule" of the future—where theories could be practised which he thinks are shared by many of those dissatisfied with the present régime. The article is, however, far from breathing the pessimistic spirit so prevalent in Germany. In fact, Herr Hillebrand sees neither in her political nor in her economic condition sufficient reasons for a dissatisfaction which he considers partly as inborn in the German mind, partly as the result of a national vanity wounded by persistent misrepresentations of the German character. He admits that Germany is to-day the "best hated" country in Europe—that indeed she never understood the art of making herself liked. There was nothing in the manner of her unification that struck the popular fancy of Europe as did the unification of Italy; nor did her quiet, methodical way of conquering impress the world as did the theatrical show of the Napoleonic conquests. But even the Graces, Herr Hillebrand hopes, will bestow on the German of the future the gifts denied the German of the past.

—The *Zeitschrift für vergleichende Rechtswissenschaft* was started last year as an organ of the new science of Comparative Jurisprudence; it is published at Stuttgart, and edited by Prof. Bernhöft, of Rostock, and Dr. Cohn, of Heidelberg. Three *hefte* appeared in the course of the year, making a volume of 492 pages, containing eleven articles and three critical notices. The introductory article, by Bernhöft, "Ueber Zweck und Mittel der vergleichenden Rechtswissenschaft," gives in a brief compass the main results of the comparative study of law as applied to the Aryan nations; this will be found especially serviceable to students of early Roman law and institutions. The important subject of the condition of women in primitive times receives light from an article by Prof. Paul Roth, "Das deutsche eheliche Güterrecht"; it starts with the fact, established by the researches of Schröder and Martitz, that the earliest German law recognizes the full proprietorship of the wife in her own property, only under the guardianship of the husband. From this the article is mainly devoted to following out the twofold development of German law, the Frankish and the Saxon. Another interesting subject is the history and law of Checks, discussed in two articles by the editor, Dr. Cohn; this not merely touches economical questions of the present day but reaches back even into classical times. The philosophy of law receives attention in an article upon the conception of law, by Prof. Bekker, and the *Systematik* of Indian law, by Prof. Jolly. Another equally high authority, Prof. Brunner, has an article upon the power of attorney in the Middle Ages.

HAMERTON'S LIFE OF TURNER.*

IT will hardly be in the nineteenth century that the erratic, eccentric, and unique genius of J. M. W. Turner will receive its due position in the Walhalla of the Muses. He is still too new to enable us to gauge if he is to be the founder of a new phase of art or to remain an isolated phenomenon, a splendid *lusus naturæ* whose uses to the future shall be rather to measure distances from than approximations towards what he has done. All about him is exceptional. Artistic talent of the exceptionally high order which his undoubtedly is, is never to be measured by popular opinion. It has before happened to men to attain undeserved eminence, but perhaps never before to have attained it on one ground and merited it on an entirely different one. His real greatness, like that of all other extraordinary intellects, remains, and will always remain, caviare to the general. The clamorous reputation that attaches to his name is so far different from that which really belongs to him that an intelligent student of art, forming his estimate of the work of Turner by the literary standard which has been established, finds himself on first making acquaintance with the pictures quite disenchanted. It is not so much that his artistic power has been overestimated as that it has been utterly misstated, and is misunderstood. While in reality the most creative of landscapists, the farthest removed from the actual or veracious in any sense in which that word can be applied to delineation of the material world, he has received the reputation of being the truest.

The Turner of fact, of sober criticism, is more wonderful than, and as great as, the Turner of 'Modern Painters,' but very different. Ruskin's poetic tendencies, his intense imaginative sympathy, and subtle though wayward and fantastic analytic faculties, were accompanied by rhetorical powers which have few parallels in our language, and a one-sidedness of advocacy which has none; but not by adequate powers of comparison or calmness of judgment, nor (at the time when his plea for Turner committed him to the general line of argument he has since been obliged to follow) by a wide acquaintance with, nor catholic views of, modern art, while even to this day his technical education remains so incomplete, and his knowledge of technical processes and qualities so imperfect, that he remains the most untrustworthy critic as to the merits or demerits of particular works of art who has ever exercised an influence on public taste. The result of all his teaching has been to establish a school of art whose precepts are opposed to all the laws of art, and to put as its chief exemplar a painter who continually defied all the rules the founder of the school has laid down. Ruskin has not made Turner too great, but he has done him the grave injustice of putting him on a pedestal that did not belong to him, and from which sound criticism and time must take him down to put him on another not inferior, but far removed from the former one.

This work is undertaken in a thoughtful, discriminating, and completely appreciative spirit in the biography of Mr. Hamerton, and in a manner which shows not less knowledge of Turner than Ruskin's, but far greater judicial power, much truer comparative estimate of Turner's genius and qualities, more just and larger objective perception of nature, and last, but far from least, a knowledge of the technique of landscape-painting and sound art-training incomparably greater than Ruskin's. Of course his Life must in many points assume the character of a polemic against Ruskin, because the correction of the false ideal was necessary to the delineation of the true; but the book is remarkably free from all heat of discussion or discoloration of advocacy. It is in every respect a contrast to the 'Modern Painters'; and whatever estimate be hereafter established as the permanent conception of the relative position of the great landscape painter, it is safe to say that it must embody in substance the judgment pronounced by Hamerton.

* 'Life of J. M. W. Turner. By Philip Gilbert Hamerton.' Boston: Roberts Bros. 1879.

The impeachments of Ruskin's plea for Turner are not, therefore, on account of his overestimating the painter, for the younger critic does not yield to the elder in his general estimate, but to two points in that plea, both of which he abundantly confutes, viz., that Turner aimed at truth in his pictures, and that he was an under-esteemed and neglected painter when Ruskin undertook his defence. The second point was easily made; the facts as to Turner's position when the 'Modern Painters' appeared are within the memory of many living amateurs. We quote the pith of what Mr. Hamerton says on the subject (pp. 330–33):

"We all know how kindly Turner was encouraged when a young man, how well and how early he was received in the Academy [full Academician at twenty-seven], and how he enjoyed the friendship and sympathy of intelligent men such as Lord Egremont, Mr. Rogers, and many others, at a time when he was in the full enjoyment of his powers. Now it suited Mr. Ruskin's artistic purpose—at the close of a lecture in Edinburgh, which was to be very pathetic and awaken deep feeling in the hearts of his audience—to say, in order to prepare the people for the sad account of Turner's death, that he had incurred neglect until late in life. Even this mild assertion would have been untrue. The exact truth is that Turner was not neglected during life, but that in his case, as in many other cases, the fame of the artist when living was less splendid than it has since become. But now observe how Mr. Ruskin 'forces the note.' He does not simply say that Turner was comparatively neglected; that would not be enough—the audience would feel no thrill. These are the words used:

"'Imagine what it was for a man to live seventy years in this hard world, with the kindest heart and the noblest intellect of his time, *and never to meet with a single word or ray of sympathy until he felt himself sinking into his grave.* From the time he knew his true greatness *all the world was turned against him*; he held his own, but it could not be without roughness of bearing and hardening of the temper, if not of the heart. No one understood him, no one trusted him, and every one cried out against him. Imagine, any of you, the effect upon your own minds if every voice that you heard from the human beings around you were raised, year after year, through all your lives, only in condemnation of your efforts and denial of your success.'

"This passage is admirable as an appeal to the feelings. It is the work of a consummate artist in words, and so deeply pathetic that if well delivered in the lecture-room it must have touched the hearts of men and moistened the eyes of women. I admit and admire its excellence, but I say that whilst Mr. Ruskin was writing it, and during the whole space of time between the writing and delivery of the lecture, the critic in him must have been silenced or asleep.

"Many years before Turner died was there not a great meeting at Somerset House, attended by Sir Robert Peel, Lord Hardinge, and many others? and did not all these gentlemen confer upon Turner the very exceptional and very substantial compliment of subscribing five thousand pounds to buy two pictures of his for the National Gallery? . . . Did not Lockhart, a very influential Scotchman, express his opinion publicly a year or two later [*i.e.*, 1814 or '15] that Turner was simply the greatest of all living landscape-painters? Was not Turner selected to illustrate the greatest contemporary poets? and did not Scott (who died in 1832) say that Turner was 'all the fashion'—so much the fashion, indeed, that by sheer weight of reputation he was imposed on the great novelist against his will? Did not Constable write on the 14th of January, 1832: 'I remember most of Turner's early works; amongst them was one of singular intricacy and beauty—it was a canal with numerous boats, making thousands of beautiful shapes, and I think *the most complete work of genius I ever saw*'? . . .

"All this was intended to prepare Mr. Ruskin's hearers for a most touching and pathetic account of Turner's death:

"'He received no consolation in his last years nor in his death. Cut off in great part from all society—first by labor and at last by sickness—hunted to the grave by the malignities of small critics and the jealousies of hopeless rivalry—he died in the house of a stranger—one companion of his life, and one only, staying with him to the last.'"

We cannot follow Mr. Hamerton in his refutation of this "pathetic fallacy." Those who know anything of the later years of Turner's life know that in all this touching picture there is not one correct statement of fact. Turner died in lodgings he had long had in Chelsea, and he was accustomed to hide there from his friends, who were many and devoted to him with enthusiasm. He was idolized by the whole Royal Academy, and many of the Academicians would have disputed the privilege of watching by his sick bed. Hundreds of houses of all classes, from that of a peer to that of a country curate, would gladly have given him hospitality in health or sickness; but he repulsed, and often rudely, all attempts of any but two or three of his oldest friends to approach him, and for a long time it was unknown where his hiding-place in Chelsea was. He died worth above £100,000, and left pictures besides which he might have sold before his death for as much more. For the "Old Téméraire" alone he had refused first an offer of £5,000, and after that, from the same amateur, a blank check! The fact is that there was never an English artist, with the exception, perhaps, of Landseer, who had been so greatly praised (and none who had been so much abused except Haydon), there was not one so highly esteemed by that class of society whose appreciation is the basis of all solid reputation, none so widely known amongst living landscape painters and so much engraved, as Turner at the moment when Ruskin wrote 'Modern Painters.'

The other point of the author's indictment of Ruskin—his erroneous teaching as to Turner's veraciousness—involves the whole question of Turner's relation to nature. Mr. Hamerton, as a painter of experience and a student of art in its best technical schools, judges the work of the great master pencil in hand before the scene he painted, and shows, what all who have taken the pains to do the same will have learned for themselves, that Turner had the most supreme contempt for everything that inclined to topography, that in his architecture he habitually misrepresented the characteristic features of the buildings he painted, that in his effects he took the most unlimited licenses, while as to his color the whole story is told in brief in the following passage:

"If the reader will imagine Turner as a supremely clever executant in water-color who played with his orange and purple, his red and green, his washes of cool grey to refresh the eye and his touches of burning scarlet to excite it, just as a musical composer will combine the effects of the various instruments in an orchestra, he will, I sincerely believe, not be very far from a just appreciation of his work."

This is, in fact, the general law as to Turner's work, and, *mutatis mutandis*, the criticism may be applied to his composition, his geology, his topography, his botany, and even his meteorology. There is not in the whole range of Turner's study (and we speak from long personal study) one sketch or drawing which shows that he could or cared to match a tint of nature or, so far as any important feature is concerned, a piece of form, natural or artificial. His early work is purely conventional, and is simple modulation of grey, cooler and warmer, and, as the power grew, the range of orchestration extended, *not by reference to nature, but by experience of art*, till it had reached the range of the "Slaver" and the even more splendid (because better technically) water-colors like the "Goldau and Lucerne."

Mr. Hamerton does full justice to the unrivalled power in certain ways which Turner showed, and if his admiration for him is less eloquent than that of Ruskin it is at least as learned. He might have gone further with his demonstration of the painter's deviation from the standard of truth which Ruskin has set up for him. A large proportion, indeed, of the effects which Ruskin notes as truths never told by any other painter are simply daring licenses and flagrant violations of nature. He gives a list of mingled effects of moonlight and sunlight, when the fact is that the full moon an hour after sunset has not power enough to throw a perceptible shadow in the face of the western sky; he calls to witness the glory of sunset skies like those of the "Slaver," "Napoleon," and "Old Téméraire," having apparently never noticed that the sunset colors with which those pictures are glowing never appear till the sun is below the horizon, while Turner puts them around the sun half an hour high. Nor has time convinced him of his mistake, for in the collection of Turner drawings exhibited last year in London by Mr. Ruskin there was one—"Leicester Abbey"—in which a golden sunset occupied the right of the picture (spectator's right), while at the left rises amidst the blue mists of evening the full moon, both sun and moon being included in the picture—a magnificent drawing, however, in every way, and the transition from the golden glow of the sun to the blue night coming on under the moon was a marvel of management of color. One was curious to see what Ruskin could have to say of this splendid defiance of nature. The note is this: "The sunset and moonrise are not meant to be actually contemporaneous. Strictly this is two pictures in one, and we are expected to think of the whole as a moving diorama"!!

As biography the 'Life of Turner' is meagre, because Turner furnished no materials for biography and left no letters or journals, one of his most curious characteristics being his utter and ineradicable illiterateness; he had no power of expressing himself connectedly in words. Even in speaking to people he used only the words which were absolutely necessary, eking them out with nods and gestures so that to a stranger he was sometimes scarcely intelligible. But so far as the artist is concerned Mr. Hamerton has given a sober, full, and invaluable analysis of what we most want to know of him, which is at the same time one of the most valuable pieces of æsthetic writing that English literature has produced, a careful, sincere, and fully appreciative commentary on the most difficultly understood painter of our and perhaps of any day.

MALLESON'S INDIAN MUTINY OF 1857–1858.*

TO exhibit very recent history in its genuine aspect, or even as it will be exhibited eventually, is acknowledged to rank among impossibilities. Of the achievements and miscarriages which so largely constitute

* 'History of the Indian Mutiny, 1857–1858. By Colonel G. B. Malleson, C.S.I., author of 'History of the French in India,' 'Historical Sketch of the Native States of India,' etc., etc.' Volume I. London: William H. Allen & Co. 1878.

it, the former are all but inevitably magnified by flattery or enthusiasm; while the latter are sure to be extenuated by their authors or by their authors' vindicators, and, at the same time, countless prejudicial facts, essential towards interpreting them aright, are sedulously withheld from publicity. As to the Indian Mutiny of 1857, the difficulties thus indicated which, not to name others, beset a conclusive appreciation of it, are not as yet by any means wholly obviated by the operation of time. It may be, indeed, that the reminiscences of numerous actors in transactions which date only two and twenty years ago still await disclosure, and, in some cases, are still unrecorded. Every due allowance being made for this and kindred considerations, it is, however, highly expedient, in the interests of justice, that we should be put in early possession, as in the work before us, of a corrective to so exceedingly one-sided and misleading a performance as the fragmentary 'History of the Sepoy War' of the late Sir John Kaye.

For substantial reasons Colonel Malleson, departing from chronological order, narrates in his first volume those events to which Sir John Kaye devotes his third. But the events in question are, almost one and all, of prominent importance, and, besides, endure very well to be treated of by themselves. A more impartial detail of them than has hitherto been accessible is, therefore, most welcome; and so it would be though we were not supplied with the brief but lucid sketch of their antecedents with which the author dexterously prefaces them.

Within a very narrow compass, Colonel Malleson conveys to us a vivid idea of the character of Lord Canning, Governor-General of India at the critical period referred to. Well-meaning, but timid, lethargic, and injudicious, he had the ill-fortune to place himself wholly at the disposal of men as ill-qualified as was well possible to direct him aright. Foremost among these delusive advisers and guides were Mr. Secretary Beadon and Lieutenant-Governor Halliday. As is obvious to observe, their counsels were such as might have been expected from favored members of an official fraternity in which, at least in the days of the East-India Company, promotion was perhaps oftener due to adroit courtiership than bestowed as the reward of desert. Blinded by those who had him under their control, Lord Canning was long reluctant to be convinced, even when omens were most unfavorable in every direction, that serious danger was impending. When, too, his eyes were at last couched, many of his measures were in the last degree unwise. An instance here in point is seen in his action with regard to the Indian newspapers. The native press, encouraged by the apparently frail tenure of English domination, had, it is true, become daringly disloyal in its utterances, and demanded to be dealt with rigorously. But nothing could be more loyal than the English press of India; and yet Lord Canning did not hesitate to gag both presses by one and the same edict, on the flimsy plea, to quote his own language, that he could "see no solid standing-ground upon which a line can be drawn marking off one from the other." At the time, it was asserted, very naturally, and there is some foundation for believing, that his real motive was to forestall, if he but could, the transmission to England of any printed record of his own and his subordinates' mistakes. Among his misfortunes, possibly, rather than among his faults, was his appointment of Sir Patrick Grant as temporary commander-in-chief. However, except for the combination of inactivity and self-distrust which Sir Patrick evinced, there is no saying for what disasters he might not have made himself responsible. As it turned out, it was solely owing to his being what he was, and doing as he did, that an opportunity was afforded to the gallant and energetic Havelock of coming to the front, and of paving the way to successes which have served to inscribe his name for ages in the bead-roll of illustrious soldiers.

Of the rising at Patna, and of its suppression, a circumstantial narrative is presented to us; and the proceedings of its commissioner are detailed with all desirable distinctness and fidelity. The gentleman here adverted to is Mr. William Tayler. That the course which he pursued was the most sagacious that was practicable under then existing circumstances scarcely any one doubted at the moment, and scarcely any one has doubted since. Had he obeyed Mr. Halliday, already mentioned, the result might have been signally calamitous. But he chose, in the public behoof, to act on his own judgment; and for so doing, though his efforts, and in a most perilous emergency, were crowned with success, he exposed himself to Mr. Halliday's implacable animosity. By misrepresentations, groundless and scandalous innuendoes, and divers other unworthy devices, Mr. Halliday contrived to procure his expulsion from the civil service. To the discredit of the India Office, as of various governor-generals, his wrongs are still unredressed, whereas his vindictive oppressor has been rewarded with honors and high office. The matter here outlined is one which contributes a humiliating page to the history of modern India.

The heroic defence of Arrah, and the masterly way in which its garrison was relieved by Major Vincent Eyre, are told with spirit, and can hardly be read without exciting warm admiration of all that were concerned in them.

Owing to the arrival of the new commander-in-chief, Sir Colin Campbell, the official career of Sir Patrick Grant was, happily, of but short duration. Had Lord Canning's recommendation been acted on, the latter would have been confirmed in the appointment which he was filling provisionally; but Lord Palmerston, being better advised, most sensibly made election of the former. Credit must, however, be allowed to Lord Canning for his exceptional manifestation of good sense in deputing, as his civil plenipotentiary for a considerable portion of the northwest provinces, the ablest man, by far, that he had about him, Mr. J. P. Grant. The lieutenant-governor of those provinces, Mr. J. R. Colvin, was then, by reason of the mutiny, isolated at Agra, and died soon afterwards. Though a person of acknowledged ability in the sphere of civil avocations, and in a time of quiet, he was but ill-provided with the nerve, decision, and tact which are indispensable for coping with a popular uprising.

Well-nigh inevitably, if not altogether so, the subject-matters of Colonel Malleson's volume are not always treated by him in strict chronological succession. These, far from descanting on them, we can only enumerate succinctly. From the point indicated in the preceding paragraph they are as follows: Scindhia, a powerful native chieftain near Agra, casts in his lot with the British. Holkar, his brother magnate further to the south, shows himself equally loyal, though the troops about him display impatience of their foreign masters. The massacre of Jhansee, a tale rife with horrors, is recounted. Rajpootana, thanks to the prudent measures concerted by Colonel George Lawrence, remains pacific. Affairs at and in the neighborhood of Agra are recorded. An account is given of the mutinies in the districts represented by the stations of Aligurh, Mainpooree, Etawah, and Bolundshuhr. Out of the 575 pages which the volume contains 199 are appropriated to Oude, and yet there is no ground to complain here of diffuseness or superfluity. Wherever the mother-tongue shall be English, many a generation must yet elapse before the noble exploits of Sir Henry Lawrence and General Havelock, as set forth by any well-informed and skilful writer, will cease to command enthralled attention and to stimulate martial ambition.

But we have nearly exhausted the space which we can assign to the book before us. Colonel Malleson is executing, in a manner deserving marked commendation, the task which he has set himself. His research is untiring, and his love of his subject amounts to a passion. The equitableness of his judgments will rarely be challenged. Praise and blame he distributes very freely, indeed; but he is judicially careful, while awarding his verdicts, to justify them to the full; and his discrimination of character, in introducing or dismissing the various actors whom he brings on the scene, is marked by equal sagacity and thoroughness. Though a warm eulogist of sterling worth and merit, he leans, unquestionably, to the side of lenity, when called upon, as he is ever and anon, to arraign and stigmatize incompetence. Taking account of his long Indian experience, and, in the just words of the London *Times*, of his being recognized as one of the masters of Indian history, one would, almost without further evidence, have warrant for calculating on his so telling the story of the Indian mutiny as to dispense with the need of its being told at length again. Nor does his beginning disappoint this expectation, but, on the contrary, leads us to anticipate, in the completed result of his undertaking, a work of conspicuous value, and, with reference to available information, of irrefragable authority.

Artist Biographies. Allston. (Boston: Houghton, Osgood & Co. 1879.)—It is sad irony to gather up and put into a book the contemporary praises of a man whose reputation, once great in a narrow circle, has failed to extend far beyond that circle's limits. To collect with painstaking industry the affectionate hyperboles of friends, together with what their memories have treasured of the pretty phrases of polite acquaintances or indulgent critics, in such a case deepens regret and aggravates distrust, and when all this is unaccompanied by any critical reservation or any hint of its extravagance, it is unjust to a man's memory. Allston, as much as any other, would have resented this volume, called his biography, which, beyond being a record of the facts of his life, is little more than a string of the compliments paid him, with a critical commentary unmarked by any sobriety of judgment or intelligent insight

into Allston's worth. The author leaves the impression that he thinks William Ware was right in saying that "in the great Venetian (Titian) I had found nothing more true, nothing more beautiful, nothing more perfect than I had already seen in Allston"; and Coleridge right in saying "Washington Allston, a painter born to renew the fifteenth century"; and Lord Napier, of Merchiston, right in speaking of "the incomparable pencil of Allston." He seems to see a compliment, too, in Southey's remark to Collins on Allston's poems: "Whatever defects some of them may have, he had no hesitation in saying that they could not have proceeded from any but a poetic mind; in which sentiment," Collins adds, "he was cordially supported by Wordsworth." But it is not so much when the author is sifting the worth of other men's words as when he himself becomes the critic that his true penetration and the value of his information become clear, as a few sentences will show without need of comment: "He avoided bright eyes, curls, and contours. . . . The stilted allegorical compositions of the schools of West and Fuseli. . . . The sharp manifestations of passionate life are veiled in an atmosphere of divine glow and profound mystery, inviting the study of the most reflective and contemplative of men. . . . If beauty can exist without expression, it finds no more perfect exemplification than Allston's 'Rosalie' and 'Beatrice,' not even in Leonardi's 'Mona Lisa' or Raphael's 'Fornarina.'" This last is a sufficiently marvellous sentence in art criticism, but it is surpassed by the following in literary criticism, where the author is fooled to the top of his bent in describing Allston's mock-heroic poem, "The Paint King," a most extravagant, disagreeable, and in parts offensive production, as "a fancy as wild surely and as well wrought out as any Hawthorne ever dreamed of."

These extracts illustrate well enough the nature of the criticism in this volume, but the narrative also is in parts amusing; we were really startled at the society which our author, with a daring disregard of time and place seldom equalled, provides for Allston in Rome from 1805–9. He mentions among the men who were to be seen there at that time, and whom presumably Allston may have met, Cornelius, who arrived in 1811; Andersen, at that time a babe a month or two old, who first saw Rome in 1834; Flaxman, who had left Rome in 1794; Gibson, who arrived in 1817; Shelley, who was then a child at Eton; Byron, who, a boy of seventeen, had just matriculated at Cambridge, and was guiltless of the "Hours of Idleness" for three years more, and Keats, who, nine years old, was most likely to have been playing in the stables where his father worked a few months before. Two only of those mentioned by the author in this paragraph were there, Thorwaldsen and Louis of Bavaria, who was a youth of nineteen. Later he speaks of the brilliant circle which surrounded William and Alexander von Humboldt; the latter was in Rome in 1805 for ten days with Gay-Lussac. With this instance of the most culpable ignorance we may dismiss the author and his book in peace.

Of Allston it would be worth while to say more than our limits allow, for his artistic merits have never been properly discriminated, and his literary performance is well-nigh unknown. His great reputation in art was due to much the same causes as Irving's in literature, and its correction has been similar; like Irving, too, he possessed rare and charming personal qualities, which won for him an admiration and affection of considerable influence in determining the regard in which his works were held. In imaginative literature he was the most noteworthy follower of that romantic and grandiose school which Monk Lewis founded by turning into English channels a stream from the Storm-and-Stress period of German literature, and which was continued by Mrs. Radcliffe, from whose novels Allston took subjects for his pencil. Many of Allston's poems are purely from this source, as is the conception and much of the execution of his single novel, 'Monaldi.' On the other hand, one would be justified in saying that Coleridge furnished him with the forms of his religious conceptions and with all his metaphysics, as any one may satisfy himself by reading the 'Lectures on Art.' He was moulded intellectually by European influences, and under these his nature was mainly passive. Hence in literature, in which he had only talent, he gave us little that will be preserved for its own merit: in art, in which he had veins of real genius, he gave us some work which we would not willingly let die, but it is frequently defective. We are told that in correcting the entire perspective of the great picture of "Belshazzar's Feast" he made over "twenty thousand chalk-lines in circles and arcs to bring the amended figures into correct drawing"; he would not have done this had he possessed the unerring artistic conception and direct rapid executive force of those painters of the fifteenth century whom he was ignorantly set up by his friends to rival. It is now indisputable that he fell far short of his own hopes, and failed to justify the expectations which his genius had rightly raised.

Bacon's Novum Organum. Edited, with Introduction, Notes, etc., by Thomas Fowler, M.A. Clarendon Press Series. (New York: Macmillan & Co. 1878.)—Hume, in the sixth volume of his 'History of England' (pp. 194, 5), in discussing the position of Bacon in the history of English thought, says:

"If we consider the variety of talents displayed by this man; as a public speaker, a man of business, a wit, a courtier, a companion, an author, a philosopher; he is justly the object of great admiration. If we consider him merely as an author and philosopher, the light in which we view him at present, though very estimable, he was yet inferior to his contemporary Galileo, perhaps even to Kepler. . . . . The national spirit which prevails among the English, and which forms their great happiness, is the cause why they bestow on all their eminent writers, and on Bacon among the rest, such praises and acclamations as may often appear partial and excessive."

Buckle, in his examination of the Scotch intellect during the eighteenth century, cites this as "grossly unfair," and explains it on the theory that the essential difference between the respective methods pursued in their investigations made it impossible for Hume to sympathize with or understand Bacon. Bacon is to-day probably much more often talked about than read, and we fancy that most general readers still derive all their knowledge of him from Macaulay's delightful essay (though for those who go into the subject with any thoroughness, Mr. Spedding is, of course, a higher authority). For a purely popular account of his career as a public man, and an examination of the once mooted question of his corruption, it is difficult to imagine that Macaulay can ever be improved upon; but on the subject of philosophy he was hardly an authority, and that part of his essay which is devoted to the Baconian method, though deeply interesting, has never seemed to us as satisfactory as the biographical part. A defender of Hume against Buckle's criticism might cite many passages of it, perhaps, as instances of those "praises and acclamations" which arise from the national spirit of which he speaks. Mr. Fowler's profound introduction to the present edition of the *Novum Organum* is an essay as different from Macaulay's as possible. It is intended, as he says in his preface, to supply a want which has undoubtedly often been felt by students, namely, "A commentary, which, besides explaining the difficulties of the work (by no means few or small), should also present Bacon in his relations to the History of Philosophy, Logic, and Science." The commentary, of course, is one into which Mr. Fowler, as a logician, allows nothing but the dry light of the intellect to penetrate, and it is quite safe to say (without entering into any criticism) that his conclusions as to Bacon's position in the history of thought may be taken as authoritative. It is interesting to find that the scientific position he accords to Bacon is not lower than that which has been popularly assigned to him as founder or father of experimental philosophy. It is hardly necessary to add that as an annotated edition of the *Novum Organum*, Professor Fowler's volume is worthy of the press from which it is issued.

Manuel du Voyageur. Par D. Kaltbrunner, Membre de la Société de Géographie de Genève. (Zürich. 1878. New York: B. Westermann & Co.)—The author states that the design of this 'Traveller's Hand-book' is to bring within the compass of a single volume the suggestions and instructions which will be found useful by any one who wishes to travel as an observer. He assumes that the traveller's aim should be to increase our knowledge of the country he visits, and offers to show him what and how to observe, in order to secure the best possible results. Nor are the qualifications requisite for a good observer passed unnoticed; among these are named and discussed the ability to observe natural phenomena, and its habitual exercise; the spirit of investigation and enquiry; the critical faculty; and various "qualités et aptitudes accessoires," such as pluck, endurance, and persistency. It should be remarked that the work is not written for any special class of tourists, or in the interest of any particular lines of research, but that it undertakes to cover the entire range of subjects which may present themselves to any intelligent and thoughtful observer, whatever his bent of mind may be—to omit, in short, no essential particular and to put the matter in such manner that any one may understand it. A glance at the table of contents will show not only the comprehensiveness of the author's plan, but also the thoroughness with which he has pursued the subject to the most minute of multifarious details. Upwards of a hundred pages are devoted to the preparation required for successful observations—the part of the book in which

the intending traveller is taught *how* to observe, including details of equipment and supply, use of various scientific instruments, photography, drawing, etc. The bulk of the volume, however, is occupied with extended and systematically arranged indications of *what* to observe, relating, as already intimated, to an extraordinarily varied range of subjects. Under the first head, "Le pays," for example, are treated geography, topography, geology, the soil, climate, hydrology, flora, and fauna. The second division, "Les habitants," is still more exhaustive; one who should acquaint himself with the varied aspects of the case as presented by the author would become an accomplished historian and ethnographer of the people visited. The work seems to us to be prepared with great care and conscience, as well as with much learning and experience, and to be as successful in execution as admirable in design. If the author be as exact and reliable in all departments as we have found him to be in those in which we have tested him by our own experience in travelling, he is certainly a guide whom no one may hesitate to trust implicitly. His instructions, always practical and to the point, are frequently very pithy, suggesting a very long and familiar acquaintance with the requirements, obstacles, and purposes of productive travel; while the advantage of being told beforehand what to look out for and how to see it, is too obvious to require comment. We suspect that no one ever did or could accomplish as much as Kaltbrunner would put the ideal traveller in the way of doing, unless he were a Humboldt or a Darwin; but such riches as he offers, it will be remembered, cease to be embarrassing when divided among tourists of all countries and all tastes. The foreign dress of the work will doubtless restrict its usefulness in this country, until an English translation be made, as certainly should and probably will be done. A companion volume, entitled 'Aide-mémoire du Voyageur,' is announced to appear soon.

Epochs of Modern History. The Normans in Europe. By the Rev. A. H. Johnson, M.A. With Maps. (New York: Charles Scribner's Sons. 18mo, pp. 273.)—Mr. Johnson is fortunate in his subject, and he has treated it in a manner worthy of it. One hardly realizes, until looking over his admirable table of contents, how much of the most fundamental history of the earlier Middle Ages is associated with this lordly race, and how complete a view of the condition of Europe at this epoch can be given in connection with its history. The most romantic events of this period, too, are associated with the Normans, and, in virtue of their great administrative and organizing capacity, almost every form of institutions then existing was touched and more or less modified by them. We have, therefore, chapters on the Scandinavian and Anglo-Saxon institutions, on Feudalism, and on the Norman administration. We only miss the ecclesiastical institutions; these receive a brief mention, excellent so far as it goes, but which might very well have been enlarged.

The chapters under consideration are remarkable for their clearness and accuracy, and by themselves form the best brief sketch of the institutions of this period with which we are acquainted. Here and there, it is true, we find slight inaccuracies or obscurities, to some of which we will call attention. The definition of *beneficia* (p. 97) is hardly in accordance with the best science; it seems proved by Roth that the *beneficia* of the Merovingian kings were absolute grants, the rewards of past services, not the condition of future; the "pledge of fidelity" was required of every subject, not of beneficiaries as such. We are told (p. 99) that "it had long been the custom of the kings to couple their grants of land with rights of independent judicature over the dwellers on the land." By "long" we must suppose the Merovingian times to be referred to, but no such grants as these were made until long after the time of Charles the Great; the ecclesiastical immunities of the seventh and eighth centuries granted no "independent judicature" at all. On page 111 the free socagers are defined as a class "who paid a fixed sum of money annually, and were exempt from all further service." Some of them, it is true; but as a rule the English socagers performed agricultural labor for their lords. The term, by the way, is not properly used in relation to Continental feudalism, for the existence and rights of this class are the one point in which English feudalism is most fundamentally contrasted with that of the Continent. On the same page the old classification of villeins regardant and in gross is far from adequate, and is given up by the best writers.

The chapter upon the Anglo-Saxon institutions contains very little to criticise. The powers of the township (p. 149) are stretched beyond what any clear evidence will justify; not, perhaps, beyond what may be fairly inferred, although this is by no means without controversy. Neither do we know what authority there is for the distinction made (p. 151) as to the procedure in criminal cases before the Shire Moot—ordeal if the presentment was made by the Hundred court, compurgation if by a private individual. The definition (p. 155) of "'sac' (jurisdiction in matters of dispute) and 'soc' (the right of holding courts for their personal and territorial dependants)" may be called a distinction almost without a difference. It would, perhaps, be too much to expect an English writer to be acquainted with the results of American scholarship; but certainly Mr. Henry Adams appears to have disproved this definition of "soc."

The closing chapter, on the Norman Administration, is equally excellent. The statement (p. 241) that the freehold tenants of the manor occupied the tenemental lands, while the villeins were settled upon the demesne, is commonly made, but is incorrect, or at least incomplete. The principal part of the villeins occupied the lands of the *villata* or village (whence their name) alongside of the freeholders, and often intermixed with them. A portion of them, however, received allotments on the demesne, and these might be held by villeins, and even by freeholders, who at the same time held estates upon the tenement lands.

There is an index, six genealogical tables, and three excellent maps; but we do not understand why, in the map of "England and France in the time of Henry I.," the County of Toulouse is not given as a part of France. The Count of Toulouse was one of the six peers of France, and we are not aware that the suzerainty of the king over him was any more nominal than over, for instance, the Duke of Guyenne.

Gwen. A Drama in monologue. In six acts. By the author of 'The Epic of Hades.' (London: C. Kegan Paul & Co.; Boston: Roberts Bros. 1879.)—In the seven years since the author of this poem first appeared before the public he has maintained his place as one of the most careful and elegant of minor English poets. His verse is musical, and his style is clear, temperate, and free from most of the conceits to which his school is especially prone. This drama, which is his third work, is named such only by a fancy; it has no action whatever, but is constructed, similarly to Tennyson's "Maud," with a series of monologues in irregular verse embodying the reflections or hopes of the hero and heroine, who are the only characters in the first five acts. The situation, also, is the same as in "Maud," except that the hero is of high birth and the heroine a country girl, so that a comparison between the two poems obtrudes itself upon the reader whether he wishes it or not, and this the more because distinct Tennysonian echoes recur on page after page. It is not plagiarism, but one cannot help doubting whether some phrases are altogether the author's own. To give illustrations which might be multiplied, we have

> "And sometimes, rare blessing, there comes with me
> A fair young Oread over the hill" (p. 36).
>
> "I see my Oread coming down" ("Maud," xvi)
>
> "Oh, strange we did not know before how near
> Our stream of life smoothed to its fated end" (p. 55).
>
> "Calming itself to the long-wished-for end" ("Maud," xviii.)
>
> "Take with a frolic eagerness the doubts" (p. 151)
>
> "That ever with a frolic welcome took" ("Ulysses").

So, too, in the song of Gwen, when she throws the rose into the stream to float to her lover—

> "Tell him, oh, sweet, sweet rose,
> That I grow fixed no more, nor flourish now
> In the silent maiden garden-ground of old,
> But severed even as thou."

It is impossible not to remember

> "Queen rose of the rosebud garden of girls" ("Maud," xxii.)

The number of such echoes which, without looking for them, we detected in reading is far too large; sometimes a similar phrase of Browning or Clough came to our memory, but Tennyson is the poet's master. Many of them are, doubtless, coincidences; some are conscious expansions of the original thought, and some may have been appropriated as the common property of the poetic guild; but an author cannot deny himself too much in resisting such temptation.

The diction is at times faulty, and the music frequently; how does the author read this line, for example:

> "And even to my high inn-chamber I seemed."

Some lines are in bad taste:

> "It is only in thought I invade her virginal peace."
>
> "Stately cities I have dreamed of,
> Naples, Rome in all her pride—
> I shall see them all, *a great lady*,
> With my husband at my side."

The italicized words contain the only indication in the poem that

the thought of worldly advantage was in the heroine's mind as an element of happiness in her love, and is very incongruous with her simple affection and trustfulness; it may be natural, but it is vulgar. It is worth while to point out these defects in detail, for the poem is, as a whole, tender, simple, chaste in feeling, and occasionally it rises to a lyrical loftiness of sentiment, or grows compact with vigorous and direct thought.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Arnold (M.), Mixed Essays	(Macmillan & Co.) $2 00
Blanc (C.), Grammar of Painting and Engraving, 3d ed	(S. R. Griggs & Co.) 3 00
Cunynghame (Gen. Sir A. T.), My Command in South Africa, 1874-78	(Macmillan & Co.) 3 50
Hammond (Prof. W. A.), Fasting Girls	(G. P. Putnam's Sons) 75
Hill (Prof. D. J.), Wm. Cullen Bryant	(Sheldon & Co.) 1 00
Improved Dwellings for the Laboring Classes, swd	(G. P. Putnam's Sons) 80
Le Goff (F.), Life of Louis Adolphe Thiers	" " 2 25
Lie (J.), The Barque *Future*	(S. C. Griggs & Co.) 1 00
Streckfuss (A.), Castle Hohenwald: a Tale	(J. B. Lippincott & Co.) 1 50
Swing (Rev. D.), Motives of Life	(Jansen, McClurg & Co.) 1 00
Wood (A.) and Steele (J. D.), Fourteen Weeks in Botany	(A. S. Barnes & Co.) 1 25

RECENTLY PUBLISHED.

THORNBURY'S LIFE OF

J. M. W. Turner, R.A.,

With Fac-similes in Colors. $2 75.

BAKER'S ENGLISH ACTORS, from Shakespeare to Macready. 2 vols., $2 50.

HENRY HOLT & CO., NEW YORK.

Artists of the Nineteenth Century and their Works.

A Handbook containing 2,050 Biographical Sketches. By Clara Erskine Clement and Laurence Hutton. 2 vols. crown 8vo, $5.

An encyclopædia of information respecting the lives, circumstances, styles, and works of the artists of this century, with full indexes that render this information easily available.

Poems of Places.

Edited by H. W. Longfellow. Vols. 25, 26. NEW ENGLAND. Vol. 27. THE MIDDLE STATES. Vol. 28. THE SOUTHERN STATES. $1 a volume.

The American volumes of this unique and comprehensive series are peculiarly interesting.

THIRD EDITION.

The Lady of the Aroostook.

By W. D. Howells. $2.

"Of all the charming stories that Howells has written, this is certainly the most charming."—*The Churchman, New York.*

A Treatise on the Law of Railroad

And other Corporate Securities, including also Municipal Aid Bonds. By Leonard A. Jones, author of 'A Treatise on Mortgages.' 1 vol. 8vo, 750 pp., law sheep, $6 50.

This work presents a full and systematic statement of the law of Corporate Securities, chiefly the bonds and mortgages of railroad companies. The peculiar nature of the property of these companies, and their public duties and relations, make their mortgages very different from those of individuals and ordinary corporations. Mr. Jones, whose masterly work on 'Mortgages' has been accepted as an authority, has produced a work of like value on the law of Corporate Securities.

NEW EDITION.

Angelo.

A Poem of Michael Angelo and Vittoria Colonna. By Stuart Sterne. $1.

"Full of interest as a mere story of the lives of two such people. It contains verses and passages of rare and peculiar beauty."—*N. Y. Times.*

*** For sale by Booksellers. Sent, post-paid, on receipt of price, by the Publishers,

HOUGHTON, OSGOOD & CO., BOSTON.

FOR ANY BOOK DESIRED—for newest styles of Stationery—for Photograph and Autograph Albums—for the only perfect Bookcase, portable, for those who board or change residences, or for permanent Library or Parlor use—address the undersigned. Buyers at a distance may safely send money order for goods to be selected by us at lowest prices. Mail your card plate to us. Best plate printing and wedding orders in the correct style. Send for samples and estimates. Circular describing the Portable Book-case sent to any address, and all enquiries in regard to books and stationery promptly and carefully answered. Address LOCKWOOD, BROOKS & CO., 381 Washington Street, Boston.

BINDER for the Nation. *convenient for receiving* the current numbers, also for permanent binder. Holds one volume. Price, in cloth, 50 cents; half-cloth, 25 cents (stamps). If sent by mail, 15 cents additional. Address THE NATION, Box 25, New York.

CHINA PAINTERS

May do their own "firing" (of small articles) in a common kitchen stove by use of the AMATEUR'S MINIATURE KILN.

Price $2. Send stamp for descriptive circular.

N. M. FORD, Port Richmond, N. Y.

For sale also by Society of Decorative Art, 34 East Nineteenth Street, New York City.

Mr. Seymour Haden's

New Etching—WINDSOR, FROM THE ETON BATHING CREEK—is now publishing by the FINE ART SOCIETY, 148 New Bond Street, London. £8 8*s*.

Mr. Haden's Notes on Etching, 1*s*. 6*d*., free by post.

Mr. Whistler's Etchings.

Fine impressions of Mr. Whistler's celebrated and rare Series of Sixteen THAMES Etchings. Can be obtained of the FINE ART SOCIETY, 148 New Bond Street, London. Price of the Set, mounted and in portfolio, 14 guineas.

Mr. Ruskin.—Illustrated Edition of his 'NOTES ON THE TURNER DRAWINGS.' This work is now ready for delivery to subscribers. India Proofs, £2 2*s*. The FINE ART SOCIETY, 148 New Bond Street, London.

JUST RECEIVED.

Mr. Seymour Haden's

NEW ETCHING,

Windsor, from the Eton Bathing Creek.

The celebrated and rare series of 25 Etchings—Etudes a l'eau-forte par Francis Seymour Haden—and a choice assortment of new French etchings.

HERMANN WUNDERLICH & CO., 880 and 882 Broadway, between Eighteenth and Nineteenth Streets, New York.

EXHIBITION OF THE SOCIETY

OF

AMERICAN ARTISTS,

KURTZ'S GALLERY, MADISON SQUARE.

LAST WEEK.

Mr. John Albee

Will read eight Lectures on the Earliest Period of English Literature and the Contemporaneous Growth of English Language, at UNION LEAGUE THEATRE, corner Madison Avenue and Twenty-sixth Street, New York, beginning March 24, 3 o'clock P.M. Course tickets, $4, at G. P. PUTNAM'S SONS, 182 Fifth Ave.

Guides for Science Teaching,

Supplementing Lectures given to Teachers of the Public Schools of Boston.

BY THE BOSTON SOCIETY OF NATURAL HISTORY.

Intended for Teachers who desire to practically instruct classes in Natural History.

No. 1. *ABOUT PEBBLES.* By Prof. Alpheus Hyatt. Price to teachers, post-paid, 15 cents.

No. 2. *CONCERNING A FEW COMMON* Plants. By Prof. George L. Goodale. Price to teachers, post-paid, 25 cents.

No. 3. *COMMERCIAL AND OTHER* Sponges. By Prof. Hyatt. Illustrated by 7 plates. Price to teachers, post-paid, 30 cents.

No. 4. *A FIRST LESSON IN NATURAL* History. By Mrs. Elizabeth Agassiz. Illustrated by woodcuts and 4 plates. Price to teachers, post-paid, 35 cents.

The above will be immediately followed by ten others on

Corals and Echinoderms, Mollusca, Worms and Crustacea, Insects, Fishes and Frogs, Reptiles and Birds, The Common Metals and Minerals.

GINN & HEATH, Publishers,

Boston, New York, and Chicago.

The Nation.

NEW YORK, THURSDAY, APRIL 3, 1879.

The Week.

THE Senate has accomplished nothing besides half-attempting a debate of Mr. Hoar's resolution declaring it revolutionary for either house to withhold appropriations as a means of coercing the other house and the President; or for both houses to do the same thing for the purpose of coercing the President. Mr. Beck objected to the debate because of the absence of Mr. Thurman, the chairman of a committee having the revolutionary business in charge. As this committee was a caucus committee unknown to the Senate, the excuse was received by the Republicans with equal hilarity and indignation. But all the same, the Senate's occupation depends on this extraneous body. The House began on Thursday the discussion of the Army Bill in Committee of the Whole, and quickly disposed of the few trifling amendments offered. The repeal of the one obnoxious phrase in the Act of February 25, 1865, though objected to as not germane and not obviously a retrenchment of expenses, was ruled to be in order by Mr. Springer, who had the chair, and the discussion began.

Mr. Garfield delivered one of his effective speeches in the House on Saturday, in opposition to the Democratic plan of tacking on a repeal of the law permitting the use of the army to preserve order at the polls to the Army Appropriation Bill, maintaining by the familiar arguments that it was an unconstitutional attempt to coerce the President. The weak point in his case was that it was based on the assumption that the President will surely refuse to sign the bill in this shape. But we believe nothing is as yet known to warrant this assumption. If he sees nothing objectionable in the repeal, he will sign, for it is agreed by both parties that there is nothing objectionable or unusual *per se* in tacking on legislation to Appropriation Bills. It has been done frequently as a matter of convenience. If, therefore, the President signs cheerfully, he will make the Republicans look rather foolish. It is quite possible, and in fact not improbable, that he will do so, for the Republicans themselves were willing to yield last session nearly everything the Democrats are contending for in order to avoid an extra session. Mr. Garfield's strongest point was that the bill it was proposed to repeal had been introduced, in 1865, by a Democrat, and that many leading Democrats had supported it; but this is hardly ingenuous. The Democrats had no difficulty in showing that the bill was a measure of restriction on the previously unlimited power in the use of the Army at the South exercised by the President, and therefore a clear gain for their side. There is a lamentable want of seriousness on both sides in the whole business. The Democratic pretence that the Act, after existing fourteen years, threatens our liberties and must be repealed in April, 1879, if this Republic is to get through the summer, is about equalled by the Republican pretence that sticking it to an Appropriation Bill is in itself "revolutionary." The debate now going on ought to have taken place after the President had vetoed the bill. Beginning it now is evidently part of the process of "firing the Northern heart." The readiness of the Democrats to fall into the Republican traps—witness Mr. Randolph Tucker's proposal to make ex-Confederates eligible for commissions in the Federal Army—it must be admitted goes far to excuse the Republicans for setting the traps.

The measure which now forms the bone of contention is entitled "An Act to prevent officers of the Army and Navy and other persons engaged in the military or naval service of the United States from interfering in elections in the States." It was approved February 25, 1865, by President Lincoln, but Senator Powell, of Kentucky, announced his intention to introduce it as early as December 9, 1863, that is, immediately after the opening of the first session of the 38th Congress, and actually brought it in (as Senate Bill No. 37) on January 5, 1864. The author of it began by offering two amendments designed to propitiate the majority, both of which were adopted. The first section originally read:

> "That it shall not be lawful for any military or naval officer of the United States, or other person engaged in the civil, military, or naval service of the United States, to order, bring, keep, or have under his authority or control any troops or armed men at the place where any general or special election is held in any State of the United States."

Mr. Powell moved to add: "unless it shall be necessary to repel the armed enemies of the United States." He also reduced the penalties affixed to a violation of the prohibition. Senator Pomeroy, of Kansas, recalling the practice of Democratic sheriffs, while that State was a Territory, of surrounding the polls with a large armed posse to overawe Free-State voters, moved to add the further qualification: "or to keep the peace at the polls," his sole object being, he said, to prevent collisions. This was adopted, by Republican votes only, and the bill finally passed on the same day by 19 to 13. Still another debate arose on the following day on a motion to reconsider, made by Senator Harlan, which was lost by yeas 19, nays 23. The bill was referred in the House to the Judiciary Committee, which reported it favorably at the next session, on February 22, 1865, when on motion of the chairman, Mr. Wilson, of Iowa, it was passed *without debate* under the previous question by 113 to 18, among the nays being Messrs. Ashley, Winter Davis, Garfield, Kelley, and Thaddeus Stevens.

The issue raised by the bill was the constitutional right of the commander-in-chief to determine the qualifications of voters and control the elections in loyal States; and the grievance complained of was not imaginary, nor was it contested by the Republicans in the debate. Under various generals—Burnside in Kentucky, Schofield in Missouri, McClellan and Dix in Maryland, and Dix and Schenck in Delaware—the right of the military authorities to protect Union voters and to purge the polls of rebel sympathizers and returned rebels, by imposing oaths of allegiance and making arrests, was asserted and exercised. There was no constitutional excuse for this except constructively under the "war-power"; and the Republicans were frank enough to admit it, Senator Harlan even saying:

> "In a time of peace, I agree, there being no necessity for the exercise of this tutelary authority which I have referred to, it would be incompetent for Congress to pass any law relating to the qualification of electors in any State, or in any way regulating their elections."

A conscientious perception of this, joined to the confidence in the speedy overthrow of the rebellion inspired by the midsummer victories of Gettysburg and Vicksburg, doubtless led Senators Grimes, Hale, Harlan himself, Harris, Pomeroy, Trumbull, and Wade to vote for the bill; just as a desire to evade the constitutional argument led the Republicans primarily to refuse to refer the bill to the Judiciary Committee, giving it instead to Senator Wilson's Committee on Military Affairs. Senator Pomeroy's amendment, a purely casual one, was of course deprecated and opposed by the Democrats, who insisted that the State authorities could keep the peace at the polls, and that the amendment would nullify the main object of the bill. In fact, however, they consented to give a positive and definite sanction to military interference rather than lose the bill. A year later, on the eve of the collapse of the rebellion, when the Border States had ceased to be a concern to the Unionists, and above all when Mr. Lincoln had been re-elected, the House cared little for the enactment one way or the other. No one foresaw its bearing on the momentous question of Federal police, in time of peace, at elections for Federal officers, then conceded to be under the "tutelary authority" of the States; nor did any one who op

posed it as reactionary, dream that it would one day be defended as (to borrow the happy phrase of the New York *Staats-Zeitung*) an instrument of "historical development."

They are having a delightful time in Congress on both sides, in the complete absence of all serious business. One side is giving loud utterance to the "rebel yell," while the other is rescuing Anthony Burns from the custody of the United States Marshal in Boston. A little paper in Mississippi, the Okolona *Gazette*, said to be edited by an Ohio carpet-bagger, and enjoying a circulation of three hundred and fifty, has been "thanking" God that the Confederates have at last "captured the Capitol." Mr. Frye, of Maine, had the article solemnly read at the Clerk's desk, but warned the rebels on the other side that they had not got possession of the Capitol yet, and "under God" they never would. This brought great applause from the Republican side. Mr. Chalmers, of Mississippi, compared Mr. Conger to a court-jester, thus greatly encouraging the Democrats, but they were bitterly cast down when Conger retorted by comparing Chalmers to a monkey on a hand-organ, which correspondingly elated the Republicans. The Republicans are likely to be helped by a kind of mania among the negroes, which is leading them to quit Louisiana and Mississippi in great numbers, some who are well-off selling everything they have at a sacrifice in order to get away to Kansas. Two thousand are said to have reached St. Louis in a state of great destitution. According to the rebels, this is all due to the machinations of Yankee agents; according to the Union soldiers, it is due to a desire to escape from bull-dozing and cheating. Whichever it be, it is pretty certain that the great majority of the poor people will not better their condition, as in Kansas they will be brought into competition with some of the most energetic labor in the world.

The evidence of Mr. Gorham, the Secretary of the Republican Executive Committee, before the Wallace Committee is edifying reading from the civil-service reform point of view. The assessing of Government employees for political purposes has been positively forbidden by statute, but the Republican Committee seems to have considered the statute a sort of joke and their liberty of action complete. Gorham says their "feeling against assessments" was unanimous, and they magnanimously resolved that the contributions should be "voluntary." They accordingly sent round agents to dun the unfortunate and poorly-paid clerks, and actually raised one per cent. from them on their salaries, amounting in all to $93,000. The whole campaign fund raised amounted to only $106,000, so that all which that portion of the party which does not get its living out of the public Treasury contributed to save the country from the Democratic "revolutionists" was $13,000. The rest was extorted from the civil servants of the Government, who have of right no more interest in saving the country than anybody else, and who are already wretchedly paid. Moreover, Gorham perverted the money, for he used some of it to circulate very silly twaddle of his own, in which he sought to belittle the financial question and encourage the inflationists. And yet when the Democrats come into power there will be a great outcry if they dismiss from the public service the persons whose salaries furnished last year eighty-eight per cent. of the total cost of the Republican canvass.

Tilden has been unusually active of late for an old paralytic with "transparent hands" and all his faculties gone except his memory. After procuring the election of a "notorious squire" in the Philadelphia municipal election and getting the keeper of the Auburn Penitentiary dismissed, he brought about the election of Mr. Randall as Speaker of the House and got Congressman O'Reilly put out of the Brooklyn Board of Aldermen; had the Police Commissioners called on to show cause why they should not be removed, and had Gumbleton the County Clerk dismissed and the office seized at daybreak by Thompson. He then redistricted the State of Indiana, "sold out" of the Elevated Railroad, making a profit of three millions, and put a Democrat into a Florida seat in the House which rightly belonged to a Republican, and is now trying to coerce the President by tacking revolutionary legislation to appropriation bills. In addition to this he is directing the operations of a large band of hired men who are disseminating falsehoods invented by himself. These are only a few of his public "moves." His private "moves" are not, of course, easily watched, but they are far more numerous and nefarious, and consist of various forms of fraudulent speculation and railroad and steamboat wrecking. He probably in leisure moments sends little boys to the banks with forged checks, and waits round the corner for the money. It is a favorite trick with him to give out after "a move" that it is Green's or some other man's "move," inasmuch as if his own hand were in it it would have been done differently, and so on.

The appointment of Mr. Andrew D. White to the Berlin mission is a very fortunate solution of what the Administration has, we believe, found a very troublesome problem. Mr. White is a gentleman whose character and attainments and position fully fit him for the place, and he is a graduate of the University of Berlin, and will, therefore, be at home among German scholars, as well as among German statesmen. The one flaw in his equipment is his respect for Mr. Roscoe Conkling as a politician, which in an educated man is hard to understand, and must in charity be set down to youthful associations and memories. It is difficult to believe that anybody who thinks Mr. Conkling a statesman can have a very high political ideal; but Mr. White's political ideal, nevertheless, is high, and he preaches it with courage and fervor on all proper occasions. Few men in the country have given more attention to the philosophy of politics, or have done more to promote the study of it. But we doubt much if he has mastered the Arthur-Cornell case, or if Mr. Conkling would consider anybody who was not familiar with it fit for a high public office.

A Justice of the Court of Appeals has been shot dead in the public street in Kentucky by a defeated litigant. In Georgia, the other day, a leading citizen was shot because he used a power of attorney for the sale of a contract. In Virginia, a young man in a shoe-store has been killed for not admitting that he had insulted a lady, whose name was not communicated to him, when fitting a pair of boots. In Texas, two peaceable men, actors, have been shot by a "detective" for objecting to having a lady who was travelling with them called names. The affrays in the public streets —that is, of attempts to kill which are not successful—which are reported in the Southern papers, are almost beyond counting. An ex-Congressman, who committed suicide in Tennessee the other day, slew himself with a pistol he had borrowed from a friend on the pretence that he expected "a difficulty," that is, a fight with somebody on the public high-road like a breech-clouted Sioux or Zulu. It is only within a month that order has been restored in Breathitt County, Kentucky, by the militia; the male inhabitants of that district having passed the previous year literally in lying in wait for each other with guns behind bushes and banks.

The newspapers condemn these things, but only in a half-hearted way, for the simple reason that public opinion at the South does tolerate murder as an expression of hatred, and only reprobates and punishes it when it is a means or accompaniment of robbery or rape. The Southern community is, in short, on this subject, in a condition of gross barbarism, as low as that of Kurdistan and lower than that of the Corsican mountaineers. If it supposes that any permanent and abounding prosperity can come to a region in which life is held so cheap it is hugely mistaken. No country in the world has yet prospered until it gave up the practice of assassination. Even in duelling countries like France a man need not fight if he does not please to do so. It is only in Asia Minor and the mountain regions of Afghanistan and the Southern States that persons are liable to be "shot on sight" if their neighbors are displeased with them. We had hoped in this part of

the world that these savage "ante-bellum" customs were dying out, but they seem to be strong as ever. What the South needs even more than capital or immigration appears to be a stock of skilful and industrious hangmen. Pennsylvania in hanging nineteen "Mollie Maguires" within the last two years for killing people whom they disliked in a business way, put the imperilled prosperity of the State on a sure and lasting foundation. The old joke about the shipwrecked sailor who "thanked God he was in a civilized country" because when he got ashore he saw a gibbet with a man hanging on it, was not so much of a joke as it seems. Plenty of gibbets with one murderer at least on each is what the South needs for that much-talked of job, "the restoration of her waste places."

The Virginia State debt has at last been settled by the passage of the McCulloch bill. Registered and coupon bonds are to be issued, dated January 1, 1879, the principal payable in 1919, with interest at three per cent. for ten years, four per cent. for the next twenty years, and five per cent. for the last ten years. The State has the option to redeem any or all of the bonds by paying the principal and accrued interest at any time after the expiration of ten years from January 1, 1879. The coupons will be receivable at maturity for all taxes and dues of the State, and the bonds and coupons are non-taxable. This settlement has been violently opposed by a party known as the Forcible Readjusters, who objected to any rate of interest greater than three per cent. and to the tax-receivable feature of the coupons. They prevented the passage of the bill during the regular session of the Legislature, thus making an extra session necessary at an expense of $40,000 to the embarrassed treasury of Virginia, and this too when they were pretending that the State could not afford to pay the interest on its debts. On the other hand, the press and members of the Conservative party, which contains the best elements of the people, have all along been as strongly in favor of an honest and speedy settlement as the bondholders could desire, and it is through their perseverance that the difficulty has been satisfactorily solved. The bill is, in fact, satisfactory enough. The State can now pay three per cent. without any additional taxation, and time is given for recuperation before any increase of interest is made. The bondholders are secured by the tax-receivable feature of the coupons.

In Wall Street the money market has been seasonably active during the week, but the usual drain of currency from the New York banks was felt more than usual because of the previous drains into the Treasury on account of 4 per cent. bond subscriptions, and the shipments last week to New Orleans to fortify the banks of that city. The reserve of the New York banks was reduced last week to about $3,000,000, the lowest for several years. As settlements to the extent of $150,000,000 on account of the refunding operations of January were due in the month of April there was considerable anxiety, and the Secretary of the Treasury early in the week instructed the Treasurer in a way that should relieve apprehension. In short, he directed that no money should be drawn from the banks in payment of 4 per cent. bonds until money had been paid out by the Treasury for 5-20 bonds redeemed. This was a valuable guarantee, and when it became known on the last day of March that a very large part of the April settlements had been anticipated the public mind became settled, and the fact that money commanded fully 7 per cent. was looked upon as a temporary matter, to be relieved soon by the Treasury payments and the ordinary commercial currents of money; these currents run towards New York from the middle of April until midsummer. Notwithstanding dear money the Stock Exchange markets were strong, and even sterling bills advanced. The subscriptions to the 4 per cent. bonds began late in the week, and a call for the redemption of another $10,000,000 of 5-20s was issued, making $280,000,000 issued this year. The London silver market early in the week was strong, the price rising from 49¾*d.* to 50 3/16*d.* per oz.; later there was a decline to 49⅝*d.* At the close of the week the bullion value of the 412½-grain silver dollar was $0.8391; the highest for the week was $0.8469; and the lowest, $0.8372.

In England the Ministry won an easy victory in the Lords on a motion censuring Sir Bartle Frere, the High Commissioner at the Cape, for having brought on the war with Cetewayo (pronounced Ketchwyo) by sending him an ultimatum which the Home Government had not seen, and disapproved of when it did see it. He was defended successfully by the plea that it was the one mistake of an able man who had rendered inestimable service in bringing about the Confederation of the South African Colonies, and that the Government would not be bound by it in their future dealings with the Zulus. Since then the weightier charge of having begun the war before he was ready has been made against him, with the support derived from the Isandula disaster, and he has been debated in the Commons, but the Government again escaped with a majority of 306 to 246, which is less than it has yet had and is really a defeat. The Marquis of Hartington made a strong point against them that Sir Bartle Frere had submitted plans of campaign as early as January 9, which must have made them aware that he was bent on an early fight. The public is waiting with much anxiety for news from Colonel Pearson, who was in command of one of the invading columns when the Isandula disaster occurred, and was left high and dry by it at Elkowe, a place about forty miles from the frontier. He is entrenched there with thirteen hundred men, and a supply of provisions which must be run out by this time. A relieving column was about to start at the date of the last advices.

The gloom in the commercial situation in England continues unabated, and the process of reducing wages in all trades to the point at which successful competition in foreign markets will become possible, goes on relentlessly, in spite of the desperate resistance of the operatives by strikes. Within the present year the reduction will probably be complete. Lord Beaconsfield, speaking in the House of Lords on the agricultural depression, put the depreciation of property in the landed interest at $400,000, and estimated the amount of land which has gone out of cultivation at 1,000,000 acres. The prevailing feeling of uneasiness is being intensified every day by the revelations of weakness among the joint-stock banks. The Mercantile Bank of India, London, and China announces that it is in difficulties and will have to use up its reserve in getting out of them. The Oriental Bank, a short time ago, made a similar announcement, and this gives the final shake to the credit of the Eastern trade. The unfortunate shareholders of the Glasgow Bank have received a final call for $10,500, which it is supposed will ruin all who still survive. What makes this catastrophe all the more shocking is that a considerable number of the shareholders held the shares simply as trustees, under marriage settlements and the like; but the law holds them personally liable, to the last cent of their personal property.

The Bulgarians have now, it is said, fully seventy thousand men under arms, and fairly drilled; and there is every reason to believe that if disturbances broke out in Eastern Rumelia they would be used against the Turks. The fact of the existence of this force, too, renders disturbances in Eastern Rumelia all the more likely, and the people have given unmistakable signs of their determination not to let the Turks occupy the Balkans peaceably. This has so far disarranged the Beaconsfield programme that the Powers have agreed that a joint occupation of the province will be necessary to prevent Turkey from having to fight for this remarkable bulwark against Russian aggression. England, Austria, Russia, and Turkey are to furnish twenty-five hundred men each for this purpose; the Russian contingent to occupy the Balkan side. Turkey is much troubled by this arrangement, but, acknowledging it to be inevitable, is trying to stipulate that her contingent shall be larger than the others, so as to preserve some sign of her suzerainty. The Bulgarian Assembly declines to permit their prince to be tributary to the Sultan.

CONGRESSIONAL CONTROL OF FEDERAL ELECTIONS.

IF the controversy over the means of securing free and fair elections now raging in Congress were somewhat more serious than it is—that is, if each side was not so much occupied in making the other "put itself on record" in a damaging manner—there can be little doubt that a satisfactory solution of the problem could be readily reached. Every intelligent and candid man in the country knows well that neither the Democratic nor the Republican description of the situation is correct. It is not true that Federal voters at the South need no more protection now than they did before the war, or that the State authorities are as likely to furnish such protection as they were before the war; nor is it true, on the other hand, that the machinery provided for this purpose by the Republican party is free from very grave objections. Whether the bestowal of the suffrage on the blacks was wise or foolish, the fact is that they now possess it, and that they are not competent, as an equal number of white men would be, to protect themselves in the enjoyment of it. As long as they do possess it, however, the whole country is interested in the highest degree in seeing that, at the polls at least, they can vote without let or hindrance. With the motive which determines a voter's will prior to his coming to the polls, whether fear or favor, the law cannot well interfere. There is no legal method of making a voter pure and patriotic in the intention with which he casts his ballot; but the law can provide that a man who does desire to cast his ballot honestly shall be able to cast it at the proper place and proper hour without danger to life or limb or property.

That a certain class of voters, and these the feeblest and most helpless, are likely to have considerable difficulty in doing this in certain parts of the country, and that in those parts of the country the State government is not likely to protect them efficiently in doing it, are well-known facts. It may be undesirable that there should be such voters, but as long as there are such voters their inability to vote securely, if witnessed on a large scale, would rapidly bring representative government into utter contempt. No government can support with impunity the caricaturing of the process by which it obtains its authority and vitality. The spectacle of large bodies of voters kept from the polls by systematic fraud or force in one State would soon exert a powerful influence in discrediting universal suffrage in every other State. We are all, therefore, strongly interested in having the negroes vote freely as long as they have the legal right to vote, especially for the men who in the National Legislature are to make laws for the whole country.

But it is not true that there is nothing objectionable in surrounding the polls with supervisors and marshals and deputy-marshals with powers of challenge and arrest, such as they possess under the statute over which the two parties are now quarrelling in Congress. It is not true that when Mr. John Davenport, on election day in this city, seizes on everybody whom he suspects, even on good grounds, of being armed with fraudulent naturalization papers, he is rendering the public a service of unmixed good, or that those who object to his performances necessarily look on cheating with a kindly eye. The powers with which the supervisors and deputy-marshals are armed may be fairly complained of on the ground, which has received singularly little attention in all this controversy, that to challenge a voter wherever the ballot is secret, and arrest and carry him away from the polls for offering to vote, is to inflict on him summarily a very severe penalty—the deprivation of the franchise—which ought not to be inflicted on any one without a proper judicial enquiry. If he has been wrongfully challenged under the present law, the injury done him and his party is irreparable; for, the election over, his opportunity of voting is gone. It is true that the law provides that when arrested by the deputy-marshals—to whose number, by the bye, there need be on election day no limit—he shall be carried before a United States Commissioner, and there be dealt with according to the ordinary process of law. This may be a sufficient protection for his liberty, but it is no protection at all for his vote. The United States Commissioner may be, as he is in this city, a strong political partisan, with a profound belief in the dishonesty of everybody who votes the opposition ticket, and the special deputy-marshals may be, and indeed are, pretty sure to be active workers of the party in power. It is open to any of the deputy-marshals to seize and carry off from the polls any person who offers to cast what they on the spot, in the midst of the turmoil, may choose to consider a fraudulent vote, and to take him before a Commissioner, who may delay his examination until the close of the day. There would be no great harm in this under a system of open *viva-voce* voting, because the challenged voter would state for whom he intended to vote; and if it were subsequently ascertained that the challenge had no foundation, the vote, if necessary, could be counted. But under our secret ballot the challenged voter cannot tell for whom he means to vote. There is at present no arrangement for receiving or recording such information, and there is no way of compelling the voter to furnish it. If, therefore, he is for any reason, whether just or unjust, removed from the polls before voting, his vote is absolutely lost, although it should be clearly proved afterwards that his removal was unwarranted or malicious. Moreover, the two supervisors are not obliged to agree upon a challenge; either of them may challenge. The supervisors, too, in cities of over 20,000 inhabitants, the marshals and deputy-marshals may not only challenge but arrest and take into custody, with or without process, any person accused by them of offering to cast a fraudulent vote in their presence. Practically, therefore, there is no limit to the number of voters whom the United States marshal may carry off from the polls and deprive of their votes, and the only satisfaction the voter can get is his subsequent discharge from custody by the United States Commissioner.

It is hardly necessary to say that the bestowal of these extraordinary powers on the class of persons who usually fill the office of marshal and deputy-marshal would never have been thought of by any party in calm and quiet times. It was the product of the passion, partly philanthropic and partly warlike, of the period of reconstruction. Nor would it have been thought of by any party which did not feel, as the Republican party did after the war, that it would retain control of the Government for an indefinite period. A very large part of the reconstruction legislation was shaped under the influence of the notion, which now seems so strange, that the Democrats could not possibly come back to power. Otherwise the Enforcement Act, which, whenever there is a Democratic President in the White House, will enable Democratic marshals to remove negro voters from the polls by the hundred, would never have been devised as a means of securing free elections. It really seems to have been conceived with the best of intentions and to have covered no purely partisan design, as far as Congress was concerned. Its defects are due to a sort of simple-minded faith in the eternity of Republican rule.

The prevention of fraudulent voting at Federal elections is likely to be as necessary, at least in the large cities, at the North as in the South, and to prevent it there must be some person at the polls empowered to prevent persons suspected of fraud from irrevocably casting their ballots. But a law which enables any officer summarily to deprive a citizen of his vote at the polls because he suspects him of fraudulent intent, will never be quietly accepted by the party in opposition; and it ought not to be, particularly when United States marshals get their places as a reward for their partisan activity. What is needed is the means of keeping the man's vote in suspense until the question of his guilt or innocence is enquired into by a judicial authority. He should, therefore, when challenged, be allowed to cast his ballot on declaring for which candidate or candidates he voted, and then, if he were convicted on enquiry, his vote could be thrown out by the canvassers, or by Congress, in case of a contest before that body; if he were acquitted, it would stand. We make this suggestion on the supposition that the practice of filling offices charged with delicate and important duties, like the United States district-attorneyships, marshalships, and commissionerships with red-hot political partisans, who feel that at every

election they are fighting for their bread, is to be maintained for a good while to come. As long as it is maintained they can never be made acceptable protectors of electoral purity, and voters will need protection against them.

A NEW KIND OF STATE CONSTITUTION.

THE Convention which has recently completed its work in California has reported a new constitution, which will be voted upon on the first Wednesday of May next. The work of the Convention deserves more than ordinary attention, because it is the result of a movement new in American politics. Hitherto constitutional conventions have generally been in the hands of a very conservative class, and usually have been controlled by lawyers. In California the anti-Chinese party, combined with the Communists under Kearney, have exercised such an influence in politics during the past year or two that a powerful minority of the Convention was led by statesmen of the Kearney order. Antecedently, therefore, it might be expected that the new instrument would be somewhat unlike those drawn up for American States hitherto, and such is most certainly the fact.

A State constitution may be regarded as the most complete expression by an American community of its fundamental and permanent ideas of law and government. The constitutions of the Revolutionary and pre-Revolutionary period may be said, in a general way, to have consisted of three parts—*first*, provisions relating to the formal organization of the government; *second*, a definition of the powers of the three branches of the government; *third*, a few positive provisions for the protection of the person and property of the citizen, including habeas corpus, trial by jury, etc. These provisions, however, were not at all new, but drawn directly from the same source from which the common law of the various States came—the English statute-book. Indeed, with regard to them it would not be unfair to say, considering the supposed revolutionary origin of American constitutional law, that what is most remarkable about them is not their novelty but their antiquity; the great body of them having been taken from English statutes passed in the reigns of Charles II. and James II., while some of the most important of them go back to the time of John. These safeguards of life, liberty, and the pursuit of happiness had already proved their value to so many generations of Englishmen and Americans that it was by no figure of speech that they were generally termed then, as they have ever since been, a common birthright.

In the hundred years which have elapsed since the Revolution the spirit of constitution-making in the various States has undergone several marked changes which have attracted more or less attention and criticism. The first serious change, of course, was that which swept through all the States thirty years ago, and introduced universal suffrage and an elective judiciary. Whether this be regrettable or no, it is impossible to deny that the men who were responsible for the change sincerely believed in it. They were drawn, too, as a general thing from a class competent to form an opinion on the basis of suffrage, and the conventions which incorporated the change into the fundamental law were guided by the same traditions and notions of the foundations on which society rests as their predecessors had been. The next change in the spirit of constitution-making which attracted notice was that which made its appearance in several constitutions ten years or more ago—most noticeable, perhaps, in the constitution of Illinois of 1870—in the direction of placing great restrictions upon the power of the legislature, and upon the sovereign right through the legislature to incur debt. In the old constitutions the branch of the government which had been restricted in its functions was the executive. Almost all the grievances from which the American colonies had suffered in the last century (as may be seen from the long list of the "repeated injuries and usurpations" which are enumerated with each recurring Fourth of July by every village orator who is charged with the duty of reading the Declaration of Independence to his fellow-townsmen) were laid by them at the door of the king, and consequently in the old constitutions the official who was most hedged about with definitions and restrictions was the governor. The purpose in view was entirely accomplished. There has probably never been in the history of the world any executive who has made so few encroachments upon popular rights as the governor of the American State. But in carefully guarding these rights from encroachments in one quarter they had omitted to protect them from assaults in another; and it soon became clear that the legislature might become by means of special legislation, and its power of saddling the State with debts, quite as dangerous to popular government, although in a different way, as kings had been in their own. Consequently in the later constitutions, of which the Illinois constitution is a type, the power of incurring indebtedness and of special legislation is limited in every way. These new safeguards have been found to work well, and in the States in which they have been longest in operation have improved the tone and character of legislation and strengthened the public credit.

A comparison of the earlier constitutions with those recently adopted, however, shows that in one important respect there has been a decline in the art of constitution-making. The point to which we refer is this: In the older constitutions, as has been shown, the framers of the instrument were always careful to incorporate provisions affecting life, liberty, and property, which formed a fundamental part of the common laws of England and America; and the great advantage which was gained by incorporating them into a written constitution was that they were removed from the power of the legislature and made irrepealable except by constitutional amendment. They became part of a law which is superior to all mere legislative acts, and in case of conflict overrides them. Of late years, however, it has become more and more common for demagogues to attempt to make use of constitutional conventions, just as the legislature is made use of every year, by getting them to adopt, for the purpose of appeasing some popular cry, a mass of heterogeneous provisions applicable to the law of persons and property, concocted on the spur of the moment, and embodying no fundamental economical or legal principle tested by the experience of generations, but forming a sort of popular pronunciamiento on a half-understood subject, the actual effect of which the framers themselves cannot foresee. Illustrations of this tendency might be taken from several of the recent constitutions, but that just drawn up in California is the first one in which it has reached a dangerous climax.

The evils and abuses which the Convention undertook to cure and abate were, first, of course, the Chinese difficulty; second, a number of evils which are not peculiar to California, but have appeared in half the States of the Union within the past ten or twelve years—*e. g.*, the escape of large amounts of personal property from taxation, secret combinations by powerful corporations adverse to public interests, the delay of justice owing to the crowded calendars of the courts, excessive rates of toll or service by railroad, telegraph, and gas corporations, corruption in the legislature, gambling in shares of mining companies. When we examine the new constitution to see how the California Convention has dealt with these questions, we find that its most marked characteristic is that it contains some novel and ingenious provision with regard to each of them. In the first place, it proposes to bring stock-gambling to an end by giving to the legislature power to pass laws either to regulate "or *prohibit* the buying and selling of the shares of the capital stock of corporations in any stock board, stock exchange, or stock market under the control of any association." Excessive charges by gas and telegraph companies are brought to an end by directing the legislature to pass laws "for the regulation and limitation of the charges for services performed and commodities furnished" by such corporations. Even charges for "storage and wharfage" are provided for in a similar way, whether made by corporations or *individuals*. Section 35 of the same article brings the corruption of the legislature to an end by declaring "lobbying" (which is made to embrace the somewhat vague offence of seeking to influence the votes of legislators by "intimidation") a felony. The

judiciary article contains a section intended to prevent any further delay or denial of justice in California. It provides that no judge of either Supreme or Superior Court shall draw his monthly salary unless he make oath that no cause remains in his court undecided *which has been submitted for decision for the period of ninety days.* The labor question is disposed of by making eight hours a legal day's work on all public works. Finally, corporations "other than municipal" are handled without gloves. Stock-watering is prevented by declaring any stock issued except for value of some kind received to be "void." For the regulation of railroads a board of commissioners is created with a general power "to establish freight and passenger rates for all transportation companies"; any one who charges more than the rate established is liable to a fine of $5,000 or imprisonment for a year.

Citizenship is, of course, restricted to natives or foreigners not of Mongolian blood, and corporations are prohibited from employing Chinese labor. The old provision that taxation shall be "equal and uniform" is struck out, apparently for the purpose of enabling the Legislature to impose an income-tax increasing with the income. As the new constitution does not prevent the imposition of taxes upon the principal as well, it looks as if the "money kings" of "Nob Hill," as Kearney calls them, would certainly catch it this time. Many of the sections directed against abuses by corporations are so worded as to be almost unintelligible. Railroad companies, for instance, are forbidden to make contracts with vessels plying to California ports, "by which the earnings of one doing the carrying are to be shared by the other not doing the carrying." Whenever a railroad lowers its rates of transportation for the purpose of competing with another railroad, there is to be no increase of rates afterwards without the consent of the government.

Such a farrago as this is a novelty in American constitutional law. Of course it is not difficult to see that much of it will never have any lasting effect upon the social and legal machinery in California, because much of it cannot be carried into effect in any civilized country. Some of it will be explained away by the courts, some of it will be rendered null by the corruption of the officials who are elected to execute it. But as it stands it is not the constitution of a civilized state, but of a civilized state the management of whose affairs has partly fallen into the hands of barbarians. Instead of confining itself, with regard to the ordinary rights of person and property, to a simple declaration of those permanent and settled principles to which, as we have shown, the earlier constitutions always confined themselves, it has embodied in the fundamental law of the State a mass of heterogeneous and confused edicts, representing nothing more substantial than those gusts of popular passion which hitherto have spent themselves in primaries or in the election of party candidates, or at most in laws passed *subject* to overruling by the judicial interpretation of a constitution based on fixed principles. That they should now have reached and so largely controlled the action of a constitutional convention is a bad sign. So far as such a constitution as that proposed in California fails of the evident objects of its authors, it tends to bring all laws and constitutions into contempt. So far as it succeeds, it marks the first incorporation into American constitutional law of pure communism.

AN ENGLISH WINTER WATERING-PLACE.

London, March 18, 1879.

I HAVE just been spending a couple of days at a well-known resort upon the Kentish coast, and though in these circumstances there was nothing particularly novel or significant in my situation, yet, as to the truly observing mind no opportunity is altogether void and no impressions are wholly valueless, I have it on my conscience to make a note of my excursion. Superficially speaking, it was certainly wanting in originality; but I am afraid that it afforded me as much entertainment as if the idea of paying a visit to Hastings had been an invention of my own. This is so far from being the case that the most striking feature of this locality is the immense provision made there for the entertainment of visitors. Hastings and St. Leonard's, standing side by side, present a united sea-front of more miles in length than I shall venture to specify. It is sufficient that in going from one end of the place to the other I had a greater sense of having taken a long, straight walk, than I had done since I last measured the remarkable length of Broadway. This is not a strikingly picturesque image, and it must be confessed that the beauty of Hastings does not reside in a soft irregularity or a rural exuberance. Like all the larger English watering-places it is simply a little London *super mare.* There is always picturesqueness to be found in England if one will take the trouble of looking for it; but it must be conceded that at Hastings this element is less obtrusive than it might be. I had heard it described as a "dull Brighton," and this description had been intended to be what is vulgarly called a "crusher." In fact, however —such is the perversity of the enquiring mind—it had rather quickened than quenched my interest. It occurred to me that it might be entertaining to follow out the variations and modifications of Brighton. Four or five miles of lodging-houses and hotels staring at the sea across a "parade" adorned with iron benches, with hand-organs and German bands, with nursemaids and British babies, with ladies and gentlemen of leisure—looking rather embarrassed with it and trying, rather unsuccessfully, to get rid of it—this is the great feature which Brighton and Hastings have in common. At Brighton there is a certain variety and gayety of color—something suggesting crookedness and yellow paint—which gives the place a kind of cheerful, easy, more or less vulgar, foreign air. But Hastings is very grey and sober and English, and, indeed, it is because it seemed to me so English that I gave my best attention to it. If one is attempting to gather impressions of a people and to learn to know them, everything is interesting that is characteristic, quite apart from its being beautiful. English manners are made up of such a multitude of small details that the picture a stranger has mentally formed of them is always liable to receive new touches. And this, indeed, is the explanation of his noting a great many small points, on the spot, with a degree of relish and appreciation which must often, to people who are not in his position, appear exaggerated. He has formed a mental picture of the civilization of the people he lives among and whom, when he has a great deal of courage, he makes bold to say he is "studying"; he has drawn up a kind of tabular view of their manners and customs, their idiosyncrasies, their social institutions, their general features and properties; and when once he has suspended this rough cartoon in the chambers of his imagination, he finds a great deal of occupation in touching it up and filling it in. Wherever he goes, whatever he sees, he adds a few strokes. That is how I spent my time at Hastings.

I found it, for instance, a question more interesting than it might superficially appear, to choose between the inns—between the Royal Hotel upon the Parade and an ancient hostel—a survival of the posting-days—in a side street. A friend had described the latter establishment to me as "mellow," and this epithet complicated the problem. The term mellow, as applied to an inn, is the comparative degree of a state of things of which (say) "musty" would be the superlative. If you can seize this tendency in its comparative stage you may do very well indeed; the trouble is that, like all tendencies, it contains, even in its earlier phases, the germs of excess. I thought it very possible that the "Swan" would be over-ripe; but I thought it equally probable that the Royal would be crude. I could claim a certain acquaintance with "royal" hotels—I knew just how they were constituted. I foresaw the superior young woman sitting at a ledger, in a kind of glass case, at the bottom of the stairs, and expressing by refined intonations her contempt for a gentleman who should decline to "require" a sitting-room. The functionary whom in America we know and dread as a hotel-clerk belongs in England to the sex which, when need be, has an even more perfect command of the supercilious. Large hotels here are almost always owned and carried on by companies, and the company is represented by a well-shaped female figure belonging to the class whose members are more particularly known as "persons." The chambermaid is a young woman, and the female tourist is a lady; but the occupant of the glass case, who hands you your key and assigns you your apartment, is designated in the manner I have mentioned. The "person" has various methods of revenging herself for her shadowy position in the social scale, and I think it was from a vague recollection of having on former occasions felt the weight of her embittered spirit that I determined to seek the hospitality of the humbler inn, where it was probable that a solitary gentleman who should after all decide to indulge in the luxury of a sitting-room would be treated as a prince. Once established at the "Swan," in the sitting-room, the whole affair was as characteristically English as I could desire.

I have sometimes had occasion to repine at the meagreness and mustiness of the old-fashioned English inn, and to feel that in poetry and in fiction these defects had been culpably glossed over. But I said to myself the other evening that there is a kind of venerable decency even in some of its dingiest idiosyncrasies, and that in an age of vulgarization one should do justice to an institution which is still more or less of a stronghold of the ancient amenities. It is a satisfaction in moving about the world to be treated as a gentleman, and this gratification appears to be more than, in the light of modern science, a Company can profitably undertake to bestow. I have an old friend, a person of admirably conservative instincts, from whom, a short time since, I borrowed a hint of this kind. This lady had been staying at a small inn in the country, with her daughter; the daughter, whom we shall call Mrs. B., had left the house a few days before the mother. "Did you like the place?" I asked of my friend; "was it comfortable?" "No, it was not comfortable; but I liked it. It was shabby, and I was much overcharged; but it pleased me." "What was the mysterious charm?" "Well, when I was coming away, the landlady—she had cheated me horribly—came to my carriage, and dropped a curtsy, and said: 'My duty to Mrs. B., ma'am.' Que voulez-vous? That pleased me." There was an old waiter at Hastings who would have been capable of that—an old waiter who had been in the house for forty years, and who was not so much an individual waiter as the very spirit and genius, the incarnation and tradition, of waiterhood. He was faded and weary and rheumatic, but he had a kind of mixture of the paternal and the deferential, the philosophic and the punctilious, which seemed but grossly requited by a present of small coin. I am not fond of jugged hare for dinner, either as a light *entrée* or as a *pièce de résistance;* but this accomplished attendant had the art of presenting you such a dish in a manner that persuaded you, for the time, that it was worthy of your serious consideration. The hare, by the way, before being subjected to the mysterious operation of jugging, might have been seen dangling from a hook in the bar of the inn, together with a choice collection of other viands. You might peruse the bill of fare in an elementary form as you passed in and out of the house, and make up your *menu* for the day by poking with your stick at a juicy-looking steak or a promising fowl. The landlord and his spouse were always on the threshold of the bar, polishing a brass candlestick, and paying you their respects; the place was pervaded by an aroma of rum-and-water, and of commercial travellers' jokes.

This description, however, is lacking in the element of gentility, and I will not pursue it further, for I should give a very false impression of Hastings if I were to omit so characteristic a feature. It was, I think, the element of gentility that most impressed me. I know that the word I have just ventured to use is under the ban of contemporary taste; so I may as well say outright that I regard it as indispensable in almost any attempt at portraiture of English manners. It is vain for an observer of such things to pretend to get on without it. One may talk of foreign life indefinitely—of the manners and customs of France, Germany, and Italy—and never feel the need of this suggestive, yet mysteriously discredited, epithet. One may survey the remarkable face of American civilization without finding occasion to strike this particular note. But in England no circumlocution will serve—the note must be definitely struck. To attempt to speak of an English watering-place in winter and yet pass it over in silence, would be to forfeit all claims to analytic talent. For a stranger, at any rate, the term is invaluable—it is more convenient than I should find easy to say. It is instantly evoked in my mind by long rows of stucco-fronted houses, with a card inscribed "Apartments" suspended in the window of the ground-floor sitting-room—that portion of the dwelling which is known in lodging-house parlance as "the parlors." Everything, indeed, suggests it—the bath-chairs, drawn up for hire in a melancholy row; the innumerable and excellent shops, adorned with the latest photographs of the royal family and of Mrs. Langtry; the little reading-room and circulating library on the Parade, where the daily papers, neatly arranged, may be perused for a trifling fee, and the novels of the season are stacked away like the honey-combs in an apiary; the long pier, stretching out into the sea, to which you are admitted by the payment of a penny at a wicket, and where you may enjoy the music of an indefatigable band, the enticements of several little stalls for the sale of fancy-work, and the personal presence of good local society. It is only the winking, twinkling, easily-rippling sea that is not genteel. But, really, I felt like saying at Hastings that if the sea were not genteel, so much the worse for Neptune; for it was the favorable aspect of the great British proprieties and solemnities that struck me. Hastings and St. Leonard's, with their long, warm sea-front, and their multitude of small, cheap comforts and conveniences, offer a kind of résumé of middle-class English civilization and of advantages of which it would ill become an American to make light. I don't suppose that life at Hastings is the most exciting or the most gratifying in the world, but it must certainly have its advantages. If I were a quiet old lady of modest income and nice habits—or even a quiet old gentleman of the same pattern—I should certainly go to Hastings. There, amid the little shops and the little libraries, the bath-chairs and the German bands, the Parade and the long Pier, with a mild climate, a moderate scale of prices, and the consciousness of a high civilization, I should enjoy a seclusion which would have nothing primitive or crude. I am afraid that the more frugal amateurs of life find no such well-padded nests in America.

Notes.

HENRY HOLT & CO. publish immediately 'Money and Trade,' by Prof. Francis A. Walker; 'Communism in America,' by Henry Ammon James (the John A. Porter University Prize Essay, Yale College, 1878); and Symonds's 'Renaissance in Italy: The Fine Arts.'——Other spring announcements are: 'The Russian Army and the Campaigns of 1877-78,' by Lieut. F. V. Greene (D. Appleton & Co.); the third volume of Green's 'History of the English People,' and 'Northward Ho!' by Capt. A. H. Markham, R.N., who describes English attempts to reach the North Pole (Macmillan & Co.); 'Great Orations and Speeches of Daniel Webster,' with an introductory essay by Edwin P. Whipple (Little, Brown & Co.); 'Wild Life in a Southern Country,' by the agreeable author of 'The Gamekeeper at Home' (Roberts Bros.)——The late William Howitt, as we learn from the *Academy*, has left behind him a complete autobiography, the publication of which may be confidently looked for. ——Daniel Slote & Co., New York, are preparing a children's edition of their 'American Plant Book,' especially adapted for the preservation of forest leaves.——Mr. John Williamson, whose 'Ferns of Kentucky' we not long ago had occasion to praise, now sends us the prospectus of a forthcoming volume of 'Fern Etchings,' containing representations of all the ferns that have been found in the Eastern and Middle States. Accompanying this is a specimen of two of the etchings, with brief descriptive text, which the publishers (John P. Morton & Co., Louisville, Ky.) will send to any one on receipt of fifteen cents. They are quite worth the money merely as works of art, though that is not their chief excellence. ——The opening paper in the *American Naturalist* for April, on "Animal Music, its Nature and Origin," by Xenos Clark, is noticeable both for the scientific theory put forth in it, and for probably the completest transcription of bird melodies yet made. The music fills seven pages, and is also sold separately in sheet form, by McCalla & Stavely (Philadelphia).—— From the *Magazine of American History* for April we learn that Messrs. Charles Henry Hart and William A. Baker, of Philadelphia, are preparing a 'Descriptive List of all the Engraved Portraits of Washington,' with notes and observations on the original pictures. They desire to be put into communication with collectors.——Parts iii., iv., Vol. XV., of the 'Essex Institute Historical Collections,' are wholly taken up with an account of the Institute's celebration, September 18, 1878, of the fifth half-century of the landing of Governor John Endicott in Salem, Mass. The appendix contains biographical notes of interest, and a chronological list of events in Salem from its settlement to the present time. There is also a steel portrait of the first Governor of Massachusetts——We have received from Mr. Frederick Prime, jr., Assistant Geologist of Pennsylvania, a useful 'Catalogue of Official Reports upon Geological Surveys of the United States and of British North America" (51 pp. 8vo). There is a great disparity among the States in the number and character of these reports.——The Report of the scientific results of the First Session (June–August, 1878) of the Chesapeake Zoölogical Laboratory connected with the Johns Hopkins University makes a handsome volume of 170 pp, with 13 plates (Baltimore: John Murphy & Co.) Mr. W. K. Brooks, the Director, treats of the development of *Lingula*, "the oldest animal now living, and almost the earliest which is now found as a fossil."——The last volume of Longfellow's 'Poems of Places' (which we have received from Houghton, Osgood & Co.) contains a very desirable collection of local and little-known poems relating to the Middle States. The great rivers and lakes are honored, but the lack of human interest, in comparison with the volumes on New England, is striking, and we cannot help thinking the collection on Niagara humiliating to the race. ——The fifty-fourth exhibition of the National Academy of Design was

opened the day before yesterday. Works which redeem the display from commonplace are Edgar M. Ward's "Paternal Pride," a strong Breton interior and figures; W. P. W. Dana's "Beach at Dinant," with peasants gathering seaweed; Hovenden's "Pendant le Repos," a third Brittany subject; J. Carroll Beckwith's Vandyke-like portrait of Mrs. McCurdy; John S. Sargent's little wanton boys who swim on bladders, on the shores of the Bay of Naples; George W. Maynard's somewhat similar, but cooler, beach-effect; Mr. Chase's "Coquette"; and Prof. Eakins's vigorous portrait of Dr. Brinton. The exhibition is generally considered the strongest yet arranged by the Academy.

—Professor Charles Eliot Norton and Mr. Charles H. Moore are engaged, with Mr. Ruskin's approval, in preparing a compend of 'Modern Painters,' intended to contain the substance of its teachings in regard to the principles and practice of art. The work, while preserving that which is of most permanent value and general interest in the original, will be brought within moderate compass. The sections treating of botany and of geology will be reserved by Mr. Ruskin for reworking in connection with his 'Proserpina' and 'Deucalion.' This compend will be illustrated with the original plates and woodcuts, so far as they can be used to advantage. It is to be considered as the final and authoritative form in which Mr. Ruskin desires that the essential doctrines of his book shall be preserved, as it is his intention not to reprint in full the 'Modern Painters.'

—We receive from Albany the hand-book which was prepared for the recent Loan Exhibition in that city. It was devised at a late hour, composed in great haste (the expense being wholly borne by a lady of Albany who was strongly interested in the charitable purpose to serve which the Exhibition had been organized), and is said with undoubted truth to have been of great assistance to the visitors, and, through its ready sale, to the fund. It bears the name of Mr. Prentice Treadwell as author, but the preface gives to another the chapter on printing. No book prepared in such haste as this (ten days) can aspire to completeness or careful arrangement. Tolerably uniform accuracy alone, in such a work, would argue very unusual accomplishments, great knowledge, and the power of drawing on it at will. We are not able to say that the book before us is free from those errors which one falls into when using in haste many authorities, and condensing their varying statements—nor yet from those slips of style which will make themselves visible in such cases as this. But to have done the thing at all, and to have produced as pretty and useful a book as this is, deserves mention as an unusual feat.

—The first part of the catalogue of the Barton collection in the Boston Public Library has been issued, containing in sixty-seven pages not only the editions of Shakspere in the collection, but all throughout the library—an excellent plan, as it is very desirable to have a complete conspectus of the strength of the library in this respect. There are 959 titles of separate editions, and about 200 more of plays contained in miscellaneous collections. The rarities come almost entirely from Mr. Barton, who had all of the first four folios and nearly a third of the quartos issued before 1623. Of course such a collection deserved to be treated with especial care. The catalogue will no doubt be often cited by other librarians and cataloguers when the public are clamoring at their slow progress. These sixty-seven pages have been eleven months in passing through the press, but the result justifies the delay. The work is as nearly perfect as work of this sort ever is. The titles are given in full, with collations; the notes, strictly bibliographical, are made freely wherever needed; the type is small, but beautifully clear; the press-work of the best. Distinction of type is used with good effect. We only regret that names of editors were not printed in s p a c e d type, which would have made it much easier to find one's way among the different editions. We are glad to see that the Public Library is changing its practice and now gives its officers due credit for their labors. The third volume of the Bulletin, lately issued, was described as edited by J. L. Whitney, and the present catalogue is stated on the title-page to be "by John Mascarene Hubbard."

—The committee of nine gentlemen appointed by the Mayor at the public meeting held last month to consider the question of tenement-house reform have submitted a preliminary report. They find that the existing laws on the subject are insufficient to ensure light, air, and ventilation, and prevent overcrowding, or to provide for effectual supervision. They therefore propose to present a bill to the Legislature providing for a system of sanitary police, and the licensing, by the Board of Health, of all tenement houses. They also find that the condition of the streets in the tenement-house quarters of the city is deplorable, and is, in itself, a positive cause of demoralization, filth, and disease. With regard to any large system of improved tenement houses the committee, we are glad to see, think that the ordinary city lot, measuring 25 by 100 feet, should be put out of consideration; that large buildings are requisite; and that such buildings might be made to pay a fair rental independently of their moral advantages. They recommend, therefore, the formation of one or more stock companies under the Limited Liabilities Act, and the creation of a trust fund, something like the Peabody Fund in London, for the construction and maintenance of improved dwellings for the poor. This movement, which is in the charge of a thoroughly capable committee, cannot be regarded by any one who lives in this city as an ordinary charitable enterprise having merely for its object the improvement of the condition of the poor. The tenement-house system in New York constitutes, as it exists to-day, a vast nuisance, which perpetually lowers the health and vitality of the whole city, besides placing it in periodical danger from pestilence and forming a nursery for crime such as hardly exists anywhere else in the civilized world. Such a quarter as that in which the New York tenement houses flourish is unknown in Boston, Philadelphia, Chicago, or any other large American city; and whatever may have been the excuse for its existence hitherto, certainly, now that the rapid-transit roads have opened a vast area of land on the upper parts of the island for settlement, there is no longer any. The movement to improve the system of dwellings for the poor is a movement really to improve the public health and to diminish the causes of crime. The committee evidently regard the provision of an effective system of licensing and protection the most difficult part of their task; but as the whole movement is meant to rest on an investment of private capital for profit, it is fortunately probable that supervision will not be left to the control of any body of politicians, but be kept in the hands of the individuals or companies who erect the buildings.

—A point of contact, too little regarded, between the inmates of the tenement house and the respectable middle classes is in the public schools, to which compulsory education brings the rough and vicious characters whose presence every school-teacher dreads, over whom a delicate woman is generally placed, and against whose infractions of order or common decency no physical defence is allowed or would be operative. This subject is incidentally treated in the last report of the Superintendent of Truancy, in this city, to the Board of Education. He recommends following the example set by the Brooklyn Board, in opening schools for habitual truants exclusively. To these would naturally be transferred the black sheep of the common ward-schools, and in them a more rigid discipline would develop their capacity for improvement, and sift out the incorrigible for a second transfer to some house of correction. Truancy would be not a little diminished by such measures, while the lot of the teacher would be made easier, and the better class of children be saved from contagion. The Superintendent shows that in four years substantial progress has been made under the Truancy law, both in increasing the average attendance at school and in reducing (by twenty-four per cent.) the number of children between the ages of eight and fourteen arrested and held or committed by the police courts. He points out certain modifications of the Act of May 11, 1874, which would make it much more efficacious, and which are so reasonable that they certainly should be had for the asking.

—The sixth and last concert of the Steinway Hall series which took place on Saturday night may justly be considered the musical event of the season. A selection of unusual merit attracted one of the largest audiences that has ever filled Steinway Hall. The programme contained only two names, Beethoven and Wagner, both representative men of the period to which each belongs. The first number was Wagner's Overture to Tannhäuser. A more perfect rendering of this interesting work than that given on Saturday night is hardly possible to imagine. The Choral, with instrumental introduction, from the third act of the "Meistersinger," is new to New York concert-goers. It is a hymn for St. John's day, the birthday of Hans Sachs, the hero of the opera, and the words are taken from one of the old cobbler-poet's own spiritual songs. The orchestra did its part admirably, but the same cannot be said of the chorus, which appeared not to be perfectly sure of their parts: the first *unisono* intonation, particularly, was harsh and out of tune. The "Kaisermarsch" was heard for the first time with the addition of the chorus, which, however, did not add much to the massive grandeur of the work. The second part consisted of Beethoven's last and greatest symphony, the Ninth in D minor. The performance was exceedingly good. Dr. Damrosch feels sometimes inclined to take liberties with the

tempo which are in our opinion unjustified. No composer has been more careful than Beethoven to mark in his pieces the time and manner in which they should be executed, and if a conductor, after having conquered the technical difficulties, will only conscientiously adhere to the master's own indications, he will come as near a perfect rendering as is possible. However, Dr. Damrosch's performance was an artistic success. The chorus was very fair, and the solo quartet executed their difficult and ungracious part very creditably.——Mr. Henry G. Hanchett made his first appearance here in a piano-forte recital given by him at Chickering Hall on Wednesday afternoon. He is an excellent pianist and showed himself at his best in rendering works of the modern school. His interpretation of Bach was spiritless and wanting in vigor and earnestness. The Beethoven sonata Op. 53 in C was an improvement, and the last four numbers of the programme, compositions by Chopin, Liszt, Schumann, and Rubinstein, were given by Mr. Hanchett in a truly poetical and artistic manner. We should like to hear more of him before giving a final opinion on his merits, and trust we shall have an opportunity of judging him in a piano-forte concerto of Beethoven, or Liszt, or Rubinstein.——The two principal events of last week's Italian opera were Madame Gerster's first appearance in "Traviata" and the first performance this season of Meyerbeer's "Dinorah." Madame Gerster gained a signal success as *Violetta;* her singing was admirable, and her acting, though sometimes lacking in dramatic vigor, was always refined and artistic. It may be safely asserted that Meyerbeer's tedious and shallow opera was only saved from a *fiasco* by the excellent manner in which both singers—particularly Madame Gerster and Signor Galassi—and the orchestra performed their thankless and unprofitable task.

—The distinguishing merit of the series of symphony concerts under Dr. Damrosch, at Steinway Hall, has been its programmes of sterling artistic merit. The opening concert was full of promise of what was to come; Beethoven's symphony in C minor, Wagner's introduction to the "Meistersinger," and Raff's violin concerto in E minor, which was admirably played by Mr. Wilhelmj, forming part of it. Selection was sadly at fault for the second concert, however, which would have proved a total failure had it not been for Mr. Pinner's excellent rendering of Beethoven's E flat piano-forte concerto, the only redeeming feature of the programme. The third concert introduced Mr. Franz Rummel, who made his first appearance in Grieg's piano-forte concerto in A minor. This brilliant young artist at once took his audience by storm with a performance that was remarkable for vigor and fire. The remaining numbers were Schubert's unfinished symphony in B minor, Schumann's symphony in C, and a charming song of Berlioz with violoncello obligato from Victor Hugo's "Orientales"—"Si je n'étais captive." The fourth concert was favored again by Mr. Wilhelmj's assistance, who played the first movement of Beethoven's violin concerto. It was a matter of regret to many that so conscientious and scholarly an artist as Mr. Wilhelmj condescended to destroy the harmonious completeness of this noble work by playing only the first part of it. It is by no means a long composition, and is so rich in melody and beautiful harmony that there was probably no one in the audience who would not have been glad to hear it in its entirety with such a rendering. A bright and tuneful little symphony of Saint-Saëns was performed for the first time, and at once highly appreciated. Volkmann's serenade in D minor for string orchestra, with violoncello obligato, and Liszt's "Préludes" were among the remaining numbers of this interesting concert. The feature of the fifth concert was the first performance in its completeness in this country of Berlioz's "Sinfonie fantastique." Dr. Damrosch deserves the thanks of the public for introducing this most interesting of Berlioz's compositions, which is so full of technical difficulties that only orchestras of the highest standing can venture on a performance of it. The "Sinfonie fantastique" was written nearly fifty years ago when Liszt was unknown, when Wagner had not been heard of; yet it is entirely pervaded by the spirit that breathes in the works of these two masters, and so completely foreign to the traditions of the classical school that it may well be considered as inaugurating a new era of instrumental music. Cherubini's overture to Anacreon, a very brilliant and pleasing piano-forte concerto by Scharwenka, and a rather monotonous scene for orchestra with soli and chorus by Grieg, made up the remainder of the evening's performance. The sixth and last concert has been described above, and it only remains for us to congratulate Dr. Damrosch on the success of his series, which has never, all things considered, been surpassed in this country.

—In the death of Thomas Couture, last Monday, French art lost one of the last of its idealists. He was born at Senlis, December 21, 1815. His "Roman Orgy," the success of the Salon of 1847, seemed to define a permanent and secure renown for the artist, which has been steadily declining since. The thinness of the painting in this celebrated picture is said to have been forced on the artist by absolute lack of means to buy materials. For the past ten years there has been observed a tendency, which seems like an organized effort, to treat Couture with studied coldness. He is called the painter of a single picture. The prosperity of idealism in art has at no epoch been very secure, since the period of the Greeks; the realistic sceptics of our day are even disrespectful towards the idealism of Michael Angelo and Raphael, asking inconveniently whether or no those great men could paint the "morceau." Ideal work, indeed, almost necessarily, contains a tincture of the fleeting taste of its century, which is an element of deadliness; that of Delaroche, which seems like an inspiration from Scribe's melodramas, that of Delacroix, which suggests Hugo, that of David, which matches the French classical drama, are all in precarious predicament at this moment. Couture, however, the Parisians determined was to die in his lifetime; and he must have been often pained, in his sulky hermitage, at the silence which was gathered like a palpable oblivion around his once great name, while upstarts were offered more applause than they could carry. His "Love of Gold" is in the Museum of Toulouse. His "Day-Dreams," or school-boy blowing bubbles, is in a private gallery of this city, and his "Triomphe d'une Femme équivoque" in one at Philadelphia. Some of his satirical paintings illustrating the lawsuits of his friend Barbedienne, where the personages of the court-room are harlequins and polichinelli, are also owned in this country; Barbedienne's show-rooms contain many of these sarcastic parables. His two little published volumes are very lively reading; the first comprises revelations of his humble origin and his contrariness under the labored teachings of Baron Gros; the second is devoted to the rise of modern landscape art, and contains this sentence: "Certain critics recognize one element of superiority alone for us moderns, that of landscape-painting; it is fine and bold to say so; but for my part, I think one must be more of beetle than critic to have this exclusive predilection for greens."

—A great standard work of history and ethnography, Friedrich Spiegel's 'Erânische Alterthumskunde,' has reached its completion with its third volume (Leipzig, 1878). The programme, as sketched in the preface to the first volume, has been strictly adhered to and fully carried out. The work is divided into seven books, of which the first volume (1871) contains three, the second (1873) one and a half, and the third two and a half. The first book, embracing nearly three hundred pages, is devoted to the geography of Iran, in the widest sense, and of lands bordering on it, and the second to the ethnography of the same countries; and so broad is the modern basis on which the 'Iranian Antiquities' are made to rest that even writers on the present theatre of war in the East would do well to study the chapters descriptive of the Cabul and its affluents, the Suleiman Mountains, the Kuram and Gomal Rivers, the highlands of Ghazni and Candahar, Afghans, Belooches, etc. The third book treats of the origin and earliest conditions of the Iranians, and sketches their myths and heroic legends. The fourth book, perhaps the most important of the whole work, unfolds their religious system and kindred conceptions, including late post-Zoroastrian theories and speculations, down to Manes and Mazdak. The first half of the fifth book contains the history of Iran from the rise of the Median power to the destruction of the Persian Empire by Alexander of Macedon, and the second half—upward of five hundred pages—its history under the generals of Alexander, the Seleucidæ and Græco-Bactrian kings, the Parthians, and the Sassanides, to the conquest by the Caliphs. The sixth book treats of the internal conditions of ancient Iranian society, of classes and their relations to each other, and of private life. The respective topics of the five chapters of the last book are the Iranian language and its dialects, Iranian writing, ancient Iranian literature (the Avesta), translations of the Avesta and later literature, and Iranian art. Considering that the author has drawn all his materials from first sources—Persian, Zend, Arabic, Greek, Roman, etc.—and that he has subjected every part of his vast subject to minute research and strict elaboration, we are struck by the shortness of the time within which he has succeeded in executing his monumental task. What moderates our surprise is the knowledge that Spiegel's literary life has been almost entirely devoted to this branch of study, and that, before beginning the publication now concluded, he was famous as the translator and editor of the Avesta, and as the author of 'Einleitung in die traditionellen Schriften der Parsen,' 'Grammatik der altbak-

trischen Sprache,' 'Die altpersischen Keilinschriften,' and other writings on kindred topics.

—'Historische Beiträge zur Caesar-Literatur' is a pamphlet of twenty-three pages, quarto, by Dr. Franz Fröhlich, teacher in the gymnasium at Zürich. It contains two essays, upon Cæsar's Agrarian Law and Vercingetorix. The latter lays no claim to originality, but aims, in the interest of the pupils of the gymnasium, to present a vivid picture of the career of this "noble Gaul, alike deserving of admiration as statesman, warrior, and man"; especial emphasis is placed upon his achievements as a politician and organizer. Cæsar's own account is, of course, the chief and almost exclusive authority. The other essay has more originality, as it aims to give a nearly complete sketch of the events of Cæsar's consulship, the authorities for which are very conflicting and fragmentary. The author is of opinion that Cæsar promulgated two agrarian laws; the *Lex Campana*, dividing the public lands of Campania, being only an afterthought, when it appeared that the public lands distributed by the first law would not be adequate. These laws are usually regarded as purely demagogical measures; and, indeed, it appears that their effect, if carried out, would have been very materially to strip the state of its effective revenue. Nevertheless, it was no unmixed good for the Roman Republic that its revenue was secured without any regular taxation; and at any rate, in view of the fatal disease of Italy—the aggregation of its lands into great estates or *latifundia*—one cannot but feel some sympathy with the view presented by Dr. Fröhlich, that this measure had an element of wise statesmanship. A point of detail that Dr. Fröhlich appears to have made out, from Cicero's letters, is that the Vatinian Law, bestowing the military command of Gaul for five years upon Cæsar, was passed after the Agrarian Law—that is, not earlier than May. This is a point of some importance in determining the constitutional question at issue between Cæsar and the Senate at the outbreak of the civil war ten years later.

HOOKER AND BALL'S TOUR IN MAROCCO.*

THE isolation of Marocco from the European world is strikingly shown in the fact that up to the publication of this goodly volume the principal geographical authority for the interior of the country is Leo Africanus. This man was a Moor of Granada, who, with his kinsfolk, at the time of the siege of Granada in 1492, fled to Fez, then the headquarters of Arabic culture, and was taken into favor by Mouley Ahmet, the founder of the dynasty still reigning in Marocco. He travelled throughout the empire, and wrote in Arabic a description of that part of Africa, which he must have had with him in manuscript when, in the year 1517, he was captured by Christian corsairs and carried to Rome. The Pope, Leo X., hearing of this learned Moor, sent for him, treated him kindly, had him baptized, and gave him at the font his own names, Giovanni Leone; and so, as the writer of the narrative before us naïvely remarks, the Moor perhaps became as earnest a Christian as the pontiff himself. In Rome he translated his work into Italian; but it was not printed until 1550, in the first edition of Ramusio's 'Collection of Voyages and Travels.' Excepting Gerhard Rohlfs—who, by assuming the garb and professing the faith of a Mussulman, traversed districts where no Christian dare present himself, and who could make only surreptitious observations and trust them to memory—our British travellers were the first Europeans to travel in South Marocco and to reach the Great Atlas.

Their opportunity and their success were exceptional. It was a botanical expedition, in the spring of 1871, with the president of the Royal Society and director of Kew Gardens at its head, with Mr. Ball, a member, or at least an ex-member, of Parliament, as his companion, and a third naturalist, Mr. George Maw, as their associate for half the journey. High influence was required for obtaining the Sultan's permission to penetrate the country at all; and utmost skill, determination, and no small assertion were called for to surmount the obstacles which were systematically interposed by the authorities, and to baffle attempts to lower the personal importance, and therefore frustrate the aims, of this scientific embassy. On reaching the city of Marocco the playing of the game began. The Sultan's letter instructed the Governor of Mogador to "send the English *hakim* and his companions to the care of my slave El Graoui," said slave being the governor of the whole Great Atlas region. The city of Marocco was not in his province; and there the duty of providing for the sustenance and comfort of the travellers devolved upon Ben Daoud, governor of the city. Before entering the town our travellers had managed to learn that a very small house with only two rooms had been provided for them, and that Ben Daoud meant to make as little of them as possible. So a message was sent on that a larger house was needed, or else an enclosed garden in which to pitch their tents. In reply, a larger house with four rooms was offered. On reaching this house at nightfall it proved to be mean, dirty, and swarming; so when the *mona*, or present for the evening meal, came in, it was ordered back with scorn. It was felt that submission to any belittling at the outset would be the beginning of sorrows.

"Tell the Governor," said Hooker, "that my Sultana gives me a large house with a garden to live in; hospitality would require that the Governor of Marocco should provide me—the guest of his Sultan—with a better house; but, in any case, I shall not live in a worse one."

The messenger returned with the answer: "The Governor has no better house to give the Christians; but Marocco is large, and they are welcome to provide for themselves." Whereupon the cavalcade moved to the great square, or open space, beside the chief mosque and tower of the Koutoubia, sending at the same time a message to the Viceroy, son of the Sultan, that they should encamp in their own tents until a suitable house had been provided. The upshot was that on the following day the Viceroy installed them in the palace of Ben Dreis, with the adjoining garden, and soundly berated the city Governor for his churlishness; but it leaked out that the poor Governor had only obeyed the express orders of the Viceroy, who had directed him to begin by offering the mean house, then one somewhat larger, and to leave it to the Viceroy himself graciously to meet the higher demands if they should be insisted on. Fortunately, too, the row with the city Governor threw the travellers into the hands and good graces of his rival, El Graoui, under whose protection and care they were to explore the Atlas range.

It was now full time to determine how this visit, and the laborious journey they were to undertake, were to be made intelligible and satisfactory to El Graoui and the other Moorish authorities. The gratification of a desire to learn something about the vegetation of the Great Atlas would have seemed a thin pretext for some sinister design. An insanity of this sort might possess the unaccountable soul of some one Christian; but that three should be simultaneously smitten with it would be thought to pass the bounds of probability. The pretence of collecting live plants for Kew Gardens could hardly be made plausible to the Moorish mind, except, haply, for that one use of plants that every one can understand. The Royal Gardens are literally the Queen's Gardens, and herbs that will cure diseases are among its most valuable collections. Judicious representations upon this line would go far towards explaining the strange proceedings of the party of travellers, and would contain all the truth they were likely to get credit for. So "there is no doubt that the current belief among our own followers was, that the Sultana of England had heard that there was somewhere in Marocco a plant that would make her live for ever, and that she had sent her own *hakim* to find it for her." And when it was seen what toil and hardship these botanical explorations entailed, the natural commentary upon the whole proceeding was: "The Sultana of England is a severe woman, and she has threatened to give them stick (the bastinado) if they do not find the herb she wants."

Those interested in the natural history of an almost unknown district lying on the very border of Europe; those interested in its geography and physical features; the statesman and philanthropist, who may here contemplate in a typical instance the decadence and depletion of a once prosperous people, and note the misery which two or three centuries of misrule may bring upon a smiling land; and those who enjoy the charm of fresh and graphic narrative, the sketch by a practised hand of keen and quick observations by practised eyes—all these will find this volume attractive reading. To us it has been fascinating and full of suggestion. The main drawback to our travellers' enjoyment was the suffering which they unwittingly inflicted on the mountain villagers of the Atlas—the poor Berebers, who are altogether the worthier part of the population—through the insatiable rapacity of the large escort provided by the Moorish Government for their protection. If the naturalists could have journeyed by themselves, with needful attendants under their complete control, their support would have entailed no hardship whatever; but the shameless extortion and abuse by the guards, which the travellers were unable to prevent, must have left a painful remembrance upon their minds as well as upon those of the despoiled mountaineers. It is hardly a consolation to the former that the latter are used to it.

The appendix to this charming volume is filled with scientific, philological, and geographical details. The most elaborate article is that

* 'Journal of a Tour in Marocco and the Great Atlas. By Sir J. D. Hooker and John Ball.' London and New York: Macmillan & Co. 1878.

"On the Geology of the Plain of Marocco and of the Great Atlas," by Mr. Maw.

As to the orthography of the name of the city and country, Morocco is peculiar to the English. In the adoption of Marocco the authors follow, as regards the first vowel, the universal Continental usage.

STUBBS'S CONSTITUTIONAL HISTORY OF ENGLAND.*

A MAN'S real merits may at times be obscured by his pre-eminent reputation for some one virtue. Aristides, no doubt, was just, but if he possessed other qualities than equity the fame of his justice has hidden from posterity important features in his character. Hooker was judicious, but one of the greatest masters of English has certainly suffered by that reputation for calm judgment which has overshadowed his eloquence and wisdom. Professor Stubbs is in danger of suffering from the calamity which has befallen men as eminent as himself, and may find that his learning and sound sense have been so amply acknowledged by his friends that a careless public, apt to believe that the possession of one great talent is inconsistent with the possession of nine others as valuable, comes to the conclusion that a writer who is both learned and sensible has no marked qualities but learning and common sense. A critic, therefore, who has to any extent entered into the merits of by far the most remarkable historical work which has been published in English during the last quarter of a century, can do no better service to his readers than to attempt to make clear that Professor Stubbs is something much more than a man learned beyond all others in the history of England, and that he has, if not all, some, at least, of the rarest gifts which go to make up an historian of the first rank. Nor ought a judicious reviewer to find any insuperable difficulty in making intelligent readers perceive that Professor Stubbs has at least two historical gifts which are lacking to many authors who are not deficient either in learning or in good sense.

Of these gifts the first is a keen appreciation of character. Mr. Stubbs's style, which, though not wanting in force or terseness, is nevertheless deficient in emphasis and singularly unepigrammatic, may, indeed, hide from a careless student how considerable is the professor's skill in the analysis of character, yet we defy any one to read his estimate of Henry V. without seeing that the professor really understands a man whose merits were as easily understood by his own age as they are hard to be understood by men of the nineteenth century. The passage to which we refer is too long for quotation, but the following part of it gives a specimen, though, from its fragmentary character, an inadequate specimen, of the professor's capacity in this field :

"If," he writes, "we set aside the charges of sacrificing the welfare of his country to an unjustifiable war of aggression, and of being a religious persecutor, Henry V. stands before us as one of the greatest and purest characters in English history—a figure not unworthy to be placed by the side of Edward I. No sovereign who ever reigned has won from contemporary writers such a singular unison of praises. He was religious, pure in life, temperate, liberal, careful and yet splendid, merciful, truthful, and honorable ; 'discreet in word, provident in counsel, prudent in judgment, modest in look, magnanimous in act'; a brilliant soldier, a sound diplomatist, an able organizer and consolidator of all forces at his command ; the restorer of the English navy, the founder of our military, international, and maritime law. A true Englishman, with all the greatnesses and none of the glaring faults of his Plantagenet ancestors, he stands forth as the typical mediæval hero. At the same time he is a laborious man of business, a self-denying and hardy warrior, a cultivated scholar, and a most devout and charitable Christian."

When after reading this passage we take into account that Mr. Stubbs, without any use either of special pleading or of paradox, shows that Henry V. was a persecutor who did not love persecution, and that in undertaking the war which exhausted England and inflicted untold misery on France, Henry acted in accordance with the moral feeling of his age, we feel that the professor has rendered the greatest service which an historian can perform, and has made plain to a generation utterly unlike that which admired Henry, why he really deserved admiration. To do this is not only to explain a ruler who seems at first to modern readers a mere fighter who fought for fighting's sake, but it is also to interpret the feelings of one century to the men of another and quite different era. For to understand Henry V. is to understand the age of which he was a hero ; and the real difficulty to students in seeing how it can be that, without denying the truth of a single moral principle to which modern philanthropists attach value, we may yet admire a king who "renewed a great war which, according to modern ideas, was without justification in its origin and continuance," is at bottom the difficulty which every candid thinker must feel in entering into the merits of the civilization (if civilization it can be called) existing in the middle ages. This difficulty will never be removed or even lightened until readers realize that it is one of the penalties which not only great men but also generations with any touch of virtue "must pay for their greatness, that they have to be judged by posterity according to a standard which they themselves could not have recognized, because it was by their greatness that the standard itself was created." When this is clear, Henry and Henry's contemporaries become at least comprehensible. The technicality, the love of war, the religious intolerance which mark the man and the age, are seen not to be inconsistent with a sense of honor, of justice, and of generosity. A further result follows, which Professor Stubbs, unlike the crowd of paradox-mongers who descry modern civilization to enhance the merits of feudal barbarism, never dreams of concealing. Admit, as you must, that Henry V. was the ideal king of his time, that his policy in church and state seemed admirable to the men of his age just where they are most justly condemned by the conscience of later centuries, and you are compelled to admit that the mediæval ideal was not only defective but in many respects utterly vicious. If Henry's greatness was followed by a period of national calamity, half at least of the cause of the sudden change from prosperity to misery was that the society of which Henry was the head was doomed to break up from its own vices.

The second historical gift with which Professor Stubbs is endowed is the capacity for seizing the important features of an epoch. The power to do this is different from insight into the peculiarities of character, and is found lacking in men who can draw brilliant and truthful pictures of individuals. In no instance is Mr. Stubbs's special talent shown to greater advantage than in his treatment of constitutional history under the house of Lancaster. The period is one of dreary confusion. Warfare without generalship alternates with revolutions without statesmanship. The virtues of Henry VI. are scarcely sufficient to make his weakness pathetic, and the undoubted capacity of Edward IV. is not sufficient to atone, even in the lenient eyes of posterity, for his reckless selfishness. Amidst the din of battles and the perplexities of intrigues the reader feels as if the years which are filled up by the Wars of the Roses were a period marked by no feature but that of aimless turmoil, yet Mr. Stubbs shows that the rise and the fall of the house of Lancaster have, from a constitutional point of view, a singular significance. The Lancastrian kings were constitutional monarchs, who *bonâ fide* attempted to carry out what may fairly be called a constitutional system of government. The experiment whether the nation was fit for a system of government in which Parliament, if not supreme, should play a leading part, was tried and ended in failure. That the attempt failed was owing in part to accidents such as the weakness of Henry VI. and the results of the French wars, but Mr. Stubbs shows clearly enough that the reaction against constitutionalism which was represented by the house of York arose from a more permanent cause than the defects of a particular sovereign or the calamities of a particular era. What the mass of the people needed was a government powerful enough to protect the weak against the strong. Parliamentary rule under the influence of nobles could not supply protection against the tyranny of the great and powerful. To use modern phrases, which have far more meaning when applied to the middle ages than when employed with reference to present times, what the nation needed was "order" rather than liberty. When at last the Wars of the Roses ended on the field of Bosworth, the Crown became the representative and the guarantee of orderly government.

At this point Professor Stubbs's history pauses, yet even as it is he throws great light on the characteristics of the age on which he does not enter. As we read his pages we understand how good men and wise men and brave men could transfer to a king like Henry VIII. the kind of loyalty which in modern times is felt by all rational men not towards the crown but towards the law, and we can at least see how great was the temptation to think that the prosperity of the nation was bound up with the power of the crown. Professor Stubbs has paused in his task at a moment when constitutionalism was under a cloud. There is no living writer so capable of tracing the steps by which the forms of the constitution were kept alive under the reigns of the Tudors, and by which the spirit of Parliament revived with new vigor to resist the attacks, and at last to overthrow the power, of the Stuarts. He is the one living writer who combines the knowledge, calmness, fairness, and breadth of view needed in one who traces, in accordance with modern knowledge, the full growth and development of the English Constitution. We cannot believe that he will leave unfinished his half-completed work.

BEDOUIN TRIBES OF THE EUPHRATES.*

CERTAINLY an Englishwoman is the queen of travellers. She sets off for the Euphrates and the Bedouin tribes, moved by no other stimulus than a general intelligent curiosity: she is prepared to be on horse-back or camel-back all day, and to sleep at night, by preference, *on* the roof rather than *under* it; she has neither personal attendant nor commissariat, but follows the Napoleonic principle of getting her supplies from the country she traverses. If her saddle is out of order, she restuffs it; if the horses are noisy at night, she goes down to the court-yard and straightens matters; she is up to her work every day, and finds abundant compensation for any little discomforts in the open-air life and

"the feeling of absolute ownership one has in each spot of ground one camps on. . . . Here in the desert it is absolute and complete, even to the closing up of rights of way; for one is at liberty to treat all comers, if one likes, as enemies, and to bid them be off. Not that at present we have hostile feelings towards any one; only *it is nice to think* that even the keeping of the peace depends on our good will and pleasure, not on the law of the land."

Ladies, ambitious of "the higher education," see what long centuries of civilization may bring you to!

Lady Anne Blunt and her husband (presumably) set sail for Aleppo, or its seaport Scanderoon, like mediæval merchants, not seeking ambergris or pearls, but the tribes and the horses of the desert. They provide themselves at Aleppo with a tent, "largely the work of my own (Lady Anne's) hands," horses, presents consisting of cloak, boots, tobacco, and sugar; hire a cook, who proves a treasure, and set off on January 9, 1878, at first through cultivated ground. On the second day they follow "a kind of road or track leading across a perfectly level plain. The loose stones had disappeared and our path was over a light, crisp soil thinly covered with grass." There were mole-hills and jerboa-holes; "except for these, the most beautiful galloping ground conceivable." Toward nightfall they reach the Euphrates, at that point about five miles wide, lying in a deep, broad cutting, perhaps a hundred and fifty feet below the level of the plain.

"The valley is a long, level meadow, green as emerald, and covered with flocks of sheep. We counted twenty of them, with perhaps a thousand sheep in each." "We could see the river winding to and fro in this great meadow, far away, fringed with a deep brown belt of tamarisks, in great curves and reaches."

The travellers follow the right bank of the river, which hereabout ran nearly due east, passing many ruined castles, and finding plenty of game —francolins, rock-pigeons, red geese, etc., until, as they approach Deyr, they are urgently invited to the house of the Governor, Huseyn. It being presently apparent that a part of his hospitable intention is to hinder their visit to the desert tribe of the Ánazeh, which was their main object, the travellers disregard the alarming stories which Huseyn tells, and join a caravan *en route* for Bagdad. The journey occupied nine days, but had sundry diversifications. Once "a venerable-looking man with a long, white beard, and the remains of a green turban on his head," greets them gravely with "Starboard, port, god dam"; explains that he knows their language and had served in Col. Chesney's expedition forty years before, and then mysteriously vanishes. The travellers eat their "first really Bedouin meal," an unspeakably nasty mess of butter, dough, tallow, and boiled mutton. Lady Anne passes the towns of Hitt and Jebbah, and finds them, "of course," the cities of the Hittites and the Jebusites, and also sees the place where it is "most likely" that Noah built the ark, because *pitch—i. e.*, bitumen—springs were so conveniently near; "so that it is foolish, though it appears to be the fashion, to put down the account in Genesis as fabulous." Snow falls, and the weather is severely cold (February 9); a wolf is hunted and wounded, and thus variously with sport and archæology they beguile the way till "the City of the Caliphs loomed through the driving rain, a grimy and squalid line of mud houses, rising out of a sea of mud." They go directly to the English Residency and rejoice in the appliances of civilization. Bagdad is described as utterly desolate and decayed, and suffering alternately from the rapacity of evil-minded governors and the folly of the better disposed. Ruins and mosques are unvisited, but the travellers buy "four fine young camels, capitally matched, and said to be fast walkers, at ten pounds apiece, a she dromedary, and a white ass," and slipping off to the country-house of the Nawáb Ikbálet Dówlah, they silently steal away.

From Bagdad the party take a route nearly north, finally turning west at a sharp angle, and on the 14th of March reach the tents of Faris, chief of the Shammar, who welcomes them "with a smile which had so much honesty and good will in it that we felt at once that we were safe in his hands," so that they think they have found at last what they have hitherto sought in vain, "a *gentleman* of the desert." In person Faris is small, as a true Bedouin should be; but he is a model of grace, and strength, and activity. On horseback there is no one of the tribe that can come near him. "Wilfrid" makes himself so delightful to this chieftain that Faris takes with him the oath of brotherhood, which binds them to each other's help and service "to-day, to-morrow, and hereafter." After five days with the Shammar the travellers make a push for Deyr again, as they expect there to meet the friendly consul, renew their credit, and generally put themselves to rights. The over-hospitable Huseyn again attempts to detain them, and Mr. S., the consul, does not arrive, but after some delay and some diplomacy the party gets away from Deyr, and succeeds in reaching the encampment of the Ánazeh, and Jedáan, their chief, who compares but ill with the handsome Faris. As they move along with the tribe they make acquaintance of the sheikh of a minor sept, Ferhan, who has "something in his air which points him out at once as a man of rank and breeding." He has distinguished manners, and resembles a Spaniard of the very best type. He ranks next to "the five great families of absolute nobility" whom Lady Anne's soul yearns after, and tells her that the five families are thus distinguished because they had "at *all* times killed a lamb for their guests. The rest of us have only *learned* to do so." More travelling with the tribe, much chaffering for horses, a suggestion that Lady Anne should act as diplomatic agent to an estranged portion of the tribe, apprehension of robbers, dinners to the chief, presents judiciously applied, and at last, April 11, the travellers set their faces homeward, taking Damascus by the way.

Better travellers could not be, as far as endurance and determination make good travellers. Nevertheless, the book is somewhat hard reading. The absence of vivid description becomes a weariness; the reader must make an effort to remember just what point he has reached, and the attitude of voluntary attention must be maintained longer than is comfortable. The final chapters, added by "Wilfrid," give a good deal of valuable information as to the breeds and qualities of Arabian horses and the honesty of their owners. He describes the desert as splendid with flowers in February and early March—"tulips, marigolds, asters, irises, and, most beautiful of all, certain pink wallflowers, cousins each of them to our garden plants, for it was from the desert, doubtless, that the Crusaders brought many of those we now consider essentially English flowers. Through this, as through a garden, the vast herds of camels, with their attendant Bedouins, move slowly all the spring, and the mares grow fat upon a certain crisp grass that grows among the purple stock, fine and dry and sweet as sugar." Of the limited mental horizon, the noisy, monotonous life, the decent morality of the desert tribes, some account is given, and it strikes us that the last five chapters should be at the beginning, not at the end of the book.

* 'Bedouin Tribes of the Euphrates. By Lady Anne Blunt.' Edited, with a preface and some account of the Arabs and their horses, by W. S. B. Map and sketches by the author. New York: Harper & Bros. 1879.

READ'S THEORY OF LOGIC.*

THIS work is the fruit of a travelling scholarship. But in all his travels the author seems never to have come across any modern logic, except in English. Three views, he observes, have been taken of logic; which, if limited to England, is true. Some writers consider it as a study of the operations of the understanding, thus bringing it into close relations with psychology. Others regard it as an analysis of the conditions which must be conformed to in the transformations of verbal expressions in order to avoid the introduction of falsehood. While others again—our author among them—think the propositions of logic are facts concerning the things reasoned about.

There is certainly this to be said in favor of the last opinion, namely, that the question of the validity of any kind of reasoning is the question how frequently a conclusion of a certain sort will be true when premises of a certain sort are true; and this is a question of fact, of how things are, not of how we think. But, granted that the principles of logic are facts, how do they differ from other facts? For facts, in this view, should separate themselves into two classes, those of which logic itself takes cognizance and those which, if needed, have to be set up in the premises. It is just as if we were to insist that the principles of law were facts; in that case we should have to distinguish between the facts which the court would lay down and those which must be brought out in the testimony. What, then, are

* 'The Theory of Logic: an Essay. By Carveth Read.' London, 1878.

the facts which logic permits us to dispense with stating in our premises? Clearly those which may always be taken for granted: namely, those which we cannot consistently doubt, if reasoning is to go on at all: for example, all that is implied in the existence of doubt and of belief, and of the passage from one to the other, of truth and of falsehood, of reality, etc. Mr. Read, however, recognizes no such distinction between logical principles and other facts. For him logic simply embraces the most general laws of nature. For instance, he recognizes as a logical principle the law of the conservation of energy, which is even yet hardly set beyond all doubt. If he excludes the laws of geometry, as being "quantitative," it is by an ill-founded distinction. If he does not mention the law of gravitation nor the existence of a luminiferous ether as logical principles, it must probably be because he thinks them less general truths than the laws of motion.

The especial purpose of the book is to arrange the principles of logic, considered as matters of fact, in regular order, beginning with the most abstract and general, and proceeding towards the particulars. In short, it is an attempt to give a syllabus of the most general laws of nature. This is a well-conceived idea.

After the introduction, the first chapter treats of *Relation*. We notice immediately the illogic of thus making relation the most abstract of facts. Existence should come first and quality next; no competent logician, however he might modify this statement, will deny its approximate truth. Why does Mr. Read not begin with *Being*? Is it because the writers he follows greatly insist on the point that existence and qualities depend on relations? There is this dependence, no doubt; the abstract and general always depend on the concrete and particular. But having undertaken to arrange the subject in synthetical order, which consists in putting the abstract before the concrete, Mr. Read should not violate the principle of arrangement at the very outset. Turning, however, to the substance of the chapter, we are told that relation cannot be defined. This is not exact; it can and has been defined; but what is true is that it cannot be defined without considering the operations of the mind or the general nature of language. But the author is endeavoring to state the principles of logic without referring to either of these. He is, therefore, unable to explain the notion of relation, because to do so he must explicitly introduce those notions which he wishes to exclude. Not being able to define relation, he typifies it. This he does by the following figure—two spots united by a line:

•————————•

But here he betrays a not altogether distinct conception of relation. These two spots are similarly related to one another. Now there are certainly relations of this kind. If A is like B, B is like A; if A is unlike B, B is unlike A, etc. But, generally speaking, two related objects are in different relations to one another. The relation of father to son, for example, is different from the relation of son to father. So that if we desire to make a sort of hieroglyph for relation in general, it should be something like this: A ——> B.

We next meet with an enumeration of the ultimate modes of relation. These are stated to be three—viz.:

1. Likeness and unlikeness.
2. Succession and non-succession.
3. Coexistence and non-coexistence.

Succession is defined as unlikeness in time; and coexistence as likeness in time. If that be so, the second and third modes are not ultimate, but are only species of the first. Substituting the definitions for the terms defined, they are:

2. Unlikeness in time and non-unlikeness in time.
3. Likeness in time and non-likeness in time.

Hardly a model of synthetic orderliness.

But what does the author do with the great body of relations? What pigeon-holes has he for them in his scheme of arrangement? Take, for instance, the relation of striker to struck. A man's striking another constitutes certainly no resemblance between them. But neither is it an unlikeness, for a man may strike himself, and since he is then a striker only so far as he is struck, and *vice versa*, it is impossible to say that striker and struck are unlike. In short, the relation is neither a likeness nor an unlikeness, for the reason that both these latter are relations between objects similarly related to one another, while the relation of striker to struck, like most relations, is between dissimilarly related objects.

The few pages we have thus examined are a fair specimen of the strength of the whole book. Its purpose is a sharply-defined one; its style is clear and free from verbiage; and if it is not a striking success, it is because its author is not thoroughly well grounded in his subject.

The Libraries of California, containing Descriptions of the principal private and public Libraries throughout the State. By Flora Haines Apponyi. (San Francisco: A. L. Bancroft & Co. 1878. 8vo, pp. 304.) —The range of this book is so broad that the author is in no danger of having her motives misconstrued. The great railroad and mining nabobs who form one end of the social scale of which Kearney and the hoodlums form the other, receive no incense-burning here, but, so far as they are admitted at all, stand on a level with the humblest lover of books named in the "Collected Notes." In fact, we are more or less explicitly made aware in the preface that the task was undertaken as a protest against the materialism of the Pacific coast, and an incentive to the pursuit of higher ideals than those which find favor in circles to which the vulgar rich give tone. In a work which may be said, therefore, to have some of the qualities of a tract, the author was justified in including the free-thinker's "small collection," of which the chief merit appears to be that the books are "stout, clean, and to the purpose"; the library whose "notable feature is its lack of complete editions"; that of the collector who "has made it a principle never to buy a book that he could obtain in a public library," and whose interesting assortment was "temporarily packed away"; along with the working libraries of professional men, the showcases of the millionaires, and the few large and intelligently selected libraries of specialists, of which the account, evidently by the owners themselves, makes the volume valuable to scholars and bibliophiles as well as to the social philosopher.

There is, in point of size, a great gap between Mr. Hubert H. Bancroft's and the next best library. He reports 20,000 volumes, MSS., pamphlets, and maps, and 200,000 copies of Pacific Coast journals, for which an index of subjects has been prepared at his expense. Forty-eight pages are filled with the description of the riches of this truly unparalleled collection, whose reason for existence was long since given to the world in the 'Native Races of the Pacific Coast.' The MSS. consist of ancient Spanish-American originals and, to an enormous extent, of copies and digests directed by the historian. The spoils of Maximilian's library are gathered here. The library of "P. C.," perhaps second to Mr. Bancroft's, is, among other lines, devoted to the imprints of Aldus, Stephanus, and Elzevir, reckoning 1,500 volumes of the last-named. An ardent student of language has a fine polyglot collection which he is now engaged in mastering; an admirer of Dickens possesses more than 2,300 illustrations of his works; a lover of the stage delights in large photographs of actors and actresses, which fill a specially constructed album; another collector is happy in having 500 volumes, 1,000 pamphlets, and 2,000 engravings pertaining to the French Revolution, and "points with pride to several specimens of San Francisco bindings"; a "veteran San Francisco journalist" is busy over a history of the California press, to be followed by that of the St. Louis press, and then, "if he lives long enough," by that of the press of the United States. His plan is as heroic as it is novel: it is "to take up every important subject and occurrence—as, in our own State, the proceedings of the Vigilance Committee in the early days, political struggles, various resources of the State, mining developments and bubbles, etc.—and give the positions taken by the various newspapers at various times." Some of the collectors to whom separate articles are given might have been relegated to the briefer Notes, since what we may call the library fixings furnish the bulk of the notice. We are treated to such minutiæ as the subjects of engravings on the walls, the size of Smyrna rugs, and the obscure beauties of the Old Masters; "in a good light," we are told of the St. Peter by Goya, "a tear can be seen coursing down one cheek."

The State Library is pre-eminent among the public libraries, and, indeed, with its 48,000 volumes, seems very well equipped. In the 16,300 volumes of the library of the University of California are included the late Dr. Francis Lieber's library. The Mercantile Library of San Francisco was rescued from bankruptcy and despair by a *deus ex machinâ* in the person of Camilla Urso, and by three legalized gift-concerts. We regret to learn that "the financial reverses of the Young Men's Christian Association have not contributed to the prosperity of the library," but this was perhaps hardly to be expected. A miscarriage of statistics in the mail leaves only the size of the library of the Academy of Sciences to be stated; it exceeds 16,000 volumes.

The aim of this work is so respectable, and the labor involved in it so

considerable, that we shall not dwell on the typographical and other errors which disfigure those portions for which the author is mainly responsible. She has fairly earned the gratitude of her fellow-citizens.

Aucassin et Nicolette. Chantefable du 12me siècle, traduite par A. Bida. Revision du texte originale et préface par Gaston Paris. (Paris: Hachette & Cie.; New York: F. W. Christern. 1878.)—To one who reads history with human sympathies few things are more charming than the early songs which woke in France in the morning of the Renaissance, with their burden of courtesy, sentiment, and valor; and of these 'Aucassin and Nicolette' is one of the earliest and most delightful. Pure romance, woven of threads of Eastern fable, it is far removed from us in spirit; the childlike simplicity of its surrender to sentiment, its daring absurdities, in which the narrator seems almost to be satirizing something the essentially exquisite charm of which he knows only too well, the intangible magic that makes the marvellous influences of the Saracen captive seem natural, the playfulness in it all, belong to its own age and have vanished from ours. All this tests the catholicity and subtlety of the reader's taste; but if he is only amused at the infatuation of the amorous pair; if Aucassin going out to battle so lost in dreaming of his love that he is half-disarmed by his enemies before he wakes to his danger—if Nicolette descending from her prison-chamber in the fair night and escaping through the dewy garden, and stopping in the shadow to talk with Aucassin through the crevices of his dungeon and dispute with him whether he loves her more than she loves him, while the armed troop in search of her life passes by—if the lovers riding through the forest and the mountain passes, careless where they wander so they remain together, and coming to dismount at morning on the sea-shore where captivity is waiting for them both—if the childishness in such experiences only amuses the reader, and he is moved by no finer emotion, there is much beside this left for him in the realism of natural description, the besieged town, the tower, the forest with the hut adorned with flowers through which the stars shine, the pastoral scene of Nicolette meeting the peasants, and many other details which are drawn with a vigor, sharpness, and delight in beauty for its own sake which are rare in later centuries. It is impossible to describe in a brief space the various and refined interest which pervades the poem—Mr. Pater has failed to do so in his well-known essay; but now that it has been translated into modern French excellently, and is accessible to any one willing to give to it half an evening, it should become familiar to all lovers of graceful sentiment and simple nature. This version is not literal, but conveys the spirit of the original in a paraphrase in parts, while in other parts it approaches nearer the text. It is illustrated by the translator and contains the revised text of M. Gaston Paris, with an entertaining and instructive preface also by him.

Socrates. A translation of the 'Apology,' 'Crito,' and parts of the 'Phædo' of Plato. (New York: Chas. Scribner's Sons. 1879.)—The aim of this volume is to make the personality, the individual qualities of Socrates, known to its readers, and, therefore, only those parts of Plato have been selected which possess a biographic interest apart from philosophy. This was work worth doing, and undoubtedly any one who wishes to know what manner of man Socrates was cannot do better than learn from this convenient book, and its preface by Prof. Goodwin, what his contemporaries said about him. The translation itself is not, of course, to be compared even remotely with the literary power of Prof. Jowett's, but it is clear and trustworthy, and if, after reading it, one should read also Xenophon's description of his master, he would possess the clearest knowledge attainable of Socrates biographically, and most readers, we fancy, would be surprised at the entertainment as well as instruction to be so simply derived in regard to a man whose name is known so much more widely than his worth.

A Holiday Tour in Europe. Described in a Series of Letters written for the *Public Ledger* during the summer and autumn of 1878 by Joel Cook, "J. C." (Philadelphia: J. B. Lippincott & Co. 1879.)—Philadelphians always dwell lovingly on the old-fashioned 'American in Paris' of forty years ago, by John Sanderson, so well hit off by the late Dr. Chapman as "too broad but not long enough," and they will now welcome this modest volume as a record of the changes that have marked the lapse of years, both in morals and in manners. Mr. Cook's keen scent for useful information and his accurate knowledge of home statistics are made to serve a useful purpose, notably in his comparison of taxation in London and Philadelphia. As he pithily puts the case, in the former city a property worth $50,000 pays $125 in taxes. Of this $69 is for poor-rates and $56 for all other municipal charges, the poor-rate being paid quarterly, the others half-yearly. Not only would this property in Philadelphia pay eight or nine hundred dollars in taxes, but in London there is an actual reduction in consideration of the improvements. Then, again, London collects revenue from its streets over and above the cost of cleaning them, besides that from cabs, omnibuses, railways, steamers, markets, and franchises, while it gives its inhabitants such pavements, gas, and sewerage as would put the best American town (to say nothing of Philadelphia) to the blush. The true Philadelphian comes out again in the reference to the new Palace of Justice in Brussels, "as large as our public buildings at Broad and Market streets," eleven years building and costing thirteen millions of dollars; and a local prejudice of a little broader reach, but not going beyond the Commonwealth of Pennsylvania, finds the Rhine "a reminder of much similar scenery on the upper Allegheny," barring the castles and vines, the legends and the population. Even the mosquitoes on the Lake of the Four Cantons serve to point a moral of endurance for the Philadelphia reader who was suffering from them at home in September too. The Swiss mountains found no answering echo in the bosom of the *Ledger* correspondent; but the busy scene of Lyons, with its manufacturing done in the workmen's houses, and its Sunday election with lively charges of fraud, are described with great vivacity and in a way to enable the reader to make his own comparisons. The book is an interesting recital of the sort of sight-seeing that most commends itself to the American in search of change from home work and home scenes.

The Commercial Products of the Sea. By P. L. Simmonds, Editor of the *Journal of Applied Science*, etc. With thirty-two illustrations. (New York: D. Appleton & Co. 1879. 12mo, pp. viii. 484.)—"Food Products of the Sea"—fishes, namely, *bêche-de-mer* or trepang, and various edible mollusca; "Marine Contributions to Industry," as sponges, oils, isinglass, seaweed, shells, and salt; and "Marine Contributions to Art," in the shape of coral, amber, tortoise-shell, pearls, and mother-of-pearl; these are the three divisions and the chief topics of Mr. Simmonds's book. It is of English origin, being made up of papers contributed to the author's own and to other serial publications. Recent statistics are given of the various industries described, and of their products; and there are glimpses, too, of some of the correlations between the world of fishes and of men. France, for instance, offers bounties to her fishermen, paying about 540,000 francs a year, or £2 to each man engaged in the fisheries in British America; "an expensive process, but it is alleged that it would cost twice as much to train an equal number of men for the navy in any other way. In 1861 a French commission appointed to enquire into the deep-sea fisheries said in their report: 'It is on fisheries that at this day repose all the most serious hopes of our maritime enlistments.'" Railroad traffic, again, has greatly increased the consumption of fish. "Before the Eastern Counties Railway was constructed, the transport of fish from Yarmouth to London was effected by light vans drawn by post-horses, and the quantity amounted to about 2,000 tons a year. Nearly double that quantity is now conveyed to London and the great manufacturing towns in the course of a fortnight. . . . The increase of fishing power brought of late years to bear upon the sea is equally remarkable." The most noticeable deficiency in this book is that of any sufficient account of the seal-fishery—a purposed but injurious omission. Mr. Henry W. Elliott has given, under the unpromising title of 'A Report upon the Condition of Affairs in Alaska' (Washington, 1875), a full account of the fur-seal and of his habits, which more closely resemble a human polity than that of any other gregarious animal. It is Mr. Simmonds's misfortune that he has not apparently read that very interesting description. For the rest, his book covers much ground carefully, and reconciles instruction with entertainment better than most books of its class.

Patchwork. By Frederick Locker. (London: Smith, Elder & Co. 1879. Pp. 234.)—Mr. Locker is already well known to American readers as the author of 'London Lyrics,' a little volume which contains some of the best *vers de société* of our time, and as the editor of 'Lyra Elegantiarum,' a book into which he had collected nearly all the good specimens of that difficult form of poetry in our language by authors not living. The same skill which made the latter volume a model of what a special collection of verse should be is visible in 'Patchwork,' which is, however, not wholly a compilation, for Mr. Locker now and again introduces some

of his own writing—a brief and pungent little essay, or a line or two of apt comment on a quoted rhyme or smart saying. He intimates in his preface that 'Patchwork' is really but a few "leaves from his commonplace book," under which title the volume was at first announced; and he also suggests that although some may hold "that a commonplace book is a book kept by a commonplace person," and therefore but a miscellaneous and aimless gathering of fragments, yet as this gathering was made to please one person only it may perhaps thereby have a more individual flavor in general lacking in such compilations; and this is really the case. Mr. Locker draws from out his store of autographs letters of Swift and of Fielding and of Steele hitherto unprinted, and poems of Wordsworth in their early form; and he flanks this prose and verse of the past with Dr. Holmes' "Last Leaf" and Mr. Lowell's "Within and Without" and Mr. Austin Dobson's "Love Letter," and with four new London Lyrics of his own not to be found in the American edition of his poems.

Of jests either single or grouped together by unity of subject there is great variety and, on the whole, much merit. None of them are broad or in bad taste. Few, if any, are cheap or weak. The weakest are the poor fatherless bantlings which are laid at the broad door of America. Many of them have not appeared in print before; these are among the best in the book, and several of them have already been borrowed since the publication of the volume to serve as legends for the vigorous designs on wood of Mr. Charles Keene in recent numbers of *Punch*. Two or three of Mr. Locker's brief anecdotes may be quoted as specimens. Some one remarked of the portrait of the Rev. Holwell Carr (who, tradition declares, was a carping and sceptical art-critic) that it looked as if in the act of saying, "Yes, but the original is in the Borghese Gallery." Another clergyman, we are told, was churching a lady of very distinguished rank, and in consequence modified the formula thus: "God save this *lady* [woman], thy servant." His clerk was also equal to the occasion, for he added: "Who putteth *her ladyship's* trust in thee." It is a pity that Mr. Locker did not immediately follow this story with an anecdote which we presently come upon about a dignitary of the Greek Church who ventured to alter the form of his ritual. The historian who relates the event gravely remarks: "And his congregation, justly incensed, tore their bishop to pieces." But the gem of the whole collection tells of an American diplomatist, a very genial and social being, who made the round of the sights soon after his arrival in London, and, of course, included Madame Tussaud among the number. "And what do you think of our wax-work?" asked a friend. "Well," replied the General, "it struck me as being very like any ordinary English party."

Stock Breeding: A Practical Treatise on the Application of the Laws of Development and Heredity to the Improvement and Breeding of Domestic Animals. By Manly Miles, M.D. (New York: D. Appleton & Co. 1879.)—This is a commendable and more than usually successful attempt to translate the teachings of scientific investigators into the language of common life, and to bring their discoveries to the service of practical men. It differs greatly from previous farm-books on the subject of breeding, especially in the prominence it gives to the influence of *heredity*—through its various tendencies to produce likeness; to produce variety; and to reproduce lost ancestral characters. These are the three agencies by which the thoughtful breeder, bent on the improvement of a race, must seek to gain his end. Only the first of them enters into the calculations of the average farmer. But the average farmer is hardly to be called a stock-breeder; as a rule he is only a multiplier. He pins his faith to the theory that "like begets like," and by selecting always the best parents, he produces a creditable average result. If he is a good feeder he improves the average quality of his stock.

The better breeder, who looks for something beyond improved averages, and seeks a radical and fixed advance beyond the foremost point yet reached, must have a quick apprehension of the meaning and tendency of those slight variations which, even in thoroughbred animals, distinguish progeny from parents. It is through this channel that his road to success must lie—through recognizing a promising deviation from the present type, and fixing the divergence. In addition to this he must, so far as his knowledge of antecedent pedigrees makes it possible, study the value and importance of good or bad qualities which have died out from earlier generations. When these recur—by what the moderns call *atavism*, and what old breeders call "throwing-back"—he must determine their advantages and disadvantages, and discard or foster them accordingly. Prof. Miles sets forth the present state of knowledge on these subjects with much clearness, though in his illustrations he has perhaps been misled into attaching too much importance to occurrences which may have been mere coincidences. A recent writer has illustrated this defect as follows: "If a number of players are throwing three dice, and one should throw three sixes, that combination would attract more attention than perhaps any other, though it is precisely as likely to occur as any other combination of three." In breeding we must always guard against attaching too much importance to the recurrence of striking defects or merits. Having the desired type thoroughly fixed in the mind, we should cherish every characteristic that approaches it, and reject every one that deviates from it, whether they seem to be important or not, for the characteristics of an animal are of more consequence in their relation to the whole result than they are in themselves alone.

In all breeding nothing is of greater service than such a chart of the pedigree as will show the interlacing of the different strains of original blood. Prof. Miles has devised a system of charting which would of itself be an ample justification of his work. Aside from these more recondite elements of the subject, the book treats in a practical and suggestive way the better-known rules and processes of the breeder's art. It will probably be accepted as of decided value to the better class of agriculturists.

Fine Arts.

EXHIBITION BY THE SOCIETY OF AMERICAN ARTISTS.—II.

AN effort to demonstrate to the public, as at the Kurtz Gallery just closed, what are the primary effects sought by a proficient in art technic, is certain to be misunderstood by most spectators. These primary effects are in the nature of a workman's secret; their success or shortcoming is never truly viewed but by the professional. The person of mere social or travelled culture, the "person of taste," whom Whistler so witheringly anathematizes, may think he sees a great deal in a work of art, but he never sees the real mystery. He divides his admiration between the dramatic expressiveness of a picture (a thing too external and too much allied to literature to engage the best sympathies of an art proficient) and a kind of polish which he calls finish, and which may be really the reverse of finish, being the cold elaboration of surfaces under which the real fire of the conception is choking to death. On the one side, the technical proficient sees during the progress of a sketch some daring stroke which has succeeded in conveying at a blow all that a stroke may convey of attitude, of movement, of form, of unmixed and unteased color; the professional economy of the touch takes his eye; so much is got by so little waste of effort! To an expert the masterly stroke tells everything; let the stroke be retouched and finished into softness and roundness, there is not only a waste of concise expression, but there is the inevitable opacity and dulness and color-loss always accompanying tormented workmanship. To the professional the mended stroke is a stroke enfeebled, and rather basely modified to conciliate the fogies. A remark made by such an economist of art-labor showed his point of view:

"My sketch tells the greatest number of facts about nature that the touches I have used can convey. By this kind of breadth I get atmosphere, the just relation of values, and the live movement of my objects. I see no use in carrying the thing further, so as to explain myself to those who really know nothing about art. The things I admire in nature are just those things—its live movement in organic objects, its values, and its luminous atmosphere. Having expressed these I do not see why my picture is not done."

The picture so defended would be, it goes without saying, one of those patchworks of flat tints and vigorous indications which are the puzzle of the "man of taste"; but every touch might be a master-stroke of reserved force to the eye of a brother artist. To set against this *credo* of a painter by indications there might be quoted the lament lately made by a landscapist who fully appreciates the vigor of the most summary technic, but whose own aim is at something different. Bringing out a preparatory sketch which was full of light, of breadth, and of strength, and which was already a finished masterpiece for an impressionist, he said discontentedly:

"I shall never satisfy myself until I get all of this luminous quality, without the least loss, into my thoroughly-finished canvases; it is so easy to be luminous in a broad sketch—my first sketches always are luminous. But when I look at nature it permits me to examine into its details without detecting paint-strokes. Nature is brilliant and pure-colored without showing the technical carpenter-work by which brilliancy and color

are got. I must carry those qualities into canvases which do not invite the eye to study their clever strokes; I shall not be content with pictures that are mere brags of technic."

The greater number of the efforts at the Society's exhibition are willing to halt at the stage where art displays a few telling touches, whose adequacy can only be estimated by artists. The pictures are epigrams. To produce a canvas in which the workmanlike directness is quite preserved, at the same time that workmanlike methods are not made conspicuous, seems almost too much to ask of humanity. Remembering that Velasquez did it, however, we need not quite despair, and meantime may acknowledge that technical economy of stroke is a good and refreshing thing to see, and that there was a large quantity of it in the late exhibition, where the professionals met to dare each other to gymnastic feats of pure "method." As the entire collection goes to Philadelphia this month, we have the advantage of being able to consider it as a continued exhibition.

The "Interior" (117) by Whistler is perfectly successful, from the point of view of its intentions. It is a dim room in which none of the shadows are opaque or black, but always let you seem to see more and more as you peer into them. In this adumbration the objects, each at its own plane, partake in proper degree of the greater or lesser illumination, and are solid and real though but half-glimpsed. On going up to it the picture falls to pieces entirely, letting you know that it is a magician who is working before your eyes, not an arranger of puppets. Miss Mary Cassatt's portrait of "Mrs. Cassatt" (99) is an admirable work of indicative painting; it is constructed as if on a wager to tell the greatest number of truths with the smallest number of strokes; and yet—a characteristic in which this showpiece of good French technic differs from the superficial Munich technic all around—there is a recognition of the essentials of anatomy, and the stroke that defines a cartilage, or a knuckle, or a muscle has its own summary way of specifying what is the organic structure it means to express. "A Spanish Beggar" (122), by Humphrey Moore, is a good and brilliant preparation for still better and more brilliant work to be done when the artist is older. Every plane, value, and fact of modelling on the bare torso is well put in place, the unifying and connecting finish being omitted by design. The "Court-yard in the Trastevere" (66), by Mr. Sartain, is one of the most intensely real and solid reproductions of the effect of stonework in tempered sunlight that we know to have been achieved by an American painter. Without the least trick or exaggeration it perfectly gives quality, texture, and substance; it stands beside the somewhat rare architectural subjects of Corot (hardly known in this country, perhaps) in its perfectly honest rendering of frank daylight playing over enduring architecture. Mr. Tiffany's scenes in broad sunshine are successful, too, this year, and he has come nearer to the wished-for trick of conveying, by the sleight of the "luminarist," a dazzle of blinking sun than he ever did before. Mr. Twachtman's "Venetian" boat (67) bathes in real, deep, transparent brine, enriched with profound sun-gilt shadows; and Mr. Low's "Cloudy Weather on the Seine" (16) shows us a full-fed tide that floats its river-boat with a satisfactory appearance of supporting power and levelled repleteness. We cannot omit all mention of the graceful ease and breadth of Mr. Wordsworth Thompson's figure-groups in his "Rappahannock" (145); nor ought we to grudge a quick tribute to Mr. Fussell's "Friends' Meeting" (5), whose rich soberness of color somehow recalls Titian's row of bishops' backs in the Louvre.

Mr. La Farge contributes two little pictures that partake of the magical, and fix for him a level from which he must henceforth take heed never to fall. The "Cactus on a Pearl-shell" (115) is a silky web of rays of light, defining the pearl and petal textures with the most subtle and penetrating conciseness; the appeal to what we love in flowers is so sharp, so quickly done, that we are perforce reminded of Othello's blossom "that the sense ached at"; to relieve us a little, though, and show himself human, the painter underlines this success with another effort (116), in which his flower-painting sinks to the mere bric-à-brac artist's enamel and ivory chips. His "Anadyomene," a miniature work, is the most beautiful fancy we recollect from his pencils; perfect in color, movement, and pagan grace, this soft page seems like the devoutest of missal-painting applied to the illustration of the Greek anthology. Another mystic, Mr. Albert Ryder, contributes at least one success, a female figure straying through a deep wood, and, with the wood-spaces, quite bathed in the red sunset. The hitting of this particular effect was a curious instance of premonitory sympathy. When he had finished it he was reminded by his comrade, Marshall, the engraver, that he had done something precisely in the vein of an Italian artist whom all the French painters raved over, and whose works, never bought for galleries, were stuck up in paint-shops to tempt the modest purses of artists. The Italian in question was Monticelli, then quite unknown to Mr. Ryder. When Messrs. Cottier & Co., by their exhibition of a group of the Italian's caprices, created a Monticelli craze in this country, Mr. Ryder's admonisher recalled the name and the style, and dragged the New York artist into the presence of his prototype; but the American painter's work was long since finished and dry, and the seeming imitation was a mere example of unconsciously congenial parallelism.

His friend, Mr. Baur, a sculptor, contributes a sketch of a Silenus, most profoundly and successfully asleep; if the artist can carry out the intensity of the sketch into an adequate thoroughness of finish, he will give us one of the best possible pendants to the famous Pompeian lamp-holder. Mr. O'Donovan, among a quantity of admirable portraits, exhibits one miniature head of a Boy (156), which is full of a fleeting grace and delicacy most hard to fix, reminding us of the most innocent of the boy-choristers of Luca della Robbia; Mr. St. Gaudens's bronze portrait-plaques are striking, quaint, and spirited in treatment, and Mr. Warner's marble "Twilight" (148), though not quite successful in reconciling the impertinent realism of the model with the abstracted canons of the ideal, confers on us a decorative statuette beyond the usual merit of our national work in this kind.

WILL BE PUBLISHED NEXT WEEK.

Symonds's Renaissance in Italy:

THE FINE ARTS. 8vo.

JUST PUBLISHED.

ENGLISH ACTORS, from Shakespeare to Macready. By Henry Barton Baker. 2 vols. (In the Amateur Series, uniform with LEWES 'ON ACTORS AND ACTING.') $3 50.

FANNY KEMBLE'S RECORDS OF A Girlhood. Large 12mo, $2 50.

ROSCHER'S POLITICAL ECONOMY. Two vols. 8vo, $7.

*GOODHOLME'S DOMESTIC CYCLOPÆ-*dia. 8vo, $5.

HENRY HOLT & CO., NEW YORK.

NEW EDITION, BY SUBSCRIPTION, OF

Stieler's Hand-Atlas.

To contain 95 Colored Maps (among them a new Map of the WEST INDIES in 4 Sections, SOUTH AMERICA in 6 Sections, GERMAN EMPIRE in 4 Sections), and to be published in 32 Monthly parts, at 65 cents each.

Send for copious Prospectus.

Have just issued a *NEW EDITION* of their

CATALOGUE

Of the latest and most prominent Standard Books on

Theology, Oriental Languages, Philosophy, and Education,

IN

GERMAN, LATIN, ENGLISH, FRENCH, etc., LANGUAGES.

8vo, 45 pages, price 15 cents, refunded on receipt of orders.

E. F. Bickford 1879

The Nation.

NEW YORK, THURSDAY, APRIL 10, 1879.

The Week.

THE financial event of the week was the subscription, on Friday, the 4th inst., of $59,000,000 to the United States 4 per cents. Of this amount $40,000,000 were subscribed in a single order by the National Bank of Commerce. The subscriptions on this day took all the 4 per cent. bonds necessary to furnish the means with which to redeem the entire remainder of 5-20 6 per cent. bonds, and the 4 per cent. bonds were then formally withdrawn from the market by Treasury circular of that date. In addition to the bids above mentioned there were other subscriptions forwarded to the amount of about $75,000,000. These arrived too late, and were rejected in accordance with the Treasury circular of March 4, in which the Treasury gave notice to all the world that when enough 4 per cents had been sold to redeem all the outstanding 5-20 6 per cents, no more would be furnished on the terms then offered. There was great disappointment among the unsuccessful bidders, and Wall Street witnessed the spectacle of about one-half the leading bankers quarrelling with the other half over the purchase of 4 per cent. bonds at par less the commission. Had such a thing been predicted at the beginning of the year the prophet would have been considered mad. On the first day of January last there were outstanding about $350,000,000 5-20 bonds which bore 6 per cent. interest. These have now all been replaced with bonds bearing 4 per cent. interest; so that so long as the debt runs there has been made an annual saving in the interest charge of about $7,000,000. This record is without a parallel, and Mr. Sherman is entitled to the main credit for it, as it would have been very easy to mismanage the matter so as to have prevented the saving.

The debating in the House improved greatly after the effects of General Garfield's rather stumpy speech had worn off, and there was, before the passage of the Army Bill on Saturday by 148 to 122, some excellent speaking on both sides. But as soon as this real discussion began, "the revolution" disappeared. General Garfield disposed of it by candidly acknowledging on Friday that there was nothing objectionable *per se* in fastening the repeal as a rider to the appropriation. Of course this acknowledgment had to be made sooner or later, but scores of Republicans apparently thought it could in some manner be avoided. He then pointed out that if they repealed the Army Bill pure and simple they would deprive the civil power of the right to summon the army as a posse or use the army for any purpose whatever. It was accordingly amended before passage so as not to prevent the President's responding to the constitutional call for assistance from a State. It is now before the Senate, and will doubtless soon go to the President. Thus far no harm has been done, and, considering the Republican precedents and concessions, we do not see what there is to prevent the President's signing it, and think it most likely that he will sign it. If he does, the uproar of the past fortnight will seem very ludicrous. If he does not, and the Democrats, being unable to defeat him by a two-thirds vote, try to overcome him by withholding the appropriation, the coercion will begin; but even then it will not be time to arm ourselves. The proper punishment for such conduct on the part of the majority is defeat at the polls, and not war, or threats or preparation or talk of war.

The Senate has not been wholly idle, though still kept waiting for the action of the House on the Army Bill. Mr. Hoar's "revolutionary" resolution was tabled on Wednesday week by 35 to 20, in accordance with the determination of the majority to postpone abstract discussions. In executive session the appointment of Mr. Andrew D. White to be Minister to Germany was confirmed, and so also was that of Mr. Clarence King to be Director of the newly-created Geological Survey, by which science and economical administration will greatly profit. An interesting subject for debate was found in the case of Mr. Charles H. Bell, appointed by the Governor of New Hampshire to fill the vacancy caused by the expiration of the term of Senator Wadleigh. Objection being made to Mr. Bell's title, it was referred to the Committee on Privileges and Elections, who on April 2 reported—the majority (all Democrats) against, and the minority (all Republicans) in favor of, admitting him to a seat.

The circumstances are peculiar. New Hampshire is about changing from annual sessions of the Legislature to biennial, and last year elected two Legislatures at an interval of several months, the last chosen being the first biennial Legislature, to convene in June next. There was, consequently, at the expiration of Senator Wadleigh's term, no Legislature competent to fill the vacancy. The question had been discussed in the Senate of the Legislature of 1878, and had been decided adversely: an Act of Congress of 1866 expressly names the Legislature "*which is chosen* next preceding the expiration" of a Senator's term. The Governor's right to convene the Legislature of 1879 in advance of the time fixed by law appears to be more than doubtful. He therefore concluded that the case was one which came under the clause of the Constitution providing for Senatorial vacancies, and made the temporary appointment of Mr. Bell. All the precedents cited by the majority seem defective in analogy, and the hair-splitting over the meaning of the word "happen" seems uncalled for. Though the committee divided according to party, the debate has been free, and Senator Bayard supports the minority, while Senator Carpenter takes the other side.

The extent of the negro exodus from the lower Mississippi cannot be stated exactly. A *Herald* correspondent at Leavenworth telegraphed on Monday that the number of immigrants who had already arrived in Kansas was about two thousand, and more were coming by every boat. This appears to be confirmed by estimates made in St. Louis, where on Saturday, according to the report of a custom-house officer, there were still thirteen hundred awaiting transportation. In Kansas some dispersion has taken place, but the great body of the newcomers have helplessly sat down at Leavenworth, Wyandotte, and Topeka. Those who first arrived, a month ago, were comparatively well clothed and provided with slender savings, but not at all capable of purchasing land or cultivating it for themselves. The rest have been worse off in all respects, and have suffered much from the change of climate. It is, in fact, essentially a pauper immigration, and as such is not heartily welcomed by the people of Kansas. The reasons assigned for this unfortunate movement are very numerous, and are both local and general. The truth appears to be that the crop-failures of the past two years have greatly discouraged the negroes now abandoning the cotton plantations along the Mississippi, and have also convinced them that labor was too plentiful there. If this were all, the movement would naturally check itself in a short time, nor would it tend all one way; and if the migrating blacks were not benefited, those who stayed behind and the planters would be. But there is no little alarm felt for the immediate consequences in Louisiana, and apprehensions are expressed in others of the Gulf States that a similar unrest will shortly be developed among them. It is alleged by independent witnesses that systematic efforts have been made to produce this result. The leading colored Baptist clergyman in St. Louis says that the leading agents in the churches and Sunday-schools, and the "moral, mental, and social organiza-

tions," have for at least three years been holding up the idea of emigration as the evidence and seal of emancipation. This mischievous doctrine may have been preached everywhere, and wherever it has encountered sufficient misery it may be expected to work in proportion to the facility of transportation.

The condition of the poor people who, however real their ills, political, social, or material, could only have been deluded into a migration northward and *en masse*, calls, of course, for pity and charity. But the best friends of the negro cannot wish to encourage or to make themselves responsible for the further spread of the movement. Yet such is the avowed aim of the organization at Washington known as the National Emigration Aid Society, of which the president is Senator Windom, of Minnesota, who introduced last winter a resolution for a committee to enquire into the expediency of assisting the Southern blacks to move away from that section. This is thought by some to have been the signal for the present exodus. Of course the society means to regulate the emigration it fosters, and to prevent scenes like those now occurring in Kansas, but that its animus is not sympathy for the blacks but hostility to the South—the assumption, at least, that whites and blacks can never agree, and might as well give up trying to do so—is clear from the constitution of the Executive Committee. No one will suspect Mr. Wm. E. Chandler or Mr. George C. Gorham of any but a political purpose in sending agents to the South to promote emigration; nor need their designs be as far-reaching as the depopulation of the South before the next census is taken, to make their motives perfectly intelligible. We hear also of a Boston "National Farmers' Association" having in view the colonization of Northwestern Texas with negroes from the other Southern States, and the ultimate erection of a separate State. Its circulars or tracts, addressed to the freedmen, declare in the wildest terms that they "must emigrate, fight, or perish." Nothing could well be more pernicious than such counsel coming from a land and railroad speculation.

The offer of the Berlin mission by Mr. Evarts to Mr. Whitelaw Reid, the editor of the *Tribune*, as a testimony to "his public position and public services" as "an eminent member of the Republican party," must have been gratifying to Mr. Reid, though he declined it; but the manner in which it has been received by his "esteemed contemporaries" shows that the old indomitable spirit of the New York press is dead or dying. We expected to see the *Times*, at least, equal to the expression in vigorous and simple English of the profound disgust which the affair has no doubt caused it. In the old Jennings days this unseemly spectacle would not have been witnessed, and we may guess the feelings with which he will in his island home read the announcement, and then glance at the milk-and-water editorial columns of his old sheet, in which he so often chastised "the man Reid" and threatened him with temporal ruin, after his eternal ruin had been fully provided for. In those days, when a brother editor was dangerously ill, the *Times* did not hesitate to call attention to the horrible forebodings with which his condition could not fail to fill him. Now it wastes its magnificent powers of invective on the distant bull-dozer or confines them to Tilden, to the great regret of some of its readers, at least.

The Advisory Board of Officers appointed by the President to examine the proceedings of the court-martial which in 1862 found General Fitz-John Porter guilty of misbehavior in the field, and sentenced him to be cashiered, have made their report. They not only acquit General Porter of the offence with which he was charged, but pronounce his conduct during the Pope campaign to have been in all respects praiseworthy, and to have contributed largely to the salvation of the army. They have been enabled to reach this conclusion in part owing to the breakdown of testimony produced for the prosecution before the court-martial; in part to accurate surveys of the field of the campaign recently made by the Engineers; and in part to the production of documentary evidence which was not previously obtainable, and to the evidence of Confederate officers. Much of this new proof is of the most crushing character. Nothing in the recent enquiry was so extraordinary, however, as the testimony of General McDowell. This is *so* extraordinary and affects so seriously that officer's reputation that, even if we had not ourselves held and expressed opinions unfavorable to General Porter, we should feel bound to make more extended comment on the case than is possible within the limits of a paragraph, and we shall return to the subject next week. As the matter now stands it is impossible to look on the prosecution of General Porter as anything but a most astonishing piece of deception practised on the public, the authors and promoters of which ought not to escape the reprobation of honest men.

The extraordinary constitution drafted by the late Convention in California, on which we commented last week, is naturally exciting great alarm in the State, and, according to the San Francisco *Commercial Herald*, "hangs like a pall over the whole business community," and has created a feeling of such uneasiness that the banks will not lend except on the best security. The situation will not improve, if it ever improves at all, until the vote is taken on the 7th of May. The truth is that the constitution puts the banking, insurance, telegraphing, and railroad business—or, in other words, all business carried on by corporations—at the mercy of "sand-lot" statesmen and blackmailers; and the business men of the community must either defeat it, or wind up their affairs, or try to nullify it by corrupting the Legislature and the courts. We fear they will take most kindly to the last course.

The trial of Talmage over in Brooklyn has turned out, as we anticipated, a most amusing farce—very like the services in Talmage's church. There has been an immense and uproarious audience during the proceedings, which the Presbytery, which calls itself "the Court of Jesus Christ," has been entirely unable to control. The unfortunate trustees of the church in which the sessions are held have filed a protest, alleging that the "riotous crowd" have broken the pews and "two treadles of the organ," "written numerous scurrilous and indecent things in hymn-books and the backs of seats," and "have been heard to threaten the destruction of an oil-painting hanging in the church parlor." The sympathies of this crowd, we need hardly say, have been all with the defendant, and they greeted him with thunders of applause whenever he rose, as he has several times done, to "hurl defiance" at his foes. The counsel on both sides are ministers, and their discussions have been acrimonious beyond anything known at the secular bar, in courts of record at least. One gentleman has had to accuse his adversary of "aiming a poisoned lance at the very centre of his moral being," an outrage never witnessed in temporal tribunals. The attempts to maintain the gravity suitable to an ecclesiastical court have been comically unsuccessful. No witnesses were ever funnier than the managing editor and publisher of Talmage's old paper, the *Christian at Work*, one of the charges being that when Talmage was "the Christian" of that periodical, part of "his work" consisted in cheating his partners. There was one very ludicrous scene, when the Moderator tried during one of the pauses in the middle of the drollery to have a hymn sung. The opening lines of that which was suggested, "Blest be the tie that binds," fairly brought down the house, and a suggestion of the Lord's Prayer was equally mirth-producing. But nothing excited so much merriment as the Moderator's proposal that, on the failure of the hymns, they should pass a few moments in "sacred silence." This was more than the audience could bear, and they doubled themselves up with laughter.

It is easy to exaggerate the importance of the political excitement in Canada, growing out of Lord Lorne's referring a domestic question to the British Colonial Secretary. Nevertheless, it seems

clear at this time that any undue emphasis on the Imperial right of revision and control over the Dominion will greatly strengthen the feeling in favor of complete separation. The Lieutenant-Governor of Quebec, Mr. Letellier, last year dismissed a so-called Conservative ministry, opposed to him in politics, but having eighteen majority in a House of sixty-five members, and appointed one of his own stripe. This change involved a general election, which gave the new ministers a bare majority with the casting vote of the Speaker. The national elections subsequently resulted in a great triumph for the Conservatives, and one of the pledges of the canvass was that Sir John Macdonald would bring about the dismissal of Letellier. His Government did, in fact, after a vote of censure of Letellier by Parliament, recommend the Governor-General to remove him, but Sir John was obliged to announce to the House of Commons on Thursday that Lord Lorne declined to act on his own responsibility, as the precedent would affect his relations with all the other members of the Confederation. The cry was at once raised that this affair concerned Canada only, and did not concern the Home Government, and there appears to be no doubt that the Governor-General-in-Council (that is, in agreement with the ministers) might safely assume the power which Lord Lorne declines to exercise. The feeling among the French Canadians runs very high, but the friends of Letellier endeavor to enlist support for him on the ground of the disrespectful treatment he received from the Conservative Cabinet, its Ultramontane character, and the Protestantism of Mr. Joly, the new Premier. Meantime, a special commissioner has been sent to England to confer with the Colonial Office.

The Khedive has just played a trick on France and England, and his European creditors, for which all those who believe in the impolicy and inhumanity of trying to patch up and maintain Oriental governments ought to be grateful to him. He has got tired of the restraints imposed on him by his conventions with France and England, which put his finances in charge of Mr. Rivers Wilson and M. De Blignières, and deprived him of his enormous private estate, and introduced European bookkeeping into the management of his affairs. He has accordingly dismissed the whole of his present Ministry, including the English and French financiers, and has formed another composed entirely of good old Turks, who are going to "make sacrifices," he says, which will enable him to settle with his foreign creditors without submitting to their interference. Of course this is mere brag. The Khedive is bankrupt. His subjects are taxed to the starvation point. He cannot meet the demands of his creditors, even if his finances are managed by Europeans; he cannot make even a pretence of meeting them with a native ministry composed of his own favorites. He doubtless knows very well what the effect of his new move will be, and calculates on being saved from interference or coercion, as Turkey has been for so long, by the jealousy of the Mediterranean powers, and in this he is not far wrong. From the peace of 1815 until very recently Egypt has been looked on as a sort of dependency of England, which she might occupy or not as she pleased. The rise of Italy, the growth of French commerce, the crushing of French hopes on the side of the Rhine, and the investment of enormous amounts of French capital in the Suez Canal and Egyptian bonds, have changed all this; and when Lord Salisbury came to test the nature of British influence over Egypt he found he had to count with both France and Italy, and that the opportunity of annexing Egypt to the Jingo Empire was gone. The Khedive has begun to understand the situation, and has gone off on another frolic.

The news from Zululand does not improve. It appears by the latest Blue-book that Lord Chelmsford now says he wrote to the Duke of Cambridge as long ago as last June that the mental and physical strain of his command was too much for him, and that he is now no better than he was then. This is a hard blow for the Government, if true, and they are in self-defence reduced to the necessity of denying that Lord Chelmsford ever said anything to the Duke of Cambridge about his weakness, which, on the other hand, if true, puts Lord Chelmsford in an absurd position, and this again reacts on the Government which persists in retaining him. The force for the relief of Ekowe has probably started before now, but in the meantime the Zulus have repeated their tactics at Isandlana, on a smaller scale, in the Transvaal, 5,000 of them falling suddenly in the early morning on a detachment of eighty men and killing or drowning sixty of them, the rest escaping, solely owing to their having crossed a river over-night. The ability of the Zulus to bear slaughter without flinching appears to be something unprecedented among savages, and makes the charges of their heavy columns irresistible by a small force, if not entrenched, no matter how close or rapid its fire. Their capacity for rapid movement, too, is very great—as great as that of our Indians, but their discipline and steadiness are far greater. It would seem as if small parties of European troops would have to carry with them something in the nature of the movable *chevaux-de-frise* with which the Russian infantry in the old days before the bayonet kept off the Tartar cavalry on the steppes.

The despatch addressed by Lord Salisbury to Lord Loftus on the 26th of January, which has been recently published, complains of the encouragement given by Russian agents to the tumultuous agitation in Eastern Rumelia for annexation to Bulgaria by keeping up a single administration of the two countries, and making the newly-raised militia of both a common force under a single commander. He points out that when the Russians withdraw this union will come to an end, but the spirit of resistance on the part of the people to the Treaty of Berlin will remain, and so will the warlike ardor. He then goes on with the utmost coolness to show that the Turkish troops will enter the province to assert the Sultan's authority, and that they will be too strong for the insurgents and will probably renew the "unexampled sufferings which the people underwent in the last war"; in other words, he looks forward to the Turkish troops being let loose on the province to subjugate it, in Turkish fashion, by massacre, pillage, and rape. This little programme, too, it must be remembered, emanates from an English minister, and it has for its object the subjection of a Christian people to an odious, effete, inhuman, and licentious Oriental despotism. No such state paper, it is safe to say, has been produced in the English Foreign Office within the present century. It is, however, quite in keeping with the now famous dictum of Sir Henry Elliot, that if England was interested in the maintenance of the Turkish Empire, whether 10,000 or 20,000 or 30,000 Bulgarians were massacred or no was of no sort of consequence.

Prince Gortchakoff's reply was what it ought to have been—brief, cold, and slightly contemptuous. He said he did not care for controversy with Lord Salisbury, and that what Russia had done or was doing was dictated by a natural interest in the safety and welfare of the people she had liberated, and that this interest she could not avoid retaining, even after her troops had evacuated the provinces. It is the sort of despatch, in short, which British ministers used to write to Austrian, Italian, Russian, and Spanish despots who complained of England's making trouble among their subjects by the unguarded display of her sympathies. Since this was written, however, it has become plain even to the English Cabinet that the plan of having the Turks seize Rumelia by force of arms cannot be carried out, and that, in fact, the possibility of maintaining the Turkish sovereignty over it is more and more doubtful, and that in any event the peace must be kept after the departure of the Russians by other than Turkish troops. But as this means the loss of the sole feature in the Berlin Treaty on which Lord Beaconsfield prided himself, it has, of course, to be disguised as much as possible. In the coming negotiations Russia is likely to be much less pliable than she has been, as she cannot again be threatened with the Sepoys and other theatrical thunder.

THE FLIGHT OF THE NEGROES.

IT would be difficult to conceive of a situation less favorable to healthy social progress than that in which the negroes at the South found themselves since the war. They were very poor, and very ignorant, and very timid, and surrounded by fierce, warlike, and contemptuous neighbors of a different race. Their ignorance, too, did not consist in the want of book-learning, but in the want of the common discipline of civilized life. All this was bad enough, or would have been bad enough, even if they had nothing to trouble them but the difficulty of getting a livelihood. They were, however, armed with the franchise, and were at once plunged into a sea of troubles which even the best equipped races would have found it difficult to navigate. The party which gave them the ballot had really no means of protecting them in the enjoyment of it, and yet had the strongest interest in preventing the Democrats from getting the benefit of it. Accordingly, it had to resort for this purpose to keeping alive among the negroes as long as possible a spirit of hatred and distrust towards the whites, and at the same time to nourishing the passions of the war at the North by stories, some true and some false, of negro wrongs. The whites, on their side, rather helped this plan by the savage means to which they resorted, in those States in which the negroes were in a majority, to overturn or prevent negro rule. The effect of the struggle on the unfortunate colored people has, of course, been bad; the wonder is that it has not been worse. It has kept them in a state of permanent hostility with their white neighbors, and has filled their minds with vague expectations of advancement or elevation of some kind from the Northern Republicans.

That they should have, under these circumstances, cultivated the soil as faithfully as the Southern crop-returns show them to have done, and at the same time purchased so much land, and taken so much advantage of the schools, is very remarkable, and suggests some melancholy reflections as to what they might have accomplished during the past fifteen years if they had enjoyed thorough security, and had not been compelled to take part in the electioneering contests of their white countrymen the minute they crossed the threshold of civilization. The flight of several thousand of them in a sort of panic from Louisiana and Mississippi, with accounts of which the papers are now filled, is dismal reading enough, because it is largely the result of delusions of one sort or another, and the danger is that it will be fostered and used during the next year as a fine campaign incident. The immense misery that it is about to produce will, of course, cause the managers and stump-speakers little concern.

When one reads in the correspondence of the Stalwart paper which is making the most of it for party purposes, that the negroes in South Carolina are ceasing to purchase homesteads and are hoarding their money, we perceive clearly enough that the more thrifty and well-to-do are alarmed by something that is impending, rather than suffering from anything which has happened in the past. A state of things in which a poor man has been able to save money to buy a homestead, as tens of thousands of negroes have done, is not one in which he is likely to think himself unhappy or ill-used. What is probably alarming this class is the accounts which have been circulated amongst them of the evils which are likely to befall them now that the Democrats have secured control of Congress. If the Stalwart reports of their condition during the past ten years, however, were true, nothing the Democrats could now do would have any terrors for them. Senator Dawes told the people of Massachusetts in 1876 that there was not a negro at the South who did not fear when he went to bed at night that he would have his throat cut or his cabin burnt before morning. The New York *Times* says that for a long time past Christmas Day and election days—that is, two days in the year—"have been appropriated [by the Southern whites] for the sole purpose of killing 'peart niggers'"; the other days of the year being reserved for "robbery and personal violence." Moreover, we learn from the same paper that during recent years, while the negroes have been raising these tremendous crops of cotton and sugar, the whites "gambled, drank whiskey, and improved their skill as marksmen by shooting offhand at a servant who did not please them." One would think that a laboring man who was murdered regularly on Christmas day and election day, and was robbed and assaulted on other days, besides occasionally serving as a mark for a drunken man's rifle, would have little to fear in this world from any change in the Government. Nevertheless, there can be no doubt that the thrifty colored men at the South were pretty well off; that a very large number were, in spite of many difficulties, making their way in the world, and that the accounts from Republican sources of the horrors that are to result from Democratic rule have determined them to get by hook or by crook into a State in which the Government would be friendly to them.

The impelling motives of the poorer and more shiftless class of emigrants in abandoning their homes are not difficult to divine either. Both the planters and the laborers at the South resumed their farming at the close of the war absolutely without capital and without business habits. Little or no money passes between them, and the negro subsists during the year on supplies furnished him on a credit account either by the planter or that still greater man in Southern society nowadays, the cross-roads storekeeper. This, of course, means monstrous prices, and probably a good deal of fraud in the tally. No laboring man who lives in this way anywhere, be he black or white, ever rises above the direst poverty or escapes debt. Laborers suffer terribly from the process at the North, and it would be difficult to say what legal remedy could be devised for it. It is probable, too, that all negroes suffer in nerves about election-time. Either the Democrats "intimidate" them to keep them from the polls, or the Republicans assure them that they will be intimidated, and between the two they have a month every year of great anxiety, and no matter which side wins, it brings no change in their condition. But if the emigration could be properly conducted, and the emigrants were able to take care of themselves until they found employment or raised crops, there would be little to regret about it. In fact it would be an excellent remedy for the trouble in some of the Southern States. There are too many negroes now in South Carolina, Louisiana, and Mississippi both for their own good and that of the whites. Profusion of labor generally means misery for the laborer, and the negroes' best chance of social and political advancement lies in scattering themselves in more advanced communities. Nothing but a return to barbarism is to be expected from dense masses of colored people, such as fill Mr. Chalmers's district in Mississippi. In England, the fight which the agricultural laborers have been long waging with the farmers over grievances strikingly like those of which the Southern negroes complain, has been won by emigration on a great scale, begun by Canon Girdlestone ten years ago. The result has been a rise of twenty per cent. in wages, and an immense improvement in treatment in all ways. The more negroes leave the Southern States the more considerate will the whites become towards those who remain behind. Indeed, even if the proportions of the present movement be, as we have little doubt they are, greatly exaggerated, the mere demonstration that it is possible must have a good effect on the relations of both races; for the only radical and effective remedy after all for defective State government, no matter in what the defectiveness consists, is the loss of population and capital. It is this that rouses property-holders, and convinces them that the paths of peace are the paths of prosperity. Politicians who are urging the poor blacks to start for Kansas, either for the purpose of confirming the "bloody-shirt" view of Southern society or for the purpose, as one writer has frankly avowed, of causing the loss of fifteen representatives to the South at the next census, nevertheless have a great deal to answer for. The bulk of the emigrants appear to be able to get no further than St. Louis, or, if they reach Kansas at all, will enter it as paupers. Kansas, too, according to all the best accounts, has already more white labor than it can pay for, and is ill prepared to undertake the maintenance of a large body of destitute negroes, particularly as it does not need their votes, the State being already overwhelmingly Republican.

CABINET OFFICERS IN CONGRESS.

THE project introduced by Mr. Pendleton, of Ohio, or, rather, re-introduced by him—for he first brought it forward in the House some fourteen years ago—to bring the executive branch of the Government into closer relations with the legislative branches, belongs to the highest class of political questions, and is destined, we trust, to receive a wide and continued discussion until a decision of some sort is reached upon it. Regarded merely as a change of diet from the treason of Jefferson Davis, the cipher despatches, unlimited greenbacks, and other stale pabulum, it ought to be welcomed by everybody. We propose to point out in this article some of the changes involved in a measure of this kind.

The plan proposes, in brief, that the members of the Cabinet shall be enabled to occupy seats in either house of Congress, and to participate in the debates and proceedings thereof, except as to the right of voting, and that they shall be required to be present on certain days to answer questions propounded by any member under the authority and sanction of the house, of which previous notice shall have been given in a prescribed manner. The principal reason assigned for this innovation is that, under the present system, Congress and the departments are always at arms' length to each other; that the information required by the former from the latter is not attainable except by slow degrees, and then only imperfectly, and in many cases too late to be of service; that the Secretaries keep back what it does not suit them to communicate, by evasive answers which would be impossible if delivered colloquially, etc., etc. In other words, there is a mechanical defect in the working machinery of the Government, for which a remedy is sought by bringing the several parts nearer together. This is the reason most frequently and forcibly assigned for bringing the members of the Cabinet upon the floor of Congress; but it is not the most important one that might be urged, and since the opponents of the plan have already dived to the bottom of it, and have attacked the project upon the ground that it seeks to introduce the English system—or, as some persons have termed it, the monarchical system—of responsible government, it is best for the friends of the measure to defend it upon that ground, if they can. To call a thing English or monarchical is, of course, to arouse a great mass of prejudice against it, but those phrases are most commonly and unbecomingly used by persons who in the same breath favor the election of General Grant to a third Presidential term.

The question whether Cabinet officers can be *required* to be personally present in either house of Congress has been learnedly discussed by Mr. Perry Belmont, who has also pointed out that the law of 1789 establishing the Treasury Department, passed by the first Congress after the adoption of the Constitution, and still in force, provides that the Secretary shall give information "to either branch of the legislature in person or in writing as may be required." This question is hardly worth spending much time over, since it can have no practical bearing until, the proposed change being made, some Secretary shall refuse to occupy the seat assigned to him. It has been so long customary for Congress to call for information from the departments in writing, and to do this in the tone of authority, that the right to do so is not likely to be a matter of dispute, and certainly the distinction between oral and written information is extremely narrow. The power of Congress to pass a law authorizing and requiring the members of the Cabinet to attend its sessions may be assumed at the outset. It cannot make them members of Congress—the qualifications and mode of electing members being fixed by the Constitution—but it can open its doors to them and give them a hearing, and it can require from them by word of mouth all that it can require by any other mode of communication.

It may be assumed, also, that oral communications, with the right to debate, would tend greatly to expedite and clarify the public business. The existing means of communication between Congress and the departments are as lumbering and antiquated as possible, and if once superseded by oral methods would be like the stage-coach and the pack-saddle in competition with the modern railway. Everything that can be urged upon this point may be taken for granted. But it is highly probable that a change of machinery of the kind proposed would lead to changes of substance also; that the heads of departments, once installed on the floors of Congress, would eventually become the leaders of their party in both Senate and House. The natural course of things would be that the Executive would seek to be represented by men able to lead, and, if for any reason those whom he had selected were unable to lead, he would choose others possessing this paramount qualification. This is of the essence of responsible government as it exists in England, but is not the whole of it. Responsible government requires that the chief executive shall belong to no party—shall have no preference for one party more than for another—so that whenever the cabinet cease to be the real leaders of the legislature by reason of a change in the political complexion of that body, they shall give place to a cabinet agreeable to the new majority and capable of leading it. This implies a permanent executive, or at all events a more permanent one than ours. The French are trying the experiment with a seven-years Presidential term, the outcome of which is still doubtful, although it is not likely to be put to a severer strain than that given it by the De Broglie-Fourtou Ministry. The relations of the Cabinet to the Commons in England have been defined by Mr. Gladstone in a recent essay. He says:

"The association of the ministers with the Parliament, and through the House of Commons with the people, is the counterpart to their association as ministers with the crown and the prerogative. The decisions that they take are taken under the competing pressure of a bias this way and a bias that way, and strictly represent what is termed in mechanics the composition of forces. . . . The various currents of political and social influences meet edgewise in their persons, much like the conflicting tides in St. George's Channel or the Straits of Dover, for while they are the ultimate regulators of the relations between the crown on the one side and the people through the houses of Parliament on the other, they have no authority vested in them to coerce or censure either way. Their attitude toward the Houses must always be that of deference, their language that of respect if not of submission. Still more must their attitude and language toward the sovereign be the same in principle and yet more marked in form, and this though upon them lies the ultimate responsibility of deciding what shall be done in the crown's name in every branch of administration and every department of policy, coupled only with the alternative of ceasing to be ministers if what they may advisedly deem the requisite power of action be denied them."

Under existing conditions responsible government, of the English type, is impossible in this country. The President will continue to be a partisan, even if not the chief of his party, and will continue to appoint or retain a Cabinet of his political friends, regardless of the complexion of either House of Congress. That he should do so is not a matter for regret, seeing that the people can deal with both him and his Cabinet every four years Semi-responsible government, or the responsibility of the Executive to his own party as represented in Congress, is possible, and it is this which Mr. Pendleton's bill would be most likely to result in. We should expect to witness, from year to year, a gradual yielding of executive influence to legislative influence. The effect of numbers counts for much in the long run, and no President would care to see his Cabinet repeatedly overridden and voted down by his own party. He would soon learn the art of choosing advisers satisfactory to the House—in other words, he would consult their preference rather than his own. Whether this would be a useful change in our politics is by no means clear. It is not to be accepted without proof. That this would be the course and tendency of the proposed measure rather than an absorption of legislative power by the Executive, we may reasonably infer from the fact that such has been its course and tendency wherever responsible or semi-responsible government has been tried.

The proposed change would not be without some effect upon the character of the Cabinet itself, and it would probably be improving. Weak and second-rate men like those whom President Grant preferred to surround himself with; not being able to meet the best

minds of the House and Senate in daily competition, would be speedily brushed aside and a stronger phalanx substituted in their places. The duty of leadership would be upon them *ex-officio*, and a failure to lead would necessitate their retirement under penalty of general contempt. The seven best intellects of the party would always be drifting by a process of natural selection into the Cabinet, and all the rest would be taking seats below them; and thus, while the legislature as a mass would gain in influence at the expense of the executive, its individual members would be overshadowed and count for something less than they do now. On the other hand, the Senate and the House would be the natural training-ground for Cabinet officers. It will be seen from this outline that there is much more involved in Mr. Pendleton's bill than a mere change of vehicles for the conveyance of information from the Departments to Congress.

THE INUNDATIONS OF THE THEISS.

THE recent floods in Hungary, so exceptionally disastrous in their effects, are, unfortunately, the natural result of causes which have given to an area of about 6,000 square miles the name of the "territory of inundation." This territory comprises nearly one-sixth of the great plain of lower Hungary, which stretches from the shores of the Danube to the borders of Transylvania, and in a southerly direction almost from the foot of the Carpathian Mountains to the frontier of Servia, a distance of 300 miles. That portion of the great plain lying east of the Theiss and north of the Maros, between the cities of Tokay, Debreczin, Arad, and Szegedin, is emphatically called the *Alföld*, the "lowland." It is one vast alluvial plain, the real home of the Magyar, and the land of the *pusztas*, whose striking features have often been described. Almost absolutely devoid of trees, the natural fertility of the soil offers an unlimited resource to the semi-nomadic natives of the *puszta*—the indolent herdsman in his sheepskin furs, which "warm in winter and cool in summer"; the fiery *csikós*, who tames his horses with the lasso; the powerful *gulyás*, who tends the long-horned cattle, and the daring *betyár*, or cattle-stealer, who survives now only in song. In spite of the absence of trees, want of water, and existence of marshes, the soil yields wheat and maize in immense quantities, and scattered villages, some of them very large in extent, break the monotony of the landscape—a monotony which is shared by the climate, the fauna and flora of the entire Hungarian plain, and of which Baron Eötvös gives, in his famous novel, 'A falu jegyzöje' ('The Village Notary'), a striking description, thus rendered by Mr. Arthur J. Patterson in his excellent work on 'The Magyars: their Country and Institutions':

"Whoever has once traversed any portion of the Alföld on either side of the Tisza, or has spent but a few days in any one of its villages, may boldly say that he knows the whole of it. . . . When the traveller who has been surprised by sleep during his journey across its sandy plains wakes up a few hours after, the only perceptible signs of his progress are afforded by the condition of his horses and the position of the sun. The general character of the scenery around him, and even its separate details, give no more indication of the progress he has made than does the monotonous waste of waters to the sailor in the midst of the Atlantic. The meadows which extend far and wide, whose undiversified appearance is only broken here and there by the tall wooden crane above some uncovered well, or by a few storks around a half-dried pool; the ill-cultivated fields, whose wheat and maize are entrusted to the care of Providence: . . . here and there a lonely farm-house, whose shaggy watch-dogs remind him by their barking of the sanctity of private property, and whose vast hay-ricks and straw-stacks, left from last year, prove that the farmer had a very abundant harvest or keeps but a small amount of stock—all these objects he saw before him when he closed his eyes, all these he has still before him now they are open again."

Although the great plain extends west even beyond the Danube, it derives its characteristic features from the Tisza or Theiss, the river of Hungary *par excellence*, whose source and mouth are both within the confines of the country. It rises in the northeast in the county of Mármaros, where the Carpathians of Hungary proper, joining those of Transylvania, rise to a height of eight thousand feet, flows, rapidly descending and augmented by the Bodrog, westward to Tokay, and, near its confluence with the Hernád, enters the Hungarian plain. After a south-southwesterly course to Szolnok, where it becomes navigable for large craft, it turns southward, and thenceforth winds sluggishly through the country, between flat and often marshy shores, the fall along this section of the valley of the Theiss being only one inch in six hundred feet. It enters the Danube south of Titel, near the Servian frontier, having traversed about six hundred miles. For nearly three hundred miles its lower course is parallel to the Danube, with which it is connected by the Francis Canal. Throughout its extent the Theiss abounds in fish to a degree which is expressed in the popular saying that the fishes make up one-third of the river.

Foremost among the causes of the frequent and wide-spread inundations of the Hungarian plain is the absorption by the Theiss of almost all the waters descending from the northeastern, eastern, and southeastern slopes of the Carpathians. All the large rivers of Transylvania, with the exception of the Aluta, find their way into the Theiss, chief among them the Szamos, Körös, and Maros; the ill-fated city of Szegedin being situated at the confluence of the latter river and the Theiss. In a similar manner the cause of the recent inundations in southern France must be sought in the mountain streams of the Pyrenees and Cévennes, which swell the waters of the Garonne.

Before the regulation of the Theiss was begun, its overflow left behind pools and marshes which did not dry up for several years, and whose exhalations poisoned the air. It was the glory of Count Stephen Széchenyi, one of the greatest Hungarians and most practical of reformers, to have conceived and begun the work of drainage and canalization which from 1846 was continued to almost the present day. Thousands of square miles have been restored by it to cultivation, and 108 cuts have been made, shortening the tortuous bed of the river by 280 miles. That the regulation of the Theiss as hitherto carried on is insufficient for the protection of cities along its shores has been sadly demonstrated by the destruction of Szegedin. It was, in fact, this conviction which determined the Hungarian Government within the last few years to suspend operations pending negotiations looking to a change of system. Not unnaturally, the Government now finds itself charged with the responsibility for a catastrophe which it could not have averted by continuing the labors of preceding administrations—nay, which, as has been pointed out by competent critics, was partly caused by a fatal defect in one of the most important features of the work of regulation. In short, Hungary has just passed through the bitter school of experience in which Holland, in the course of centuries, acquired the art of constructing her wonderful dikes. Repeatedly the embankments thrown up for the protection of Szegedin and other towns on the Theiss have been strengthened and heightened, but they have either proved utterly powerless to stem the flood or, in some instances, their presence has even added to the danger by staying a current which would otherwise have sought a natural outlet. Thus, the town of Szentes, on the left bank of the Theiss, about eighteen miles north of Szegedin, was saved from the fate of the latter city only by the timely piercing of a dike that threatened destruction. It has even been asserted, by persons thoroughly familiar with the localities, that the destruction of Szegedin itself might have been prevented had not the ignorance of officials and the incredible narrow-mindedness of a small commune in the immediate vicinity of the city opposed the opening of a dike by which the flood would have been deflected from Szegedin at the sacrifice of the village. As it was, the outer dike constructed for the protection of the rear of the town, which for years had suffered from the action of water, gave way as early as the 5th of March, the flood filling the space between it and the second dike. With the vain attempts to strengthen and heighten this embankment—attempts which at one time promised success—and the details of the final catastrophe, which occurred on the morning of March 12, the world has been made familiar. It will, however, not be amiss to recall a few characteristic features of the unfortunate city, the less so as they afford a certain gleam of hopefulness which a mere account of the desolation does not present.

Szegedin, though in point of population the second largest city in Hungary (the number of inhabitants being 70,000), was in reality no city at all. It has been said that in Hungary the villages are often cities and the cities villages. Szegedin was such a village, for of its 9,500 houses but a few hundred deserved that name, the rest being primitive habitations built of sun-dried brick, a material which the lack of stones in the Alföld—as notable as its destitution of trees—has brought into common use. As regards the number of buildings of more than one story in height, Szegedin occupied almost the lowest rank among the towns of Hungary. Of its 70,000 inhabitants, 14,000 men were directly or indirectly devoted to agriculture; roughly speaking, therefore, at least half the population depended on it for its support. Only nine and a half per cent. were addicted to commercial pursuits, and these figures find further confirmation in the fact that hardly one-half of the population were able to read and write. Consequently, the individual losses were in themselves comparatively small, and altogether of a nature which admits the hope of speedy recovery. Agricultural products and implements and cattle con-

stitute the chief losses Domestic animals naturally formed the largest part of the wealth of the agricultural population of Szegedin, and although probably only a small portion of its 7,000 horses, 9,000 cattle, 92,000 sheep, etc., escaped destruction, the natural wealth and fertility of Hungary will easily replace what has been lost. At all events, the sting of the pecuniary losses will scarcely be felt in view of the active sympathy which animates the monarchy and most of Europe, opening hearts and purses to an almost unparalleled extent.

It will be the task of science to devise schemes for the prevention of similar catastrophes. Already suggestions are forthcoming which will serve to stimulate action. Thus, Count Lónyay, the former President of the Hungarian Ministry, gives in the *Neue Freie Presse* his views on this subject, which, as emanating from a member of the first committee on the regulation of the Theiss under Count Széchenyi, are worthy of consideration. He finds the fatal defect of the old plan in the fact that sufficient space was not allowed, as proposed in 1846, to intervene between the shores of the Theiss and the dikes. This defect admits of no remedy now, but the danger of inundations in the lower districts may still be averted by a thorough dredging of the cuts hitherto made, and their consequent deepening and widening. The chief danger to Szegedin in particular lies in its situation at the confluence of the Theiss and the Maros. Already in 1846 it was pointed out that the deflection of the mouth of the Maros from Szegedin was necessary to save the city from possible destruction ; but though engineers have since fully concurred in the opinion, the citizens of Szegedin themselves, looking only to the commercial advantages derived from its present situation, have opposed all efforts tending to change the course of the Maros. Such a change into a deeper and wider bed Count Lónyay considers as the necessary foundation of all plans for the rebuilding of the city. In the same journal a technical authority attacks the evil at its source—in the mountain streams which feed the Theiss. He would assign to some of them different courses, lessening their rapidity, and construct canals for the reception of the surplus waters, communicating with the Danube at a more suitable point than the present mouth of the Theiss, say at Báziás, about sixty miles further east. The negotiations commenced by the Government in 1873 and alluded to above had for their basis the leading features of this plan, by which a better irrigation of the Hungarian plain east of the Theiss is to be accomplished.

POLITICS AND SOCIETY IN ENGLAND.

London, March 22, 1879.

ALTHOUGH the time has past when politics in England were simply the amusement of English gentlemen during that period of the year which does not admit of sport in the open air, there are traces in existing arrangements of this state of things. The two Houses are, in the ordinary course, prorogued in August just before grouse-shooting begins, and are summoned again in February just after partridge-shooting ends. Any departure from these dates is received with the greatest disfavor, and the "whips," except in the gravest emergency, frown upon it. It is their business to keep their respective parties in good humor with their leaders. Unless money is absolutely needed, or a war has to be declared—not always even then—or an act of indemnity has to be voted, a winter session is not to be thought of. The subordination of public business to the amusements of the leisured class remains now rather in form than in substance, but the reality has not wholly disappeared. The announcement of the leader of the House of Commons that if business is not advanced more rapidly Parliament cannot be prorogued before the middle of August, is felt to be the last threat of a baffled minister in arrears with his measures. It is his ultimatum, and it seldom fails of its effect. Sportsmen have taken their moors and invited their guests, and they cannot afford to disappoint either themselves or their friends. The eagerness with which an early and a long Easter and Whitsuntide recess is looked forward to is in great part due to the avidity of country gentlemen to get back to their estates. They have to talk matters over with their bailiffs, to indulge in the hospitalities which keep up their position in the county, and to practise in general those arts and amenities on which the social influence of a territorial magnate depends. The personal constitution of the House of Commons, affected by the Act of 1832, was still more seriously altered by the democratic measure of 1867. It is now to a much greater extent than it ever was before a middle-class assembly. But the properly aristocratic element in it, on both sides of the House, though weakened numerically, is still even in numbers very considerable. Its influence is, perhaps, increased rather than diminished by the change. A larger number of the wealthy middle class is brought under the range of those social attractions which have for the average Briton a charm not felt in their full extent by the inhabitant of any other country under the sun. Perhaps the phenomenon can scarcely be made perfectly intelligible to the people of any other nation. The ingenuous person who frankly confessed that he would rather be knocked down by a lord than picked up by any one else, gave expression scarcely exaggerated to the conditions under which our wealthy middle classes are willing to accept of intercourse with the aristocracy. The curious blending of sturdy independence and a disposition to resist to the uttermost if his purse is touched or his political rights are infringed, with a proneness to prostrate himself before a lord and to request as a favor to be trodden on, is one of those ethical paradoxes the examination of which would reward the analytical student of character as much as its contemplation refreshes and exhilarates the mere social observer.

The English aristocracy has always shown great mastery in the art of political yielding as a branch of the larger art, and a means to the end, of political retention. Its history has been a record of the degrees and occasions on which it has given way, in order to reassume, on new ground and under conditions slightly varied, the leadership that it seemed on the point of losing. To the art of political yielding it is becoming every day more and more essential to add that of social management. To this end the great institution of evening receptions and "At Homes" is being adapted. The Whig and Tory aristocracy dine with each other, and with a few recognized social entertainers to supply the wit and the anecdotes which keep the talk going. They still dance for their own amusement and that of their guests, not having yet taken the Turkish pasha's advice to keep somebody to do that for them ; but they rely upon a few men of letters and men about town, whose names may be seen at the tail-end of the list of guests at a fashionable dinner-party, to say witty and amusing things for them. Besides these ornaments of society there is generally a middle-class member of Parliament, or a political writer, who is thought to be flattered by the selection, and whose presence reminds his fellow-guests of the great principle of human equality, as the slave in the chariot or the skeleton at the feast served as a memorial of human vicissitudes and their inevitable end. Having dined together, as a class apart, the leaders of politics and society and their wives allow the outside world, summoned by widely-distributed cards of invitation, to tumble in upon them in numbers which are as the sand on the sea-shore. The Countess this, and the Marquis that, and Lady Rebecca Jane the other announce that they are "At Home" on a particular evening to some hundreds of more or less eligible persons. Thither these enraptured guests rush, inspired by a desire to be in the halls of the great, to get a look or a pressure of the hand, to read their names in the *Morning Post* the next day ; or, if all this is beyond their pretensions, to look on in admiration, and to whisper to each other, in awe-stricken delight, the names of the fine ladies and the great men with whom they found themselves, if not precisely in society, yet in almost physical contact. Lord Beaconsfield, with that keen perception and whimsical exaggeration which mark him, dates the decline of aristocratic influence in England from the shutting up of Ranelagh. There the British nobility, male and female, used to disport themselves, and the British commonalty went to look at them. Personal interest and sympathy were awakened. The mob of plebeian frequenters of Ranelagh did not know their lordly fellow-guests, but they knew them by sight. They did not know them to speak to, but they knew them to speak of, which was the next best thing. The "At Homes" of our great ladies are a sort of private and political Ranelagh.

The full swing of the London season has not yet begun. The theological and ecclesiastical traditions about Lent have still some force, and in many quarters it is deemed unsuitable for festivity. Pious hands have been held up in protest at the Queen's allowing the marriage of the Duke of Connaught to take place at a period sacred to fasting and mortification. Though members of both Houses come up to town when partridge-shooting is over and Parliament begins, the full influx of wealth and fashion from the country to London does not set in until after Easter. Our long-protracted winter has frozen the genial current of hospitality, and the continued depression of commerce and the abatement of rents have communicated to great landlords and iron-masters, among the latter of whom some of our chief social and political magnates are included, their share of the general pressure. The deficit which threatens the imperial exchequer is emptying many a private breeches-pocket. A declining revenue has to be met by a decreasing expenditure. London,

always somewhat gloomy, socially as well as meteorologically, in February and March, will probably lack something of its wonted cheerfulness and festivity after Easter.

The political and social centres of the Liberals in London—to speak only of them at present—are Lady Granville's, in Carlton House Terrace; Lady Waldegrave's, in the adjacent Carlton House Gardens, and the Marquis of Hartington's (there is no Marchioness *in esse* or Duchess of Devonshire *in posse*), at Devonshire House. Perhaps I ought now to add Lady Harcourt's, in Grafton Street, since she held her first reception this year. I do not know whether it is intruding unbecomingly into private and personal matters to say that the art which makes a French lady of breeding and cultivation a perfect mistress of a *salon* is not always possessed by feminine persons of quality in England. Perhaps a certain stiffness and coldness of temperament interferes with perfect mastery of the arts of society. Perhaps the French Revolution, adding the sentiment and manners of social equality to the delicate grace and refinement of the old school of courtly breeding, has given to our neighbors lessons in demeanor and deportment which we in England have lacked. Be this as it may, I am inclined to think that an American lady, acquainted with the society and with the courts of the chief capitals of Europe, and yet retaining that sense of social and personal equality which it is one of the merits of democratic societies such as that of the United States to make a part of the mental and moral life of its children, has been trained in the best schools, elementary and finishing, of good manners. In coarse minds a social democracy may no doubt tend to vulgar self-assertion and egotism. In minds really refined it gives a deeper tone and a finer touch to courtesy and politeness, which are simply a part of the honor due to all men. Besides this, there seems to be something in the American atmosphere, or climate generally, which has given a vivacity and flexibility and ethereality of temper to its women which Mr. Hawthorne rather coarsely denied to our countrywomen.

Sir William Harcourt is the man of most signal ability who has entered English political life during the past ten or twelve years, and is sure to hold a high place in the next Liberal cabinet. His beautiful house in Grafton Street, though not one of those over-grown mansions which seem built for everybody but their owner, seems to want none of the conditions which give a social charm to political life and minister to its successes. The fire which lately destroyed the upper part of Lord Granville's house in Carlton House Terrace has not only put a stop to the formal receptions on a huge scale which are the penalty and the privilege of political leadership, but to much more agreeable meetings on a smaller scale and of an informal character. It was whispered at the beginning of the session to certain friends in both Houses of Parliament, and to others connected with politics, that Lady Granville would be "At Home" on House-of-Lords nights—that is, on the few evenings of the week on which the House of Lords sits for an hour or so and affects to do business. Only those, of course, to whom the oral hint was given came. An agreeable blending of ex-cabinet ministers, Liberal peers, carefully selected members of the Lower House, and political writers, with now and then an infusion from the diplomatic body and the Conservative peerage, was the result. The grace and beauty of the hostess and the easy courtesy and charm of Lord Granville's talk and manners form a social atmosphere in which that informal talk which is often as valuable as a political debate is easy and natural. Lady Waldegrave's Sunday afternoons are to her more formal receptions what Lady Granville's House-of-Lords evenings are (or were) to her elaborate "At Homes" to all the world. Politics on the social side, the mere working of the machine, the product, not in its finished form but as it is being made, may be seen in glimpses. The winning social grace of the hostess, and the upright character, the gentle courtesy, and the keen political intelligence of her husband, Lord Carlingford, who was in succession Secretary for Ireland and President of the Board of Trade in Mr. Gladstone's government, are among the social possessions of London. The charm of a hostess is lacking at Devonshire House; but the frank and single-minded character of Lord Hartington, which, together with his political sagacity, has won for him the absolute confidence of his party, is socially winning, even under the drawback of celibacy.

I have spoken of the servility and the patronage which are the darker aspect of political life in England on its social side. But a man who is not servile releases himself from patronage. If he respects himself he will be respected. You can scarcely help treading upon or stumbling over a man who grovels on his belly at your feet. If he stands on his legs and looks straight at you, you are obliged to speak to him, face to face. Great ladies are notoriously a little capricious, and their whims may be observed with amusement, and forgotten like the moods of a child. I hope all this is not too trivial for the readers of the *Nation*. It gives a side of English political life which has an importance of its own. To depict it in detail would be an unwarrantable intrusion into privacy. To indicate its existence and character is, I hope, permissible.

RUBINSTEIN'S "FERAMORS."

BERLIN, March 15, 1879.

IT would not be easy to name another poem which has found so much favor with musicians as Moore's "Lalla Rookh." Schumann made it the groundwork of his cantata "Paradise and the Peri," while Spontini, Félicien David, and Rubinstein have in succession used it as material for an opera. That artists of such different temperaments should have been alike attracted by the delicious Oriental perfume which pervades Moore's poem is scarcely to be wondered at. But the repeated choice of this subject as foundation for an opera must be ascribed to that misguided æsthetic instinct which has so often transformed a stage performance into a "concert in costume." "Lalla Rookh" is not a dramatic poem, and it is therefore a mistake ever to put it on the stage, whether it be done by Spontini, David, or Rubinstein. It is to be regretted that Rubinstein, at least, did not feel impressed with the truth of this view sixteen years ago, when he engaged Julius Rodenberg, the present editor of the *Rundschau* and well known as poet and novelist, to work up Moore's tale into a sketch to which he himself might then add the musical coloring. The result of this combination was the opera "Feramors," which I believe was first performed in St. Petersburg, where it has already passed its fiftieth representation. In 1863 an attempt was made in Dresden to transfer it to German soil; but the reception was so cold that this exotic plant, though of northern growth, died after a third exhibition. Equally unfortunate was the attempt to introduce it to the Vienna public in 1872, and in consequence German managers came to the conclusion that the musical climate of their country did not agree with Rubinstein's work.

It so happened that a later work of the same composer, the "Maccabees," found a more favorable reception in several Continental cities, and in none more so than here in Berlin. Rubinstein, who is of Jewish descent, has a great many friends and admirers in this city, owing to whose efforts and the influence of the press, which is almost entirely under Hebrew control, the "Maccabees" has become established as a regular *Repertoir-Oper*—a fact for which all lovers of good music are grateful, for it is one of the few operatic works produced within the last two decades which will survive its author, and which has a brilliant future before it in spite of its dramatic shortcomings. The success of this opera appears to have induced the manager of the Royal Theatre to try his luck, too, with the unfortunate "Feramors." In so doing he was doubtless guided by the knowledge that the failure of an opera at one or two cities in many cases is not an absolute test of its vitality, because for such a test there is need sometimes of a peculiar combination of favorable circumstances not everywhere attainable. The result, however, has shown that this time he was mistaken, and that it would have been in every respect wiser had he chosen instead "Nero" or, perhaps better still, the new opera which Rubinstein has just finished. It is true the demand for tickets to "Feramors" was so great on the first night that the immense house could have been filled three times, and the audience was of the most select and refined quality, including the Emperor and his retinue and many literary celebrities. But disappointment was expressed at the end of each act, not only by the thin and artificial applause, but on most countenances; and this disappointment was next day re-echoed by the papers. The general verdict, which I share, seems to be that "Feramors," being a lyrical subject in dramatic form, is an anachronism. Fifty or even twenty-five years ago the incongruity of such a combination might have escaped notice, because at that time the dramatic nerve, as the Germans call it, had not been thoroughly developed and specialized in the opera. Nowadays the lack of the dramatic nerve in an opera is sufficient to relegate it to an inferior species of stage-organisms. One cannot but express regret, therefore, for the fine musical passages occurring in "Feramors," which will now probably be lost to posterity, while in the shape of a symphonic poem on "Lalla Rookh" they would have been a joy for ever in the concert hall. One of these passages, an Oriental call for prayer, taken up subsequently by the kneeling people in form of a chorus, is so remarkably grand and effective, owing in part to its brilliant exotic charms of color, that it may possibly suffice to save the whole opera from oblivion.

The extraordinary demand for tickets to the first performance of "Feramors" was not solely due to the popularity of the "Maccabees," but partly to the enthusiasm which Rubinstein had just created by two of his inimitable concerts, and partly also to an unpleasant occurrence, which assumed the dimensions of a first-rate theatre scandal. Rubinstein had intended to direct his work personally the first night. For this purpose he attended the final rehearsal, where he found to his mortification that, in spite of his expected co-operation, the powers that be had dared to cancel several passages. Still, he suppressed his displeasure until he came to an important passage for soprano, which, to his astonishment, was also omitted by Frau Mallinger. He stopped the orchestra and asked her why she did not sing her part. "Why," replied the prima donna, "has not the *chef* told you yet that I shall not sing that?" "Who else is going to sing it?" exclaimed the sensitive and irate artist; "then we may as well throw up the whole thing." Down went the bâton on the desk, and while putting on his overcoat Rubinstein sarcastically advised the orchestra to play after *their* fashion now. Then, in spite of the efforts at conciliation by some ladies present, he got his wife in the parquet, and left the house to return no more. Bravo! said I, when I first heard of this proceeding on the part of Rubinstein; and I hope the reader will share my sentiments. The Berliners lost the gratification of hearing "Feramors" under the composer's personal direction; but in return for this loss they learned two valuable lessons. Lesson the first is that there are other composers besides Wagner who have at last made up their mind not to endure any longer the mutilation of their works by unprincipled capellmeisters. Vandalism of this sort must cease before long. A theatrical manager has no more right to abridge and mutilate an opera or drama than the director of an art gallery is entitled to saw off a few inches of a picture if it happens to take up a little more space than he thinks it ought to occupy. Lesson the second is that composers are resolved no longer to tolerate the whimsicalities and eccentricities of prima donnas. They mean to have it understood that creative genius stands above the mimic talent, that the composer comes before the vocalist. Even the Italians are beginning to recognize this principle, for they did not hesitate recently to hiss the diva Patti and her satellite off the stage at Naples for arbitrarily omitting some favorite melodies of a well-known opera.

That the musical world sympathized with Rubinstein in this affair was evinced by the most cordial reception extended to him when, a few days subsequently, he gave his first concert. There is still a large number of musical people who consider the pianist Rubinstein greater than the composer. I am not one of those. The composer Rubinstein will be known for centuries after the pianist has been forgotten. He is not a musical giant, like Palestrina, Bach, Beethoven, and Wagner, destined to mark a new epoch of musical history; but he deserves to be ranked with Mendelssohn, Schumann, and Mozart, and in some respects even above two of these. For he can take advantage of the new harmonic and orchestral material which has been produced during the last decades, and make an occasional excursion into regions of the world of tone which before his day were not yet discovered. To his greatness as a composer he, of course, chiefly owes his superiority to his great rival pianist, Hans von Bülow. I will not bore you with the customary comparison between the two pianists. Only one thing I will say: Von Bülow's performance of a classical work is like a copy of a fine picture, made by another artist—a fine copy, it is true, but, after all, only a copy. Rubinstein, on the contrary, reproduces the original work in flesh and blood. Sometimes, indeed, his picture may not exactly correspond to the original conception of the composer, for he diffuses it with the color of his own mood. Yet this makes his performance none the less admirable, for he merely does what is done by the great painter who reproduces nature not as in herself she is, but as seen through his eyes. And do not composers themselves give varying interpretations of their own works according to their changing moods? Much of Rubinstein's greatness lies in this diversity and voluntary change of his moods. Like a chameleon, he in turn assumes the characteristic hue of Beethoven, Mozart, Schumann, Chopin, and Liszt, and in each case the unsophisticated observer would swear that that must be his own and only hue.

There is no danger that the comparative failure of "Feramors" will injure the growing popularity of Rubinstein as a composer. Everybody knows that it is a work of his early youth, and consequently does not count for much in an estimate of his powers. The attitude of certain persons towards Rubinstein shows that they even wish to set him up as a champion of the classical style against Wagner and his followers. Hitherto Brahms has occupied this dignified position, but some of his recent compositions betray such dangerous heretic tendencies that he is in some danger of being impeached by the committee on old-fogyism. Some of those who would now set Rubinstein against Wagner go so far as to maintain that a person who admires one of the two cannot possibly admire the other. I humbly confess, then, that I must belong to some lower sort of amphibious musicians who find not only life but intense pleasure in these two incompatible elements. If Rubinstein has not the dramatic tact nor the orchestral instinct of Wagner, he is yet a true artist, who seldom publishes a work which does not bear the stamp of genius.

Correspondence.

OPENING THE FEDERAL COURTS TO WOMEN.

To the Editor of The Nation:

Sir: My attention is called to a paragraph in a recent issue of your journal wherein it is stated that the bill opening the bar of the Federal courts to women was carried merely by the advocacy of Senators McDonald, Hoar, and Sargent. This is incorrect. The passage of the Act was the fruit of five years' agitation, beginning with the refusal of the Court of Claims to admit Mrs. Belva A. Lockwood in 1874. During that time the House Judiciary Committee three times agreed to such a bill; but only in the last Congress were its friends able to bring it to a vote. The labor for its passage involved speeches and resolutions at many public meetings, numerous newspaper articles and despatches, etc., a canvass of the House and two such of the Senate, wherein Mrs. Lockwood herself, by advice of her friends, took a leading part, commanding the respect of every Senator to whom she appealed. The thoroughness of the work is well shown by the fact that the bill passed by a two-thirds vote in both Senate and House, not one speech being made against it. The speeches of the Senators to whom you refer, though timely and pointed, were rather in the nature of funeral orations over the opposition.

Respectfully, J. K. H. Willcox.

Washington, D. C., April 2, 1879.

[We said "*mainly* by the energetic advocacy," not "merely;" and our remarks had reference purely to the final proceedings on the bill in the Senate.—Ed. Nation.]

THE CASE OF THE *TRIBUNE*.

To the Editor of The Nation:

Sir: I am prone to complain; to become a growler, as some of my friends call the *Nation*.

This time it is about the New York *Tribune*, a journal which I have read twenty-five years, and to which, although opposed in politics, I have heretofore given credit for candor and honesty of purpose. But what can be said in favor of its course during the past year, and especially the last six months? During that time it has shamefully misrepresented almost everybody at all connected with the Democratic party, as well as the party itself. It has pursued Mr. Tilden as relentlessly as though he never gave his aid and influence to elect Mr. Greeley, and as if he were the greatest robber and criminal of modern times. It has made thousands of Republican readers—those who will henceforth be Republicans unless compelled to vote for Gen. Grant—sick of its ciphers, while the investigation urged on by it has greatly aided the Tilden wing of the party; and latterly it is playing the cross-roads demagogue.

"Nineteen [sometimes twenty] Confederate generals in the Senate, and only four Union generals." If this has any real meaning, it is that the *Tribune* seeks to increase the prejudice against the South because it chooses to be represented by its ablest men. Their disabilities have been removed, and if the South chooses to send its Lamars, its Gordons, its Stephenses to Congress it is its right, while it is the right of the Republicans to keep their Hawleys and their Bagleys at home—if they can afford it.

Dubbing Garfield one of our greatest men for a speech which was uncandid, and needed but a single question to demolish, adds nothing to its acumen. Copying a squib from a Mississippi paper that "thanked God that the Confederates had captured the Congress of the United States"; berating Tammany Hall for doing what itself has been doing for the last half-year—viz., aiding Mr. Tilden's candidacy; and printing such editorials as one in the daily issue of about April first, entitled

"Shall Votes Count?" (in which it grossly misrepresents its opponents and bears false witness against its neighbors), are methods that we expect only in fourth-class journals of all parties, and are sorry to be compelled to read in the "leading newspaper."

We hope the *Tribune* will reform, will cease acting the demagogue, and return to its former tone and manner, which, whatever it may have been, could never fairly be accused of that for which, we think, we justly arraign it, and needed not the apologies of its more intelligent readers. We know that we speak the sentiments of thousands of its readers who, with us, are reading on, hoping for a return to its older and better ways. Will you not, Mr. Editor, add a word and ask this old and valued friend of ours to "reverse itself and resume its judgment"?

Respectfully, T. McGARRAH.

MONROE, N. Y., April 4, 1879.

[No, we shall not "add a word." We are very willing to allow Mr. McGarrah to try his hand on the *Tribune*, but we ourselves consider the case hopeless. The Republican party needs this kind of support at present, and all the organs furnish it. The *Tribune* is by no means the only offender. "Rebel yells," "revolution," "outrages," being what the crisis is considered in the inner counsels of the party to call for, its newspapers naturally—we were going to say properly—meet the demand, and, what is more, the bulk of their readers like it. We would therefore advise Mr. McGarrah to seek some other field of reform. We will add, however, that we think that, as an "organ," the *Times* is far in advance of the *Tribune*. The "story" of the *Times*, to which we have referred elsewhere, that Christmas Day and election day at the South are "appropriated to the sole purpose of shooting 'peart niggers,'" far outdoes anything the *Tribune* has yet produced, and shows its conductors to be masters in their line. That one "story" is "worth the whole price of the subscription."—ED. NATION.]

Notes.

AN English translation of the Duc de Broglie's 'King's Secret' is now published in two handsome volumes by Cassell, Petter & Galpin. This interesting work has been so fully noticed in our Paris correspondence (*Nation*, Nos. 701, 703) that we need say nothing more of the nature of its contents.——The American News Co. will issue in parts 'General Grant's Travels around the World,' by John Russell Young. This may be called the first campaign-book of 1880.——Callaghan & Co., Chicago, announce their long-delayed translation of the second volume of Von Holst's 'Constitutional History of the United States.' ——'Every-day English,' a collection of Mr. Richard Grant White's *Galaxy* and *Atlantic* papers on his favorite theme, will be published by Houghton, Osgood & Co.——The (British) *Journal of Philology* will hereafter be edited by Wm. Aldis Wright and Henry Jackson, Fellows of Trinity College, Cambridge, and Ingram Bywater, Fellow of Exeter College, Oxford. Macmillan & Co. will shortly issue the first number under the new management.——Ginn & Heath, Boston, have become the publishers of the Boston Society of Natural History's 'Guides for Science Teaching.' The fourth, just added, is 'A First Lesson in Natural History,' by Mrs. Agassiz, written twenty years ago, and now appropriately reprinted in a series with which it harmonizes well.——'The Annals of Saint Paul's Parish, Baltimore City and County, Maryland, from 1692,' from the original MS. of the Rev. Ethan Allen, D.D., it is proposed to print in a limited edition, finely printed and illustrated, at ten dollars a copy, if two hundred subscribers can be obtained. The publisher will be Wm. H. Corner, Baltimore.——We have received the ninth 'Catalogue of the Psi Upsilon Fraternity,' embracing 17 Chapters and 4,928 names, whereas the original Catalogue of 1842 contained but 5 Chapters and 243 names. The Fraternity was founded in 1833 at Union College, N. Y. As the members of the Fraternity have had their share of public distinction, the brief biographies annexed offer an acceptable addition to our knowledge of "men of the time." The work is sumptuously printed, and has involved very conscientious and laborious editing. Corrections and further information should be addressed to Mr. C. W. Smiley, Box 155, Madison, New Jersey.——The Concord (Mass.) Summer School of Philosophy and Literature will open at the Orchard House of Mr. A. Bronson Alcott on Tuesday, July 15, and will continue for five weeks under the conduct of five professors. Students desiring to register themselves before June should address, for particulars, Mr. Alcott at Concord, or Mr. F. B. Sanborn, Boston, Dean and Secretary of the Faculty respectively. ——The Sixth Annual Conference of Charities will assemble at the Grand Pacific Hotel, Chicago, on Tuesday, June 10, for a three days' session. The Governor of Illinois will deliver the opening address. Communications relating to the business of the Conference may be sent to the chairman, Mr. George S. Robinson, Sycamore, Ill., or to Mr. F. B. Sanborn, Concord, Ill.——Reckless meddlers with the Washington pedigree should take notice of a letter from the highest authority on the subject, in the *World* of March 29 Col. Joseph Lemuel Chester writes from London that he *believes* he has in his hands "the true history of the two brothers, John and Lawrence Washington, who emigrated to Virginia in 1658, from the former of whom the President descended." He also believes that he possesses the original deed, dated in 1657, signed by this John Washington and his first wife, hitherto unknown as to name or history. He refrains from publishing anything because he lacks an American autograph signature of John Washington confirming that of the deed. The will formerly preserved in Richmond is missing, but Col. Chester hopes the search being made for it will prove successful.——The *Rassegna Settimanale* (Rome) continues to maintain the high standard, political and literary, set for it by its projectors. Any student of the language who reads this admirable weekly will find his account in it. Some of the late numbers have contained interesting articles on "The Daughter of Bayard (the Chevalier)," "The Decay of Singing in Italy," "Valchiusa," "A New Narrative of the Challenge of Barletta" (an incident which served Massimo d'Azeglio to so good advantage), etc. Typographically the *Rassegna* is very comely.——The dramatic library of Mr. J. H. V. Arnold will be sold, at Clinton Hall, on April 16 and the following days. The catalogue, which is not very intelligently made, fills nearly four hundred pages and contains nearly thirty-five hundred numbers. Mr. Arnold's library is richer in dramatic matter than any which has been brought to the hammer in New York since the sale of Burton's; it is especially rich in enlarged and extra-illustrated theatrical memoirs and biographies; there are sometimes three or four copies of the same work, each containing perhaps a hundred or more inserted plates, autographs, drawings, etc. Next in importance to the dramatic books are the works relating to New York City, also abundantly illustrated. Chief among these is a copy of Dr. Francis's 'Old New York,' one volume 8vo extended to nine volumes imperial folio "by the insertion of 2,500 autographs, portraits, views, etc., and over that number of newspaper-cuttings, neatly inlaid when necessary."——Mr. J. Brander Matthews, the writer of the article on "Molière, the Life and the Legend," in *Lippincott's* for April, is engaged on a full biography of the great French dramatist.

—Some months ago we called attention to the offer made by the *Christian Advocate* of eternal salvation and a copy of the paper for one year to all persons paying two dollars and seventy cents. This was the best offer ever made by a newspaper, and we hope has been fruitful; indeed, the editor said afterwards that it had proved a great success. The same resource is of course open to every religious paper, and we are therefore pained to find the *Church Union* trying to "extend its usefulness," to use the publisher's language, by offering "to every new subscriber, on payment of three dollars, a genuine seven-shooter revolver, full nickel-plated, rosewood stock, steel barrel and cylinder, and finely rifled." The publisher thinks this offer is not inconsistent with "the spirit of his columns," and suggests that a pistol acquired in this way would only be used against "tramps and burglars." But seeing that the carrying and using of revolvers is one of the great evils of the day, and is the source of most of the offences against the person, and that the cases are rare indeed in which burglars and tramps suffer from it, and that to whole regions of the country—the South, for instance—it is a deadly curse, covering the land with blood and tears, we cannot help considering the *Church Union's* plan thoroughly scandalous. If it does not care to follow the example of the *Christian Advocate* it would be much more decorous for it, as a teacher of religion, to get subscribers by offering a tourniquet, a package of lint, and a roll of plaster, a bottle of Jamaica ginger, and a mustard plaster, in a neat box. Among the advertised contributors to the *Church Union*, whose attention as ministers of religion we call to this matter, are the Rev. Dr. Duryea, the Rev. Dr. Crosby, the Rev. Samuel Burchard, the Rev. Dr. Hyatt Smith, and the Rev. Dr. Ingersoll.

—The *International Review* for April contains a very clear statement, by Mr. Perry Belmont, of the practical objections to the taxation of municipal bonds. While the United States is able to borrow at 4 per

cent., cities and towns, however prosperous, seem seldom able to obtain money at less than 6. All such securities, no matter what they represent, whether mere debt, or debt incurred for improvements which are taxable in some other form, are taxable to the owner of the bond where he resides. As a matter of fact, in large cities like New York they are not reached by the collector; but they are everywhere *liable* legally to taxation. It is this liability which makes the difference, Mr. Belmont thinks, between 4 per cent. and 6, or a great part of it; and as the tax is practically non-productive, any city which makes its bonds non-taxable will save this difference in interest on its debt. In this city, for instance, the funded debt (*pace* John Kelly) is $113,000,000. Of this hardly any is actually assessed, so that the net tax only amounts to $25,000. If the repeal of the tax permitted funding at four per cent., there would be a saving of $2,000,000 a year in interest. Mr. Hayes's article on China is a very readable exposure of certain popular fallacies on the subject of our relations with that country, and contains quite a number of amusing stories. With regard to our consular and diplomatic service in the East he points out that, accustomed as Orientals are to attach great importance to appropriate and dignified surroundings, our underpaid and badly "turned out" consuls and ministers are the least impressive foreigners with whom they come into contact. Apropos of this he mentions the case of the late J. Ross Browne, who, arriving at the gates of Pekin full of high hopes (this was after the Burlingame embassy) as to the new relations established between the "youngest nation" and the "oldest," was denied admittance, and finally had to be passed in by a companion, who represented himself as minister, and Mr. Browne as his friend. Stories of the behavior of our consuls in foreign lands are always apt to be entertaining, and we do not remember before to have heard of the gentleman who, on arriving at the scene of his duties, issued a circular thanking the community for favors shown the consulate in times past and soliciting a continuance of patronage; nor of the consul from New York who took one look at the port to which he was accredited, and immediately sent his luggage back to the steamer in which he had come, and by which he at once returned, occupying himself on the way home in denouncing the deception that had been practised upon him; nor of the port at which a full consulate was established for the purpose of protecting one American citizen. Mr. Hayes describes our national policy in China as consisting in following the English and getting our share in any privileges they may acquire. He thinks it, therefore, pharisaic to the last degree for us to say that while England has forced trade upon the Chinese, and treated them badly, we have not done so. The idea that the Chinese Government likes or favors us more than other nations he declares to be "a complete and mischievous fallacy"; and as to foreigners in general, the result of a policy founded simply on a compliance with Chinese views and wishes would be their immediate dismissal from the country. He points out also, as to the reciprocity between the United States and China, that there is no protection for any foreigners in China except such as they provide for themselves. The Burlingame treaty, he says, was regarded in the East (where, we believe, Mr. Hayes was at the time) as "rather a joke," since "the only provisions not included in the more important treaty of Tientsin seemed to be that the Chinese must not kidnap Americans, and that if China wanted engineers from America to build railroads we would send them—the two things being about equally improbable."

—Mme. Patterson-Bonaparte's death in Baltimore on Friday, at the great age of 94, removes from sight a romantic figure, the connecting link between the fallen dynasty of France and the still young Republic of the West. She was married, December 24, 1803, by Archbishop Carroll, to Jerome Bonaparte, the youngest brother of the First Consul, then as a naval officer on a visit to this country; but, on the ground of his minority (he was only 19) and the lack of his mother's consent and of previous publication of his intention in the land of his nativity, the marriage was formally disallowed and treated as null. Jerome was ordered home by his brother, and his "mistress" forbidden to set foot in France or Holland. They sailed together for Lisbon, but on reaching it in April, 1805, Jerome obeyed the Emperor's decrees, and with small compunction abandoned his wife for ever. She proceeded to England, where she shortly gave birth to Jerome Napoleon Bonaparte. Two years later came the news of the marriage of the King of Westphalia to Catherine, daughter of the King of Würtemberg, and she returned to Baltimore, despairing of any recognition of her rights. In 1817 she went to live in Florence, where she passed seven years in the best society, much admired for her extreme beauty and her biting wit. Her efforts to secure recognition for her son were so far successful with Napoleon III. that in 1856 the young Jerome's title to the name of Bonaparte was conceded, but not his legitimacy. He had graduated at Harvard in 1826, and died in Baltimore in 1870. His eldest son, Jerome, graduated at West Point, and served under the French flag in the Crimea, in Italy, and during the Franco-Prussian war, accompanying the Empress to England after Sedan. His youngest son, Charles, graduated at Harvard in 1871, and is now a member of the Baltimore bar. Mme. Patterson-Bonaparte is said to have left very interesting memoirs behind her. Her fortune, partly derived from French pensions, was very considerable.

—Sardou's play, "Les Pattes de Mouches," as produced at Wallack's in Mr. Palgrave Simpson's version, makes a very charming comedy. The English play appears to be substantially identical with the French original, though Mr. Simpson has here and there left out passages thought unadapted to the typical Anglo-Saxon audience, which (to the lasting profit of adapters) still retains, at least in theory, its horror of anything improper. Mr. Simpson has preserved a surprising amount of the charm of Sardou's dialogue, although he has lost some of it at the same time, chiefly through a passion for words of Saxon origin, which jar upon the ear in dialogue translated from modern French. The best spoken French of to-day is so thoroughly Latin in character that a translator, to follow the original with neatness and good taste, must necessarily draw as much as possible upon the Latin half of the English dictionary. Mr. Simpson is a purist in his use of English, and as a purist naturally prefers Saxon words. This, however, is a trifling blemish. The acting of "A Scrap of Paper" by Mr. Wallack's company is remarkably good; so good, indeed, that it is difficult to say who contributes most to the success of the play. The principal parts are *Prosper Couramont* (Mr. Wallack) and *Mlle. Suzanne de Ruzeville* (Miss Coghlan), and it would be difficult to find in New York a better *Prosper* or a better *Suzanne*. Mr. John Gilbert's *Brisemouche* is very amusing, though Mr. Gilbert, to our mind, makes the part too quiet. The play itself is a curious proof how little probability of incident has necessarily to do with the success of a comedy. "A Scrap of Paper" is almost entirely a play of situation—*i. e.*, the interest and amusement are derived from the series of situations in which the dramatist makes the characters place themselves. There is no development of the play out of the characters themselves. Indeed, there are, with the exception possibly of *Prosper*, no characters properly speaking in the play. All the others are types which may be found under other names in a thousand plays. *Brisemouche* is the savant with whom French writers have been amusing themselves for a hundred years. The *Baron de la Glacière* is simply a jealous husband; *Anatole* is the typical *Anatole* of a youthful French love affair; *Louise* is the unhappily suspected wife, and *Suzanne* is the clever woman who gets her friend out of her scrape. These typical personages do not develop the intrigue of the play at all. That all centres about the adventures of a scrap of paper which *Suzanne* wishes to find and destroy, which *Prosper* for purposes of his own wishes to keep, and which, if it falls into the hands of the wrong person, may at any moment produce a most frightful catastrophe. The adventures of this scrap of paper are wildly improbable; for it passes through the hands of half the *dramatis personæ* without their knowing that it is a love-letter or anything but a scrap of paper; in one case is made use of by *Anatole* that he may write a love-letter of his own on the back of it, and finally, after adventures which baffle description, each one of which brings us to the verge of a crisis, is destroyed by *Prosper* without anybody's having discovered what it was. All this is improbable to the last degree, and as the plot of a story would be utterly out of the question. On the stage it all moves on to its conclusion in the most natural way in the world, and in the end the predominant impression produced by it is one of extreme naturalness. "A Scrap of Paper" promises to have a long run.

—The season of Italian opera was brought to a close on Saturday afternoon with the final appearance of Madame Gerster in "Sonnambula," the opera in which she shows herself perhaps at her best. It has certainly been superior in many respects to those of former years. Colonel Mapleson has aimed at higher effects than are attainable under the absurd "star" system, and has been partly successful. By inducing such good artists as Madame Lablache, Madame Sinico, Del Puente, Frapolli, and others to fill minor parts, and by placing the best orchestra that New York can produce under the management of so experienced a leader as Signor Arditi, artistic results of more than ordinary merit have been produced. Among the leading artists the highest praise is undoubtedly due to three—viz., Madame Gerster, Signor Campanini, and Signor Ga-

lassi. In lyric Italian opera, such as "Lucia," "Sonnambula," "Puritani," etc., Madame Gerster has gained brilliant and well-deserved success. Her beautiful organ, admirable school, infallible correctness, and perfect intonation showed themselves at their best in these parts. In characters requiring greater dramatic power—as in *Elsa* in "Lohengrin," for instance—Madame Gerster appeared to less advantage, neither her voice nor her manner being suited to this style. Signor Campanini proved himself in every part he took the conscientious and accomplished artist that we have known him to be for many years. His voice seemed as fresh and powerful as ever. Signor Galassi gave grace and dignity to every character he assumed. His rich, sympathetic voice, his fine dramatic taste, his noble and manly appearance secure for him a high rank among operatic singers. The weakest feature of Colonel Mapleson's performance was the chorus, which was never good, seldom fair, and often bad. The men's singing, particularly, was at times very coarse and offensive. We hope some better results in this respect will be obtained next year. We shall be glad to welcome Colonel Mapleson back in the fall, as he promises to bring again all the artists who have gained most public favor this winter.

—The concerts of the Philharmonic Society terminated on Saturday night. The programmes of the six concerts of this series have introduced many numbers of interest and artistic merit, and they have generally been performed with spirit and intelligence. The new conductor of these concerts, Mr. Neuendorff, has fought from the beginning of the season against a host of difficulties and prejudices. In our opinion he has made steady progress in gaining control over his orchestra, and we doubt not that in time his performances will rank with the best that have been given here. The first concert introduced Brahms's Second Symphony in D. This interesting work, though inferior in ideas and construction to the First Symphony by the same composer, first performed here by Mr. Thomas's orchestra two years ago, will more rapidly gain in public favor than its elaborate predecessor. Beethoven's overture to "Leonore," No. 3, and Liszt's "Hunnenschlacht" were the remaining orchestral numbers. Mr. Remenyi played in his peculiar manner Ernst's "Concert Pathétique" and some arrangements from Chopin. Signor Galassi sang in admirable style the "Abendstern" from "Tannhäuser" and an aria by Mercadante. The second concert opened with a fine performance of the "Eroica." A most interesting novelty by Tchaikoffsky—"Francesca da Rimini," a fantaisie for orchestra, after the fifth canto of Dante's "Inferno"—made a deep impression on a first hearing. Miss Minnie Hauk gained only a *succès d'estime* in Beethoven's "Ah! perfido," a work which is entirely out of her line. The pastoral of Berlioz's "Sinfonie fantastique" formed part of the selection. The feature of the third concert was Mr. Rummel's brilliant performance of Liszt's concerto in E♭; Schumann's Third Symphony, the "Rhenish," and an overture, "Prometheus," by Bargiel, were also performed at this concert. The fourth concert was singularly devoid of attraction: Mendelssohn's Symphony in A major is not of stirring interest in these days. Schumann's beautiful piano-forte concerto received a most commonplace rendering by Mrs. Groessler Heim, and a very ambitious but unduly long and tedious Symphony of Tchaikoffsky's was performed here for the first time. The fifth concert opened with Mozart's Symphony in C, the "Jupiter." The remaining numbers were a pretty serenade for string orchestra by Fuchs, and Liszt's "Tasso." Mr. Richard Hoffmann played a rather insignificant piano-forte concerto by Brüll in a most respectable manner. The sixth and last concert, which took place last Saturday, was altogether the best of the series: *finis coronat opus.* Beethoven's Symphony in A, Wotan's farewell from the "Walküre," and Berlioz's delightful overture, "Carnaval Romain," received a dashing and vigorous interpretation by Mr. Neuendorff. Mr. Wilhelmj was the soloist of the evening, and played Lipinski's "Concert Militaire" and a nocturne by Chopin in his own admirable style.

—We have just received the first two attempts at reproducing the great Finnish poet, Runeberg, in English. The first, a dainty little volume of 232 pages, is entitled 'Johan Ludvig Runeberg's Lyrical Songs, Idyls, and Epigrams,' translated by Eirikr Magnusson, Under-librarian of the University Library, Cambridge, and E. H. Palmer, Professor of Arabic in the University of Cambridge, and dedicated, by permission, to Oscar II. King of Sweden, by his Majesty's special permission (London: C. Kegan Paul & Co.) A biographical sketch of the bard serves as an introduction. The translators have preserved the technical form of the original book as to rhythm, metre, and rhyme, rendering with hardly a single exception line for line, and, in general, word for word; the double or feminine rhymes have not been tampered with in a single instance. Magnusson's and Palmer's literary reputation is so well established by similar work that it is needless to say that they have performed their arduous task well. These lyrical songs, idyls, and epigrams are not the best things Runeberg has written, and his translators might have preferred to introduce him to their English readers in one of his most popular works, such as 'The Tales of Ensign Stal,' or that truly national epic, 'The Elk-hunters'; but it may be that they intend to translate all his works, and choose to take them in chronological order. At all events, we would caution our readers not to form their estimate of Runeberg's powers from this collection of poems. It would be as unjust as to determine Milton's place as poet by his "L'Allegro," "Comus," or "Il Penseroso." This criticism does not apply to the whole collection of lyrics here presented, for some of them appeared in 1843, when the poet was at the height of his glorious career, and have the full stamp of his genius.

—Marie A. Brown has acted more wisely in the selection of her material. She has translated "Nadeshda," a poem in nine cantos, which is one of Runeberg's four best productions. It is a Russian story in the form of a modern romantic tale told in blank-verse. Miss Brown has had considerable experience as a translator of Swedish prose and poetry, and while we could point out faults in her metres, and here and there a slight sacrifice of the spirit of the poem, we believe her book will do more towards a just appreciation of the merits of Runeberg than the volume of lyrics, etc., mentioned above. No one who reads the first canto will lay the book aside without finishing the remaining eight, and when once read the beautiful story will never be forgotten. Miss Brown is her own publisher, and deserves much credit for the handsome style in which her book is issued. Like Magnusson and Palmer, she has also prefaced her book with a brief biographical account of the Finnish poet. She forgets to state that Runeberg died on the 6th of May, 1877, and makes some orthographical errors, but aside from these and other unimportant blemishes her sketch is excellent and thoroughly appreciative. We can heartily commend her work.

THE LAW OF EXTRADITION.*

THE importance of extradition as an international question has grown rapidly in modern times by reason of the greatly increased facilities for transportation and intercommunication between different countries. The United States is now a party to no less than thirty treaties with foreign nations, containing more or less detailed stipulations for the surrender of fugitives from justice. The offences specified in these various treaties are upwards of twenty-five in number, and range from assassination and parricide on the one hand to larceny of the value of twenty-five dollars, fraudulent bankruptcy, and malicious injuries to telegraph lines on the other. These treaties are all of modern date. Even the single treaty with England of 1794 terminated in 1806, and from that time until 1842 no convention for extradition existed between the two countries.

In some cases which arose in this country prior to the era of treaties, certain general questions rife in Europe before the advent of the positive jurists were discussed, and, with one or two exceptions, they were decided on rational principles. Thus, Grotius and his school maintained with energy that every state is in duty bound to surrender persons accused of crimes affecting the general welfare, whenever demanded by the government within whose jurisdiction the crimes were committed. At the end of a long list of jurists, chiefly of the older school, who support this doctrine, such as Heineccius, Burlamaqui, and Vattel, we find Chancellor Kent, who, both from the bench and in his Commentaries, has vigorously maintained it. It has, however, never been accepted in England, and, with the single exception of an opinion of Attorney-General Lee in 1793, the doctrine of Kent has never met with any recognition in this country. It is, indeed, easy to refute it. So far as the duty asserted rests on any defined basis, a breach of the duty would constitute a valid *casus belli*. The rules of international law rest on the usages of civilized nations, and it is not true that nations have ever resorted to war by reason of a refusal to surrender fugitives except in cases of political offenders. But political offenders are by common consent never made the subject of extradition. There being, then, by common consent no sanction for a breach of this so-called duty, it must be remanded to the domain of those other laws of nature or moral duties, of the obligation of which each nation must judge for itself, and in regard to which Savigny has somewhere

* 'The Law of Extradition, International and Inter-State, etc. By Samuel T. Spear, D.D.' Albany: Weed, Parsons & Co. 1879.

remarked with irony that "it is only to be regretted that we have not been told where these laws of nature are to be found."

A corollary from this doctrine is that though certain states may habitually practice extradition from motives of comity and convenience, yet this practice must be confirmed by convention in order to give it the force of international law. From the admission that a sovereignty may, if it sees fit, practise extradition in the absence of convention, two questions of importance in this country have arisen: First, Has it been the settled policy and practice of this country to exercise that discretion? Secondly, Is the power to perform such an act of sovereignty reposed in any department of the Government under our political system? Both these important questions have been answered in the negative. From the case of the Chevalier de Longchamps, in 1784, and the demand of Citizen Genet upon Mr. Jefferson, in 1793, to the case of Carl Vogt, demanded by Belgium in 1873, it has been held, not only that it is not the policy of the United States to demand or to surrender fugitives in the absence of convention, but also that no officer nor department of the Government has any authority whatever to do so. The Attorneys-General Lee, Wirt, Taney, Legaré, and Cushing concur in the opinion that the executive department has no such power, and Judge Barbour, in the leading case of Dos Santos, repudiates any authority in the judiciary to aid in such process. In this he is supported by Judge Story from the bench and by Chief-Justice Tilghman, of Pennsylvania. With one notorious exception the practice of the Government has been in accordance with these well-established principles. That was the case of the surrender, in the absence of any treaty provision, of the infamous Cuban slave-trader, Arguelles, to the Spanish Government in 1864 by Secretary Seward. In answer to a resolution of enquiry from the Senate, the Secretary justified his action by saying that the surrender was "understood by this department to have been made in virtue of the law of nations and the Constitution of the United States." There is scarcely a shadow of precedent for this theory, and there is overwhelming authority against it. No doubt this surrender ought to be stigmatized as a most pernicious and detestable precedent in our public law, from the possible mischiefs of which we are alone secured by the present practice of making formal treaties on extradition with all nations having any relations whatever with the United States.

The powers of the Government in this regard are still further limited. The first legislation by Congress on extradition was had in 1848. Previously, under the treaty with Great Britain of 1842, and under that with France of 1843, the question arose whether under a treaty in the ordinary form—that is, in the form of an executory contract to do something *in futuro*, but without any provision as to the method of carrying it into effect—the executive or any department of the Government could act. There are conflicting authorities, but according to the best as well as the latest the requisite power does not anywhere exist. That was decided in Metzger's case under the French treaty in 1847. The next year Congress recognized the exigency arising from this want of power in any department to carry out the obligations incurred by an extradition treaty, and passed the first act for providing means for carrying such treaty stipulations into effect.

The importance of a clear understanding of the manner in which these preliminary questions have been decided, consists in the bearing which they have in the determination of questions of construction and of powers under the present system of express conventions by treaty and the pursuant legislation. The notion of any vague rights or duties existing by virtue of the law of nations as such, or of any reserved or prerogative powers in any department of the Government, the insistance on which occasioned the national reproach of Arguelles' case, is to be dismissed on the threshold. Under the present treaty system the questions which present themselves may, in general, be determined by a simple application of the rules for the construction of ordinary statutes and contracts. When a case arises the considerations for the executive are: 1. Is there a treaty, and what are its literal provisions? 2. Is there legislation providing for executing the treaty, and what is it?

As we have seen above, apart from convention, there is no right or duty of extradition. Hence, apart from convention, there is no international law of extradition. The literal provisions of a treaty are then to be interpreted according to the ordinary *usus loquendi*. Take the most important question that has come up under our extradition treaties, whether a fugitive surrendered on one charge can be retained and tried on another. If the treaty expressly forbids it, as some of our treaties do, that settles the question; but in some treaties, as in that of 1842 with England, the subject is not expressly mentioned. In such a case resort must be had to the writing as a whole to ascertain its sense. In that treaty, as well as in all our treaties, the crimes which shall be a ground for extradition are expressly enumerated. Treason, for example, is never included. This tacit exclusion of crimes not mentioned would be quite senseless if a person could be put on trial for one of them after being surrendered under the treaty on another charge. A man surrendered for malicious injuries to telegraph wires might thus be tried for treason. This, of course, settles the construction as to crimes not specified in the treaty. Again, the Treaty of 1842, in common with all our treaties, contains a stipulation that a surrender for a specified crime shall only be made "upon such evidence as, according to the laws of the place where the fugitive . . . so charged shall be found, would justify his apprehension and commitment for trial if the crime or offence had there been committed." Under the Act of Congress, in every case of a fugitive demanded, this question is carefully determined by a competent court. This stipulation would in turn be perfectly futile and senseless if a person surrendered on one charge, with regard to the evidence of which the surrendering Government had satisfied itself under this provision, could be retained and tried for any other crime specified in the treaty, but to which the surrendering Government had had no opportunity to apply this test. In the case of an ordinary contract no respectable court would attribute such inanity to the parties. In the construction of a contract between two nations, why should not the parties be equally held to have intended to give rational effect to every part of their contract? Yet this was precisely Winslow's case, where the State Department, by Secretary Fish, maintained a long and learned controversy ostensibly on grounds of international law. Executory contracts more difficult than this come constantly before municipal justices for construction.

Since a treaty for the execution of which Congress has made provision, is a part of the law of the land, courts of justice are bound to take notice of it, and when a fugitive surrendered on one charge is arraigned before a court on another, precisely the same principles apply, and it is contrary to the treaty, and so contrary to the law of the land, for the court to take jurisdiction. The correct doctrine, as opposed to the cases of Caldwell and Lawrence in the Circuit Court before Judge Benedict and of Lagrave in the New York Court of Appeals, has lately been laid down by the Supreme Court of Kentucky in the case of Hawes. Under such a treaty as that of 1842 no court is authorized to take jurisdiction in such cases. These principles are satisfactorily developed in the first part of Dr. Spear's book, devoted to topics of international extradition.

In the matter of inter-State extradition, which comprises part second, it would seem to be still more important that the sources and limitations of the powers of executives should be sought in the positive provisions of the Constitution and the law of Congress, and their duties determined by a plain construction of those provisions. Inter-State extradition rests exclusively on the extradition clause in the Constitution and the Act of 1793. A proper and enlightened construction of these written provisions should serve to solve the difficulties of the subject. But we do not find the same equal treatment of the questions involved as in the first part. Some of the constructions insisted on are of a fanciful and impracticable literalness, such as the theory of the meaning of the words "fugitive" and "fleeing" in the Constitution and the Act, a theory from which the author deduces certain untenable conclusions as to the necessary evidence in cases of extradition, and, by consequence, the incomplete character of the Act of 1793. On the contrary, when we come to the doctrine of executive discretion, so-called, the discussion seems to bear little more relation to the Constitutional clause and the act of Congress under which the right is claimed than to the Declaration of Independence. We are bound to say that this seems a necessity of the case, since Dr. Spear defends that doctrine, and neither the Constitution nor the act of Congress contains anything which can be drawn into such a defence. In the previous part of his work the author exhibits a wholesome though discriminating regard for judicial precedent and opinion. Here, however, he holds as far aloof from the authorities as from the text of the Constitution and the Rendition Act; and it would seem with equally good reason. This subject has been pretty thoroughly discussed since the Kimpton case, and it is not worth while to enter upon it here. From the various articles in these columns, the article in the *American Law Review* for January, and that by Judge Cooley in the *Princeton Review* for the same month, it has abundantly appeared that against a score of judicial opinions denying the doctrine the single *dictum* of Judge Okey, of Ohio, stands alone. In the language of Judge Cooley, the view "commonly

held in legal circles," which he expressly states as his own, undoubtedly is, that "the duty imposed upon the governor is imperative and not discretionary." It would, indeed, be difficult to find greater real unanimity on a matter of apparent controversy among persons qualified to express an opinion, if we exclude those executive officers who, before the agitation of the question, had unadvisedly committed themselves to a practice based on the false theory.

An application of the commendable process of differentiation by which the author showed the utter absence of authority in the Federal executive to surrender Arguelles, should have excluded all argumentation based upon an unnecessary assumption of implied and reserved prerogative powers in State executives, and should have led direct to the Constitutional clause and the act of Congress by virtue of which alone State executives have any powers or duties in the premises. In the case of the national executive the author very properly calls for the exact provision in the law under which he presumed to act. In the case of the State executive, he not only makes no such demand, but he evolves from vague general premises a justification for an act diametrically opposed to the express mandate of the fundamental law, and of the act of Congress imperatively prescribing the duty. Most of the questions arising under foreign extradition are now settled upon rational principles. It is matter for regret that upon this most important point in inter-State extradition the opinion almost uniformly held both by the bench and the bar should be hindered, however slightly and temporarily, from coming to the understanding of the public at large, by the argument which the author has felt himself called upon to make in support of an untenable theory.

In a useful appendix Dr. Spear has printed the Extradition Treaties and Laws of the United States, the necessary portions of the English Extradition Act, 1870, and Forms for Extradition, both foreign and inter-State.

My Command in South Africa, 1874–1878. Comprising Experiences of Travel in the Colonies of Africa and in the Independent States. By General Sir Arthur Thurlow Cunynghame, G.C.B. (London and New York: Macmillan & Co. 1879. 8vo, pp. xvii. 376.)—'Tours in South Africa' would have been a better title for this book than the one which Sir Arthur has chosen. The author reached Cape Town in November, 1873, to take command of the British troops in the colonies, and was superseded in his command in February, 1878. During this interval he travelled somewhat extensively; visiting in succession the eastern portion of the Cape Colony, the Orange Free State, Kaffraria and Natal, Griqualand West (formerly No-Man's Land), the diamond fields, and the Transvaal. Three-fourths of the book are given to the narrator's experiences of travel, and to citations from the colonial journals and other miscellaneous sources of information, and have little to do with the affairs of the author's command. The remaining fourth describes "the sixth Kaffir war," of which the fight at Quintana, on the 6th of February, 1878, was the most important incident. But the interest of the book is not a military interest, except as preluding the graver events of January last; it is that of a narrative of travel. It must be added that it is written in a style that suggests the soldier only by its carelessness and lack of finish; and the unsoldierly quality of vanity is too often noticeable. The experiences, however, of any intelligent observer who has visited the country of the famous Cetewayo (pronounced *Ketchwyo*, Sir Arthur tells us) can scarcely fail of interest at the present time. The sale of arms to the natives, resulting "in the possession by the Kaffirs of upwards of 400,000 [?] muskets and rifles," is noted by our author as a presumption of the folly of the late Colonial Government (dismissed in February, 1878), and his censure of it would seem justified by the recent slaughter at Isandula, where the Kaffirs are reported to have killed sixty-two English officers and nine hundred and six English troops—a greater fatality, as a daily paper points out, than the sum of the English loss at the Alma, and the allies' loss at Inkermann (eight hundred and fifteen killed). The regiment, the Twenty-fourth, that was cut to pieces last January at Isandula, was the same one, by the way, that Sir Arthur had reorganized on assuming his command.

The first chapter is devoted to the subject of ostrich-farming, the data being mostly taken from the excellent work of Messrs. De Mosenthal and Harting (reviewed in the *Nation* for December 28, 1876). The hunting of large game is described, and Sir Arthur renews the often-made prediction of its speedy extermination. The manners and customs of the various peoples, aboriginal and European, are described with considerable detail and variety. Among the colonists, for instance, confirmation may be had for Mr. Francis Galton's caution, given in his 'Art of Travel,' against the incautious use of ablutions while *en route* in a wild country. A colonial gentleman said to our author: "General, be careful on your journeys very seldom to wash your face, for there is nothing which will cost you more annoyance and ultimate discomfort." He was told that a physician lost his credit by prescribing ablutions to an elderly Dutch lady. Her husband lectured the innovator as follows: "Young man, you are a stranger in this country, and recommend new customs which are contrary to the true rules for health. I have now been married to my 'vrow' for thirty-five years, during which time water has scarce touched her body. It is not, sir, by your persuasion that such inroads can be made into our manners." In the Transvaal an equal conservatism prevails in science. A schoolmaster, newly appointed, had been indiscreet enough to teach that the world turns on its axis. The children, on the strength of this knowledge, "went home and were impertinent to their parents." The schoolmaster was called to account by the elders of the village for these revolutionary views. He said:

"'I teach them nothing but the movements of the heavenly bodies.' The minister answered: 'Well, this may be true, no doubt, and what the earth does in Holland; but it would be more convenient if in the Zoutspanberg you would allow the sun still to go round the earth for a few years longer. We do not like sudden changes in such matters.' The schoolmaster took the hint, and for the present the sun is allowed, in the Zoutspanberg, to move as before."

Curious anecdotes of the aborigines are numerous. In Griqualand East we find a warrior who agreed with the author of 'Lothair' in censuring the use of time-keepers:

"A German presented Panda, the father of Cetewayo, with a watch. 'What is the use of it?' said he; 'to tell where the sun is? We can see it; when cloudy we remain in our huts; at night we sleep. Does it give milk?' 'No.' 'Does it give calves?' 'No.' 'Then take your watch away.'"

Another dialogue is "more Irish and less nice" in its reasoning:

"Two Tambookies running from the field of battle hid themselves in a hole, but the leg of one unfortunately protruding caught the eye of some wary Icalaka. They pulled him out and were preparing to slay him, when he cried, 'Spare me, and I will tell you something.' They paused, and he said: 'There is yet another man in that hole.' The second hidden warrior, hearing this, called out from his place of concealment, 'Don't believe him; kill him at once; he tells lies. There is no one in here.' But it availed him nothing, and, after the custom of Kaffirs, the two prisoners were forthwith assegaied."

Sir Arthur's visit to the diamond fields is one of the most interesting parts of the book. He tells us that the diamonds sent to Cape Town in 1876 (about three-fourths of the year's yield) weighed 773 pounds, and were valued at £1,414,590. This treasure was conveyed 700 miles to Cape Town in the mail-carts from day to day, "with a driver and no guard"; honesty, it seems, being in vogue among the Africanders, though the Copernican theory is looked upon as subversive. Sir Arthur's narrative breaks off with his retirement, in February, 1878, from command in South Africa, on account, as he was informed, of "a want of cordiality between me and the Colonial ministry." Those who care to find a sketch of subsequent events in the colonies down to the affair at Isandula, may be referred to the articles on the Zulu War in the current numbers of the *Fortnightly*, the *Nineteenth Century*, and *Blackwood's Magazine*.

Hours in a Library. Third series. By Leslie Stephen. Reprinted from the *Cornhill Magazine*. (London: Smith, Elder & Co. 1879.)—This volume contains some of the most wholesome contemporary criticism, and is marked by the author's characteristic independence of thought and clearness in stating conclusions, which, if they are sometimes very heterodox, are always worth consideration. Even when he is hitting his hardest at an established reputation, like Landor's, for instance, and his vigor reaches the border-line of denunciation and his originality comes dangerously near mere smartness of phrase, intelligent readers will find themselves hard put to it to justify their admiration of the favorite author. This essay upon Landor, which is as bold a piece of destructive criticism as it is skilful, is an excellent illustration and gauge of Mr. Stephen's critical principles and his effective application of them. Landor holds one of the securest niches in literature, because he has won the praise of a small but fit audience which warns the ordinary critic to avoid attack: but in spite of Lamb, Emerson, Lowell, Swinburne, and Browning, whom Mr. Stephen mentions, he yet dares to define Landor as "precisely a glorified and sublime edition of the model sixth-form lad, only with an unusually strong infusion of school-boy perversion," and to

say that "the most superhuman of school-boys has really a shallow view of life." We cannot think this estimate just, but Landor is a man of a class to which Mr. Stephen is little attracted. What there is in him erratic, merely epicurean and wilfully narrow, all dislike, and he was undeniably lacking in nearly all the manly qualities which Mr. Stephen most prizes, and which he is thinking of when he says that of all the literary feasts, with fancies of which men of letters play, he would most prefer "a pipe and a bowl of punch with Fielding and Hogarth," for he thinks "there would be few places where one would hear more good mother-wit, shrewder judgments of men and things, or a sounder appreciation of those homely elements of which human life, in fact, is chiefly composed." Landor was as far removed from anything like this as a literary voluptuary could be.

In the other essays, too, we sometimes suspect that the strong infusion of common sense in Mr. Stephen, his tendency to observe disproportionately the moral side of literary work, and his constant longing for a logical system in the books he reviews, impair his fitness to be a universal critic. It is with something like contempt that he speaks of Massinger as "throughout a sentimentalist and a rhetorician," and one is struck with the frequency with which he calls attention to the lack of a consistent and articulate theory of the conduct of life in the works of imaginative writers, as in the essays upon Charlotte Brontë and Kingsley. Of the latter, to whom he is striving almost painfully to give the fullest credit, he says, with a give-and-take criticism which is fortunately rare in the book, "with all his shortcomings he succeeded in giving forcible utterance to truths of vital importance, though possibly requiring more embodiment, and brought vividly before our minds problems which most urgently press for a solution more satisfactory than he was able to reach." All that he says in this respect of Miss Brontë or Kingsley is true, but he insists upon it somewhat too emphatically; we read them for many things beside their moral advice to us or the value of their philosophy of life, although these are not to be ignored. But Mr. Stephen is at his best when he writes of the authors of the last century, partly because of his fuller knowledge, partly because he possesses a rare sympathetic understanding of them. The essay upon Fielding is very just, discriminating, and instructive, and that upon Cowper and Rousseau is full of that best sort of suggestion which results from bringing into comparison similar men who are usually far dissociated in the popular thought. We have before called attention to the essay upon the Edinburgh Reviewers, which is of especial value to young men both in the way of information and doctrine; and that upon Wordsworth's ethics is of a sort which Mr. Stephen is excellently fitted to give us (for his whole heart is in it), and which is especially needed. All the essays are valuable contributions to criticism, and will stir thought much more than most that appear even from the best sources. We will only take space to add our protest to that of the author against the abuse of the word Philistine by critics, which he says is "the name applied by prigs to the rest of their species. And I hold that the modern fashion of using it as a common term of abuse amounts to a literary nuisance. It enables intellectual coxcombs to brand men with an offensive epithet for being a degree more manly than themselves." It is, as he elsewhere says of some ebullitions of Landor's, "a mere form of swearing."

THE

Meriden Britannia Co.

THE LARGEST MANUFACTORY OF ELECTRO-PLATED WARE IN THE WORLD.

Salesrooms, No. 46 East Fourteenth Street,

UNION SQUARE,

NEW YORK.

We take much pleasure in referring to the reputation we have for many years maintained for manufacturing SPOONS AND FORKS BEARING THE TRADE-MARK "1847, ROGERS BROS."

Particular attention is invited to our *Patented Process of Electro-Plating Spoons and Forks,* by which the parts most exposed to wear receive an EXTRA COAT OF SILVER. This feature renders these goods more economical and durable than those of any other manufacture, while the increased cost is relatively small. This method of plating we apply to the 4, 8, and 12 oz. plate, as required

To protect the purchaser against imitations, it should be observed that the Improved Spoons and Forks bear our Trade-Mark, "1847, *ROGERS BROS., XII.*"

FIRST PREMIUMS awarded at all Fairs where exhibited, from the World's Fair, 1853, to American Institute Fairs, 1873, 1874, and 1875, inclusive, and at the Philadelphia Exhibition, 1876.

Extract from the American Institute Report:

"Their Porcelain-lined, Double-walled Ice Pitchers are A1, and possess *all* the qualities the company claim." . . . "We consider the goods made by this company to be by far *the best* made in this country, and we believe in the world."

The Nation.

NEW YORK, THURSDAY, APRIL 17, 1879.

The Week.

THE New York *Times* has taken the trouble to make enquiries through 170 correspondents, in every State in the Union, at 1,000 localities, of well-informed persons of various classes and conditions, as to the candidates most in favor for the next Presidency in the Republican and Democratic parties respectively. The enquiries at 130 "points" out of 157 show Grant to be the Republican favorite; at 98 "points" out of 157 Tilden is the Democratic favorite. The other competitors may be said, in racing parlance, to be "nowhere." This mode of ascertaining election prospects is, of course, simply an amplification of the process called "straws," which appears in the newspapers during the campaign, and in which anonymous letter-writers communicate the result of a vote taken on the railroad train, or on the ferryboat, or among the workmen in a sugar-refinery. Its value depends almost altogether on the character and capacity of the 170 correspondents and of the persons whom they sound. As long as their names are concealed their letters are simply a huge "straw." Nevertheless, as we have said elsewhere, the result will be found to tally with the experience of most people as to their own circle of acquaintance in this part of the country.

The *Times* confesses that Grant is by no means its own choice, and, indeed, deplores the prospect for obvious reasons, while accepting it with resignation. It does not point out, as it ought to have done, that old Dr. Dwight's saying with regard to the Democrats, "that while he did not maintain, by any means, that every Democrat was a horse-thief, he did maintain that every horse-thief was a Democrat," may, by a slight paraphrase, be applied very aptly to the supporters of the Grant movement. That is, while it is true that there is a large body of respectable Republicans amongst them, it is also true that there is no Republican whiskey-thief or corruptionist of any description, defrauder of the revenue, bribe-taker or bribe-giver, worthless or lazy custom-house or other officer, rascally blackmail editor, knavish contractor or ring-master; no jobber in offices or perquisites; no drunken loafer or gambler; no enemy of improvement in any branch of the government, who is not a hearty and vociferous "Grant man," and who is not now rubbing his hands over the chance of seeing "the old man" back in the White House. This is an undeniable fact, proofs of which could be readily collected at 200 "points" and by 200 correspondents at least, and it is worth pondering.

We hope the *Times* will now institute a similar enquiry as to the popular preferences for the second place on the ticket in each party. We have little doubt that if conducted by the same machinery it will show that at a great majority of the "points" Pelton and Babcock are the favorites for the Vice-Presidency. They are certainly the legitimate candidates. Each has stood high in the confidence of his chief, is familiar with his inner counsels and views, and with the precise process by which he would save American society, and should, therefore, occupy the position in which he would in case of accident to either of "the old men" succeed to the Presidency.

The debate over the Army Bill is raging in the Senate, Mr. Blaine having been the principal speaker during the week. He made very good use of figures in ridicule of the Democratic fear of oppression by the Army, showing that the whole United States force in the Southern States would furnish only one soldier for every 700 square miles of territory, and only 70 to every 1,000,000 inhabitants. There are none in Virginia, or Kentucky, or Tennessee, or Missouri, or Mississippi, and only 30 in North Carolina, 120 in South Carolina, 57 in Arkansas, 32 in Alabama, and 239 in Louisiana. Of course these are not sufficient reasons for allowing a law to remain on the statute book permitting military interference at elections, but they are a complete answer to the claim of urgency for the measure now before the Senate; they show that it was very foolish to have made an extra session necessary to pass it, and to have tacked it to the appropriation bill now. The case of Mr. Bell was decided on Thursday, agreeably to common sense and the Constitution; a result, of course, not brought about except by Democratic votes. Mr. Bell was admitted to a seat by 35 yeas to 28 nays, among the latter being Senators Conkling and Carpenter. On Monday, the Vice-President being called from Washington, Mr. Thurman was chosen President *pro tem.*

The House proceedings have not been lacking in variety. On Wednesday week the entire session was consumed in considering the report of the Committee on Rules. No objection was made to the revival of certain select committees, on the census, the yellow fever, the civil service, on the "state of the law respecting ascertainment and declaration of result of election of President and Vice-President," etc.; nor to increasing the membership of the most important standing committees, as the Committee on Coinage, Weights, and Measures (to eleven), Ways and Means (to thirteen), Agriculture, Judiciary, Elections, Commerce, and Appropriations (to fifteen each). But an additional rule, requiring a three-fourths vote in order to suspend the rules and pass a general appropriation bill, was attacked with great vigor from both sides of the House. The tenor of the debate which arose showed clearly that the scandalous method of passing the River and Harbor Appropriation Bill was the evil aimed at by the new rule, and defended not only by Mr. Reagan, of Texas, but by Mr. Conger, who represents the Detroit River. The opposition prevailed, and, turning the tables, secured for the Committee on Commerce the same privilege to report river and harbor improvement bills that is accorded the Committee on Appropriations in reporting general appropriation bills. Next, the Committees on Ways and Means, Banking and Currency, and Coinage, Weights, and Measures, were given leave to report at any time, and a majority authorized to fix a day for the consideration of any bill thus reported, and to continue the consideration from day to day until disposed of. These rules make log-rolling easy, and invite the wildest financial legislation. They are all the more mischievous because Speaker Randall has not counteracted them by the composition of his committees. Of one-half of these (26 out of 52) the chairmanships are assigned to Southerners, including those on Banking and Currency and on Coinage, which as now constituted are in the best possible shape for promoting inflation and the fulfilment of the silver curse. Mr. Hewitt's Labor Committee has been humorously handed over to Hendrick B. Wright, the Pennsylvania Communist. The Railroad Committee is doubtfully adverse to the Texas and Pacific Railroad subsidy. The Ways and Means Committee is likely to avoid extreme views on the tariff question. General Bragg has been very properly placed at the head of the Committee on War Claims. The Appropriations Committee has been judiciously selected, and considerably strengthened intellectually as well as numerically.

On Monday the Republicans successfully filibustered away the morning hour, over a point of order neither raised in good faith nor capable of being sustained, and so prevented the introduction of sundry bills by the Greenback party and Mr. Stephens's select company of silver maniacs. All these measures, however, found a side entrance under the guise of petitions, and were *ipso facto* referred to their appropriate committees; but a declarative vote taken on the same day against meddling with the tariff or the currency at

the present session showed that their chances of being passed, if reported, are very slight. The main business with the House has been the Legislative, Executive, and Judicial Appropriation Bill. On Thursday the inflationists incautiously furnished the President with a new and substantial excuse for vetoing it, by inserting a provision that $10,000,000 to meet the arrears of pensions should be taken from the greenback reserve, held for the redemption of the fractional currency. On Tuesday, General Bragg sought to insert a clause repealing the law creating the Southern Claims Commission; but while this touches too many interests and feelings, North and South, to be likely to succeed, it promises, as we go to press, to ensure the adoption of the plan proposed at the last session by Mr. Potter, in accordance with which all pending and future claims must first be passed upon by the Court of Claims, and can only come before Congress for action with the endorsement of that tribunal.

The negro movement towards Kansas has somewhat fallen out of sight during the week, but it appears to be uninterrupted. Its political significance is now little insisted on. An apparently well-informed writer in the *Herald* of Monday, a Southern clergyman, recalls the very considerable migration to Texas from Tennessee and Kentucky begun as early as 1870, and still stimulated by land agents, whose plan is to send off only small bodies from each locality, in order to avoid alarming the whites. Kansas began to be attractive, within this writer's experience, even in 1875. He considers the prime cause of the unrest of the blacks to be the huge disappointment in their ideal of "freedom." They expected it to do more for them, to make a greater change in their mode of life, and to furnish them with an independent outfit in the shape of land and mules. Hence the notion readily sprang up that freedom could be realized only in a Free State. But more important than such considerations is the undoubted fact that the landlord and the storekeeper have, from the want of capital on the negro's part, ruined him with liens upon his crops and his land and implements, advancing him money at extortionate rates, and charging him enormously for all goods obtained on credit. In fact, in some parts of the South, though by no means in all, his condition closely approaches that of the unfortunate ryots of British India, the amelioration of whose condition is one of the most difficult as well as urgent problems in the government of that country; they are virtually the slaves of the usurers, and seem incapable by their own unaided efforts of throwing off the crushing weight of debt which rests upon them and their posterity. At the South, the dependence on the storekeeper affords a simple means of exerting political control which is not neglected.

Dr. Cooke, the President of the Claflin (colored) University in South Carolina, who was accused by the *Tribune* of having voted for Hampton in 1878 because he had been assaulted in a railroad train in 1876, but wickedly denied it, has been writing a letter to a convention of Northern residents at the South recently held in Charlotte, N. C. The wretched man, who is originally from Massachusetts, reports "that in no State at the North do the colored people enjoy superior rights to those enjoyed by them at present" in South Carolina. He, moreover, has the audacity to assert, after eight years' residence in the West, "that the South presents greater inducements to settlers of small capital than any portion of the country with which he is acquainted." This malicious assertion was doubtless suggested to him by the story of the *Tribune* correspondent who exposed him last winter, that he (the correspondent) had ridden eight miles from the town of Kingstree along a road lined with negro farms. Cooke's persistence in his stories of Southern peaceableness is a shocking spectacle, but is doubtless the result of recent corporal chastisement, and is a "Tilden move." The Convention received letters from a large number of Northern settlers in various parts of the South, many of them old Union soldiers, testifying in the most brazen manner to the peace and prosperity they enjoyed, and trying to show that there ought not to be any ill-feeling between North and South, well knowing that ill-feeling is at this juncture of the highest political importance.

We are informed that the first news of the death of Judge Robinson, of the Court of Common Pleas, reached Governor Robinson in the shape of thirteen applications for the vacant place from members of the bar in this city. Since then the number has risen to over fifty, and is steadily rising. This is very gratifying in one way, as it shows the existence among us of a greater amount of judicial talent than most people suspected. On the other hand, it raises the question whether we have enough judges "to meet the wants of trade," as the inflationists say. Upon the principle held by so many financiers in this country at present, that we cannot have too much of a good thing, it would seem as if our supply of judges was deplorably short. We get our justice from our judges, and the more judges we have, therefore, the more abundant will our supply of justice be. Therefore, we say that the bench ought to be elongated until every member of the bar who wants to be a judge has a place on it. The increase might be "based," as in Mr. W. D. Kelley's plan, on the issue of 3.65 bonds; that is, whenever a judge got tired of the bench or thought himself superfluous he might draw bonds enough from the State treasury to keep him comfortably until his services were again wanted, and then pass in his bonds and begin adjudicating again. Whether this be a good plan or not, it is certain that the bar will not submit much longer to the present miserable smallness of the bench, and any politician who tries to stem the tide of their discontent will find he has made an enormous mistake.

By the death of General Richard Taylor this week in this city one of the most striking and characteristic relics of the "ante-bellum" period at the South has passed away. He was in more ways than one the typical representative of an extinct society, and for this reason alone was an interesting person. But he was besides this a man of many gifts and graces. He started in life with peculiar advantages, and had a wide experience of the world while still young. He was in his early days a great sugar-planter, when sugar-planters were a baronial class; was an excellent politician in the time when politics were managed by a few wealthy men; showed himself a good brigadier under Jackson in Virginia, and was probably a good strategist, though his afterwards defeating Banks in Louisiana did not prove it. He came out of the war ruined, but never lost his cheerfulness and vivacity, and remained to the last a gay, brilliant, but thoroughly "unrepentant rebel," with a hatred of the new régime and a belief in gentlemanly government which carried one so far back as to have the air of a joke, which he himself enjoyed. He won the esteem of a good many men to whom his politics were simply a curiosity, and was followed to the grave by the regrets of a great variety of mourners. The appearance of the present and late Secretary of State, Mr. Evarts and Mr. Fish, among his pall-bearers, in a Northern city, was a curious illustration of the distance which separates us from the war, and of the hollowness of all attempts to revive its passions.

The Massachusetts Legislature has by majorities of two to one in both houses passed a bill securing what is called "school suffrage" for women. That is to say, every woman who is a citizen of the Commonwealth, twenty-one years of age, and possessed of the other qualifications of male voters, may participate in the election of school-committees. The same privilege has lately been accorded in New Hampshire, and still earlier in Kansas. The admission of women to the Boston school-committees had paved the way for the larger liberty in Massachusetts; but both the one and the other are a natural outgrowth of the enormous part allotted in our educational system to female teachers, as in no other country in the world. In the public schools of the United States, according to the last census, they outnumbered the male teachers by nearly fifty per cent.; but when abstraction is made of the South, where in only four instances (Delaware, Maryland, Virginia, and Louisiana) the male teachers

are exceeded by the female, and generally exceed them from twenty-five to three hundred per cent., the proportion is vastly more favorable to the latter. Thus, in 1870 there were 2,600 female teachers in New Hampshire to 510 male; while in Massachusetts there were 5,387 female to 753 male. Nothing was more natural than that women should be thought qualified to examine and inspect as well as to teach, or that they should desire to have a share in the choice and in the work of committees; and the only wonder is that they were not enabled to do so long ago. The recent extension of the higher education to women, particularly in Massachusetts, is the best assurance that the new privilege will be usefully employed.

The Massachusetts House, on the same day, rejected without a count a bill granting women the right to vote and be voted for in municipal affairs. The *Woman's Journal* might console itself with the reflection that women are eligible to clerkships in our State and National administrations, and that whatever promotes the business view of the civil service, as opposed to the political view, will improve the chances of woman's entering it, though, to take a single instance, perhaps there are more postmistresses now by appointment than there would be, in the beginning, as the result of popular election. More comfort is to be found in the rational belief that "school suffrage" is an entering-wedge for "manhood suffrage." The analogy both of right and of expediency goes so far that, with the unthinking at least, it may be expected to prevail in the long run. When once the sight of women being registered and voting, no matter for what public purpose, becomes familiar, a great obstacle will have been removed from the common mind.

Of the $40,000,000 of U. S. 4 per cent. bonds which the Bank of Commerce subscribed for last week, to furnish all the money needed to redeem the entire outstanding remainder of 5.20 6 per cent. bonds, the sum of $10,000,000 was relinquished to the London syndicate, and what threatened to be a serious dispute was thereby avoided. The Secretary of the Treasury has not yet named a price at which he will sell any more of the 4 per cents, but it is expected that he will soon do so; and it is known that the terms of sale will be less favorable than they have been. In anticipation of the sales of the new $10 certificates of deposit, which are payable only through conversion into the 4 per cent. bonds, the Treasury early in the week called in for redemption ninety days hence $10,000,000 of 10.40 5 per cents. This is the first step in refunding 5 per cent. with 4 per cent. bonds, and is taken because the option to redeem any of the remaining 6 per cents does not mature until the year 1881. In the financial markets there was a further reduction of the discount rate in London to 2 per cent. by the Bank of England, and to 1⅛ per cent. in the London open market. British consols there advanced to 98⅛—the highest price for more than twenty years. Here the money market became easier, and it was demonstrated that the large bond settlements at the Treasury can be made without disturbing it. The New York banks raised their reserve about $4,000,000 last week, and the closing rates for money were 5 to 6 per cent. Silver in London again fell from 50*d.* per oz. to 49⅝*d.* per oz.; and the bullion value of the 412½-grain dollar here fell to $0.8353—a circumstance which is important in view of the strenuous efforts in Congress so to increase the coinage of 412½-grain dollars as to force their circulation in the market at their bullion value.

Another peculiarly bold attempt on the Czar's life, following close on the attempt to shoot the Chief of the Gendarmerie in the open street in broad daylight, shows that the war between the Nihilists and the official class is becoming more and more desperate. What is singular about it is that the poorer classes, who fill the ranks of the army of discontent in other countries, take no part in it. It is a conflict between the educated or half-educated nobles and traders and the bureaucracy, in which quarter is neither asked nor given. The root of it seems to be in the fact that the Nihilists have received too much intellectual training for their political surroundings, and not enough moral and social training to enable them to seek redress and expansion by peaceable means. Their ideas, in other words, are those of advanced communities, their weapons those of the infuriated Muzhik or Tartar. At a great dinner given to Turgeneff in St. Petersburg the other day, at which he was received with unbounded enthusiasm, he warned the Government in thinly-veiled terms that the only remedy for the crisis was the establishment at any cost of free political institutions; in other words, the educated classes must get a share in the Government.

The scheme of joint occupation in Eastern Rumelia seems to have been abandoned at the last moment, partly owing to the difficulty of arranging the details, and partly to the reluctance of the Porte to submit formally one of its provinces to this sort of tutelage. It doubtless feared that the plan might be tried by-and-bye in other parts of the empire. So the last news is that it has proposed to Russia that the present status should be prolonged for another year—that is, that the Russian occupation should continue—in the belief that by the end of that time the Rumelians will be more reasonable and willing to welcome back the Turks. All observers on the spot, however, seem to be of opinion that the Turks will never have as good a chance of occupying their Balkan frontier as they have now, and that the Rumelian hostility to them will grow with time, and that the means of resisting them will grow with it, and that a year's postponement will make the Beaconsfield part of the Treaty of Berlin impossible of execution. In fact, it is more and more doubtful if Lord Beaconsfield would any longer defend his plan. The idea that the occupation of the Balkan Passes would add to Turkish strength, when the troops would have a savagely hostile population in their rear, is fast becoming ridiculous.

The Khedive's last performance, by which he has rid himself of Mr. Rivers Wilson and M. de Blignières, as well as Nubar Pasha, whom he detests, is greatly puzzling the French and English Governments. They do not well know how to deal with him, and each is afraid to let the other act alone, which is doubtless exactly what he anticipated. They do not like to use force against him, for of course he would be overthrown at once, and then what would they set up in his place? France proposes the Sultan should be got to punish him by dethroning him—for he is the Sultan's vassal—and the Sultan is said to have expressed willingness to deal with him in this way, and has called on him to show cause. But England is evidently doubtful about resorting to this expedient, and the London *Times* is calling loudly for patience and deliberation. The Beaconsfield Ministry probably dread adding another foreign complication to their already formidable list. In the meantime the unfortunate fellaheen are dying of famine, and the taxes are being collected in the old way with the whip.

The budget of the Chancellor of the Exchequer, submitted to the House of Commons a fortnight ago, and the details of which have just come out, show that his last year's estimate of receipts has been justified within $500,000, but this has been more than due to the hurried passage through the custom-house of a large quantity of tea in anticipation of a rise in the duties, so that he has to a certain extent anticipated next year's revenue. With this exception, however, his estimates have proved fairly correct. But there has been a serious falling off in the excise and stamp duties, showing the decline in trade, which, however, has been more than made up by an increase in the returns from the land-tax and house-duty, and the income-tax and the post-office. He proposes to put off paying the expenses of the preparations to fight Russia, and the expenses of the Zulu war until next year—that is, probably, until after the next general election—and the expenses of the Afghan war he apparently means to impose on "the mild Hindoo."

THE REHABILITATION OF GRANT.

AS a mode of forestalling or manufacturing public sentiment, much could easily be said against the *Times's* anonymous reports last week from all quarters of the country regarding the favorite candidates for the next Presidency. There is, on the face of them, nothing to show that they were not concocted by the same correspondents who are used at other seasons to estimate the yield of the crops in their respective neighborhoods. If even in such estimates the personal equation has to be allowed for, of how much greater importance is it in the case of political calculations, especially at a time when general uncertainty and distrust prevail, and when the weak-kneed class who do not leave the fence till assured on which banner victory is to rest, are temporarily most numerous. In fact, there is no comparison between the weight to be attached to the *Times's* reports and that which as many authentic "interviews" would have, or categorical answers to a circular of enquiry, confirmed by the name of the author of the opinion, his occupation, residence, and standing in the community. It is partly owing to the obscurity of the reporter that his representations cannot be disproved; but that Grant and Tilden are, as he says, the unmistakable preference of their respective parties for the campaign of 1880 is inherently probable (since a state of doubt as to what is best or desirable is not inconsistent with substantial agreement as to a *pis-aller*), and appears to be conceded by the press.

Mr. Tilden's sentimental claim to the Presidency, to mention no other, is strong enough to account for the favor with which his candidacy is viewed by Democratic constituencies. Nor is there anything mysterious about Grant's popularity with the common run of Republican voters as well as with a certain stripe of politicians. The question which, in our experience, is most perplexing is this, and it is frequently raised: How is it that one encounters men who abhor "Grantism," and are fully sensible of the disgrace which Grant's two administrations inflicted upon the country, and earnestly desire the purification of the civil service, and who yet keep him in reserve as a tolerable instrument in case of necessity? How is it that men who in 1876 could not be reconciled to the thought of his re-election (without reference to the third-term objection), and whose opposition did in fact make his nomination impossible, now regard it with something like tranquil assurance? What do they want and expect of him that he is now become acceptable? We believe but one answer can be given: The men we speak of are not concerned about the fortunes of the Republican party as a party. They do not look upon Grant merely as the most available Republican leader. They have no high esteem, many of them have no respect whatever, for his civil capacity. Their reliance on him, whether they confess it or not, is a *military* reliance, and their condition of mind, if plainly stated, would be that they think the war between North and South not yet over, or that it is about to recommence.

This is a serious conclusion to come to, because in the first place it argues a degree of nervous timidity which men of principle ought to be slow to acknowledge, and which quite demoralizes the reformer. Still, if this want of courage—call it dread of the immediate future, if you please—really exists, we ought to look it in the face; and it cannot be denied that the bare preamble of the resolution creating the Potter Committee set a large number of reformers to fumbling around after General Grant, as they would after a revolver if they heard burglars in the next room. Those who recovered from this panic, along with some of the stronger-minded who perhaps never succumbed to it, now see no guaranty except Grant against the "revolutionary" designs of the Forty-sixth Congress. They have, after all, so little faith in the stability of the Republic that the abuse of their powers by a parliamentary majority appears to them to involve an appeal to force; so little confidence in the provisions of the Constitution and the temper of the people that they are not easy unless a military President is at hand, ready to exercise the arbitrary powers of a commander-in-chief in the midst of hostilities. The Mexicanization of our politics has been often alluded to, but, as we have more than once urged in these columns, the process attacks the mind before it manifests itself in deeds. This apprehension that the government is in danger if the other party wins or has its way, is truly Mexican; and so is the reserve thought of a military dictator as the only possible saviour of society.

We say a military dictator, because on an instant's reflection it must appear that if General Grant were at this moment back in the White House he would have no resources against revolution that Mr. Hayes has not. He could resist and veto, no doubt; in doggedness of character he may be Mr. Hayes's superior. But he would have no control over the army, or power over the militia, that is not to be found in the Constitution by all Presidents in time of grave public peril. He would have much less than when he resigned the reins to Mr. Hayes, for we are now more than two years—we are half a century removed from the semi-military régime under which Grant kept alive the last of the carpet-bag governments. There remains only a *coup d'état*, in which the Confederate brigadiers should be driven from the Capitol and a rump Congress installed. There is no one, we are sure, who contemplates such folly as this, and, in fact, the whole discussion of what Grant might do seems rather silly, and would be utterly so but for the respectability of the men who cherish irrational expectations concerning him, and undoubtedly do get a good deal of comfort out of them.

All such, and we wish there were not so many of them, will be benefited by a little historical retrospect. There were plenty of ante-bellum crises in Congress and at the polls, and only one ended in violence, and the aggressive party was completely humbled. There have been half-a-dozen crises since the war, including an impeachment of the President, the union of Southern and Northern Democrats on the candidacy of Horace Greeley, and the late disputed election, decided by an extra-Constitutional makeshift; and peace has remained unbroken. The hasty and arbitrary legislation of the war and of the period of reconstruction has been partially undone, and in getting rid of the remainder something may be taken away which we shall be loth to part with, albeit not irrecoverable. But we ought to be glad to see the old scars effaced, and to reach at last a stage in which all the issues raised in Congress will be upon their merits, and all party differences will have a purely civil complexion. The best way to arrive at this is to refuse to "see blood" so long as there is any other view to take of the situation, or to think first of the military way out when a difficulty arises, or to discredit the ability of the people to execute judgment on the party that puts our institutions in jeopardy. As for those who in 1872 and again in 1876 resisted, for reasons that were abundantly justified, the continuance of Grant at the head of the Government, it is clearly a duty to remain steadfast on the only ground that promises a happy return to peaceful national development; to lend no countenance to the pretence that we need now in a President any qualities that were not essential then, or can dispense with any which were then demanded; to advocate now as then a return to Constitutional and regular modes of legislation and administration, the reform of the civil service, reform in the collection of the revenue, actual as well as nominal redemption; to judge of fitness for the Presidency according to the candidate's perception of the nature and scope of these measures, his earnestness in behalf of them, his resoluteness, experience, and training; finally, to take no counsel of fear or despondency, but

> "—through the heat of conflict keep the law
> In calmness made, and see what they foresaw."

LEGISLATIVE COURTS.

THE Municipal Society of this city, through a committee of which Mr. Simon Sterne is chairman, has introduced a bill at Albany which deserves the careful consideration of the Legislature and of the public. It relates nominally to a subject which, at the first blush, seems of no general interest—that of "applications to the Legislature"—but it embodies a principle which, if once incorpo-

rated into American law, and still better, as we hope some day to see it, into American constitutional law, will do much to redeem our legislation from the discredit into which it has of late years fallen. In order to make the provisions of the bill clear it is necessary first to glance at the law as it stands, and the evils which have grown out of it.

The existing provisions of law in this State on the subject of applications to the Legislature are extremely brief. They require all persons applying for leave to have the bounds of any county, city, or village divided or altered, a new county created, a new city or village incorporated, a court-house removed, a road made or improved, or any other county purpose effected involving a general or special county tax, to give notice by newspaper publication of the intended application. Corporations applying for legislation are required to give a similar notice, and these notices must specify the nature and objects of the application. There are like provisions with regard to applications for the release of escheated lands, and for the right to construct dams.

These provisions, meagre as they are, grow out of a recognition of the fact (on which all the recent constitutional amendments prohibiting special legislation are based) that private, local bills, having for their object a local grant or modification of corporate rights and privileges, a taking of private property for public use, or, in fact, any change in law or grant or withdrawal of privileges, which is to be confined in its effects to particular persons or collections of persons, or localities, are really not *laws* at all, but grants, or modifications of grants, made, indeed, by the Legislature, but involving, first, a judicial examination of the facts, and, second, a semi-judicial, semi-administrative determination as to what should be done in the case. The reason why the applicant is required to give public notice of his petition is that all those interested may be informed, as in any regular judicial proceeding they are as a matter of strict right entitled to be informed; may appear before the Legislature, may oppose the application if they see fit, and obtain a fair hearing for the purpose of bringing before the mind of the branch of the government which grants or refuses the application the merits of the case in all its bearings.

With this formal notice, however, it will be observed that the judicial character of the machinery provided comes to an end. None of the details of the procedure in these applications after they have actually reached the Legislature are provided for by law in any way. Beyond a few provisions relating to the attendance of witnesses before committees, which are chiefly declaratory of powers which the Legislature has independent of statutes, the proceedings with regard to private and local bills appear to be absolutely in the discretion of the committees to which they are of course, and necessarily, always referred. Of rules for the time of holding meetings, for the hearing of parties in person or by counsel, for the separations of questions of fact and law, even for the proper introduction of proof, there is no trace. It is, indeed, the theory of legislative assemblies, and is so stated in the treatises which discuss the matter, that committees are governed by the ordinary rules applicable to courts of justice; but the difference is that a court of justice is not itself the judge of the conformity of its proceedings to law. The suitor who considers himself aggrieved has always the remedy of appeal from the decision by which he considers himself aggrieved, and the right to appeal and have proceedings reviewed is the thing which makes the rules of law fixed and ascertainable; but from a committee's action there is no appeal of any kind. To talk of the Legislature itself reviewing the work of committees in matters of private legislation is mere trifling. The reason for the existence of committees is that the Legislature cannot afford the time to enquire into such matters. In ninety-nine cases out of a hundred the committee decides absolutely and finally what is to be done with any private bill. Not only, however, is its decision final, but its method of arriving at that decision rests in its own arbitrary discretion. It may hear witnesses or not hear them; it may listen to arguments or not listen to them; it may confine the right to appear before it to recognized counsel, or let the parties appear, or allow persons who have no recognized status of any kind to appear. It may reach a conclusion, or decline to reach any conclusion whatever, and there is absolutely no redress. It is a singular instance in our system of government of a body having judicial functions, and charged by the Legislature with a judicial duty, which has broken loose from all American judicial traditions, and enquires into and decides the cases brought before it by any method it chooses to select—precisely, in fact, as a Turkish cadi might.

The object of Mr. Sterne's bill is the assimilation of all the proceedings of legislative committees in private and local bills to those of courts of justice. For this purpose the faint suggestion of a similarity afforded by the present requirements as to notice by publication in the newspapers has been taken as a groundwork, and upon this has been constructed a complete scheme of law governing proceedings before legislative committees. By the proposed act all private, special, and local bills are to be filed on the first day of the session, and in case the bill involves the taking of private property for public use notice is to be served upon all persons affected. By another section the governor is to appoint three examiners, holding office for four years, whose duty it shall be to see that these preliminaries have been complied with, whether any objections to the bill have been filed in the office of the Secretary of State (for which purpose twenty days are allowed) and to report the facts; and in case these prerequisites are found by them not to exist to make an endorsement to that effect upon the bill; in which case the Legislature is prohibited from passing any bill on the subject. If the law has been complied with and it appears that there is opposition to the passage of the bill, it is to be placed, on reference to a committee, upon a calendar like that of a court, which is to be published from time to time so as to give due notice of the intention to proceed with the bill. On the hearing the committee is to hear all competent and relevant testimony, to hear counsel under appropriate rules and regulations, and proceed in general "as though such committee or committees were courts of justice." By a two-thirds vote the committee is empowered to impose a fine of not more than $500 on anybody maliciously opposing a bill, and by a like vote, in case of a demand in a bill for "excessive powers," by which individuals or corporations are unreasonably compelled to resist its passage, to fine the applicants in a like sum (this, of course, being intended to meet the common case of blackmailing opposition or application).

There are three acknowledged evils of great magnitude existing in the legislation of every American State and in that of Congress which are more or less directly traceable to the arbitrary and irresponsible procedure which we have attempted to describe above, and which the adoption of Mr. Sterne's bill would in a great degree bring to an end: *first*, the *volume* of special legislation; *second*, its *incoherence* and *obscurity*; *third*, the existence of the Lobby—an institution absolutely unknown in any other parliamentary country. The restrictions upon the power of the Legislature to pass special laws incorporated into the constitution of New York and other States have undoubtedly lessened the first evil to a great extent, as any one may see by comparing the 510 pages of laws passed at Albany in 1878 with the 2,199 pages passed in 1872; it will be still further reduced if the constitutional amendment now pending, limiting the Legislature to biennial sessions, is passed. But the provisions against special legislation have not destroyed special legislation. The general effect of these provisions is to take away from the Legislature the power to pass special laws where general laws are applicable. But there are many cases in which general laws are inapplicable, and there must be some provision for these. We find on examination of the New York Statute-book of 1878 that, even under the present constitutional limitations, out of the first hundred laws there are only thirty-four which can be called general in their nature. Assuming this proportion as a fair test, and we see no reason why it should not be, *two-thirds* of all the business done every year at Albany is still of a private nature, and does not partake of the character of legislation at all. So far, therefore, as the amount of special legislation is concerned, it is still very great. As

to its incoherence and obscurity, the power which the Legislature exercises to amend charters by private bills, even when it cannot grant new charters, is not likely to diminish this fault. To take a single instance, the legislation every year proposed with regard to this city is so related to and inextricably complicated with old provisions as to be absolutely unintelligible to almost every private person in the city, and is really understood only by a few office-holders whose tenure of office may be affected by the proposed alterations, and by them only so far as it affects their places.

The connection between the lobby and the existing method of legislation is very direct. The lobby, as an organized institution (as it exists nowhere but in the United States), is simply a collection of unlicensed attorneys, responsible to no one for what they do, who ply their trade as they best may. Between a court, such as a legislative committee really is, and the suitors whose interests are adjudicated upon by it, there must obviously be a body of agents who are familiar with the procedure of the court, and are capable of managing cases in it. If the procedure and the right to practise in the court are regulated by fixed rules, and the agents recognized as public officers who are responsible to their clients and to the court for any breach of duty, you have at once, as agents, lawyers forming a regular bar. If there is no procedure and the action of the court rests altogether in its own discretion, you have as agents lobbyists. The lobby necessarily drives out respectable lawyers, for respectable lawyers are restrained by their training and their sense of duty from resorting to the devices to which lobbyists are obliged to resort; consequently, before such a court, a lobbyist is a better agent than a respectable lawyer, and therefore drives the respectable lawyer out of the market.

We have merely given above an outline of the proposed plan. There are many details which we have been compelled to omit, and which deserve careful consideration. This outline, however, shows sufficiently the principle to be introduced, or rather enforced (since as a *principle* it is acknowledged to exist already). It cannot be said to be a novel one, for it is taken from the English parliamentary practice, where it has been on trial for a generation, and where its good effects are seen in the high character of the Parliamentary Bar, which corresponds to our lobby, and the absence of complaints on the subject of special legislation which are heard so continually here. The only fault that we have to find with the scheme is that it is not brought forward as a constitutional amendment, for only in that way can the legislature be permanently compelled to adhere to the proposed method; and we trust that its incorporation into legislative practice is merely a first step to this end.

FITZ-JOHN PORTER'S CASE.

IT is safe to say that the report of the Advisory Board which has been reviewing the proceedings of the court-martial which in 1862 cashiered General Fitz-John Porter, for misconduct in the face of the enemy, makes the case the most remarkable in military annals. It is remarkable, in the first place, that, considering the gravity of the offence of which he was convicted and the excited state of the public mind at the time of his conviction, he was not sentenced to death and executed, or to imprisonment for life. It is remarkable, in the second place, that he should not have succeeded in procuring a review of the proceedings for sixteen years, considering that at any time since the peace it was possible to obtain the evidence which has enabled a board of officers, composed of such men as Generals Schofield and Terry and Colonel Getty, to pronounce him not only innocent but deserving of the highest praise.

General Porter's individual misfortune in having lain so long under the burden of such an error is, of course, a cruel one; but this is something the foundation of which he may be said to have in some measure laid by his singularly indiscreet, and we may add mischievous, criticisms on General Pope, his commanding officer, addressed to General Burnside. This undoubtedly prepared the mind of General Pope and his friends for treachery or half-hearted support, and won for Pope the public sympathy when he subsequently sought to make Porter responsible for the failure of his campaign. Moreover, coming so soon after McClellan's Harrison's Landing letter, and containing, as they did, an appeal to McClellan for deliverance from Pope, they helped to strengthen and spread the popular belief that there was a clique of West Point officers, of whom McClellan was the head, who were in secret sympathy with the secessionists, and never fully believed either in the right or the ability of the Government at Washington to drive them to the wall. General McClellan's telegram from Washington, dated September 1, 1862, addressed to General Porter, asking him and "all his [my] friends for his [McClellan's] sake, and that of the country, to lend the fullest and most cordial co-operation to General Pope in the operations then [now] going on," was certainly not calculated to dissipate this impression. A more unfortunate message, or one better calculated to be injurious to General Porter at that juncture, could hardly have been devised. The position of an officer in high command in the field who needs, or seems to need, the exhortations of an outsider to obey with zeal, for the outsider's sake, the lawful orders of his superior, is not an enviable one. General Porter, however, got into it, and mainly through his own errors. There was only one excuse for his criticisms and complaints, if there can be any excuse for them, and that was Pope's general order issued in July on taking the command, in which he spoke contemptuously of "lines of retreat" and "bases of supplies," and called on the army to "discard such ideas," and occupy themselves with "the enemy's lines of retreat and leave our own to take care of themselves." His examination eight days previously before the Committee of the House on the Conduct of the War, in which he announced that his plan of campaign was to "lay off on the enemy's flanks," and "attack him day and night in unexpected places," and finally force him "to follow him (Pope) out into the mountains," was not more reassuring. In fact, both these expositions emanating from an educated soldier were very alarming, and foreshadowed the disasters which followed; but instead of lightening the responsibility of his subordinates they increased it. They made it more incumbent than ever on General Porter, and all others like him, to see that whatever Pope's folly might be, and however great the disasters it might bring on the army, the confidence of the country in more sober-minded and competent officers should not be shaken. It certainly ought not to have suggested to General Porter an appeal "to be got away," or an expression of a wish "to be away."

The great difference between the spirit with which the Advisory Board has examined the case from that in which the court-martial tried it lies, it seems to us, in the Board's freedom from the prepossession against Porter and his set in the army, created by McClellan's position towards the Government and Porter's avowed sympathy with them. It was this, too, which prevented the public from seeing how ridiculous Pope's general order was, and how much cause for anxiety there was to be found in it. The first charge against Porter, that of intentional and traitorous dilatoriness in the march to Bristow Station on the night of the 27th of August, could not, in all probability, have been sustained at all but for this prepossession. Pope's order showed that he wanted Porter at Bristow in the early morning for the purpose of pursuit. To use his own words in the order, "the enemy had been driven back, but was retiring along the railroad," and "we must drive him from Manassas and clear the country between that place and Gainesville." Porter, instead of starting at one o'clock, however, did not start till three, and did not arrive at Bristow Station until after ten. His excuse for the delay was, that his men were very tired; that the night was very dark, and the road much blocked with wagons; that, therefore, if he had started at one o'clock, he would have made little or no progress, as the time he took on the march in broad daylight showed, and he would have brought his troops into Bristow Station utterly unfit for hot pursuit of a retiring enemy. His divisional commanders agreed with him. In the mouth of an experienced officer, whose zeal was not suspected, this would have been a complete defence; and it was supported by abundant testimony. The Board, looking at the matter without the prepossession, have accepted it as such. They probably did so the more readily in view of the fact that Pope, in his evidence before the court-martial held four months later, gave a different account of his reasons for calling Porter up from that which he gave in his order. He then swore that he wanted Porter not to pursue the enemy, but because he feared an attack in the early morning from the combined forces of Jackson and A. P. Hill. It is difficult, in the light of the facts as we now know them, to escape the conclusion that Pope was either guilty of boasting untruly in the first order, or was ignorant of the real facts of the situation, and got up a story for the court-martial to meet Porter's defence that his men, after a night's march under the order, would be unfit for the work of pursuit.

The way the prepossession continued to work against Porter was

further curiously illustrated in the evidence before the court-martial of Lieutenant-Colonel T. C. H. Smith, a volunteer officer on Pope's staff. He had a short interview with Porter on the 28th, the day of the march from Bristow Station, about some ammunition which Porter had requisitioned. He had never seen Porter before, and said that while his manner was "gentlemanly and courteous throughout," it was so "sneering" and "indifferent" that he felt justified in going back to General Pope and reporting that Porter was "going to fail him" and was a "traitor," and that he (Smith) was so certain of this that he "would shoot him that night, as far as any crime before God was concerned, if the law would allow him to do it." On cross-examination he was unable to explain or describe Porter's manner any more minutely than this, and acknowledged that, never having seen him until this occasion, and then only for a few minutes, he could not tell whether the manner he witnessed was Porter's ordinary manner or not. When Mr. Holt, the Judge-Advocate, came to review the proceedings of the court-martial for the President in the following January, he dealt with this evidence of Smith's in the following fashion, to match which we should have to turn to some of the earlier State Trials and then to the dime novel of our own day. That such stuff should have found its way into legal documents we are bound in charity to consider an illustration rather of the heated condition of the public mind at the time than of the Judge-Advocate's quality of mind :

"It was physically impossible for the witness to reproduce the manner, the tone of voice, and the expression of the eye and the play of the features, which may have so much influenced his judgment ; yet these often afford a language more to be relied on than that of the lips. He could not hold up before the court, for its inspection and appreciation, the sneer of which he spoke ; and yet we know that a sneer is as palpable to the mental as a smile is to the natural vision. It is a life-long experience that souls read each other, and that there are intercommunings of spirits through instrumentalities which, while defying all human analysis, nevertheless completely command the homage of human faith. Great crimes, too, like great virtues, often reveal themselves to close observers of character and conduct as unmistakably as a flower-garden announces its presence by the odors it breathes upon the air. The witness may have misconceived this 'look,' but from the calamities likely to follow such an act of treachery, if indeed it was then contemplated, it must be admitted as altogether probable that the shadow of such a crime, struggling into being, would have made itself manifest."

On the 28th Pope had failed to "bag" Jackson, as he had expected. The forces with which he supposed he had cut him off from Thoroughfare Gap had retired, and Jackson was standing at bay expecting Lee and Longstreet, who were hastening to his assistance. Pope therefore, on the 29th, ordered Porter, by a joint order addressed to him and General McDowell, to advance towards Gainesville to establish communication with Heintzelman, Sigel, and Reno, who were moving on the Warrenton turnpike, and this done, to halt. Porter obeyed, and at a certain point on the road met General McDowell, and came in front of the enemy, but failed to establish communication with the other generals, between whom and him there remained throughout the day a gap of from two to four miles, which in point of fact made of his corps a separate force. McDowell withdrew from him early in the day, and went along the Sudley Spring road towards the right of the army with the view of filling up or helping to fill up this gap, an operation which he did not succeed in carrying out before six P.M. Porter now being left alone, Pope, in ignorance of his position, and, it now appears, in total ignorance of the force in his front, sent him an order, dated 4.30 P.M., telling him he was on the flank of Jackson's force, and directing him to go into action at once. This order, in the first trial, it was maintained, was delivered by five o'clock. Porter, on the other hand, averred he did not receive it until half-past six. The evidence by which the delivery at five was proved before the court-martial broke down before the late Board. It was shown that the officer who carried it was mistaken about the hour at which he started, and about the road by which he travelled ; and the orderly who accompanied him admitted having told lies about the matter on a previous occasion, and neither of them carried a watch. Moreover, it appeared that the date of the order—4.30 P.M.—was the hour at which the writing of it was begun, and not the hour at which it was despatched. Porter had up to the receipt of this order been exercising the lawful discretion of a corps commander in refusing to engage what he believed on abundant information, which has now been shown to be correct, a greatly superior force, for Longstreet was in his front, and could have crushed him before the rest of the army had heard of his fate, and, having crushed him, would have rolled up McDowell's wearied troops, who filled the roads behind him, in wild rout. On receipt of the order he made his dispositions to attack, but it was already dark. The revelations made at the late enquiry, both by the Confederate testimony and the production of fresh maps of the field of operations, show Pope's ignorance of the situation to have been something very serious when one thinks of the interests which were staked on his capacity to command his army.

General McDowell's evidence in the matter places him in a very peculiar position. He gave a positive opinion at the court-martial in 1862—and, as he had been on the ground with Porter, it was an opinion which undoubtedly had great weight with the court—that if between five and six o'clock on the evening of the 29th Porter had, as directed in the 4.30 order, thrown himself on the right wing of the enemy "the result would have been decisive in our favor." He had, however, left Porter at noon, taking with him part of Porter's force—King's division—and he expected, he said, Porter to have attacked in an hour after his departure. He gave no sign on the first trial that he had any reason to believe that Porter had not received the 4.30 order. He testified that he "had received messages from Porter during the day," but said they simply asked "how the battle was going on, and what was the condition of things with us, as far as I can recollect"; but he did not produce or offer to produce the messages. He has now testified in the late enquiry that when he left General Porter he left him "as a corps commander" (that is, with full discretion in the absence of a superior officer),

"that how quickly he was to get into an engagement, whether in an hour or an hour and a half, and how he would do it, whether in one way or another, he did not indicate, nor did he take it into his mind ; it was simply that he was to operate on his left, and necessarily when he got over there the nature of his operations would be determined by the condition of things he would find. What those conditions would be he could not at that time tell."

He has produced the three messages, which are all important The first warns him that the firing on Porter's right had so far retired as to alarm him, and that he had been unable to communicate with McDowell or King. The second again complains of inability to communicate through the woods, and gives notice that the enemy is in strong force in front of him, and asks McDowell's "designs for the night." The third, dated 6 P.M., showed that at that hour he had not received the 4.30 order, and informed McDowell that he had tried to put Morell's division in communication with him and failed, and had been opened on with artillery while withdrawing it ; that his scouts had found the enemy in the same direction, and some had been captured ; that infantry also were in front ; that he had not succeeded in bringing up a battery, and from the dust and scouts thought the enemy were massing on his right ; and that he had no cavalry or scouts. He again asks for McDowell's "designs." All these threw a flood of light on what was passing in Porter's mind, and on the reasons for his conduct. General McDowell, however, when testifying against Porter on a capital charge, not only did not produce them, but spoke of them slightingly, and kept them for sixteen years without properly searching for them. They were all the time among his papers. He acknowledges, too, that he knew that Jackson was being heavily reinforced during the day of the 28th, owing to Thoroughfare Gap having been left open.

This is not all, however. Porter's delay in the march to Bristow Station was used at the trial, and has been used ever since, to support the charge of treachery against him on the 29th, and his conduct on the 29th to support the explanation given of the delay in the march on the 28th. If he had fought on the 29th he probably would not have been accused of treason on the 28th, and if he had marched through the night of the 27th he would not have been suspected of shirking on the 29th. Each charge bolstered the other up, and his motive was alleged to be a desire for Pope's failure. On the 30th, when directly ordered to attack, he did attack Jackson with extraordinary vigor, and was only prevented from overthrowing him by the (to use Jackson's words) "timely and gallant advance of General Longstreet," and was only repulsed after his corps had been nearly cut to pieces. This exploit of Porter's on the 30th would, of course, have had an important bearing on the question of Porter's motives on the 28th and 29th, and he sought to bring it before the court-martial in 1862, but was not allowed to do so. Now, about 1870, when Porter was again applying for a rehearing, General Pope prepared and printed a statement protesting against it, and furnishing additional evidence of his guilt. It contained a great many statements which have been disproved by the recent investigation ; but it contained also extracts from the Confederate military reports, which General

McDowell now acknowledges that he furnished. These extracts were intended to show what it was important to show for Porter's conviction, but which the Board deny—that what Pope called "a terrific battle" was raging all along the line on the 29th, in which Porter treasonably refused to participate. For this purpose General McDowell produced and published the following from Stonewall Jackson's report, as that officer's account of the operations of the 29th :

"After some desultory skirmishing and heavy cannonading during the day, the Federal infantry, about four o'clock in the evening, moved from under cover of the wood and advanced in several lines, first engaging the right, but soon extending its attack to the centre and left. In a few moments our entire line was engaged in a fierce and sanguinary struggle with the enemy. As one line was repulsed another took its place and pressed forward, as if determined, by force of numbers and fury of assault, to drive us from our position. *So impetuous and well-sustained were these onsets as to induce me to send to the commanding general for reinforcements, but the timely and gallant advance of General Longstreet, on the right, relieved my troops from the pressure of overwhelming numbers*, and gave to those brave men the chances of a more equal conflict. As Longstreet pressed upon the right, the Federal advance was checked, and soon a general advance of my whole line was ordered. Eagerly and fiercely did each brigade press forward, exhibiting in parts of the field scenes of close encounter and murderous strife not witnessed often in the turmoil of battle."

Pope followed this with the comment, "It seems, then, that Jackson was so hard driven by that army which Porter considered defeated that he could not hold his ground, and sent to General R. E. Lee for reinforcements." General McDowell was shown Jackson's report on the late investigation, in which the sentence preceding the above extract explains that he is describing the events of the 30th ; in other words, the "fierce and sanguinary struggle" was that of Porter's corps, and was directed by Porter. On looking at it, General McDowell acknowledged "that it was a mistake that he had made." He acknowledged, too, that his attention was called to this "some time ago," it might be four years ago, and that he did nothing to enquire into it or correct it, "because he did not think it his province to do so." Nevertheless, he had circulated the statement among his friends.

General Pope declined to appear at the late investigation as a witness or submit himself to cross-examination, doubtless fearing that the petitioner's counsel would "lay off on his flanks," and "force him to follow them out into the mountains."

SCOTTISH POLITICS AND LAW.

EDINBURGH, March 17, 1879.

IT seems as if the so-called "Imperial" policy of the Government had given the Liberal party once more a rallying point; at least, the signs of a reaction are becoming daily more frequent. Foremost among these in Scotland is Mr. Gladstone's proposed candidature of Midlothian, or the County of Edinburgh. The constituency is probably the most important country one in Scotland, and is, even more than rural constituencies generally are, overshadowed by territorial influence. Those, therefore, who can appreciate the strength of that influence here will at once admit that, even for Mr. Gladstone, the task of beating "the bold Buccleuch" on his own ground will be no light one. And when it is remembered that failure with such a candidate would be political ruin, it may well be imagined that the Liberal committee of the constituency acted with due caution when they requested Mr. Gladstone to stand. And indeed when they did so they could promise him, after careful inspection of the register of voters, and ample allowance for all doubtful votes, a clear majority of about three hundred. The Tories have not been idle, however. When the register closed, on the 30th of January last, they had already enrolled about one hundred and fifty Conservative voters ; and if a dissolution of Parliament is postponed long enough they are said to have as many more ready.

The nature of these so-called "faggot" votes was partly explained by Mr. Trevelyan in the recent debate in Parliament on the assimilation of the burgh and county franchise, but a more detailed explanation of the name may not be without interest. A "faggot" means a nominal or fictitious vote, in popular language ; but the modern is essentially different from the old "faggot." Formerly, when the right to vote depended, as it did before the Reform Act of 1832, on the *legal* as distinguished from the *actual* possession of land, it was the practice for owners of land to split their holdings into two or more parts, and so create as many new votes by a curious use of legal fictions.

By the feudal system on which our system of land rights is based, all the land of the country belongs to the sovereign as superior, but the actual property belongs to those who hold as vassals of the crown, for a small, or maybe altogether illusory, annual return. The latter have in their turn vassals possessing under them who are themselves superiors of others, down to the actual possessor or occupier of the land itself. In the time to which we refer, only crown vassals were voters—that is, only those who held land of the required value directly of the crown. But when one of these crown vassals was possessed of more than the required amount of land he resorted to the ingenious device of splitting up the superiority, in right of which he voted, into as many parts as its value would admit of, by (to that extent) divesting himself of the superiority, while retaining the property which he held as vassal of the new voters. Thus, if he held a superiority capable of carrying say six votes, he divested himself of it by a complicated legal machinery to the extent of five-sixths (the *property* of which, however, he still retained as vassal of the "faggot"), and voted himself in right of the remaining one-sixth. It will be seen at once that these latter had no real interest in the land, for the faggot-maker took care that the return he was to make for his own land as vassal to each of the new superiors should be entirely illusory. They were mere men of straw, or rather of parchment, for their right to vote existed simply in the deeds on which their names occurred. From the circumstance that these nominal votes were manufactured out of one original one, they received the name of "faggots"; and the Tories allege that it was largely by means of them that the first Reform bill was passed. If so, it is some justification of them, but they deprived themselves of all importance by that very act. The franchise is now based upon the actual possession of land or houses of a certain fixed value, and no longer upon a mere nominal right of ownership or "superiority." "Faggots" must now be paid for in hard cash, and to that extent are no longer fictitious ; but of course any zealous politician is still willing enough to invest in a sufficient amount of real property to qualify him as a voter, as long as he can have a reasonable return for his money. No sooner, therefore, was Mr. Gladstone's resolution to allow himself, in the event of an election, to be nominated for Midlothian made known, than a letter was industriously but privately circulated by a Conservative agent, offering suitable investments in land and houses in the county for sums of about £120 and £150, the sale to be concluded before the end of January, when the register for the year is closed. Through some mistake one of these was addressed to a stanch Liberal, who at once made it public. The register was examined, lists were published, and the "Tory faggots" became a public scandal.

Of course, the objection to such votes, which was formerly met by the old oath of possession that they were not merely nominal, is unavailing against the new style of "faggot." The faggot has paid for his property, and is entitled to a vote in respect of it. But if not contrary to the letter, the practice is clearly opposed to the spirit, at least, of the election laws. Men can now vote in Midlothian, *e. g.*, who have no interest whatever in the welfare of the county, whose sole object in purchasing property there was to have the vote, and who may, by swamping the real constituency of the district, defeat the aim of the legislature to provide for a fair Parliamentary representation of the legitimate opinion of the country in all its districts. The error lies in making property itself a *qualification*, instead of what it was always intended to be, merely a *test* of qualification. It is men and opinions, not money, that Parliament should represent, and only the practical difficulty of finding any other standard led to fixing possession of a certain amount of property as the necessary qualification for exercising the franchise. But should the new system spread, something must be devised to counteract it ; otherwise any constituency may be bought even more easily and effectually than in the old days of "bribery and corruption," and the wealthiest will become always the ruling party.

I have said the foreign policy of the Government will be the turning-point of the next election, and the present Conservative tactics confirm this view. At the recent election for the Haddington Burghs, the Solicitor-General, the Tory candidate, tried to put the electors off the scent of the real question by drawing, as the *Scotsman* put it, "the red herring of Disestablishment across the trail," and the Edinburgh Conservative Workingmen's Association were treated last night to an elaborate and sophistical defence of the Established Church by a clever young Tory barrister. No doubt, as Lord Hartington mentioned in his speech here a year ago, that is, in Scotland at least, one of the near questions of the future ; but it cannot yet awhile become a good party war-cry, and it dwindles into insignificance in comparison with the present low state of trade and general commercial depression in the country, for which undoubtedly the extravagant and bombastic policy of the Government is

much to blame. There are also signs of Liberal activity in many other constituencies, among which I may mention the proposed formation—which, by the time this reaches you, will in all probability have become a fact—of a general Liberal Association of the electors of the Universities of Glasgow and Aberdeen. Want of thorough organization has always been the weakness of the Liberal party, and they lost the last election more because their candidate was too much of a local man to secure unity of action between the electors of both universities than on account of the actual superiority of the Lord Advocate, the Tory nominee and present member.

In legal matters we are chiefly interested at present in the question whether the House of Lords will reverse the decision of our Supreme Court here, holding trustees of deceased shareholders in the City of Glasgow Bank personally liable as contributories to its assets. If it does so, the loss to the present shareholders is estimated at between £2,000,000 and £3,000,000, so that the question is one of vital importance to all concerned. Our Court of Session went upon a decision arising out of the failure of the Western Bank in Glasgow twenty years ago. This decision, holding that the liability of trustees who were shareholders in a joint stock company was not limited to the value of the estate they held in trust, was much commented upon at the time, but it has been the law of the land ever since, and as the trustees in the present case could make out no essential difference in their position, the judges here were obliged to follow the decision of the higher court. The House of Lords, however, would seem to have full power to review its former opinion, and I hear that a very strong bench will be formed to hear the case which has been selected as a test to rule a host of similar ones. Instead of the usual five, a number of judges will sit, of whom Lords Selborne and Coleridge will be two, and it is said that the Lord Justice Clerk, president of the second division of our court here, who has a seat in the House of Lords as Baron Moncreiff of Tullibole, will also give his assistance. Besides the legal grounds that a trust estate is, by the law of Scotland, unlike that of England, a distinct entity in law, capable of entering into separate contracts and incurring separate obligations from the trustees in whom it is vested, and the fact that the trustees here never pledged or intended to pledge their individual liability in becoming shareholders of the bank, much may be said from an equitable point of view for the hardship of the position in which they are placed. The consequences of holding them personally liable will require to be obviated for the future by legislative enactment, for no man will accept out of mere friendship a gratuitous office involving such tremendous responsibilities. But, on the other hand, trustees have long known, or ought to have known, their legal position, and probably the greatest difficulty of the court in the present instance will be to get over the almost universal legal maxim, *ignorantia legis neminem excusat*, for every man is presumed to know the law. Indeed, some doubt has been expressed as to the power of the House of Lords itself to alter the law once laid down by it, and in a book just published by two English counsel, upon the procedure and practice of the House in appeal cases, the authors arrive at the clear conclusion that the Lords are bound by their former decisions on points of law, and that there is no instance in recent times in which they have directly reversed a previous judgment or set aside a rule of law which they themselves have laid down. True, Lord Kingsdown and Lord Brougham both declined to adopt this view, and, in common with other high authorities, laid down "that the House of Lords, like every other court of justice, possesses an inherent power to correct an error into which it may have fallen"; but the opinion repeatedly and forcibly expressed by Lord Campbell has received the assent of a still greater number of authorities, that

"The rule which the House of Lords lays down as the ground of its judgment, sitting judicially as the last and supreme court of appeal for this empire, must be taken for law till altered by an act of Parliament, agreed to by the Commons and the crown, as well as by your lordships. The law laid down as your *ratio decidendi* being clearly binding on all inferior tribunals, and on all the rest of the Queen's subjects, if it be not considered as equally binding upon your lordships, this House would be arrogating to itself the right of altering the law and legislating by its own separate authority."

To you who are accustomed to submit the question of the legality or illegality of a law itself to the judgment of your Supreme Court this may not seem a very dire result, but it would be with us utterly opposed to all constitutional principle. At the same time the admitted conflict between the highest authorities, irrespective of the momentous nature of the interests involved, causes the case to be watched both by lawyers and the general public with the keenest interest.

MUNICIPAL INSTRUCTION IN PARIS.

PARIS, March 24, 1879.

THE great colleges of Paris are not dependent on the Municipal Council; they are governed by the University of France. These colleges are now called lyceums, a name which they received at the time of the First Empire; they are the remnants of the old colleges of the University of Paris, and most of them are situated in the old "Latin Quarter"—Louis-le-Grand, St.-Louis, etc. There is only one University college on the right bank of the river, which used to be called Bourbon, and is now called Fontanes. The expenses of these great colleges, as well as of the Faculties of Law, Medicine, Letters, Science, are state expenses.

I will only deal here with the municipal establishments. The city of Paris supports a few high-schools and a large number of primary schools. Paris has a college similar to the University colleges, called Collége Rollin. This municipal college nearly meets all its expenses. It will cost this year $150,280, and its receipts will amount to $148,600; it may, therefore, be considered a self-supporting establishment. It is under the government of the Prefect of the Seine and its expenses are controlled by the Municipal Council.

The expenses for primary instruction and a few high-schools amount in the budget of 1879 to $2,272,240. Here is the special budget of the high-schools: 1st, Collége Chaptal, $225,940, against which must be placed $243,420 of receipts. This college is similar to the University colleges, but, besides the ordinary classes, it has special commercial and industrial classes. 2d, The Turgot School, which costs $33,920, against $4,000 only, paid monthly by the pupils. 3d, The Colbert School, whose expenses are $26,600 and receipts $19,800. 4th, Lavoisier School, expenses $26,380 and receipts $17,180. 5th, Say School, expenses $33,720, and receipts $27,720. I come now to the primary schools. In 1867, out of a population of 296,400 children from two to fourteen years old, there were 139,615 on the rolls of the primary schools of Paris, and 16,085 were received in the establishments which are called children's asylums (*salles d'asile*). Paris had, at that time, 414 boys' schools (111 public schools and 303 free schools). There were 957 girls' schools (848 free and 109 public). The statistics of 1877 give the number of 322,954 children, of which there were 113,190 between the ages of two and six. Out of this number there were 26,718 in the asylums; and out of 209,764 children who were between six and fourteen years, 168,729 were on the rolls of the schools, whether public or free. In that year, 1877, the number of schools for boys was 391 (141 public and 250 free). These numbers show an increase of the public element (30 schools more) and a diminution of the free element (53 schools less). The schools for girls numbered 867, in which there were 144 public schools (increase of 35) and 723 free schools (diminution of 125). In 1877 the asylums were increased to the number of 146. In a period of ten years, from 1867 to 1877, the number of children admitted to these various establishments had increased by 39,795. But the infantine population had meanwhile increased from 296,000 to 323,000—that is to say, by 27,000. You will see also a marked tendency towards a diminution of the free schools, as the public schools have increased in ten years by 65 and the free schools have diminished by 178. This result is owing chiefly to a better management of the public schools. Better houses have been provided for the new public establishments, with larger courts and more healthy rooms.

Whatever may be the defects of our Municipal Council, and they are numerous, it must be confessed that it is animated by a strong desire to promote primary education. "Let us teach our masters to read," said Robert Lowe, when the parliamentary reform was discussed in England. Our Councillors, who are the nominees of universal suffrage, are very anxious to teach universal suffrage to read. But they show themselves very adverse to clerical education. Not only do they desire to keep the clerical masters out of the municipal schools; they would like to abolish even the most simple religious education, such as prayers, the reading of the New and Old Testament, the Catechism. They even go so far in their materialistic zeal as to try to suppress the old and revered religious emblems in the schools. The cross, which is generally the only ornament of the bare walls of the schools, is an object of aversion with many of them. So far, our Councillors have not succeeded in closing all our municipal schools against the congregations. The workingmen of Belleville and Montmartre, though imbued with communistic and materialistic ideas, prefer in their hearts to have their young children confided during the whole day to the priests, in the schools for boys, and to the Sisters in the schools for girls. There is very near my house a municipal school kept by Sisters, and from my windows I can see the children during their

recreation. I hear their singing, for music is taught them, and I see at times the girls occupied in washing clothes, in keeping the rooms in order. I have been for years witnessing at a distance the working of this school. I often meet the children in their promenade. They are clean and seem very happy under the mild rule of the admirable women who devote their whole life to what is in their eyes a religious object. Every day almost some carriage stops before the door of the school; there is a committee of ladies of the quarter who go by turns to inspect the school. Altogether, the whole system seems to be conceived in a true Christian spirit.

It is a great pity that such schools as this, and they form the majority still of the municipal schools, should be persecuted by our councillors. Each year they pass a resolution closing the schools against the clerical element; each year this resolution is rejected by the Prefect of the Seine, as the congregations for the teaching of youth are authorized by the state. Hitherto the quarrels of the Municipal Council with the church have had no effect, as the general Government, the Executive, and the Chambers has shown no intention of beginning a *Kulturkampf*. The situation, however, is rapidly changing. The present Minister of Public Instruction, M. Jules Ferry, is not only a theoretical free-thinker, he is aggressive; he has just brought before the Chambers a bill which is aimed at the exclusion of the Church from the higher education. I will not go now into the details of this bill, but clearly if the anti-clerical and, in my opinion, anti-liberal view of a monopoly of state education prevails in the Chamber, the members of the educational congregations will soon be shut out of the primary schools in Paris. Such a step would not only have the character of a religious persecution, it would, at least for a number of years, throw immense difficulties in the way of the education of the people. The lay element is not numerous enough at present for *all* the schools of Paris and of the country. The expenses of a lay school are larger than the expenses of a clerical school, as the members of the educational congregations are satisfied with a minimum of wages which is absolutely insufficient for men and women who live an ordinary life. If a revolutionary law could be voted to-morrow forbidding clerical education all over the country, it may safely be affirmed that two-thirds of the children of France would have to renounce education till new lay teachers in very large numbers could be procured.

The last census of Paris shows that the population is composed of 1,754,000 Catholics, 32,000 Lutherans and Calvinists, and 23,500 Jews. The mayors of the arrondissements of Paris, who are the nominees of the central Government (there are seventeen mayors), are the connecting link between the church and the state. These mayors hold half municipal and half imperial functions; it is so all over France, and the dualism of their character has always been the reason why their election could not be left entirely to the universal suffrage of the inhabitants. We have had many laws on the election of the mayors; sometimes they have been appointed by the Government quite arbitrarily; sometimes the Government chose them only from the list of the municipal councillors, who are elected directly by the people; sometimes the law has been different for the great towns and for the villages. The mayor represents directly, not the electors but the central Government, in a thousand instances. He supervises the lists made of all the men who come of age and who enter the army; he is a sanitary officer, with large executive powers; he controls the registration of deaths, births, etc. The mayors of Paris have two and sometimes three *adjoints*, who are also appointed by the Home Minister. The mayor is, by right, a member of the vestry of the churches. These vestries were instituted in 1810. They consist of a delegation of the churchmen, and superintend all the expenses of the church, except the salary of the priests, the ministers, and the rabbis, who are paid directly by the state. The vestries see to all the reconstructions and repairs of the churches and presbyteries. The gifts of the churchmen are one of their resources, but they draw their main receipts from the interments, from what is called in France the *pompes funèbres*. The municipal tax on interments is marked in the budget of 1879 for $76,000.

Since the law of April 9, 1811, the municipalities are the proprietors of all the churches. They are in consequence bound to repair them, but the law applies first to these repairs the whole revenue of the vestry, and it is only when this revenue is insufficient that the municipality is bound to pay for the difference. The city of Paris has to keep in repair 113 religious edifices; it has, therefore, a religious budget. There are, however, some churches which are classed among the historical monuments—the finest and largest of them, of course, such as Notre Dame and Saint-Germain-des-Près. These religious monuments are considered as a part of the national treasury, and are kept up at the expense of the state. On an average the city of Paris pays about $46,000 for repairs, and it has to give besides annually $36,400 for the lodgment of priests or ministers. $80,400 is a very trifling sum for a city like Paris, but our radical Councillors are incessantly at war with these items. There is also a constant war between the Municipal Council and the administration of the "pompes funèbres." The legislation on interments goes as far back as Prairial 23, year XII. Article 22 of the law of that date says: "The vestries of the churches and consistories shall *alone* have the right to furnish the carriages, hangings, ornaments, and generally what is used in interments for their pomp and decency." The article adds that the vestries shall have the right to exercise this privilege themselves or to farm it to a company, which will act under the control of the municipal authority. The vestries, therefore, give all the care of interments either to one of their own officers or to a company which pays them a rent. It is said by the Municipal Councillors that the profits of the great company which has the farming of the interments are scandalously large. I doubt it; and certainly the expenses of interment are not as large in Paris as they are in London. The Municipal Council has, of course, many quarrels with the "pompes funèbres" on account of the civil interments. The company treats with the vestries of the churches; its rates include, in consequence, a journey to and from the church; it cannot well alter them when the visit to the church is declined. You see at once that each civil interment becomes the source of a conflict.

I will not dilate on the technical services of Paris—the streets, the sewers, the water-works, etc.—though the subject is very interesting, but I will in my next letter give you an idea of the finances of the city.

Correspondence.

"COMPARISONS ARE ODIOUS."

To the Editor of The Nation:

Sir: Mr. Bartlett, in the seventh edition of his 'Familiar Quotations,' besides giving the quotation "Comparisons are odorous," from Shakspere—"Much Ado about Nothing," Act iii. Sc. 5—refers at page 666, under the head of "Proverbial Expressions which are of Common Origin," to the following authors for the other form of Dogberry's maxim—"Comparisons are odious": Burton, 'Anat. of Mel.,' Pt. iii. Sec. 3; Heywood, 'A Woman killed with Kindness,' i. 1; Donne, El. 8; Herbert, 'Jacula Prudentum.' He also (p. 150) cites Granger, 'Golden Aphroditis.' All of these authors (except perhaps the last) were so nearly contemporaneous that this phrase was apparently a popular proverb in their time. Burton lived 1576-1640; Herbert, 1593-1632; Donne, 1573-1631; Heywood wrote as early as 1596, and died in 1649. I am unable to ascertain Granger's date by any sources accessible to me, including Allibone. "Much Ado about Nothing" was entered in Stationers' Register, August 4/23, 1600. It is possible, though not probable, that three of the authors named used the expression as early as Shakspere did. And Dogberry's comical blunder seems to show that Shakspere meant, as a little touch of nature, to have him stumble over a saying that was in everybody's mouth. But Mr. Bartlett has overlooked the source whence Shakspere may have derived it, or at least a source greatly antedating Shakspere. In 'De Laudibus Legum Angliæ,' by Sir John Fortescue (*circa* 1394–1484), the Chancellor says to the Prince, in discussing the comparative merits of the common law and the civil law: "I remember a saying of yours, my Prince, that *comparisons are odious*, and therefore I am not very fond of making them" (chap. xix.) The 'De Laudibus' was written by the Chancellor while in exile in Holland from 1463 to 1471, as a book of instruction for his royal pupil, Prince Edward. From the mode of expression adopted in the sentence quoted we may, perhaps, infer that even this "saying" was a proverb. C. E. Shepard.

Fond du Lac, Wis., March 31, 1879.

YELLOW-FEVER ON BOARD THE "PLYMOUTH."

To the Editor of The Nation:

Sir: The return of the U. S. S. *Plymouth* to Portsmouth, N. H., with yellow fever on board presents a phase in the yellow-fever discussion which deserves and will receive investigation. While the *Plymouth* was lying at Santa Cruz, W. I., last autumn, several cases of yellow fever occurred. There had been but little intercourse with the shore, and one

of the cases was that of a marine who had not been out of the ship since its arrival in the tropics. The ship returned at once to the United States, and remained during the past winter at the Navy-yard, Boston. For more than a month of that time the ship was in dry-dock, with no fires on board, and became thoroughly chilled. The officers and men were transferred from the ship, and the stores landed on the wharves and exposed in the open air to the cold weather, or placed in warehouses not heated. The temperature in the ship at times was as low as zero (Fahrenheit), and water froze in all parts of the ship. Large quantities of sulphur were also burned in the ship, the hatches and air-ports being carefully closed. Considerable repairs were made in the woodwork of the ship, a quantity of rotten wood being removed, the ship having been continuously in service since October, 1874.

On the 15th of March the ship sailed for a cruise in the West Indies, and on the 23d turned back on account of yellow fever again appearing on board. The ship had only reached lat. 27° 40′ N., not having come within the limits of the tropics. The maximum temperature of the air on deck was 77° ; but the temperature of the berth or sleeping deck had risen on the 19th for a short time to 88°, when the hatches had been battened down on account of a gale of wind.

The most probable reason for the germs of the fever remaining on board seems to be the presence of a considerable quantity of rotten wood which, not weakening the ship, was allowed to remain. From the porous nature of rotten timber it would naturally be very difficult to eradicate the infectious element either by freezing or fumigating. The report of the medical board detailed by the Navy Department to examine the matter is looked for with great interest. The question of a national refrigerating ship may receive some light from the proposed investigation.

U. S. S. "PLYMOUTH," April 9.

SOURCES OF SPANISH-AMERICAN HISTORY.

TO THE EDITOR OF THE NATION :

SIR : The seventy-second report of Proceedings of the American Antiquarian Society, although somewhat in the mutual-admiration style, is still of much scientific interest. There are, for instance, two papers on Yucatan which ought by no means to be overlooked. One of them is written by Dr. Augustus Le Plongeon, the other by his devoted wife. The doctor is a courageous, hard-working, enthusiastic field-archæologist, who deserves not only full credit for his achievements, but, above all, material support for a continuation of his work in Yucatan. We overlook all his failings in the shape of hypotheses and theories (some of which even surpass the worst extravagances of the late lamented Abbé Brasseur), and cheerfully affirm that he ought to be encouraged and assisted. His excavations and collections, his photographs and drawings, should be secured in time for some American institution, and we do not doubt that a man of his activity and honest zeal would increase the number of such objects in a comparatively short time. Of course Dr. Le Plongeon would have to submit to seeing his treasures differently rated by others, and perhaps even examined critically in the light of documentary evidence somewhat different from that to which he mainly appeals.

And here permit us to suggest to Dr. Le Plongeon, as well as to Mr. Stephen Salisbury, jr., that besides the so-called field-work there is, in the shape of collections, still another branch to cultivate of a very high value. Yucatan, like any other part of Spanish America, yet contains precious remains of MSS. relations, official documents, ecclesiastical writings, all more or less of an early date. There may not be many left, although there once were many ; but these few should be obtained, and archives (public or private) and private libraries should be ransacked for such a purpose. It must not be forgotten that without the help of such accessories all conclusions based upon monuments are necessarily in the highest degree suspicious. Now, if there is one Spanish-American State which has been as yet imperfectly canvassed in that line it is Yucatan. Instead of following M. Brasseur in his wildest fancies, the Worcester antiquarian would far better strive to imitate him in what made him one of the greatest lights of American archæological science—namely, his *collection and faithful publication of original documents.*

Mr. Edward Everett Hale's "Report of the Council" to some extent illustrates the urgency of cultivating the study of the older sources. The report is interesting and deserves careful reading ; but it is surprising to notice that in the lengthy discussion about sources relating to the older history of New Mexico Mr. Hale omits all the most important documents of the sixteenth and of the seventeenth centuries. About Vasquez de Coronado, for instance, he completely ignores the fullest report on hand—that of Castañeda y Nagera, a soldier of the expedition. The great chronicler of the Indies, Oviedo y Valdés, and his still greater successor, Herrera, are, the one completely omitted, the other barely mentioned. No wonder Mr. Hale complains about deficiency in sources ! There are many others yet on hand, and, since he refers to the documentary treasures on that subject hidden in the city of Mexico, we might suggest that the second volume of Señor Joaquin Garcia Icazbalceta's 'Coleccion de Documentos para la Historia de México' contains valuable indirect information, whereas the 'Historia de Nueva-Galicia' (of Mota-Padilla), edited by the same distinguished gentleman, is of great direct value. We allude to this because Mr. Hale's report assumes for the history of the former Mexican territories of New Mexico, Arizona, and California a number of known sources far less than that really existing and known to historians. Nevertheless, his appeal for further researches deserves to be cordially sustained. He asks only for this western country what we beg for Yucatan. Let us hope that *he*, at least, will be listened to in this case.

But the Society need not for such a purpose go much outside of the circle of its own members. Mr. Lenox, of this city, has purchased and still owns that invaluable lot of "Americana" which formed the stock of the late Mr. Ternaux-Compans's collection. How many are there of these manuscripts which have never been published ? Why not, for instance, print at least Fray Pedro Simon's "Noticias historiales" in full ? Mr. Lenox has in MS. the second and third volumes of this great work (the first volume alone, and a few fragments of the others, were published). A Spanish impression of Camargo's 'Historia de Tlaxcala' would also be very desirable. Therefore let the American Antiquarian Society, if it really is in earnest about work on Spanish America, not forget, over the hidden archæological treasures of Yucatan, the not less important ones lying at its own door, and which need no exhumation.

A. D.

A LAST WORD ABOUT SCHOLARSHIPS.

TO THE EDITOR OF THE NATION :

SIR : The discussions on the Harvard scholarships in late numbers of the *Nation* have called attention to a subject of great interest to every one concerned in college management, and as all experience is valuable, and ours is in some respects peculiar, I offer a few words on the plan we have adopted in the College of the City of New York.

It must be noted in the beginning that the difference between our college and others in regard to the plan of helping students through financial difficulties is only one of many differences. As all our pupils are from this city, attendance here involves no separation of the student from his family, no travelling, no apprehensions of unforeseen expenses which may be encountered far from home. To enter here is a much less serious venture than to travel away to Harvard, Yale, or Cornell. Moreover, all the preparation required for admission to our Introductory Class can be obtained in the grammar-schools of the city. The outlay required after admission is also very small, inasmuch as not only tuition but books and stationery are free. It naturally happens, therefore, that while we draw upon all classes of the community, we reach out much more widely among the poorer classes than any other college in the country, and hundreds of boys enter here who have no intention of graduating, who only mean to stay a year or two, and expect then to begin to earn their own living. Among these, however, are some enterprising ones who soon come to appreciate the value of the course of training on which they have entered, and resolve to stay to the end. These generally contrive, here as elsewhere, to support themselves, wholly or in part ; and so it comes about that on the same benches with the sons of some of the wealthiest men in the city there are often students who have distributed newspapers before they came to college in the morning, or who spend their afternoon in giving private lessons, or their evening in bookkeeping. To some of these, however, as well as to others who were in good enough circumstances when they entered, there comes a time when even the little expense that parents have had to bear is too much, or when employment fails, and they must leave unless they can be helped in some way. To these, when their scholarship and character are good, an association of our Alumni *loan*, from a fund subscribed some twenty years ago, such sums as are needed. The money is loaned without interest, and with only the promise of the borrower to repay it as soon as he is able. The names of the borrowers are known to none but the trustees of the fund and the auditors of their accounts. The sums loaned to any

one student are generally small, never exceeding $150 in any one year, the case being generally that some temporary difficulty compels the student to apply for help.

It will be observed that by this plan the two functions of stimulating the industry of the student and of helping him in financial straits are quite separated. The latter alone is the business of our Students' Aid Fund; indeed, the other meets with no great favor among us, most of us, I think, inclining to the belief that all prizes which none but the best men can hope to win stimulate only those who need no driving, and that if prizes are given at all, they ought to be arranged on a sort of handicap system, so as to draw out the second and third-rate men.

Without underrating other systems, we are disposed to look with considerable favor on our own. It gives help just where it is needed; it saves the self-respect of the student, making him, indeed, his own helper after all; it enables many a one to graduate who would not be able to do so without it; and it does its work at a surprisingly small cost. The entire fund is small, yet, as it is continually coming back and being used again, we are able to make it do a good deal of work. For instance, there have been eight students using the fund in one year, while hardly more than one or two respectable scholarships could be provided for out of the interest of the gross sum. Nor have we any difficulty in getting back the moneys loaned. Even the largest debtors have paid pretty promptly, and always with grateful acknowledgments. In the few cases in which there has been any considerable delay, actual misfortunes have interfered, and even in these the trustees look for repayment as soon as the condition of the borrowers' affairs improves a little.

The work of higher education is developing in the present day in so many different directions, and the idea which our college represents in this State is taking root so firmly in other parts of the Union, that I suppose it is fair to assume that every detail as to the difficulties encountered and the methods of meeting them is of importance. A. G. C.

College of the City of New York, New York, March 26, 1879.

To the Editor of The Nation:

Sir: In the discussion on scholarships in your columns no mention has been made of the important differences to be taken into account in pressing any analogy between scholarships at the English universities and scholarships at Harvard. The college scholarships at Oxford and Cambridge cannot be explained without reference to the scholarships at Winchester, Eton, Harrow, and elsewhere on the one hand, and the university scholarships and college fellowships on the other. These various foundations have all of them become parts of a scheme which aims at encouraging independent study more thorough and extended than that required for a university degree, even with the highest honors. No college scholarship is awarded except by a special examination far more exacting than any matriculation examination. For this competition the studies pursued by a scholar at Winchester, Eton, or Harrow are the suitable preparation. For instance, Greek and Latin verses are required of those who hold scholarships at the public schools and at all the colleges, while at Oxford they may be dispensed with for a university degree. College scholarships given for knowledge of history, theology, or natural science require also study not necessary for a degree in honors.

The holder of a college scholarship is expected by the authorities of his college—and in many cases required—to go on with his special studies while he is reading for his degree, and to present himself for university scholarships such as the Hertford, the Ireland, and the Craven scholarships. If unsuccessful in this competition his special study still bears its fruit in fitting him to compete for a college fellowship. To successful competitors for the Hertford, Ireland, and Craven scholarships, the Derby scholarship is open *without examination*. The Derby and the Eldon law scholarships are the only university scholarships at Oxford which are to be obtained without special examination on special study.

At Harvard, on the other hand, no special matriculation examination is passed by candidates for scholarships, no special examinations are held at any time during the college course for scholarships, and no work beyond that necessary for a creditable degree is required of scholars. Stated yearly examinations are held which *must* be passed by all candidates for a degree. According to the result of these examinations scholarships are awarded to those who qualify as candidates by showing that they need the money. Remove this qualification, and the Harvard scholarships will be open in a sense very different from that in which college scholarships in England are open. Among the sons of rich men the number of those who have such an interest in their work that they will make every effort for a creditable degree, is larger than the number of those who would find time and inclination to pursue a continuous course of independent study before and after entering college. Hence the special examinations held for scholarships in England are a safeguard, and not more than ten out of every hundred scholarships fall to those who have not been spurred to independent study by the need of money. There is therefore good reason to fear that, by opening the Harvard scholarships to all alike, the authorities of that college would find a disproportionate number of its scholarships passing into the hands of students who neither needed nor worked for the money, but might take it as a pleasant accompaniment of interesting work done for a degree. To this there is no parallel in the administration of English scholarships.

Very respectfully, A University Scholar (Oxford).

Cambridge, Mass., April 6, 1879.

Notes.

J. B. LIPPINCOTT & CO. have in press 'A Guide to the Popular Terms in Science and Art,' by C. Bankes Brookes; 'The Climate of America,' its influence in health and disease, by Dr. William Pepper; 'Tales of Old-Thule,' collected and copiously illustrated by J. Moyr Smith; Camoens's 'Lusiad,' translated into English verse in the Spenserian stanza by Robert Ffrench Duff; a rhythmic prose translation of Virgil's 'Æneid,' by Henry Hubbard Pierce, U.S.A.; and 'Rabelais,' by Walter Besant, in "Foreign Classics for English Readers" series.——The last volume of "Ancient Classics for English Readers," upon Pindar, by the Rev. F. D. Morice, M.A., published by the above-named house, contains as good an account as we have seen of a poet who is well known only to a few among scholars even. Its chapters afford a clear knowledge of the place of the Greek games in Greek life, and show the working of a poetic mind upon them as illustrations of human powers: and the very brief account of the philosophy and morals of Pindar indicates the principles to be noticed in studying his poems. The translations are from the anonymously published work of the Lord Bishop of Salisbury, and are spirited and musical.——A. D. F. Randolph & Co. will shortly bring out, under the title of 'A Life Worth Living,' a biography of Mrs. Emily Bliss Gould, of Rome, by the Rev. L. W. Bacon.——D. Appleton & Co. will be the American publishers of the school series of "Classical and English Writers," to be edited by Mr. J. R. Green.——G. P. Putnam's Sons announce for early publication 'Talks on Art,' a translation of the late Thomas Couture's 'Entretiens d'Atelier'; 'Sketches and Studies in Paris,' by Edmondo de Amicis; 'Thoughts on the Religious Life,' by Joseph Alden, D.D.; 'The Round Trip,' by way of Panama to the States and Territories of the Pacific Coast, by John Codman; and 'Railroad Accidents: their Causes and Prevention,' by Charles Francis Adams, jr.——Apropos of 'The King's Secret,' D. Lothrop & Co., Boston, issue a new edition, at a reduced price, of the "Bungener Historical Series," namely, 'Bourdaloue and Louis XIV.,' 'Louis XV. and his Times,' 'Rabaut and Bridaine,' 'The Tower of Constancy.'——Those who wish to understand thoroughly the grounds of the decision of the Board of Enquiry in the case of Gen. Fitz-John Porter will be materially aided by a colored map printed in last week's *Army and Navy Journal* in connection with the report itself, which is republished in full.——We have received from Portland, Oregon, the second Catalogue of the Library Association of that city. It is a neatly-printed octavo of 174 pp. in double columns, and in its arrangement it principally follows the Catalogue of the Mercantile Library of San Francisco—a safe guide. For the catchwords of the Catalogue a rather fatiguing type has unfortunately been chosen.——From the Pacific Coast we have also received a sheet of photographs of Chinese lepers in the San Francisco pest-house, "dedicated by the *California Demokrat*, Fredk. Hess & Co., publishers, to the Friends of Chinese Immigration throughout the United States." The friends of Chinese immigration are perhaps not so numerous as the foes of demagogic and faithless legislation; and, as a contribution to the recent discussion which ended in the President's veto, this pathological broadside has about as much force and pertinency as a similar exhibit of European syphilitic patients would have on the question of admitting foreigners to the Treaty ports of China.——Mr. F. W. Christern sends us the third series of Alexandre Dumas, jr.'s, 'Entr' Actes.' The new volume, still preserving a sort of chronological order, opens with a preface to Quatrelles's 'Le Chevalier Beautemps.' This is succeeded by the author's famous 'Homme-femme' (June, 1872), which solves the interesting question, "Faut-il tuer

la femme adultère ? Faut-il lui pardonner ?" with the final word addressed to his imaginary son, "Tue-la." A long preface on Goethe's 'Faust' (July, 1873) is the most valuable part of the contents. About the still fresh prefaces to 'Manon Lescaut' and 'Daphnis et Chloé' we have lately had our say; the latter concludes the volume, and, curiously enough, is made to follow directly the address in which Dumas awarded the Montyon *prix de vertu*. We should also mention the author's *discours de réception* at the French Academy, an eulogium on Lebrun. ——*Polybiblion* informs us that the Boston Public Library is about to publish a catalogue of its rich collection of Spanish books, and "has entrusted the task to Mr. Ticknor, well known for his labors on Spanish literature."——In the course of its ninth volume, *O Novo Mundo*, the Brazilian illustrated monthly, published in this city, has reached its one hundredth number, and the editor, Mr. J. C. Rodrigues, who was its founder and is also its publisher, celebrates the occasion in a novel and interesting manner. The entire number is occupied, for the text, with notable articles reproduced from the past volumes, and, for the plates, with the cream of the full-page illustrations covering the same period. In a brief and modest preface Mr. Rodrigues relates the remarkable success of a "journal published 5,000 miles from the country in which it circulates, and in a country where, out of forty million inhabitants, perhaps not more than a hundred use the idiom in which it is printed." *O Novo Mundo*, in fact, is one of the most widely circulated journals in Brazil, and justly also one of the most esteemed. It has well fulfilled its aim of making the United States known both in its moral and material aspects to the people of the great southern empire.

—The Quincy (Mass.) Public Library has issued its first supplement, including the additions since September, 1875. There are a few short explanatory notes, but the long "notes by the trustees," which made the main work one of the best of our American catalogues, have been omitted, not because they had proved not to be useful, but because "the trustees" (a pseudopolynym under which was concealed, our readers may remember, Mr. Charles Francis Adams, jr.) have not had time to prepare them. Nevertheless the supplement has the general appearance of having been prepared under the care of one who steadily kept in mind the purpose of a catalogue in a town library, to furnish as much assistance and stimulus as possible to untrained readers. One good feature has been retained and extended. Under Fiction the titles of novels are almost always followed by a few explanatory words, as "Woman-Hater [English life. Education of women]," "York, A, and Lancaster Rose [Girl life in England at the present day]," "Vineta [Eastern Germany. Polish insurrection of 1863]." Any one who remembers how seldom the titles of novels are anything but a puzzle and a delusion will appreciate the aid given by this simple device to readers who flatter themselves that they can improve their minds by novel-reading, and try to exercise some little judgment in the selection of their amusement. "Fiction, Juvenile," is divided into classes suited to "Boys 11 to 14," "Boys 12 to 16," "Boys from 12 upwards," with similar rubrics for children and for girls. There is one new and entirely original feature—a collection of titles of "Short Stories, which have appeared in periodicals, and have not been republished. They can usually be read at one sitting, and are intended to form a selection for the use of those who wish for light reading, and do not care to begin a long book." Surely the force of condescension can no further go. At the Conference of Librarians in Philadelphia it was considered doubtful whether public libraries ought to have any fiction at all, and for years we have been listening to denunciation of the mental weakness that will not read philosophy and science and history, and persists in calling for 75 per cent. of works of the imagination; and yet here is provision made for the babes, for whose intellectual digestion even a novel is too heavy. Is there any lower depth ?

—We have received the prospectus of a "Society for the purpose of furthering and directing archæological and artistic investigation and research." Its projectors anticipate from it great services "not only to the science of archæology, but to classical and Biblical studies, and to the fine arts, by quickening interest in antiquity and by increasing the resources of our universities and museums." The fund created by annual assessments is to be used for the equipment and support of expeditions of research. When a membership of one hundred is assured, a meeting will be called for the purpose of organization. The circular is signed by President Eliot, of Harvard, by several professors, and by well-known citizens of Boston. Persons desirous of joining such a society are requested to send their names to Prof. C. E. Norton, Cambridge, before April 21.

—Mr. W. J. Stillman, whose success in photography has been marked, proposes to issue one hundred sets of a series of photographs illustrative of Tuscan Gothic, and Renaissance architecture, provided a sufficient number of subscribers is obtained. They will be taken by the Woodburytype or autotype process, according to the fitness of the negative for one or the other method. There will be twenty-five views with a folio, the prints being cut to 7x5 and mounted on cardboard 10x14, at a cost of $20 per set. Mr. Stillman's thorough acquaintance with art will ensure a good choice of subjects, and he will avoid those which are commonly to be found. The series cannot fail to be valuable to students of architecture.

—*L'Art* for the 23d of March, 1879, contains a long article in answer to Mr. Vedder and to the numerous allusions to the way in which he was treated last autumn. The editors must have felt it an important matter, that they should give it a page and a half, in fine print, of their awkwardly large *format*. Mr. Vedder's letter is given in English, and a translation into French of a part of it, and then the reply takes the following shape: First, it is said that if Mr. Vedder objects to the engraving of *two* pictures when he had consented to only *one*, the editor apologizes for that "*malentendu*" (of course Mr. Vedder cared nothing about that!); secondly, the editor declines to admit that he is bound to praise the picture he reproduces; third, it is stated that this is not the first time that *L'Art* has criticised pretty sharply works which it has reproduced, and that artists could be named, worth certainly as much as Mr. Vedder, who have preferred criticism to silence, and have offered their work again after unfavorable criticism on previous occasions; and, finally, it is reasoned at considerable length that criticism must be free, and that M. Tardieu was discharging a duty in saying what he thought. It is true that a journal is not bound to praise unreservedly the works of art which it reproduces by permission of their authors; it is true that criticism ought to be free and uninfluenced even by good-nature. Probably no person not immediately interested as an advocate of Mr. Vedder's work would have objected to criticism of anything like an usual character; but to visit with unmeasured blame the pictures which you have asked permission to copy is not the thing. It must be observed that not one good quality was admitted in Mr. Vedder's work; it was abused heartily, and the drawings made from the pictures were praised at the pictures' expense. Now, that is not criticism at all, unless the pictures were of the very worst and lowest order, and, if they were as bad as that, why were they engraved at all ? Mr. Vedder certainly had a right to resent the treatment he received; and *L'Art* has got itself into this scrape merely by entrusting to a writer who is not sufficiently critical, and not light-handed enough, the difficult task of criticising works from a new country and not quite submitted to old canons.

—A very fully annotated bibliography of Tennyson's works, with the addition of some interesting biographical and critical matter, has been lately published under the title of 'Tennysoniana' (London: Pickering & Co. 1879). It contains an account of all the poems which Tennyson wrote, or is supposed to have written, some of which, from their rarity, are almost unknown, and a description of all the editions, with reprints of many variations in the readings. Tennyson has been so given to working over his poems after they have been printed that, with such a guide as this book, one can easily study the poet's art and see his taste and judgment at work, selecting, refining, rejecting, until the more perfect form emerges before our eyes. No one could study the alterations in "The Princess," for example, through five editions without gaining a useful knowledge of artistic workmanship in poetry. The volume contains also an interesting comparison of passages from the "In Memoriam" with some from Shakspere's sonnets, a long list of Scriptural references in the poems, some striking classical parallelisms (though we notice with surprise an entire omission of all Tennyson's obligations to Theocritus), a description of the poet's portraits, a complete bibliography of English editions, and a list of more than a hundred critical notices in magazines. The glimpse we get of the poet's college life with Arthur Hallam, Kemble, Dean Alford, and Lord Houghton is very pleasant, and the account of the unfavorable reviews of his early works (in one of which Christopher North calls Arthur Hallam a "crazy charlatan") is amusing. An excellent index closes the volume.

—Among recent English announcements we note the following: 'Travels with a Donkey in the Cevennes,' from the lively pen of R. Louis Stevenson; 'A Nook in the Apennines: a Summer beneath the Chestnuts,' by L. Scott; a selection from Wordsworth's poems, by Matthew Arnold, for Macmillan & Co.'s "Golden Treasury Series"; a new volume

of 'Public Addresses,' by John Bright, edited by Prof. Thorold Rogers, and consisting of extra-Parliamentary speeches only; a volume of 'Essays on Art and Archæology,' by C. T. Newton, a collection of lectures, memoirs, and articles representing a period of nearly thirty years; a new edition of Smith's 'Dictionary of Greek and Roman Antiquities'; 'The History of the Administration of John de Witt, Grand Pensionary of Holland,' by James Geddes; and a systematic exhibit of George Combe's contributions to education, edited by William Joly, one of H. M.'s Inspectors of Schools.

—The sixth and last concert of the Chickering Hall series, under Mr. Carlberg, took place on Saturday night. It opened with a vigorous rendering of Beethoven's overture to "Coriolanus." Mr. Wilhelmj, whose presence sufficed to attract a numerous and appreciative audience, played for the first time in this country a concerto by Rubinstein. This delightful composition, which is entirely different in form and style from other violin concertos, afforded the artist an opportunity of displaying all the breadth and fulness of his tone. The first movement is a beautiful andante. There are no break-neck bravura passages in it; nothing but an uninterrupted flow of a lovely melody for the solo instrument, of that dreamy Eastern character which distinguishes Rubinstein's best efforts. The second movement is brilliant and more in the virtuoso style, but all technical difficulties seem to vanish before Mr. Wilhelmj's marvellous execution. He played later a Réverie by Vieuxtemps, one of those tiresome, commonplace melodies which might well have been omitted. Miss Beebe sang an aria by Mozart, "Non temer, amato bene." Though a great favorite with lovers of English glees and ballads, she lacks voice, training, and taste for a work of this kind. She was encouraged by the applause of her numerous friends to give as an encore a song by Mr. Bartlett. A very insignificant orchestral composition, "Love Scene," from an opera by Hamerik, hardly calls for more than a passing mention. Schubert's great Symphony in C—great in every sense of the word—was very finely rendered by Mr. Carlberg's orchestra.

—In reviewing this series of concerts we must confess that if Mr. Carlberg has not always been successful in offering interesting programmes he has paid a judicious regard to the forces at his disposal. His orchestra at the beginning of the season was composed of heterogeneous elements, and he was a stranger to them, as they were to him. Considering all this, Mr. Carlberg has done good and honest work, for which he deserves credit. One great fault in the programmes has been that they were invariably too long. The very first concert comprised two symphonies, the D minor by Schumann, and the A major, No. 7, by Beethoven, besides Spohr's "Concerto dramatique," played by Mr. Remenyi, and followed, as encores, by mazurkas, nocturnes, etc., by Chopin and Mendelssohn. The second concert opened with Bargiel's overture to "Medea." Mr. S. B. Mills played Beethoven's G major concerto, No. 4; and a romanza from Suite No. 1 by Nicholl, and Mendelssohn's Scotch Symphony in A minor, were the remaining orchestral numbers. The third concert opened with Mendelssohn's overture to "Ruy Blas" ("by special request," as the programme alleged). Beethoven's fourth Symphony in B, an orchestral scene from Wagner's "Siegfried," and a gavotte by Martini, arranged for string instruments by Mr. Dulcken, were also performed at this concert. Mr. Hoffman played Brüll's Piano-forte Concerto, which he later in the season repeated at one of the concerts of the Philharmonic Society. The fourth concert was far more interesting than any of its predecessors, and was, all things considered, the best of the series. Raff's poetical symphony, "Im Walde," received a very fair rendering. Mr. Rummel was the soloist of the evening, and played with unusual brilliancy and fire Schumann's Piano-forte Concerto in A minor, Liszt's Hungarian Fantaisie, and, as an encore, the finale of Weber's "Concertstück." A very fine rendering of Wagner's "Eine Faust Ouverture" was the principal feature of the fifth concert. The rest of the programme contained nothing of stirring interest. The soloists were two young ladies, Miss Josephine Bates, who played Beethoven's Concerto in C minor, and Miss Gertrude Franklin, who sang an air from Handel's "Acis and Galatea," neither of whom succeeded in making any impression by their efforts. In fact, in all these concerts not one of the lady solo singers was above the average.

—The mediæval drama has recently received two important historical contributions. The first, by Professor Alessandro D'Ancona, 'Origini del Teatro in Italia: Studi sulle Sacre Rappresentazioni, seguiti da un appendice sulle rappresentazioni del contado toscano' (Florence, 1877), is an introduction to the same author's 'Sacre Rappresentazioni dei secoli XIV., XV., XVI.' (Florence, 1872, 3 vols.) The latter work contained a selection of the religious plays peculiar to Tuscany, and the collector promised in the preface to publish soon a volume on the history, sources, and form of these plays. After an interval of five years appear two volumes instead of one; and, although mainly devoted to Italy, their range is wider than might be expected from the title. The first eighty pages are devoted to a general history of the mediæval drama outside of Italy. Following in the footsteps of the late Édélestand Du Méril, the author traces the two main sources of the modern drama, the classical drama and the liturgy, and then passes to a consideration of the religious drama in Italy. He first proves that the plays mentioned in various parts of the country during the thirteenth and fourteenth centuries were probably dumb shows and pageants. The real source of the sacred drama in Italy is to be found in the religious exercises of the Flagellants of Umbria in the latter half of the thirteenth century. The simplest form was the *lauda*, a popular hymn, based on the liturgy, which afterwards became dramatic in its character, but was only sung, not acted. The second stage was the *devozione*, which was acted in the churches, and from which sprung the two forms of the Italian sacred drama, the *sacre rappresentazioni* and the popular *maggi*. The *devozione* spread from Umbria and appeared in the fifteenth century in Florence as the *sacra rappresentazione*. Henceforth Tuscany is the home of the new drama and sets the fashion for the rest of Italy. D'Ancona then traces very fully the history of the *sacre rappresentazioni* through the fifteenth and sixteenth centuries; the remainder of the work being given to a consideration of their external and internal forms. The appendix contains an interesting account of the popular dramas, the *maggi*, still performed by the peasants in various parts of Tuscany. The most interesting result of D'Ancona's studies is the proof that the Italians possessed all the elements of a national drama, which the Renaissance destroyed by substituting for the already flourishing popular drama developed from the liturgy the artificial and scholarly drama imitated from the Latin theatre.

—The other work alluded to concerns more particularly the French drama, and is entitled 'Le Drame chrétien au Moyen-Âge,' by Marius Sepet (Paris, 1878). It is a collection of articles which have already appeared in various French periodicals, and is divided into six parts. The first, *La Tragédie française et le Drame national*, contains a brief account of the liturgical origin of the drama and the profound change effected by the Renaissance, which, as in Italy, destroyed the national drama. The writer sees the necessity of a return to the popular traditions interrupted in the sixteenth century by the Renaissance if France wishes to create a national theatre. The next two articles are intended to acquaint the reader with the French mediæval drama, the author selecting for examination the cycles of Christmas and Easter, in each exhibiting the progress from the liturgical to the semi-liturgical drama, and then to the perfected *mystère*. The fourth article, *Les Vies de Saints*, gives an idea of the miracle play, the subject of the one in question being a miracle of St. Nicholas. The following article describes in a very vivid manner the mode of performance of a *mystère* at the end of the fifteenth century, and the final article gives an account of a Christian drama in the sixteenth century ("The Murder of Cain," by a Norman priest, Thomas le Coq). M. Sepet's book, which is intended to be popular in the best sense, will be found very readable, and will doubtless attract attention to a subject too long neglected and by which modern literature may well profit. More technical as well as more recent is the same author's 'Les Prophètes du Christ: Étude sur les origines du Théâtre au Moyen-Âge' (Paris, 1878), of which the object is to show that the mediæval drama sprung from the religion of the Middle Ages, just as the classic drama did from the ancient religion. To prove this M. Sepet traces a religious drama from a sermon of St. Augustine on the Nativity, afterwards one of the Christmas lessons, then a liturgical *mystère*, then semi-liturgical, and finally an integral part of the great dramatic cycle of the fifteenth century.

BLANC'S FINE ARTS AT THE PARIS EXPOSITION.*

IT is impossible to deny that there is among contemporary schools of criticism, as of art, a distinguished superiority in that of France, taken as a whole; a high average of right perception of what art is, and a general good sense in comparative judgment; and that this is almost as distinct a national characteristic as the artistic attainment, which, if no marked genius should arise in it, would still be the first, in point of learning and style, of the epoch. Every one who has studied art in Paris will

* 'Les Beaux-Arts à l'Exposition Universelle de 1878. Par M. Charles Blanc.' Paris: Librairie Renouard; New York: F. W. Christern.

have felt the influence of that artistic atmosphere which finally and imperceptibly imbues the minds of all who live in it, to a greater or less extent, with certain views of art and of its relations to nature which elsewhere come slowly and exceptionally. It is a phenomenon not easily explained, but in part probably it is due to a certain *solidarité* of all the arts, and a general recognition, if not cultivation, of them as Art—a kind of large generalization (a faculty more generally developed with Frenchmen than other nations) of all that makes Art, which serves as a basis for comparative technology, just as the knowledge of original word-roots gives facility in comparative philology.

The general mass of French art criticism in the journals of the day has for this reason a collective force, and perhaps an influence, which the literature of no other nation even suggests. If we compare the average newspaper critic of Paris with his *confrère* in London, there is a contrast as marked as there is in the general tone of society, and in this case wholly to the advantage of the Parisian. He shows not only that he knows the *salon* and has had personal acquaintance with the artists, but that that knowledge and acquaintance have done more for him than beget the familiarity which breeds contempt ; they have given him an amount of education, even in the plastic elements of art, which scarcely an English critic possesses, for Hamerton is in his education as much French as English. A serious student of art can, therefore, hardly read a current French criticism without finding something in it suggestive and valuable, while one might read the Royal Academy *critiques* in all the papers of London, from the *Times* to the *Saturday Review*, without finding more than individual preferences and views, which, where they have authority even, rarely carry a suggestion of general applicability.

The collection of *feuilletons* which M. Charles Blanc has thrown into book-form have not been sufficiently digested to give them a tone above that of the newspaper ; but even in their disjointed and feuilletonic shape they do not fail to show the serious and wide manner of looking at art which is characteristic of French criticism in general, nor often miss true grounds of preference or depreciation ; while, on the other hand, they never attain great profundity or striking originality of view, or even poetic insight. Perhaps no better instance could have been given of that respectable and dignified breadth of judgment we have indicated as the characteristic of the school to which M. Blanc belongs. Eminent authority the book does not merit, critical genius of a distinguishing type it certainly does not show, and a certain weakness which the author betrays in the ostentation of the traces of authority indicates that in his own mind there was not that confidence in the solidity of his opinions which a clear and original judgment generally imparts. He constantly invokes evidences of the distinguished consideration in which he *has been* held, to show that his opinion is still weighty. Such passages as the following prove a vanity which is itself an impediment to sound judgment or want of faith in one's own opinions : "When we were invited by the President of the Republic to do the honors of the Salon of 1872 for him, he was surprised by this figure, . . . and did not shrink from the proposition to send the Cross of Honor to Mercié. . . . In this we also, we have pushed back (*reculé*) the limits of the public administration," etc., etc. "In advising the artist to raise . . . . we gave him counsel which he hastened to follow." "If the Direction of the Fine Arts were yet confided to us we should point out to the Minister," etc. "I remember, *apropos*, that one evening, travelling on the Nile, we saw on the bank . . . *Gérôme had time* to jump ashore," etc. These passages are so many indications of a desire to give his opinions a buttress from the outside.

Nor is this the only constitutional weakness in the author's criticism. He shows a want of that power of abstraction which gets hold of the idea of the work and does not need to be helped out by accidents of material—a want which we accept in the public, where it is inevitable, but which is a disability in the connoisseur, which, *au fond*, the critic must be. "Supposing that the 'David' of Mercié were cut from a block of Carrara, what a difference between the impression which this figure would produce in marble, and the effect which it produces in the sombre material in which it has been cast. Independently of the magnificent ease which the bronze permits to the conqueror of Goliath, do we not feel *that this greenish metal, brilliant in places, has a sort of moral affinity with the action represented* and the savage hero who acts it ?" It is hardly necessary to point out how utterly this confounds the expression of an ideal with the trickeries and accidents of execution, a tendency to which is indicative of nascent barbarism in art, and which appeal to the lowest and most *banal* elements of art appreciation. This is the feeling that leads to putting marble heads into porphyry or variegated stone busts to imitate the contrasts between flesh and drapery, to tinting statues, and, still further on, to gumming hair on a portrait in place of representing it by legitimate painting. The "moral affinity" which M. Blanc finds between the green of the bronze and the slaughter of Goliath and the *farouche* character of the "David," is something so far from all the affinities of art that we do not know where even to place it. One would be glad to suppose it a careless thought overlooked in the feuilleton, but it recurs in various phases. "The nobility of bronze is a beautiful patina, and often the idea of propriety attaches itself to the tint of the metal." Then, as the metal in time changes tint, the idea it conveys undergoes change ! Again : "The head of Eugénie Doche has been modelled by M. Delaplanche with a touch caressing and, as it were, buttery, which flowing on the flesh has expressed its sweetness, has told the delicacy of the features, and has passed in silence all that was not grace." We have translated the above literally, and no better example could be found in the book of the utterly ignoble and popular idea of representation—one which has too far invaded the minor *ateliers* of Paris with its slang and claptrap, fit to amuse the devotees of *chic*, but not to be introduced into serious criticism. The passage succeeding the above, however, shows still more completely the author's naïveté in expressing this *banal* standard of quality in execution : "It is in the same sentiment that M. Tony Noël has sculptured the bust in marble of Leonidas Leblanc, with this addition (*à cela près*), that he has employed variety in the working, and by that means opposition of color, which awaking all round the optical interest of the portrait make of it a work full of *esprit*." If the uneducated exhibition-goers are caught by these tricks of the tool, as by the curious and detestable veiled heads in marble which our countrymen abroad sometimes mistake for art, and if an artist of real talent sometimes amuses himself in this way, there is no excuse for a grave critic gravely eulogizing them, except that he considers them legitimate art; in which case we know at once where to place *him*.

M. Blanc's definition of style is one which touches more nearly the general interests of art nomenclature, and if he is right some of his contemporary fellow-critics must remodel their "style" :

"But these pictures of Gérôme and Meissonier contain only accidental truths, examples of nature caught in the act, portraits in action—these are *genre* pictures. The talent of imitating these figures, putting in relief these truths, is not the last word of art, because the artist has found his model in life, and he has not overstepped the limits of an intelligent imitation. In contemplating those phases of life and of nature which offer only fleeting events, perishable examples, the artist has the privilege of raising himself up to the idea of a type which has no exact counterpart in nature, to the conception of the species which does not perish. This permanent side of human character, this typical truth of forms—that is style [*voilà ce qui est le style*]. . . . Woe to the schools of painting which no longer aim at style—that is to say, beauty of form, generic and untrammelled by conditions [*la beauté inconditionelle et générique des formes*], which is its poetry—to attach themselves only to *genre*, which is only its accidental interest and its prose ! Wishing to find a medium between these two extremes, style and *genre*, an artist of eminence and rare sagacity, Paul Delaroche, conceived the historical *genre*, otherwise the modernization of history."

Well might one say, *en passant*, "Vixere fortes ante Agamemnona !" Where were the Dutchmen who only modernized history ? And there was a certain Benjamin West who, with all his demerits, modernized history before the great Frenchman was born ! But let that pass. We only want Delaroche to show us exactly what Blanc means by "style." As we read him, we cannot find wherein is the difference between his "style" and the generally accepted "ideal." David, according to this definition, had style, and Delacroix had not. Delaroche himself in the centre of his "Hemicycle" had style, and in the wings had not, because in the former he has completely idealized and in the latter simply painted such portraits as he could find of all the old masters, most of them realistic enough, and owing their principal value to their resemblance. The work of Titian at his best is generally accepted as the highest attainment of style in the art of painting, and the best examples of it are precisely in the most sincere and faithful portraiture—as, for instance, in the portraits of his daughter at Dresden, and the "Bella" of the Pitti Palace. In these works realization and individuality are pushed to the last degree consistent with freedom of execution ; reduce them in size to the measure of a Teniers, and they will be found more elaborate than it.

But why should style in painting and sculpture differ so radically from style in all other branches of art ? Elsewhere it has not relation to the subject matter, but to the manner of treatment. One of the leading artists of the past decade said to us one day, "When a painter is a little man, and works in a way peculiar to himself, we call it *manner ;* when he is a great man, and does the same, we call it *style*." In spite of the eminence of

the late Director of Fine Arts, we venture to opine that he has simply confounded *style* with the usual acceptation of *ideal*, mistaking the exalted theme, the proper mode of expression of which is a style of corresponding dignity, for the mode itself. By any standard of measurement or in any branch of art style refers to manner, not matter; yet wherever M. Blanc attempts to define it, it takes the shape of an ideal.

But not to dwell exclusively on the shortcomings of the book, which is, after all, only and evidently a sample of bookmaking, feuilletons of haste bound up at leisure, M. Blanc does say some things worthy to be remembered, the more as they are the well-put expressions of the French art tendencies, which the prevailing realistic fashion tends to obliterate. His definition of art is welcome:

"Art being an interpretation of nature by the human intelligence, or, as Bacon puts it, '*homo additus naturæ*,' it is evident that pure imitation is not art, if at least the imitator does not allow to appear in his copy something which renders it superior to inert nature [in which case it is no longer imitation], the soul; and that which nature does not possess, thought. It is impossible to imitate a pretty woman better than her looking-glass imitates her when she looks into it, and yet the looking-glass is not accepted as an artist; and even if its image were fixed, as it is in the lens of the photographer, the image would never be taken for a work of art. Why? Because the human element is insignificant compared to that of the machine. The intervention of the human soul is, then, absolutely necessary in any work in order that the presence of art should be recognized in it. Consequently, the greater the extent of imitation the more trivial is the art."

There is nothing new in this, but it cannot be too variously and authoritatively kept in view in a country where art is not yet well formed, and where education of the entire thinking classes will have much to do in forming it. Of all the essays which compose the book those which relate to sculpture have the greatest value. In the technique of painting the author seems quite afloat; his estimates of the comparative value of works are generally sound, the reasons for them frequently curiously astray.

GRANT DUFF'S MISCELLANIES.*

THE writer of these papers is an exceptional man even in the British Parliament; he would be still more so if viewed in the light of our western civilization. Though still in the meridian of life (he was born in 1829), he has been for a good many years an authority in England on subjects relating to foreign politics. A volume of his collected 'Studies in European Politics' was reprinted in Edinburgh in 1866, the original articles, which relate to Spain, Russia, Austria, Prussia, the Germanic Diet, Holland, and Belgium, having been published in the *North British Review*, the *National Review*, and *Fraser's Magazine*. The Elgin District of Burghs, which Mr. Grant Duff has represented in Parliament for more than twenty years, and of one of which (Banffshire) he is a native, is on the northwest coast of Scotland, having a population of less than thirty thousand, and a constituency of electors of only thirty-six hundred. To this small and remote constituency he has for some years past delivered a series of addresses on home and foreign politics which have not been equalled in the breadth and variety of their learning by the speeches of any other English statesman. A volume of these addresses, entitled 'Elgin Speeches,' was published in Edinburgh in 1871. Mr. Grant Duff has also been a prolific writer in the *Fortnightly* and *Contemporary Reviews* and in the *Nineteenth Century*, besides publishing a variety of addresses and pamphlets on literary subjects and political questions. He was for several years during Mr. Gladstone's administration Under-Secretary of State for India, and subsequent to that time made an extended tour through the British Indian Empire, the results of which were published in several articles in the *Contemporary Review*. One of his most instructive papers on Indian affairs was published, if we remember rightly, in the *Fortnightly*, under the title "Is India worth retaining?" As the question was regarded by him from the standpoint of an advanced Liberal and was answered in the affirmative, it is worthy of perusal at the present time, when India is getting to be considered as an expensive and troublesome ornament of the Imperial Crown.

The peculiar field, however, of Mr. Grant Duff's studies has been that of Continental politics. His estimate of the value of such studies is well expressed in one of his latest essays:

"The truth is," he says, "that no European politician who aspires to be really a statesman can afford nowadays not to know pretty intimately France, Germany, England, and, we may add, Italy. If he does not take the trouble to do this he is quite sure to nourish prejudices from which a wider survey of men and things would have saved him."

Since the death of Mr. Sumner is there any American statesman who considers European politics a necessary part of his education? For the future guidance of our public affairs where shall we find "the men who have already been trained, or may be trained, into having that wide knowledge and balanced judgment which are the first requisites of statesmanship"? The Monroe doctrine, which proclaimed the determination of the United States not to permit the European powers to extend their systems of government to any portion of this hemisphere, certainly does not require that we should so shut ourselves up in that hemisphere as to be ignorant of what is passing in other countries of the civilized world. Civilizations and governments have but one end—the conservation of society and the improvement of the human race. Social and political progress is confined to no one country and to no one people. On the contrary, it is running, in parallel lines and with nearly equal rapidity, in many countries and in many races. Those countries which fail to recognize this and to note carefully what other countries are doing in the work of reform will speedily fall behind in the race of national competition.

The new volume of Mr. Grant Duff's 'Miscellanies' contains nine papers, which are entitled respectively, "Address at the Opening of the Section of Economic Science of the British Association at the Dundee Meeting in 1867"; "A Lecture of Egypt"; "Must We, then, Believe Cassandra?"; "Opening Address as President of the Department of Economy and Trade of the Social Science Association in 1875"; "1847 and 1876, an Address delivered at Clifton College"; "Balthasar Gracian," from the *Fortnightly Review* of April, 1877; "A Plea for a Rational Education"; "Emilio Castelar," two essays from the *Fortnightly* of June and July, 1878; and "A Speech on the Political Situation," delivered at Peterhead, Aberdeenshire, September, 1878. The papers are of unequal merit, and some of them—as, for example, that on Egypt—seem to us hardly important enough to go into permanent literature. But, taken as a whole, the volume is one of considerable value.

The tone of it is eminently healthy and invigorating. The writer is always heartily in earnest, and with all his scholarship speaks from the forum and not from the closet. His advice to young men purposing to enter public life is excellent: "Be English first of all and last of all; but be European—not to say cosmopolitan—into the bargain." He is no pessimist, and in the paper entitled "Must We, then, Believe Cassandra?" he combats with great spirit the gloomy assertions and vaticinations of Mr. Greg, in his "Rocks Ahead." The three national dangers to which Cassandra attaches most importance are: 1. The political supremacy of the lower classes. 2. The approaching industrial decline of England. 3. The divorce of the intelligence of the country from its religion. The influence of the Reform Bill of 1867 on the political future of England is still debatable ground. Mr. Grant Duff does not deny that the enlargement of the borough franchise which that bill introduced "will no doubt cause the majorities in favor of this or that party to fluctuate more than they have done." He also says, in the article on Castelar, that Great Britain, under the action of that bill, is "governed by a far more excitable public than heretofore," and that demagogues are to have more influence in future than in past politics; but he has an abiding faith in the intelligence and in the honesty of the classes which have heretofore governed, and which still govern, the British Empire. If any one doubts the correctness of this conclusion, let him turn over the pages of Dod's 'Parliamentary Companion,' and see how unchanged the character of the House of Commons is from that of twenty years ago. The titled and educated classes, the learned professions, and the two services—the army and the navy—still make up nearly the whole body of members of the lower House. Especially is this the case in the Liberal party—the party of progress and reform. The very small number who have purchased a parliamentary seat by wealth acquired in trade have allied themselves to the Tory party, with the unerring instinct which leads them also to join the national church.

On the score of religious faith the author asserts that the world, and especially the English world, is steadily advancing. He freely admits that the strength of ecclesiasticism and of creeds is declining, but holds that while many of the outworks of Christianity have been abandoned as untenable, the fortress of Christian faith is stronger than ever.

"*L'Église a été dépassée, et s'est dépassée elle-même. Le Christ n'a pas été dépassé.*" "Observe," he says, "how entirely the mocking Mephistophelian view has died out in those who are most strongly opposed to existing beliefs—how reverent is the tone of the very men who are prayed for and preached about in the churches.

* 'Miscellanies, Political and Literary. By Mountstuart E. Grant Duff, Member for the Elgin District of Burghs.' London and New York: Macmillan & Co. 1878. 8vo, pp. 315.

"At no previous period in the history of the world has Christianity, as represented in the Gospels, or in the lives and works of the best of its followers, exercised so powerful an influence on public affairs as in the last thirty years. . . . The settlement of the *Alabama* controversy on the part of England was, as has been well said, at once one of the best pieces of statecraft and one of the most Christian acts recorded in history."

The article on Emilio Castelar is valuable as presenting in an epitomized form the life, labors, and opinions of that statesman. He is already better known to American readers than most of his European peers and contemporaries, from the appreciative articles of Col. Hay and from his own elaborate contributions to the history of the Republican movement in Europe, also published in one of our periodicals. Though presumably the most conspicuous representative of democracy now to be found in Europe, he is not to be classed among the subverters of existing institutions, otherwise than by the slow action of progressive reforms. In a speech which he delivered at a great banquet given in his honor at Rome, under the management of Mancini, Depretis, Crispi, and others, we find the following remarkable passage :

"You have made Italy one ; you have made Italy free ; you have made Italy independent. All this you, who are without doubt the most favored of the generations, have attained by having reunited to the efforts of previous generations, and to their martyrdoms, the vital idea *par excellence*, the powerful idea *par excellence*, the idea of liberty. But it is not enough to have succeeded. It is necessary, at all costs, to keep what you have got. A long experience teaches us how much easier it is to found than to consolidate public liberties. For the first, one great but common and rudimentary virtue is sufficient, the virtue of courage. For the second are required wisdom and prudence. You, who are by nature inclined to synthesis, do not fall into the error of errors—the error of looking only to liberty, and caring nothing for authority ; the error of looking only to progress, and caring nothing for stability ; the error of looking only to the right of the individual, and having no care for the force of the community ; the error of looking only at the future, when every moment has in it the past, the future, and the present."

Notes by a Naturalist on the "Challenger"; being an Account of various Observations made during the Voyage of H.M.S. *Challenger* round the World in the years 1872-1876. By H. N. Moseley, M.A., F.R.S. With a map, two colored plates, and numerous woodcuts. (London and New York : Macmillan & Co. 1879.)—Mr. Moseley, a member of the scientific staff of the *Challenger*, has given in this journal a very full account of all that could be observed by one zealous man at the numerous points visited by the *Challenger* expedition on its voyage around the world. This expedition touched incidentally at the islands of the Atlantic and Southern Indian Oceans, cruised in the Antarctic ice-fields, and visited many points—some of them practically unvisited heretofore—in Polynesia and the archipelagoes of the Western Pacific. The cream of discovery in most of these regions has long ago gone to make up the fame of earlier explorers, and not much that is strikingly new could be expected to result from these brief visits. The value of this book lies chiefly in the fact that it is the record of the consecutive, rapid observations of a trained naturalist on nearly all the representative insular faunas and floras of the three great oceans. It is essentially the narrative of a naturalist whose first thoughts and steps on land and sea were turned to botanical and zoölogical work ; but the author has a very happy style of narration, and succeeds through his own enthusiasm in interesting even the general reader in the habits of the animals, as well as in his adventures in searching for them.

Mr. Moseley gives also a great deal of interesting and important information concerning the customs and expression of the emotions among the different races visited by the *Challenger*. He is an ardent disciple of Darwin, and in reading this account of a voyage revisiting, after a lapse of nearly half a century, the scenes of many of the memorable observations made by the naturalist of the *Beagle*, one is forcibly reminded of the profound impression Darwin has produced upon modern scientific thought in every direction. This truism is nowhere better illustrated than in Mr. Moseley's observations on the pile dwellings in the Philippine Islands, and his derivation of the Swiss chalet by evolution from the lake dwellings of Switzerland. As civilization extends protection to the pile-dwelling communities in the Philippines, they leave the water and build on land, but the structures are still in every sense pile dwellings. The first step in the evolution (all stages of which are observable in the Philippines) is the enclosure of the open space under the house by a fence of palm-leaves to form a pen for pigs ; next, this gives place to matting walls with a door, to form a store-room ; and other houses have this space boarded in, making a permanent lower story. A further progress is shown in the substitution of pillars of masonry for wooden piles, and wooden houses are seen standing high on open arches supported by such stone piles. In the last stage the arches are abandoned, and continuous walls of masonry support the house. *In all these cases the upper story is built first and the lower one afterwards.* The true pile dwelling has a platform at the entrance and a smaller one for canoes behind ; and both these recur in the "pile dwelling gone on shore," where the rear platform reappears as a veranda. From the remarkable resemblance of these Malay houses to Swiss chalets —the latter having the lower story enclosed with a stone wall and used for cattle-stalls, and having also access to the living-floor by outside stairs opening on to the front veranda, and frequently a veranda in the rear—Mr. Moseley is inclined to derive the typical domestic architecture of the modern Swiss from the ancestral lake dwelling.

There are several interesting, and one or two very important, geological observations recorded, especially that of the massive eruption on Camiguin Island of a dome 450 feet high of a trachytic rock, still red and glowing in cracks, and emitting smoke, but having no crater, and closely resembling the smaller domes of the Auvergne. Nor should we omit to mention the author's observations on the structure of the ice of the antarctic icebergs, which are illustrated by some excellent colored sketches. Almost the only reference to the special work of the *Challenger* —its methods and results—is confined to a part of the last thirty pages. But this has been so fully treated by Sir C. Wyville Thomson that it is not missed here. Aside from this, the chapter in question contains what is of more general interest—a review of the life of the deep sea and its surface, and of the varied conditions amid which it exists. A valuable feature of the book is a long list of all the books and papers that have grown out of the *Challenger* expedition.

The Political Destiny of Canada. By Goldwin Smith. (Toronto : Willing & Williamson. 1878.)—The points of contact between Canada and her more powerful neighbor are so numerous that some explanation is required for the almost universal indifference in "the States" to the problem discussed by Mr. Goldwin Smith and Sir Francis Hincks in the volume before us. That even an intelligent American does not care to bestow a second thought on the political destiny of Canada arises, first, from a conviction that neither an indefinite prolongation of the colonial condition nor the achievement of a perfect nationality has any perils for the United States. Next comes the equally strong feeling that what Mr. Smith calls "the great forces" can work in only one direction—that is, away from the tutelage of the mother country and towards assimilation to the ruling polity of this continent and hemisphere. Americans, having lost with slavery their thirst for more territory, are content to let gravitation take its time. Nine out of ten would say they believe Canada will ultimately form a part of the Federal Union ; not one in a thousand would lift a finger to hasten the event.

All this might seem a reason why this little book should have no interest for readers on the hither side of the border. But, in the first place, we ought not to disregard an experiment in self-government parallel to our own as well as adjacent, with points of difference which may prove instructive ; and we might well be curious to know why a people with institutions so similar should on every occasion protest its opposition to the very thought of absorption in the United States, and its want of sympathy and respect for our national traits. Nor while Jingoism is flattering Canada with Imperial attentions, and while a scheme of Imperial Federation, magnificent in its conception, is being gravely discussed as if necessary and practicable, need we deny ourselves the profitable study of so remarkable a phase of politics with which we are after all intimately connected and ever shall be. Finally, we must acknowledge that in the endosmosis which is always taking place between two adjoining countries separated chiefly by imaginary boundaries, we receive much greater accessions to our population than Canada does. For various reasons New England attracts more immigrants than any other section, and in such numbers and so concentrated that they have done much to change for the worse the character of the communities in which they find employment. Those States, at least, have the same sort of interest in the political and social progress of Canada that the United States have had in the government of Ireland, or that the Northern States have in the improvement of the blacks at the South.

The polemic between Mr. Goldwin Smith (writing in the *Fortnightly Review* of April 1, 1878) and Sir Francis Hincks replying to him and being criticised in turn in these pages, unfortunately assumes a personal complexion, with which, however, we need not concern ourselves. Whether Sir Francis is a renegade Nationalist or Mr. Smith a renegade Free-trader, is of no consequence for the matter in hand. Mr. Smith's thesis is that

the connection of Canada with the mother country must sooner or later be severed as completely as that of the United States ; that Canada must cast in its lot with this continent ; and that wise statesmanship would shape all its measures of public policy or public improvement with reference to this forecast. He also holds that the National idea is dead beyond resuscitation, and that "the ultimate union of Canada with the United States appears now to be morally certain." Confederation, not being spontaneous but brought about by external pressure, will develop principles of antagonism in at least equal degree with those of union. All the evils of parliamentary government in a dependency are aggravated "by superadding federal to provincial government." As a dependency has no foreign relations, the management of which is "the proper province of a federal government," the chief duty of such a government in Canada is "to keep itself in existence by the ordinary agencies of party—a duty which it discharges with a vengeance." Mr. Smith then enumerates the "great forces which make for the separation of the New from the Old World," and the more numerous but less weighty forces which make in favor of the present connection. Of these last the strongest appears to us, as to Mr. Smith, to be "the special attachment naturally felt by the politicians, as a body, to the system with reference to which their parties have been formed, and with which the personal ambition of most of them is bound up." He admits that "the connectionist sentiment is now dominant, especially in Ontario ; that in Ontario it almost exclusively finds expression on the platform and in the press ; and that the existence of any other opinions can only be inferred from reticence, or discovered by private intercourse." For the rest, "Canada, though adorned with the paraphernalia of eight constitutional monarchies (one central and seven provincial), is a democracy of the most pronounced kind ; the Governor-General was not wrong in saying that she is more democratic than the United States." "At present the bane of Canada is party government without any question on which parties can be rationally or morally based."

Sir Francis Hincks is "not presumptuous enough to declare that the subsisting connection must be perpetual," but is decidedly of opinion, "in common with the leaders of both political parties," that if for any reason the chain that binds Canada to the mother country is broken, the result will be not independence, but annexation to the United States. He further agrees with Mr. Smith in regarding the projects of a Pan-Britannic Empire as utterly visionary. He believes, however, in acting as if the connection were to be perpetual, and he devotes himself to refuting Mr. Smith's theory of forces, and to sundry corrections of fact and of reasoning into which we cannot follow him. His strictures lead Mr. Smith in his rejoinder to modify some unguarded expressions and abandon some illustrations ; but, after all, the issue relates mainly to the *time* in which a possible if not probable consummation will be reached. Sir Francis declines to dwell on his opponent's fourth great force—the economic impulsion to a union with the United States ; passing it by with the remark that, "if it were practicable, the abolition of custom-houses would be beneficial to both countries." But the present protectionist movement was not needed to show that Canada fares worst from want of reciprocity ; and the failure of protection either to restore prosperity to Canada or to force the United States to sue for reciprocity would seem calculated to foster a party feeling for the one measure that would ensure both prosperity and reciprocity—namely, annexation. If this be so, a decade might be ample verge for a peaceful revolution. It is to be regretted, therefore, that Sir Francis Hincks did not face this contingency boldly, and prove, if he could, that there was no ground of apprehension in regard to it. As commercial oppression led to the American Revolution, so commercial inconvenience and depression growing out of a state of dependence may well be expected to overcome the Canadian sentiment of "loyalty," in whatever sense we may understand that word. Whether this sentiment will give way all at once or successively in the provinces on which the inconvenience most presses—that is, whether the Dominion will abdicate by a sort of plébiscite, or whether, say, the maritime provinces will withdraw their allegiance and so begin the *débâcle ;* and whether the tariff would be an adequate cause for the break-up of the Confederacy—are questions on which we need not speculate.

The New Puritan: New England Two Hundred Years Ago. Some account of the life of Robert Pike, the Puritan who defended the Quakers, resisted clerical domination, and opposed the witchcraft prosecution. By James S. Pike. (New York : Harper & Bros. 1879. 8vo., pp. 237.)—This is a most prolific time in historical studies. Scarcely a month passes without the appearance of a genealogy or a monograph. The modern antiquarian does not rest satisfied with mere learning, as did his brother of a generation ago ; he must preserve his knowledge in a treatise. Scattered details must be gathered into a complete structure ; and the permanent research replaces the perishing memories, sometimes with brilliant success. Of this the biography before us is a striking example. Before its appearance absolutely nothing was known of its subject beyond the mention of his name in Savage's 'Genealogical Dictionary,' and the scant indexes of Colonial Records. No private papers, no personal recollections were preserved by his descendants. Tradition and history had utterly forgotten him. Yet here he is in these pages, the real man ; intense but never narrow ; grim and stiff-necked and high-handed, but bold and strong, and free and true. He became the leading man of his settlement, and filled the highest offices in its gift for half a century, not because of his superior culture—he hadn't it ; not because he had popular manners—he did not hesitate to brave not only his neighbors, but the General Court, and even his minister ; but because his mental power commanded in that age the respect that was its due. His townsmen continually called him from his farm to the field and the bench and the forum because they found him such "a useful instrument."

Born in 1616, Robert Pike was amongst the first to settle empty-handed on the fields allotted along the Salisbury marshes. He left England too young for much education, but by the time he was twenty-eight he was made a magistrate "to end small causes" in Salisbury, and four years later he was sent to the General Court. From the beginning of his public career he showed an indomitable love of free-thinking and plain-speaking. When in 1652 the General Court passed a law forbidding the Baptists Peasley and Macy to exhort the people on the Sabbath, he did not hesitate to say out boldly to his friends that the law-makers did break their oaths in passing a law so against the liberty of the country. Such audacity was intolerable. The General Court sent for him "with speed," and, upon hearing his defence, indignantly punished him not only by a fine and bonds for good behavior, but by forbidding him to vote or hold office. Great was the excitement in Salisbury and the adjoining towns, and the townsmen soon ventured the bold step of a brief, mildly-drawn petition for the revocation of the sentence on their "loving brother." The General Court stood for a moment aghast at the insolence. Then it repealed the objectionable law against free preaching, but turned in hot resentment on those who had dared to question its wisdom, and sent out at once a commission to summon the signers of the petition, and find out what they meant by it. Some apologized or evaded, but some stood firmly on the broad right of petition; and the Government was forced at last to pass the matter over, and virtually to concede the fundamental right which was claimed.

Lieutenant Pike himself was of too sturdy a fibre to retract or apologize for the truth, and it was two years before his disability was removed; but it was no sooner done than his sympathizing townsmen elected him a member of the body which had sought to crush him, and thus ended one of the first of the struggles for freedom. For all his "usefulness," it is to be feared that Lieutenant Pike was too often a thorn in the side of those in authority, not from quarrelsomeness, but from his intolerant independence. Before long, his minister, the reverend but excitable John Wheelwright, thought meet to rebuke him for the "abominable crime" of reviling his pastor and not attending divine service, and speedily found himself summoned before the doughty reviler, and bound over in high bail to the next court. Mr. Wheelwright in return excommunicated him ; and one must bear in mind the intensity with which this people poured their whole energy into their religion to appreciate the excitement that ensued. A special act of the General Court had to be passed to still the storm. We cannot here follow Lieutenant (afterwards Major) Pike through the obscure details of the Indian war. Like most of his countrymen, he held the musket as firmly as the plough. But we must mention the brave and, alas ! the only protest made against the mad witchcraft fever at its height—a long argument addressed to one of the magistrates admitting the possibility of sorcery, but showing the inadequacy of the evidence, and suggesting that the simplest explanation was the direct action of the evil one upon the victims. It was not long before it came very near home to him when it struck the mother of his daughter-in-law, the venerated Mrs. Bradbury.

The few details of Pike's life show its simplicity. Owning several farms, filling for half a century the highest positions his countrymen could bestow, he lived just as his neighbors did, and we peep with interest into the little house with its one great fireplace, its one table and

three chairs, its cupboard and two chests. Besides his wearing clothes he had a best broadcloth coat; his one bedstead and his fireplace were well equipped, and he had half-a-dozen godly books, and plenty of pewter for his table. If he had no carpet or window-curtain, no picture or clock, no glass, or silver, or crockery, or forks, or handkerchiefs, he did not miss them. He had no pipe, for he scorned sinful indulgence. Life was severe, but he did not know it, for it was never empty, and he was too keen-witted not to find a certain racy humor in its hardest passages. With one Sabbath experience of his we must close. Urgent business called him to Boston, and the ill-made roads were growing "rotten" in the spring thaw. As soon as the Sabbath sun should tell by its fall the end of the day he had to start, if he would be in time. He attended both services and closed the day with prayer at his daughter's house, and soon after the sun disappeared he started on horseback for the Merrimack. Unluckily, however, as he passed the house of one Winsley, who had a grudge against him, the deceptive clouds broke away, and a gleam of level sunlight from the horizon showed his error. He had started too soon and profaned the Lord's day, and neither his sixty-four years nor high standing could save him from punishment by fine. And here we must leave this energetic, God-fearing Puritan, whom neither government nor priest could subdue, nor Indian nor devil daunt.

Young Folks' Heroes of History. Pizarro: his Adventures and Conquests. By George M. Towle, author of 'Vasco da Gama.' (Boston: Lee & Shepard. 1879. 12mo, pp. 327.)—The fear that we expressed, when reviewing the 'Life of Vasco da Gama,' that the subject chosen for the second book of the series would be found a less satisfactory one, is fully justified. Not that the 'Life of Pizarro' is less well done. Mr. Towle is a skilful narrator, and has made a very graphic and interesting story. But we protest, in the name of the children who are to read this book, against this cruel and perfidious adventurer being classed as a "hero of history," and still more against a treatment of his career which wholly blinks the wickedness of his enterprise, and even deals very tenderly with the horrors of its execution. Nobody's feelings need be hurt by such mild disapproval as this (p. 203): "We may admire his courage and perseverance, his self-reliance and military genius; but we cannot but condemn many of his acts as barbarous and bloodthirsty, and his objects as covetous and selfish." We have no desire that the historian should go into hysterics over the atrocities that he narrates, but one does long for a few words of hearty indignation, such as even the calm Prescott knew how to bestow upon villanous deeds.

The next subject of this series is a more promising one, Magellan.

English History in Short Stories. Revised edition. 16mo, pp. 179. (New York: A. S. Barnes & Co. 1878)—This little compendium contains a brief account of the reign of each sovereign, preceded by a sketch of the English Constitution and other useful matter. A description of each of the counties of Great Britain and Ireland follows. There is no genealogical table; but its place is supplied by a table of lines of descent, showing Victoria to be thirty-seventh in direct descent from Egbert, and twenty-eighth from William the Conqueror. It appears to be very accurate in details, but there is a strange carelessness in editing. The chapter headed "The Romans in Britain" gives two pages to this topic, then a page and a half to the Anglo-Saxon invasion, then goes on, without a break, to describe the present constitution in seventeen pages (including a sketch of heraldry), after which succeeds an account of the Heptarchy. And not merely is the running title, "The Romans in Britain," continued for the whole, but the table of contents recognizes the same division.

READY SATURDAY, APRIL 19.

SYMONDS'S

Renaissance in Italy:

THE FINE ARTS.

8vo, $3 50.

Of which

The London *Academy* says: "The most comprehensive and the most important essay on Italian art which has yet been written in our language."

The London *Spectator* says: "Learned and thoughtful, Mr. Symonds shows that he is no mere scholar in his mode of handling his subject."

The *British Quarterly* says: "Mr. Symonds's great work. . . . He has, in no mean sense, given us a philosophy of the birth-time of modern civilization—a philosophy of the history of one of the most important periods of the world's history, illustrated by examples. . . . One of the most valuable contributions to modern literature which have recently been given to the world."

HENRY HOLT & CO., New York.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from Birth to Maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." WM. HENRY EATON, Assistant Manager.
GEO. W. HOYT, Deputy Assistant Manager.

CUNARD LINE.

ESTABLISHED 1840.

FOR QUEENSTOWN AND LIVERPOOL.

Sailing from New York every Wednesday. From Boston once a week.

RATES OF PASSAGE:

CABIN—$80, $100, and $130, gold, according to accommodation. Return tickets on favorable terms.

STEERAGE—$28 currency. For freight or passage apply to

C. G. FRANCKLYN,
Bowling Green, New York.

The Nation.

NEW YORK, THURSDAY, APRIL 24, 1879.

The Week.

ON the 4th instant the Treasury called in for redemption all the outstanding 5.20 6 per cent. bonds, having been enabled to do so by the subscription of the Bank of Commerce for $40,000,000 4 per cent. bonds at par. The Treasury then withdrew the 4 per cent. bonds which it was offering for sale; and it was a question whether refunding would not stop, although the right existed to redeem the $194,556,300 10.40 bonds. Secretary Sherman visited New York, and had many conferences with bankers. While here he made a call (on the 9th) for $10,000,000 of 10-40s in anticipation of sales of 4 per cent. bonds and ten-dollar certificates of deposit to be made on terms not yet decided upon. On his return to Washington, and after mature deliberation, he issued a circular (on the 16th) in which he offered for sale, at an advance of ⅛ in the price (⅛ in the nominal price and ¼ in the reduction of the commission), $150,000,000 of 4 per cent. bonds and $44,556,300 ten-dollar certificates of deposit. On the 18th instant a syndicate was formed by the First National Bank and Fisk & Hatch, and they notified the Secretary that they accepted for themselves and their associates his offer of the entire $194,556,300 at 100½ and accrued interest. On the same day other bankers sent on bids for $39,000,000 of 4 per cent. bonds. Out of this total of $233,556,300 bids—all being ⅛ higher than the price at which the Treasury was selling the bonds previous to the 4th instant—the Secretary accepted bids for only $150,000,000 of the 4 per cent. bonds. He declined to sell the $44,556,300 ten-dollar certificates of deposit, which are convertible into 4 per cent. bonds, until he had first offered them for sixty days to the general public. He agreed that such as remain unsold at the end of that time shall be given to the bidders of April 18. Having thus made provision for the sale of enough 4 per cents (bonds or certificates) within sixty days, he issued calls for the redemption ninety days hence of the outstanding remainder of 10.40s. The first of these calls, issued on the 18th, was for $160,000,000, and the second, issued on the 21st, was for $24,556,300; these, together with the call of $10,000,000, issued on the 9th, take in all the 10.40s. It may be said, therefore, that the work of reducing the interest 1 per cent. per annum on $194,556,300 of the public debt was accomplished in a week. The subscription of the First National Bank Syndicate in amount overshadows all others on record in this country.

As no more 4 per cent. bonds will be sold by the Treasury until more of the present debt can be refunded in 1881, the market price for the 4 per cents has advanced 1⅛ per cent. in London and here. Money in London lends at the Stock Exchange at 1 per cent., and the best mercantile paper is discounted at 1½ per cent. British consols have advanced to 99¼—the highest price since 1853, when they reached 101. Here the money market has become very easy, and notwithstanding the settlement of bond contracts made in January, the reserve of the New York banks has been increased to $9,480,000 above the legal requirement, against less than $2,000,000 during the first week of April. The large refunding operations in United States bonds will, of course, make money extremely easy for the next seventy to ninety days, and the Stock Exchange already shows signs of becoming crazy. The stocks of the railroads running through Kansas have been particularly in speculative favor. Of these the leading one is Kansas Pacific. A controlling interest in this was a few months ago bought by Jay Gould for the benefit of the Union Pacific; he paid 12 for this interest. The stock had been advanced to 36 to 37 when the great U. S. bond operation became known; it has since bounded up to 49½. This is only a sample of the speculation going on in the "southwestern fancies." Silver bullion has been very steady in London at 49⅝*d.* to 49¾*d.* per oz. The bullion value here of the 412½-grain dollar at the close of the week was $0.8391.

The "revolution" has been shorn of half its terrors during the week. On Wednesday, the 16th, Senator Beck, of Kentucky, concluded a long speech carried over from the preceding day, and being naturally somewhat exhausted by the effort, was hardly in a condition to be catechised. Mr. Hoar, however, insisted upon asking him whether he stood by or backed out from a declaration made in the closing hours of the last Congress, that the House would be justified in again refusing appropriations to carry on the Government if the President should veto the repeal of the obnoxious legislation aimed at by the Democrats. Mr. Beck, after bidding Mr. Hoar sit down with his impertinence, boldly said that if the President refused to sign the bills he would "consult with the wisest and best men of his [my] party and with good men everywhere," to see what an American senator ought to do. He denied having made any threat, but only a statement; and what he did say as a Senate conferee had reference solely to a failure of the two houses to agree, and to the probable action of the lower House, and not to his own disposition to block the wheels of Government. Mr. Hoar read over again what Mr. Beck had just read in his own vindication, and showed that it did contain the programme of the new Congress in extra session, and did predict a stoppage of supplies in case of a veto, shifting the blame of it upon the President. As the dispute went no further, Mr. Beck's real meaning may still be open to question; but his present intent to consult with wise and good men before laying low the Government proves him to be a demoralized revolutionist, from whom Mr. Hoar has nothing to fear. On Saturday, in the House, another Kentucky fire-eater, Mr. Blackburn, was shown to have said in his place: "We do not intend to stop until we have stricken the last vestige of your war measures from the statute-book, which like these looked to the abridgment of the liberties of the citizen"; and then, before this was printed in the *Record*, to have inserted a qualifying phrase—"which like these were born of the passions incident to civil strife, etc." In the pamphlet edition of the same speech the weakening process was carried one stage further. Strange to say, the Republicans appeared to regard this as a kind of robbery of something to which they were entitled.

The other proceedings in Congress have not been very important. The Senate has languidly continued the discussion of the Army Bill, but has thrown no new light on the question involved. Mr. Randolph, of New Jersey, incidentally told a remarkable story of President Grant's treatment of a message which he (Randolph) bore him in 1876 from Governor Hampton, whose title had just been confirmed by the Supreme Court of South Carolina, and who accordingly asked for the withdrawal of the U. S. troops. Grant's reply, "in angry tone and uncivil manner," was: "I won't withdraw the troops; I don't regard the decision of the Supreme Court; and if I had any message to send to General Hampton, it would be that his message to me is an impertinence." As a proof of the way in which a President might abuse his authority over the Army this anecdote could not be offset by naming the ridiculously small number of the troops at Columbia, or by giving their ratio to the area of South Carolina. The House refused to abolish the Southern Claims Commission or to adopt Mr. Potter's scheme of reference to the Court of Claims. It has begun the discussion of the jurors' oath section of the Legislative Bill, and has passed a bill of Mr. Stephens's to make the subsidiary coinage redeemable in lawful money in sums of twenty dollars, and legal tender for the same amount, and on Monday was flooded with upwards of a thousand new bills, whose introduction threatens an indefinite prolongation of the session.

The Assembly has determined to adopt the suggestion of Mr. Hamilton Fish, jr., to send a committee of five senators and nine members of the House to escort General Grant from San Francisco across the continent on his return from his European and Asiatic trip. In doing this New York will only be following the lead of Pennsylvania, which first proposed a similar committee for the same purpose. There seems to be no good reason why all the States should not do the same thing, and thus make the demonstration a grand national affair. As the nomination of Grant next year is the best thing that can happen for the Democrats, there is no reason, too, why there should be any distinction of party in the matter. The chief speaker in opposition at Albany was Mr. Williams, a Greenbacker, who expressed the opinion that General Grant, as President, "did not reflect credit on the office." Both the Pennsylvania and the New York committees are to serve without pay.

The Governor has removed Mr. Sidney P. Nichols, one of the Democratic members of the Police Board, and the Mayor has appointed in his place Mr. Charles F. McLean. What is to be done with the other Commissioners seems to be still undecided. Mr. McLean's appointment was a great surprise to the politicians, as they expected to see some anti-Tammany "worker" put in; while Mr. McLean is simply a member of the bar of very good standing (he has been for some years counsel to the Police Board), whose only prominence before the public, as yet, has been owing to his public services as a member of the Bar Association Committee which preferred charges against Mr. Gumbleton. As to Mr. McLean's qualifications for the position, they are yet to be shown. But it is only fair to say—and this is a great deal more than can be said for most of the selections of Police Commissioners during recent years—that the class from which it is made is a perfectly fit class from which to make selections for offices of this sort. It is indeed eminently necessary that there should be some good legal head among the commissioners, inasmuch as the whole supervision of elections is in their hands. In "Anti-Tilden circles," however, the appointment is regarded as being tantamount to a "confession" by the shameless Cooper that he is simply a tool of the indefatigable "Sammy." Mr. McLean is, it is said, a nephew of Tilden (though this, like other facts with regard to Mr. Tilden, is in dispute), and has now taken Pelton's place. He is believed to have an office at 12 Wall Street, where another person, named, if we remember right, Smith, is thought to have received cipher despatches during the campaign of 1876. He also resembles Mr. Tilden in personal appearance, has a "soft, oily manner," speaks in a whisper, and altogether is an apt agent for the unscrupulous schemer of Gramercy Park. Usually, in the case of appointments of Police Commissioners in the interest of reform, there has been a brief period during which the newspapers published flattering notices of the new men, stated what their plans for the improvement of the health and order of the city were, and cheered them on in their good work. It was not till some time had elapsed that their true character was discovered and exposed. But we live in exciting times now, and have to make up our minds quickly. Mr. McLean must congratulate himself already on knowing the worst. He may remain in the Board for ten years, and clean the streets every day with his own hands; but his character is gone.

Mr. Simon Sterne's plan for regulating the practice of legislative committees, to which we called attention last week, is advocated by him partly on the ground that there is always danger of the Legislature "getting round" the constitutional provision against special legislation by passing general laws to meet particular cases. A very glaring instance of this sort has come to light within the past week. A young man—a resident, we believe, of this city—married some years ago, and after his honeymoon was over found, as many other husbands have found before, that there was not that absolute freedom and independence in married that there is in single life. He and his wife did not get on well together, and finally she procured a divorce from him on the ground of adultery. Of course the decree forbade him to marry again during his wife's lifetime. Some years afterwards he fell in love with another woman, and then found that a new legal marriage was out of the question. Not daunted, however, by this obstacle, he went to Albany, and, after two years' work, has succeeded in getting the Legislature to pass a law authorizing the remarriage of *any husband* divorced for adultery on his furnishing satisfactory proof that he has for a certain number of years conducted himself with propriety. That such a bill should have been signed by the Governor is, we confess, a great surprise to us. Of course it is tantamount to a general permission to husbands to marry again; for the amount of proof of good conduct that a man really anxious to marry again can procure is measured, not by the morality of his life, but by the time at his disposal and the number of his acquaintances. The divorced wife will have no sort of inducement to come forward and prevent his remarriage, and she will, in nine cases out of ten, have no evidence on the subject. In short, the law is simply calculated to encourage adultery and divorce.

General John A. Dix died on Monday, in the eighty-first year of his age, after a life of singular vicissitude and rare usefulness. He was a native of New Hampshire, son of an army officer, and entered the service himself as a mere boy during the War of 1812. His regular education, such as it was, he acquired in Montreal and in Baltimore, and when the time came to choose between a military life and civil pursuits he betook himself to the study of the law and established himself in Cooperstown, New York. He quickly found his way into political life by joining the rising fortunes of the Democratic party, became Adjutant-General of New York in 1830, Secretary of State in 1833, Representative of Albany County in 1841 and 1842, and United States Senator in 1844. In these various positions his military knowledge made his services especially valuable. He opposed the annexation of Texas and the Mexican War, but out of friendship for General Pierce supported him as a candidate for the Presidency, and, but for Southern opposition, would have had a place in his Cabinet. He received the post of Assistant United States Treasurer at New York, which he presently resigned, was appointed Postmaster of this city by President Buchanan in 1859, and finally entered the latter's Cabinet as Secretary of the Treasury in those anxious days of dissolution, when the head of the Government was an imbecile and his advisers engaged in betraying the Government into the hands of the Secessionists. He, with Stanton and Holt, kept their chief from recalling Anderson from Sumter to Moultrie, and his were the stirring instructions to the Treasury Agent at New Orleans—"If any man attempts to haul down the American flag, shoot him on the spot." On Mr. Lincoln's accession he re-entered the military service, was made Major-General of Volunteers, being placed in command first at Baltimore, then at Fortress Monroe, then at New York, and finally was made Minister to France, where he remained till 1869. His subsequent career is well known. He was closely associated with the attempt to redeem his adopted State from the corrupt rule of the Ring, and obtained the Governorship in 1872 with the most gratifying marks of popular favor. His administration was honest and vigorous, but left some abuses still for Mr. Tilden's peculiar genius to expose and reform. The mere record of a long life like General Dix's supplies the place of comment or eulogy.

The Supreme Court at Washington has decided the question of settlers' rights in lands granted to the Pacific railroads in favor of the railroads. The controversy turns on the meaning of the words used in the grant to the Union Pacific by Congress, providing that all lands not "sold or disposed of" by the company within three years after the completion of the road should be open to settlement like public lands, at a price not exceeding $1.25 per acre. In the case just decided the company maintained that its lands had been otherwise "disposed of," within the meaning of the act, by a mortgage given in 1867, by means of which it raised the money to build the road. The Court holds that this is the correct view of the act;

that Congress cannot be supposed to have used words without some object; that the words "disposed of" must have some meaning beyond the word "sold," and the most natural meaning would be a disposition by mortgage for the purpose of raising money to build the road. No other mode of disposal would have been of any use, and the right to hypothecate a limited interest in the land would have been a "barren gift." "Looking at the character of the lands and their remoteness from settlements, it must have been evident enough that money could not have been raised on the credit of such a mortgage." In reply to the argument that such a disposition of public lands is repugnant to the governmental policy of guarding against monopolies of public lands, the Court say that this policy was manifestly subordinated by Congress to the more immediate and direct object of having the road constructed, and constructed with the aid of a land-grant. The decision, we take it, applies to all the Pacific railroads. Three judges dissented from the opinion; but the grounds of their dissent have not yet been published. The division of opinion justifies the position that Mr. Schurz took in the matter as Secretary of the Interior.

The news from Russia grows more and more serious. The failure of the police to cope successfully with the Nihilists, coupled with the suspicion, which grows stronger, that the police itself is more or less infected by Nihilist sympathies, has led to the issue of a ukase putting six districts, containing the largest cities in the Empire, Petersburg, Kharkov, Odessa, Moscow, Kiev, and Warsaw, under martial law. A governor-general is to be appointed for each of them, armed with more than the full powers of a general in the field. He can arrest and try by court-martial any one he pleases, on any charge he chooses to prefer, or, if he does not choose to try him, he may arrest and send him off to any place he pleases. He may take charge of all schools and colleges and suppress any newspaper or periodical, and finally may adopt any measure he may consider necessary for the preservation of order. Nothing approaching to this in severity, on the part of a sovereign towards his own countrymen in time of peace, has been witnessed since 1815, except, strange to say, in France, which permitted itself to be cut up into military districts in 1852, and governed by generals armed with powers almost as great as those bestowed on the Russian generals. But then there was in France, even in those dark days, a public opinion which Bonapartist generals could not wholly disregard. The Russian governors will act under no restraint, and it is difficult to imagine anything more terrible than the risks to which persons suspected of liberal opinions, or in any way obnoxious to the authorities, will now be exposed, even in the greatest cities in the Empire.

That the experiment is sure to fail in the long run—that is, that it will not lay the foundation of any better state of things—is quite certain. At the same time it is hard to see what the Emperor, of whose good intentions no one can doubt, is to do. He cannot yield to assassination or armed attacks on the police directed by secret societies, because this would speedily reduce the Empire to the condition of Sicily, and put all life and property at the mercy of brigands. On the other hand, a class has evidently come into existence within twenty years which cannot be handled by the Russian police as it now is, which will not submit to the brutalities and repression which were accepted as a matter of course under Nicholas, and which seems to have unlimited command of desperate agents. It looks as if either the late reforms ought not to have been attempted without representative institutions, or not attempted at all.

The difficulty of getting at the cause of the Russian troubles is very great, owing to the rigid censure of the press, and the silence, in fact, imposed upon all criticism or discontent. But one remarkable examination of the situation from the point of view of the moderate and sensible reformers, of whom there is undoubtedly a considerable party, has been made public. It consists of an address to the Emperor by one of the Zemstvos, a kind of representative County or Provincial Board of recent establishment, and fully described by Wallace. It was signed by all the twenty members, but the President refused to transmit it or allow it to be published. It was circulated, however, in a lithographed form, a copy of which has been published by the Paris *Temps*. It says the cause of the malady which now afflicts Russian society is, (1) the inefficiency of the secondary schools and of the colleges and universities; (2) the total absence of liberty of speech and of the press; and (3) the want of respect for the law. It explains that the great reforms of the present reign have filled Russian society with new aspirations and given it a new leaven, and pushed large bodies of youth into the colleges, where they are only half-taught, and in which only *one-fiftieth* of their number complete their course. Both these and those who do graduate have no career open to them on coming out into the world, and can satisfy neither their intellectual nor material wants, and are in consequence filled with bitterness against society and against the Government, and throw themselves into the present mad struggle against social order. They might be met and vanquished or cured by free discussion, but this is made impossible by the censure. The friends of anarchy propagate their opinions by a clandestine press, while the friends of order have no means of reply. "Silence," they say, "which is the rule of our institutions, makes even such rudimentary institutions as the Zemstvos useless." The rapid decline of respect for the law is due to the absence of proper control in the bureaucracy, the feebleness of the courts, and the continuance of administrative punishments by the police; and with contempt for the law comes general degeneracy of morals and manners. The whole document is very interesting.

There appears to be no doubt that Prince Bismarck is to have his way in the tariff matter. The majority of the Reichstag sticks to him, and the Free-Traders confess the necessity of beginning an economical agitation among the people, which means that victory is still some distance off. He has, too, placated a good many enemies by his liberal tone with regard to Alsace-Loraine, which he admits ought to have an autonomous government—that is, be erected into a member of the Confederation. He said some handsome things by way of excuse for those Alsatians who still mourn the French connection. The reception-address of Renan at the French Academy has excited a good deal of attention and some newspaper bitterness, even from the semi-official press in Germany, partly owing to its jubilant, triumphant strain, so different from the tone of his writing after the war, and partly to his wicked allusion to Germany as a country "whose science, pedantic in its solitude, whose literature without gaiety, whose sour politics, high society without brilliance, nobility without *esprit*, and gentlemen without politeness, and great captains without stirring speech, will not soon dethrone the old French society, so bright, so polished, so eager to please."

It has been found impossible to get the Turks to settle amicably with Greece about the new line of frontier; but Lords Beaconsfield and Salisbury took quite a cheerful view of the matter on being questioned about it in the House of Lords, and said that there was nothing wonderful in Oriental negotiations lasting so long; that this was the Oriental way, and they had no doubt all would come out right in the end. The explanation the Sultan and his cabinet are said to give of the delay, on the other hand, is that the Mussulmans could not be got to understand the cession of territory to a Power with which there had been no war. They understand the surrender of portions of the soil of Islam to the superior force of an enemy, but they would be greatly excited by the spectacle of surrender to infidels who have never fired a shot. For this reason they feel it necessary to wait for the interference and even actual pressure of the great Powers. When this is brought to bear, "Kismet" will appear on the scene, and the Mussulmans will declare that God is great, and that nobody is to blame.

STATE TAXATION.

MOST civilized countries, our own included, divide the subjects of taxation in such a manner that the national authorities are enabled to lay their hands on those sources of revenue which are easily managed and give rise to little dispute, such as customs and excise duties, stamps and other imposts which are mostly indirect, and are sometimes termed voluntary taxes, because people can avoid them by not buying or consuming the articles taxed. To the local authorities, State and municipal, are remitted all the subjects of taxation not monopolized by the central government, and these are commonly reachable only by direct assessment, coupled with the power to seize or imprison if the tax is not paid. The puzzle of the local authorities, here and elsewhere, is to assess the subjects of taxation belonging to them in such wise that each person or thing shall pay his or its fair proportion, and that none shall be driven out of the jurisdiction. Any tax, whether just or unjust in itself, which causes the property, or the person owning it, to depart the jurisdiction, defeats its object in a double sense. It not only causes a loss of the particular sum sought to be obtained, but diminishes the taxable value of all other property in the vicinage. Any tax which even tends to cause the migration of capital is *primâ facie* a blundering imposition, and yet no other lesson seems so hard for American legislators to learn. The idea handed down to us from a time when the person and the property were always situated together, that each man should pay according to the amount of his property —which cannot be gainsaid from a moral point of view—has been an invincible obstacle to any rational system of taxation. It is a mischievous fallacy as applied to the conditions of modern society, but it stands on the statute-books and in State constitutions as something in the nature of an axiom which nobody is permitted to dispute.

In preparing any scheme of State taxation the first question to decide is, What are the subjects of taxation? Are they persons or things, or both? Are they persons and things situated within the jurisdiction of the taxing power, or beyond such jurisdiction, or both? Here there is great diversity of opinion, or, at all events, of practice, and the notion which seems to prevail most generally is that both persons and things are the subjects of taxation; that persons and things within the jurisdiction are preferable as subjects of taxation, but that persons and things outside the jurisdiction are to be levied upon as far as possible. Then comes the great question, What are "things"? At first blush this might seem to be tolerably easy of answer; but we find State legislatures, and even courts of justice, hotly disputing with each other upon the definition of a "thing" as a subject of taxation. A horse, a house, a piece of land, a locomotive engine, are conceded upon all hands to be "things." Is a promissory note, a share of stock in an incorporated company, a warehouse receipt, or a railroad bond a "thing," within the meaning of the phrase? Most of our legislatures say, Yes, they are things rightfully subject to taxation, separate and apart from the property, *the other things*, which they represent, and this irrespective of their geographical situation. If the owner lives here, we will tax him for the possession of these *things*, even though the *other things* represented by them are situated in California and taxed there. The pending new constitution of the latter State puts this vexed question beyond controversy, by providing that everything which is susceptible of ownership shall be subject to taxation. Thus the real estate, machinery, and tools of a mining company would be liable to taxation; the capital stock of the company, being likewise susceptible of ownership, would be liable to taxation; and the indebtedness of the company, represented by bonds or promissory notes, would also be liable to taxation. If the stock, bonds, and promissory notes were all burned in the fire, there would be no less property in the State than before. If these written or printed instruments were multiplied by ten, the property would be no greater. Therefore the proposition is to tax a certain species of property three times, or as many times as it takes different forms of subdivision and transfer. Such absurdities are not peculiar to California; New York and Massachusetts can match them in many ingenious ways. Mr. G. H. Andrews, of this city, and Mr. William Minot, jr., of Boston, have given us tabulated statements of double and triple taxation of the same property, and of cases where A. is taxed two or three times, while B., owning the same kind of property, is taxed only once, or not at all, and all in strict accordance with law.

Nearly all the absurdities and inequalities of local taxation—and it would be impossible to enumerate them all in a single article—grow out of a primary want of definitions. There is no clear understanding, as has been shown, of what a "thing" is, in the purview of the tax-gatherer. Nor is there any clearer idea of what a person is. A person can only be taxed as a person. His income may be taxed, his profession or trade, his property, his consumption may be taxed, but as a person he can only be subjected to a personal tax; and it is agreed that all personal as well as other taxes should be uniform. There is no reason why Mr. Vanderbilt should pay a greater poll or capitation tax than anybody else. Such taxes have been generally discontinued. The tax on persons has practically ceased to be levied in the United States, or if levied at all, it is for other purposes than revenue. But the common conception of legislators is that *persons* should be taxed according to the amount of their *property;* whence the solecism arises that a person residing in Massachusetts or New York, but having no property there which the tax-collector can levy upon and sell, may be cast into prison if he refuses to pay a tax upon property situated in California, which may have been taxed or even confiscated by the authorities of the latter State. The Supreme Court of the United States has decided that property lying beyond the jurisdiction of a State cannot be made the subject of taxation by the State, and has added, by way of reproof, that no adjudication ought to be necessary to establish so plain a proposition. With due deference to that high tribunal, we incline to the belief that more than one decision will be needed to break through the crust of ignorance which surrounds this subject. So long as legislators imagine that they are taxing persons when they are really taxing things, and so long as they remain in a fog as to what a "thing" really is for purposes of taxation, they will continue to assess the citizen of New York for property and dues belonging to him in Illinois.

A good deal of confusion has been imported into the subject by the never-ending dispute in reference to the taxation of mortgages. It is not right, say the tax-reformers, when you have taxed A.'s land to tax B.'s mortgage on the same land also; this is double taxation of the same property. That there is something in the nature of double taxation here has been grudgingly admitted by sundry State legislatures, and various awkward concessions have been made to correct the evil. A mortgage is one form of security for a promissory note, or other evidence of debt, differing in nowise from any other kind of security except in its mode of enforcement. A.'s indebtedness is no greater because he has given a mortgage on land to secure it than if he had given cattle, railroad shares, or a friend's endorsement. The only things to be considered are the land and the debt. If the mortgage is brought into the case as a third element, it is sure to produce confusion. Smith, Brown, and Robinson, members of the Legislature, will be sure to have three different ways of dealing with the mortgage, whereas if A. had given bank stock as security for the same debt, or if his credit had been good enough to procure the loan without security (in which case his situation as a debtor and taxpayer would be exactly the same), Smith, Brown, and Robinson would understand the situation perfectly. The State in its tax-gathering capacity has nothing to do with the forms of security by which people satisfy each other for the loan of capital. It has no more concern with mortgages than with pawnbroker's tickets; and tax-reformers make a serious mistake when they bring mortgages forward to illustrate the injustice of double taxation, because they tend to the multiplication of words and darkening of counsel.

The proper rules to be followed in any system of State and municipal taxation would seem to be—1st, to obtain as much revenue

as possible in the way of licenses from trades and occupations which, like the liquor trade, need to be repressed rather than encouraged; 2d, to tax movable things—"things" being tangible, ponderable substances, and not the written evidences and title-deeds of the same—no further than they will voluntarily consent to be taxed by remaining within the jurisdiction of the taxing power; 3d, to tax immovable things, such as houses, lands, railroads; 4th, to exempt from taxation all invisible and intangible creations whatsoever, including the claims which one man has upon another, whether that other be a citizen of the same State or of another State, or of a foreign country. There is no reason why a different set of rules should be applied to corporations. If corporations have property within the jurisdiction of the taxing power, it should be assessed in the same way and to the same extent as similar property owned by individuals. The stock of a corporation being merely the representative of its property, is not a subject of separate taxation any more than a right of inheritance or a right of dower. Demagogues are constantly bringing forward schemes to relieve the whole people from public burdens by taxing corporations. A corporation is only a community of ownership, the need of which in civilized society is so great that every facility and inducement for entering into it is offered by the state. To turn around, after persons have been thus lured into the investment of their money, and to impose excessive and differential taxes upon their capital merely because it is held in small parcels under articles of incorporation, instead of being owned in large blocks by individuals or firms under articles of partnership, is a Jeremy Diddler's trick which will not greatly advance the political fortunes of anybody who seeks to play it upon the people of this State. As regards the project to raise all the revenue required for local purposes from a tax on land, houses, and rooms, on the theory that such a tax will distribute itself equitably throughout the community, it must be said that the burden of proof to show that such a tax will distribute itself equitably is still upon the advocates of the system, and that the highest authorities on the subject, notably Mill and Fawcett, do not concede the truth of the proposition.

THE COLLEGES AND LEGISLATION.

MR. ANDREW D. WHITE, the late President of Cornell University and the new Minister to Germany, recently repeated in this city a lecture of which we have already made mention, calling attention to the need of a larger supply of men properly equipped by education for the work of legislation and administration. He pointed out the immense drafts which our system of government makes on the political capacity of the country, with its Congress, its forty-odd State and Territorial legislatures, and its enormous number of city and county councils and boards. Nowhere is there a greater amount of legislative business of one sort or another despatched every year, and nowhere is there so little preparation made for it by any sort of formal training. The result is, as everybody knows, a large amount of hasty and ill-advised law-making, and slovenly and blundering administration, the evil effects of which have to be repaired or concealed by the great energy and intelligence of the people, and the vast natural resources of the country. But it cannot be concealed that as population grows denser and the mass to be acted on by legislation grows larger, and the interests with which it has to deal become more complex, the popular energy and intelligence and the natural resources of the country will become less and less able to make up for errors and shortcomings of our rulers. We shall have to be governed more carefully, or else submit to a considerable diminution in our rate of progress and in our sense of security.

The remedy Mr. White proposes is the establishment of schools or departments of political science by our leading colleges, in which such young men as choose to make politics their occupation or their leading object of attention might get an education in political economy, in the use of statistics, in finance, in general jurisprudence, and comparative legislation. He thinks this would not only make a much-needed addition to our supply of trained politicians, whether in public life or at the bar or in journalism, but would stop the growing separation of the colleges from the active life of the country. There is nothing in his recommendations or suggestions in which every intelligent observer of the tendencies of American politics must not heartily concur. But he, like every man who is or expects to be in public life, has been restrained by a not unnatural delicacy from mentioning some of the difficulties in the way of bringing training to bear on politics which arise out of the political system itself, but which in devising any plan of reform cannot be overlooked. Foremost among these is the elaborateness of the political machinery—or, in other words, the frequency of elections and the enormous number of the offices which have to be filled by election. It is this, even more than the want of skill or preparation on the part of legislators, which makes American legislation defective. No man, no matter what his training or capacity, has more than a certain amount of energy or working power. Under our present system of choosing men for office through primaries and conventions, and frequent elections, the best man has to expend so much of his energy in getting his place, and after he has got it, in keeping it, that he has little or none left for its proper duties. If he is very skilful in getting nominations and providing for new nominations, he is almost certain to take very little interest in serious questions, and is almost sure, by way of self-justification, to adopt the habit of sneering at scientific legislation and deriding the persons who profess it as "theorists." Our own Senator Conkling is a striking illustration of this. He is a person of considerable ability and untiring industry. No man in Washington works harder, but his time is spent not in looking after the great commercial and other interests of his State, or those of the country at large, but in keeping in good working order the machinery by which, once in every six years, he procures his re-election. It is fair to acknowledge that with less attention to this machinery he could probably hardly attain his object, and that if he did the duty which Mr. White's scheme assigns to a Senator he would have to give less, and considerably less. The reform of the civil service would no doubt greatly improve the quality of Federal legislation, by making the nominating machinery simpler and easier to work, and thus giving the legislators more time for their real duties; but even this will hardly make the public life attractive to the best political talent of the country without greater simplicity in the mode of getting into it. It is still too hard to get at the voters. Politics is, owing to the enormous labor and the peculiar kind of talent needed to manage a convention, something in the nature of a close corporation. It is reached by men of ability and training, but in the larger number of cases theirs is not the kind of ability and training which make good legislation. It is not filled by any means with men like Mr. Simon Cameron and Mr. Roscoe Conkling, but it is such men who find it easiest to get into it, and, what is of still more importance, to stay in it.

To change this state of things the mode of selecting candidates, and perhaps the mode of electing them, will have to be modified. Able men who do not possess the "managing" talent will have to be furnished with some means (such, for instance, as minority representation or the abolition of the residence qualification) of finding constituencies which the caucus in their own districts will not furnish them, before we shall ever see many real politicians—that is, men who are more interested in questions than in machinery—sitting in Congress or in our State legislatures. Such spectacles as the turning adrift of men like Mr. Hewitt, after he has acquired parliamentary experience, at the very moment when his party is in the direst need of brains, will never be prevented in any other way, and yet they are now of yearly occurrence. Two years is about as long as a really well-equipped man, who will not devote time and money to the nominating machinery, is able to stay in Congress.

Until this change is brought about, we fear no system of preparation colleges could devise would produce much fruit. Colleges, with regard to all special training, are, after all, very dependent on

the market demand. The law and medical and mining and theological schools flourish because through these schools men are prepared for callings which they are reasonably sure of being able to follow. If they were simply places in which men prepared themselves to look on at other people arguing, curing, mining, and preaching, and to produce barren criticism of them, they would attract very few students, and these not by any means men of much force or ambition. Yet a school of political science in any university at this moment would be very much in this position if it undertook to furnish a complete college course that is to take the place of all other courses of instruction, which is, we understand, what Mr. White has in his mind. It would, in other words, want the crowning attraction of practice. The graduates would, if they sought for even the humblest office in virtue of their training, be the laughing-stock of the managers; if they worked for it in the ordinary way, by active participation in the management of the nominating machine, beginning with the primaries—which is the course that is usually recommended—they would have to devote an amount of time to it which few young men can afford, and it would be a kind of work so repulsive in many of its features that it is questionable whether, except in the case of men of unusually robust temper, their collegiate training would not prove rather a hindrance than a help in it. In fact, it is no exaggeration to say that it is doubtful whether at this moment collegiate training can be made to tell on public life in any way except through journalism. Here we do believe there is a field for those who wish to exert a powerful influence on public affairs in the United States, which men of wealth and education have thus far strangely neglected, and which offers immense opportunities for shaping the thought of the country.

It is a field which thus far, in spite of the great number of newspapers, has been very little worked by the kind of men whom Mr. White seeks to prepare for public life; and yet it is a field in which we feel sure they must labor a good deal before they can hope to labor in any other. So great has been their abstinence of late years from all attempts to influence public opinion on any but philanthropic questions, that they have almost, in the popular eyes, lost their right to be listened to with anything but indulgence. Whatever they have to say against existing practices has come to wear the air of "theory," which in the average politician's mouth means a plan which is incapable of execution in this world; and the list of things in politics which are only practicable in heaven is every year enlarged. There are, too, now regular strata of politicians, each considering itself truly "practical," and the one above it merely "theoretical." To the City Hall politician Conkling is a "theorist," because he makes no money out of his patronage and never calls for a "divvy." When we get down to the man who sells his vote for a quart of whiskey, we find that to him all the rest of the political world is a mass of visionaries, whose heads are filled with impracticable schemes, little suited to a plain democracy like ours, which is after all a government of "the boys."

LIBERAL PROSPECTS IN ENGLAND.

London, April 8, 1879.

THE two Houses of Parliament have adjourned for the Easter recess, the Lords acting in the spirit of Charles Lamb's principle and conduct, and rising earlier to reassemble later. Ease with dignity is certainly the maxim of that august assembly, which in proportion as it does less work requires longer rest and relaxation. This is a rule of human nature—to be more tired of doing little or nothing than of the most strenuous exertions.

The Opposition retire for their Easter holidays, which in the Commons extend from the 7th to the 17th of this month and in the Lords from the 4th to the 21st, in higher spirits than they have known since Mr. Gladstone's capricious dissolution condemned them to a hopeless and almost helpless minority in both houses, and, it is fair to add, in the country. The debate and the division on the Zulu War showed a great accession of strength and confidence on the Liberal side. The Ministerialists were plainly out of heart. A series of accidents has reduced their debating power in the House of Commons to a lower level than has been known since the ministry of Addington was the subject of Canning's merciless jibes. With the exception of Sir Stafford Northcote and Mr. Cross, the Cabinet in the House of Commons is without a speaker above the second or third rank; and the sense of a powerful majority behind them does not make up for the consciousness of inadequacy in debate. Mr. Gladstone, Mr. Bright, and Mr. Lowe are now comparatively infrequent speakers—the last is an eminently uncertain one, as the late debate showed—but their presence on the Opposition benches is a mark and symbol of oratorical and intellectual power which has its influence. The knowledge that they can and will intervene, if occasion arises, to turn the tide of debate, has the effect of a large body of reserve on the side of an enemy already more than a match for its antagonist. It is not that as a whole the Liberal party is stronger in parliamentary ability than its opponents; but the accidents or necessities or the claims to social and political recognition which have removed Lord Beaconsfield, Lord Salisbury, Lord Cairns, and Lord Cranbrook to the House of Lords have left the Government naked to its enemies in the Commons. They have given it a superfluity of strength where it was not needed, and impoverished it where it was poor already. The speech with which Sir Charles Dilke opened the debate in the Commons was one of the great successes not only of this session but of the Parliament. It ranks among those decisive steps which at a critical point in his career a man makes to the front. Sir Charles Dilke's steady progress shows that with him a position gained will be a position kept. With the exception of Sir William Harcourt, no Liberal politician has advanced so rapidly as he in parliamentary reputation, and a considerable place is assured him, if he chooses to take it, in the next Liberal Government.

Talk of the next Liberal Government may seem to hopeless minds like talk of the millennium or of what will take place on the Greek Kalends. But the Opposition benches and the election agents are beginning to feel sanguine; and various combinations are tried and retried in gossip and conjecture. The fact is made much of that the vote on the Zulu debate gave the Government only its strict party majority. That wavering and fluctuating mass of undecided opinion which sways now to this side and now to that, and which turns the balance of parties in the country and in Parliament, went against the ministers. The more independent of their ordinary supporters, men like Sir Robert Peel, Sir Henry Holland, son of the celebrated physician and for many years permanent Under-Secretary for the Colonies, and Mr. Gorst, for a long time their political agent and election manager, spoke and voted against them. There was no heart in the speeches on their side, and the division lobby was filled with reluctant recruits, "whipped" into action as the Russian soldiers used to be. The ministerial majority was little more than half or two-thirds of what it ordinarily is. The financial scheme of the Chancellor of the Exchequer has not mended matters. It is sneered at as the Cocoa-paste budget, from one of the two new features which it contains. Of course, a momentary relief is felt at the fact that it does not impose fresh taxes. But behind this sentiment is the misgiving that bills are simply renewed which before long will fall due with heavier interest. To use an "Americanism" as old as Chaucer, the Chancellor of the Exchequer lets things slide; and there is fear that they are going down a steep slope with great rapidity. The feeling is common to both sides, and finds expression not in debate but in familiar talk in the lobbies and other places where a safe frankness is practised. It is customary to speak of a particular House of Commons, especially when it has reached a certain term of years, as being at variance with the opinion of the country. On great critical questions this is often so. But the action of the country on the House of Commons is not confined to its votes at a general election. Public opinion tells insensibly upon it, without ostensibly affecting the party allegiance of its members. During the past four years of Lord Beaconsfield's administration the popular Conservatism and Jingoism loosened the bonds of discipline in the Liberal party. The tribe of independent Liberals flourished who delighted to speak and vote against their chiefs and with the Government, some of them undoubtedly from deliberate conviction, others carried away by the sentiment and impulse of the hour, others consciously trimming their sails to the popular gale. Now the effect of outside opinion on the House of Commons is just the reverse. It is loosening the allegiance of the Conservatives, and tempting them into the novel position of giving an independent support to the Government—that is, opposing it whenever they can find a pretext for doing so. On the other hand, the Liberal party is being knitted together. The party managers are confronting the possibility that the next general election may return a Liberal majority to the House

of Commons. At the very least, it is likely seriously to diminish the Conservative majority. What is probable is, that parties will be so nearly balanced as to make government either by a Liberal or a Conservative administration difficult. The new Parliament, if it is of this character, will probably be a short-lived one, and may be followed by another of a more decided party character. The alternations of sentiment, the desire for action after repose, the maturing of opinion on controverted questions, and inevitable growth of abuses needing correction, make it probable that the next Parliament may be indecisively Conservative or Liberal, and that its successor will be decisively Liberal. Another element in the changes of party and opinion needs to be taken into account. Prolonged prosperity has a tendency to make men Conservative and apathetic The financial and commercial successes of Mr. Gladstone's government, paradox as the thing may seem, did something to weaken its hold on the country. Distress and impoverishment help to make men radical. The industrial depression which has been simultaneous with Lord Beaconsfield's administration contributes of itself to a Liberal revival.

Whenever the future of the Liberal party and the possibility of a Liberal administration are considered, two questions present themselves, which are really different sides of one and the same question. The first is : What will Mr. Gladstone do ? The second is : What is to be done with Mr. Gladstone ? The former is asked with a certain eager curiosity and hopefulness by the Liberal rank and file in the country; the latter with considerable perplexity and searching of heart by Mr. Gladstone's old colleagues in the two Houses. It is probable that Mr. Gladstone himself would find it impossible to answer the first question. It is certain that until he has done so no one can answer the second. It will be very difficult to do anything with Mr. Gladstone which Mr. Gladstone does not choose to have done to him. So long as he remains in political life, from which he shows no signs of a disposition to retire, no Liberal administration can be formed with any chance of continuing of which he is not a member, and he could not conveniently be a member of any Liberal administration in any other character than in that of its ostensible as well as its real chief. The confidence of the country and of the House of Commons in the Liberal party is confidence in Mr. Gladstone. The terms in which his candidature for Mid-Lothian have been stated both by himself and on his behalf, and the manner in which his challenge has been met by the Conservatives, show that on both sides the election will be what is called a test one. Mr. Gladstone, as he himself has stated, put himself into the hands of the Central Liberal Association, the party organization directed by Mr. Adam, the Liberal whip in the House of Commons, to determine the place and conditions of his candidature. A merely individual candidature would not have been thus disposed of. The issues of the coming contest which he has laid down are accepted through the country. The general election will turn on the question : Mr. Gladstone's policy or Lord Beaconsfield's policy ? And this means, practically, Mr. Gladstone or Lord Beaconsfield ? The suggestion has been thrown out that Mr. Gladstone might hold the Chancellorship of the Exchequer in an administration of which Lord Granville should be the head, and Lord Hartington the leader in the Commons. Mr. Gladstone habitually lives in considerations in which regard to titular and official precedence has no place ; but finance, as Lord Beaconsfield has said, depends on policy, and large financial reforms could not be effected without the weight belonging to their author as first minister of the Crown. Great financier, too, as Mr. Gladstone is, finance is second in his mind to the moral side of politics ; and it is impossible to think of him as accepting the post of mere cashier or managing clerk of a Liberal administration. It has been suggested that, as was the case with Lord Lansdowne and Lord Russell, he might accept a seat in a new Liberal cabinet without office. But practically this would mean one or other of two things : either Mr. Gladstone would be a merely ostensible member of the Cabinet, giving his name to it and nothing else—a position in which neither he nor the country would acquiesce—or he would be really the first minister without salary, office, or responsibility, an arrangement quite impracticable and barely constitutional.

No ; if there is a Liberal majority in the new parliament it will be a Gladstone majority. If we are to have a Liberal administration, while Mr. Gladstone remains active in political life, it can have only one chief. Lord Granville is a man universally popular ; but he is neither a great minister nor a great parliamentary leader. He is an admirable party-manager and social harmonizer. The House of Lords is a drawing-room, and Lord Granville is a drawing-room politician. Moreover, although half-a-dozen years Mr. Gladstone's junior in age, he is half-a-dozen years Mr. Gladstone's senior physically and mentally. Lord Hartington has done his work admirably in the House of Commons ; his good sense, straightforwardness, and courage are universally acknowledged ; but he cannot succeed in rousing or interesting either himself or the country. In the middle of one of his speeches on a great political question he interrupted himself to yawn, amid the titters of the House of Commons. That yawn was symbolic. There can be no doubt that he would readily yield the leadership to Mr. Gladstone if the interests of the party required it. A combination which has been a good deal talked of, and which may come to pass, would give Mr. Gladstone the premiership and the leadership in the Commons ; Lord Hartington a peerage, in anticipation of his succession to the dukedom of Devonshire, and the leadership in the Lords ; reserving to Lord Granville high titular office, such as that of President of the Council or Lord Privy Seal, with such functions of advice and direction as belong to his experience, ability, and tact, and as were exercised in somewhat similar circumstances by such men as the Duke of Wellington, the Marquis of Lansdowne, and Lord Russell. These, however, are details. What is certain is that, if the measures of a Liberal administration, when the time comes for forming one, and of a Liberal House of Commons, when it is elected, are to go to the House of Lords with an authority which will overcome resistance, the official and parliamentary leadership of Mr. Gladstone will be essential. No other man has the personal energy for this work ; no other man has the popular forces at his back. The hostility of the Liberal aristocracy to him has been exaggerated. There have been a few secessions of no great importance ; but the great Whig families and the old Whig officials have been true to him, and the more promising members of the younger aristocracy follow his lead. The historic houses of Bedford, Devonshire, and Argyll, old Lord Halifax and the young Lords Rosebery and Lansdowne, represent a body of political influence and promise which is upon his side. The courtier, and even court, impertinences which were lavished by George III. on the elder Pitt and the younger Fox, and by George IV. on Canning, have not altogether been spared Mr. Gladstone. But feelings of this kind in quarters of this sort do not need to be taken into account. In reckoning with and resisting them they disappear. † † †

THE FINANCES OF PARIS.

PARIS, April 4, 1879.

THE foreigner who visits Paris and enjoys its pleasures and its splendor is not often aware of the price which the citizens of Paris have to pay for the privilege of having the finest capital in Europe. I have before me the Budget of Paris for 1879 ; and I see among the *ordinary* expenses an item of $20,005,956—an item inscribed perforce every year in the budget. This sum alone represents nearly half the annual expense of the city of Paris, which, in fact, now normally amounts every year to $41,200,000. Paris looks like a shining sun surrounded by such small planets as Marseilles (of which city the annual expense is only $2,200,000), Lyons ($2,087,471), Bordeaux ($1,328,626), Lille ($926,548), Rouen ($789,325). Then come in order of wealth or of extravagance, as you like it : Saint-Étienne ($685,072), Havre ($576,467), Toulouse ($528,676), Nantes ($362,781). Nantes begins the list of the cities whose budget is under two millions of francs ($400,000). In the descent to one million we find Nantes, Nancy, Reims, Nice, Amiens, Angers, Toulon, Nîmes, Limoges, Versailles, Boulogne, Grenoble, Tours, Orléans, Montpellier, Rennes, Troyes, Besançon, Clermont-Ferrand, Dijon, Caen—I have placed them in their order of wealth. You see at once what a position Paris holds. Marseilles, the queen of the Mediterranean Sea, has only a budget of eleven million francs, while Paris has all the dignity of the budget of a small kingdom, spending annually more than two hundred millions of francs. The sum of $20,005,956 which is mentioned above represents the interest and the sinking fund of a capital of $397,423 229, which will be repaid, if all goes well, only in 1950.

What is the origin of this stupendous debt of nearly two milliards of francs ? It is to be found chiefly in the extravagance of the Second Empire and its mania for new houses and new boulevards and streets. Nero set a part of Rome on fire, and rebuilt it ; perhaps his way was the cheapest. M. Haussmann destroyed with much care great quarters of Paris, and had them rebuilt. Loan after loan was emitted by Paris after 1852 ; the budget of Paris for 1852 was still rather modest ; we had the loan of 1852, the loan of 1855, the loan of 1860, the loan of 1865, the loans of 1867 and 1868 made to the Crédit Foncier, the loan of 1869. After that date come the loans made after the two sieges of Paris, and for the liquidation of the debts contracted during the invasion and the Com-

mune. The Republican Government, however, did not think of making economies; the very men who had published the 'Comptes fantastiques d'Haussmann' (a very poor allusion to the 'Contes fantastiques d'Hoffmann'), the men who had attacked the extravagance of the Empire and denounced the method of giving labor at any price to the people, began at once to look into the papers left by M. Haussmann, and to study his plans. They saw new boulevards to cut, new squares to make. There is, I suppose, a born mason in every man; our Municipal Councillors, at any rate, seem determined to change again the face of the capital They have cut the immense Boulevard Saint-Germain across the quiet old quarters of the left bank of the Seine; they have cut the Avenue de l'Opéra, from the new Opéra to the Théâtre-Français, across the Butte des Moulins.

Since 1871 the Municipal Council of Paris has contracted two great loans—in 1874 and in 1876; the capital which has to be repaid by the city on these loans was, on the 31st December, 1878, equal to $77,196,600, which is equivalent to an annuity of $3,564,019. It is calculated that the actual total annuity of the debt of Paris, which amounts to $20,005,956, will be reduced, by the operation of the sinking fund, $8,948,766 in the course of thirty years. This reduction of the debt will, of course, only take place if there is no new debt incurred, which does not seem a very probable contingency, as our Municipal Council is more inclined to extravagance than to economy. The sum last named represents nearly the amount of the new taxes which were created in 1871 and in 1872; if all went well, if Paris became frugal and wished to be economical, the citizens of Paris could, therefore, throw off thirty years hence the burden which has been imposed upon them; but if our Councillors continue to walk in the footsteps of Haussmann, there is no hope of ever seeing a diminution of the annuity of the municipal debt, nor a diminution of the municipal taxes.

While the annual tax, per capita, amounts in Belgium to $7.36, in Switzerland to $2.86, it is equal in Paris to $22.40; and this figure does not tell the whole story: it represents only a part of the annual contribution paid in Paris, and in Belgium there is no *octroi* (or entrance duty paid on nearly all articles of food that enter the city); in Switzerland the municipal tax is a part of the figure which I have given. In Paris you must add to the figure of $22.40, which represents the municipal tax, a charge of $13.33, which represents the average payment made by each French citizen to the state. Each Parisian pays therefore, in all, $35.73. He pays twice as much for the expenses of the capital as he does for the imperial expenses. (N.B.—What I have said applies to every inhabitant, whether male or female.)

In old times, before 1852, the receipts of Paris were always somewhat larger than the expenses. The surplus was employed in public works or helped to diminish some taxes. The new economic school has found this too vulgar and too *bourgeois* (as we say), merely to apply a surplus to extraordinary expenses. "Why don't you," said the Haussmanns, "consider this surplus as the interest of a large capital, and spend this capital at once in some great works? It would be more systematic, and, in the end, as economical." It is true that the rules which apply to an individual do not apply to a community; but it seems to me to be merely because the community increases in numbers; if a community makes a loan, there will be in the course of time more individuals who will work in order to repay the capital. It is on this principle of the gradual increase of the population that you can defend the system of state loans and city loans which has become universal. We can hardly conceive at the present day a state or a city having no debt whatever. So much wisdom would seem like folly. The Parisians, however, have entered with too much ardor upon this new system of "the capitalization of the surplus." The city owes now $397,423,229, and in order to liberate itself it has to pay, till the 25th February, 1950, reckoning the annuities and the lots (large lots are drawn in a new sort of lottery), a sum which amounts to $921,349,259. And if you add to this enormous sum what has been paid since the engagements were contracted, you will arrive at the still more enormous sum of $1,091,698,306, a sum equivalent to the ransom which France had to pay to Germany after the last war.

I come now to the resources of Paris. I have shown what its expenses are; I must show how they are met. The greatest resource is the *octroi*. Originally this entrance-tax on the necessities of life had for its object only the endowment of the hospitals of Paris, but now it has become the great lever of the whole administration. It is marked on the budget of 1878 for $25,340,620; with the *octroi* alone Paris can pay the interest on its debt. The *octroi* falls very heavily on the people. Each litre of wine (whether good or bad, cheap or dear) pays at the barrier of Paris an *octroi* duty of 23.875 centimes (nearly five cents), of which 12 centimes are for the state and 11.875 centimes for the city. This applies to the litre when the wine is not bottled; when it is bottled, the tax rises to 50 centimes (ten cents), 30 for the benefit of the city and 20 for the state. But little wine enters Paris in bottles; it is generally only bottled inside of the barriers. A workingman who drinks on an average a litre of wine a day—and this is a very reasonable measure, as the French wines are light—pays in the course of the year $8.66 to the city and $8.67 to the state, which makes in all $17.43. This he has to pay out of a salary which is often not higher than $240 or $300. The housekeeper who puts in the course of a week in her pot one and a half kilogrammes of butcher's meat has paid at the end of the year for 78 kilogrammes of meat the sum of $1.81 (the *octroi* on meat is 11.605 centimes per kilogramme—about two pounds). Salt meat (what the French call *charcuterie*) pays double—22.77 centimes per kilogramme. My woman will have to pay for geese and rabbits 9 centimes per kilo. (this is the third category of game—the first and second categories, hares, pheasants, deer, etc., pay 30 to 75 centimes); butter, 16.80 centimes; eggs, 4.20 centimes per kilogramme; fish, 21.60 centimes for the second category, 40 20 for the first; common oil, 67.45 centimes (of which 15 go to the treasury); vinegar, 18 centimes per litre; salt, 6 centimes per kilogramme; beer, 15 centimes per litre; grapes, 5.76 per kilogramme. Alcoholic drinks pay at the barriers the enormous sum of $53.20 per hectolitre (about 4½ gallons).

The *octroi* of Paris is not only levied on articles of food; there are also small duties on wood, on coal, on all sorts of burning-oils, on candles. You can hardly, in fact, do anything without unconsciously paying something to the *octroi;* you are a taxpayer whenever you eat, or drink, or warm yourself, or light a candle. This unconsciousness is the great argument always urged in the defence of the *octroi*. The *octroi* duty is merged in the price of each article. When you go to market and buy a fish or a chicken you never think of the little clerk at the barrier, in his tight green uniform, who has already levied his tax on your fish or chicken, at the dawn of day, at the time when the market people enter the barriers. Whatever may be said against the *octroi*, it must be acknowledged that we do not feel its tyranny so keenly as we feel the tyranny of the tax which we must go and pay ourselves in the collector's office, such as the personal tax, the land tax, the house tax, the tax on revenue.

The *octroi* is also paid on many articles which enter into the construction of houses and of carriages, stones, cement, plaster, marble, iron, slate, bricks, clay, woods, colors, essences, bitumen, glass; there are taxes upon hay, straw, etc. Out of a receipt of 125,398,641 francs ($25,079,608) of the *octroi* in 1877 we can separate, 1st, what is due to the alimentation, 81 millions (eatables 26,312,510 francs, and drinks 54,639,728 francs); 2d, *octroi* on all materials of construction, 13 millions; 3d, combustibles (wood, coal, etc.), 10 millions; 4th, alcohols, 8 millions; 5th, articles for lighting, 5 millions; 6th, *octroi* on forage of horses, 4 millions. The rest amounts to about 4 millions.

Correspondence.

EMPORIA (KANSAS) BONDS.

To the Editor of The Nation:

Sir: As you have been willing to advertise the dishonesty which some sections of the country practise, will you please place the following on your "Black List." The city of Emporia, Lyon Co., Kansas, issued legally and correctly $12,000 of bonds dated May 21, 1872, and paid the coupons on them for two years. In 1875 they let the coupons go by default and repudiated the whole debt without giving any reason for such a step. The amount was small, and until recently the bonds have been too scattered to have united legal action in the matter. The city is growing and in good shape financially, but, pleased with their effort of 1872, they have just voted to issue a large lot of new bonds. Will you inform the public about them? W. R.

Lowell, Mass., April 16, 1879.

THE McCLELLAN-PORTER DESPATCH.

To the Editor of The Nation:

Sir: In your review of "Fitz-John Porter's Case" in the *Nation*, No. 720, an extract is made from General McClellan's despatch of September 1, 1862, to General Porter. As the criticism is calculated to do great injustice to those officers, I take the liberty of recalling the fact to

the mind of your readers that the despatch mentioned was sent at the earnest *personal solicitation* of Mr. Lincoln.

The interview with the President, and General McClellan's reluctance to take any action that might appear to doubt the loyalty of General Porter, or the gallantry of an army "committed to the death to a duty self-imposed," can be found in detail upon page 183, General McClellan's Report, Washington, 1864, or pages 341 and 342 of the edition of Sheldon & Co., New York, 1864. And there also can be read General Porter's telegram to General McClellan, the last line of which, for terseness and truthfulness, has few equals in modern war despatches.

Yours respectfully, JOHN P. NICHOLSON.

PHILADELPHIA, April 19, 1879.

TO THE EDITOR OF THE NATION:

SIR: In your review of General Fitz-John Porter's case, in this week's *Nation*, it seems to me you are in error as to the part taken by General McClellan in his telegram to Porter. As you put it, this telegram was a fatal indiscretion. As I prove it in the following notes, it was a necessity arising from Pope's wilful misrepresentation to Halleck in a letter from Centreville, dated September 1, 1862.

I had dealt with this matter in my forthcoming history of Pope's campaign, and will ask you at this opportune period to give the following pages an insertion.—Yours truly, GEO. H. GORDON.

BOSTON, 37 SEARS'S BUILDING, April 19, 1879.

"This letter was filled with meanly artful complaints against his generals, with charges of lukewarmness against his troops, with brag and bluster in behalf of himself. It was a tissue of misrepresentations. It was written to turn public censure towards worthy and brave men, that the real offender might escape. In the recent vindication of General Fitz-John Porter, Pope has been necessarily condemned. In the rapidity with which he sought safety in flight, the sincerity of his bragging letter was revealed.

"Pope began his communication by a reference to his army. Things were quiet; his men were resting, and they needed it. He was obliged to keep considerable infantry along the road: his cavalry was completely broken down; there were not five horses to a company that could raise a trot. He should attack again to-morrow, if he could; the next day certainly. Then he assailed his own troops:

"'I think it my duty,' he continued, 'to call your attention to the dangerous conduct of many brigade and some division commanders of the forces sent here from the Peninsula. Every word and act and intention is discouraging, and calculated to break down the spirits of the men and produce disaster. One commander of a corps who was ordered to march from Manassas Junction to join me near Groveton, although he was only five miles distant, failed to get up at all—worse still, fell back to Manassas without a fight and in plain hearing, at less than three miles distance, of a furious battle which raged all day. It was only in consequence of peremptory orders that he joined me next day. One of his brigades, the brigadier-general of which professed to be looking for his division, absolutely remained all day at Centreville in plain view of the battle, and made no attempt to join. What makes the matter worse, these are both officers of the regular army who do not hold back from ignorance or fear. Their constant talk, indulged in publicly and in promiscuous company, is that the Army of the Potomac will not fight, that they are demoralized by withdrawal from the Peninsula, etc. When such example is set by officers of high rank, the influence is very bad amongst those of subordinate stations. You have hardly an idea of the demoralization among officers of high rank in the Potomac Army, arising in all instances from personal feeling in relation to changes of commander-in-chief and others These men are mere tools or parasites, but their example is producing, and must necessarily produce, very disastrous results. You should know these things as you alone can stop them Its source is beyond my reach, though its effects are very perceptible and very dangerous. I am endeavoring to do all I can, and will most assuredly put them where they shall fight or run away. My advice to you—I give it with perfect freedom, as I know you will not misunderstand it—is that, in view of any satisfactory results, you draw back this army to the intrenchments in front of Washington, and set to work in that secure place to reorganize and rearrange it You may avoid great disaster by doing so. I do not consider the matter except in a purely military light, and it is bad enough and grave enough to make some action very necessary. When there is no heart in their leaders and every disposition to hang back much cannot be expected from the men. Please hurry forward cavalry horses to me under strong escort. I need them badly, worse than I can tell you'—[*Official Correspondence, Pope from Centreville*, 8.50 A.M *September* 1, 1862, *to Halleck at Washington. Pope's Virginia Campaign*, *pp.* 250, 251.]

"This composition, so plainly acknowledging the utter incompetency of John Pope, and so plainly attempting to shirk responsibility for that incompetency, was shown to the President of the United States. Abraham Lincoln feared that these base accusations against Porter, and the baser insinuations against McClellan as the fountain source of insubordination (for these were the officers to whom Pope alluded), might not be wholly false, and he hastened to plead with General McClellan in an interview which that officer has given in substance to the world. The interview was held at the house used by Halleck for his headquarters. McClellan was directed to come there to meet the President. We can bring before us at this hour the grave, almost sad, earnestness with which Abraham Lincoln informed General McClellan that he had reason to believe that the Army of the Potomac was not cheerfully co-operating with and supporting Pope; and we can hear the President's tones of affection when, as McClellan reports him, he said, 'He had always been a friend of mine,' and asked me as a special favor to use my influence in correcting this state of things. Then followed at this interview McClellan's earnest reply that he was confident the President had been misinformed; for 'whatever sentiment,' he urged, 'the army might entertain towards Pope, they would obey his orders, support him to the fullest extent, and do their whole duty.' But the President desired McClellan to telegraph to '*Fitz-John Porter* or some other of my (his) friends' and try to do away with any feelings that might exist. That McClellan could rectify the evil and that no one else could the President believed and said, upon which General McClellan said he would telegraph to General Porter or do anything else in his power to gratify his wishes and relieve his anxiety. Abraham Lincoln then thanked McClellan very warmly, assured him that he could never forget his action in the matter, and departed. McClellan immediately sent the following telegram; it was forwarded by General Halleck:

"'"I ask for my sake, and that of the country, and that of the old Army of the Potomac, that you, General Porter, and all my friends, will lend the fullest and most cordial co-operation to General Pope in all the operations now going on. The destinies of our country, the honor of our army, are at stake, and all depends now upon the cheerful co-operation of all in the field. This week is the crisis of our fate. Say the same things to my friends in the Army of the Potomac, and that the last request I have to make of them is, that for their country's sake they will extend to General Pope the same support they have ever to me.' 'I am in charge,' continued McClellan, 'of the defences of Washington and am doing all I can to render your retreat safe should that become necessary.'"—[*McClellan's Report of his Interview with Abraham Lincoln and Telegram to General Porter. McClellan's Report and Campaigns, pp.* 341, 2, 3, 4.]

"Pope's letter of accusation had been potent for evil. The President was prejudiced against Porter, and this prejudice was manifest in his approval of the findings and sentence of that court-martial before which General Porter was arraigned for these grave offences which were set forth in Pope's letter, and under which he has suffered so unjustly for so many years. But the attempt to poison his mind against McClellan failed. Abraham Lincoln believed in General McClellan's patriotism and in his ability. He was his friend; and he showed his great friendship by promoting him from the expressly limited jurisdiction of the works and garrison before Alexandria, and from the expressly prohibited exercise of any authority or control over the troops actively engaged in front under Pope, to both of which he had been verbally condemned by Halleck in his personal interview at Washington, to the sole and entire command of all the combined forces which met and vanquished, on the 15th and 17th of September, the victorious Confederate army at South Mountain and at Antietam.—[*See McClellan's Reports and Campaigns, pp.* 341-344.]

"This promotion was due to the President's own act and judgment; it was made in the face of, and in despite of, the evil counsels and mischievous interferences of his War Secretary, Stanton, and his War Secretary's abettor, Halleck.—[*See 'History of Great Rebellion,' following Pope's retreat to defences of Alexandria.*]

"It is hardly necessary to say that General Porter, in replying to McClellan's telegram, indignantly disclaimed the need of any appeal to his loyalty. He denied with much feeling that his own men required a spur to their loyalty.

"'"You may rest assured,' he wrote, 'that all your friends, as well as every lover of his country, will ever give, as they have ever given to General Pope, their cordial co-operation and constant support in the execution of all orders and plans. Our killed, wounded, and enfeebled troops attest our devoted duty.'"—[*Fitz-John Porter from Fairfax Court-House at* 10 *A.M., September* 2, 1862, *to General George B. McClellan.*]

[We had overlooked the fact that the President suggested or asked for the McClellan telegram, and we admit that our allusion to it without any mention of its origin does General McClellan injustice. But we did not use it for the purpose of casting any imputation on him. We referred to it as one of the things which helped to strengthen the popular impression that the McClellan set in the army were not doing their duty; and that it had this effect, no matter under what circumstances it was written, we still maintain. —ED. NATION.]

OUR POLITICAL EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: It has become an axiom that the permanence of a popular government depends upon the intelligence of the average citizen, and we guard and foster our common schools with sufficient reason. But if the chief end of state education is the maintenance and elevation of the state, it would seem self-evident that an important element of this education should be a grounding in the rudiments of statecraft and the theory and practice of our own political system. That this has not been apparent, however, to our school boards in the past hardly needs to be said. In default of any school-training, what has been the actual teaching of our youth?

The boy comes out of school with the commonplaces afloat in the air about the blessings of liberty and the pricelessness of citizenship in our free land. If he is a thoughtful boy, it very likely seems a little thing to him that no one should want to enslave him, or should persecute him for thinking and speaking his mind and honestly obeying his conscience. No one has taught him that these seemingly simple conditions have been the slow growth of centuries, had their roots in the agony and oppression of whole peoples, and have been nurtured by untold endeavor and rivers of blood and tears. The chances are he will conclude that all such talk he hears and reads in the papers is mere cant, and be inclined at the start towards a benumbing scepticism of the sincerity of those who make such professions; and it may take him years to discover that there is genuine and well-founded devotion to free in-

stitutions among sound and wise men, and correct the false attitude taken at first, or it may never be entirely corrected.

But the average boy is merely puffed up with the vainglory of being in some uncomprehended way one of a superior and chosen people, and an ignorant contempt of foreign nations. Of the relation of the States to the Federal Government, of the functions and limitations of either or their co-ordinate branches, he knows nothing, nor of the duties and tenure of office. His next lesson, inferred from his father's party paper, is that the nation is divided into two great bodies, one of which is entirely occupied in doing and contriving evil, and is only prevented from speedily destroying the country by the vigilance of the other, which is by nature incapable of sin and continually thwarts the wicked party's open or insidious designs ; and he gathers an impression that this party warfare is the greater and more important part of government, and that caucuses and conventions are component elements of the constitutional machinery, just as are elections and congresses. If any defects in the actual working of things, not directly or indirectly attributable to the sinful other party, are admitted or implied, he is pointed to the source of the trouble in the failure of honest citizens to do their duty and "attend the primaries," and he resolves to avoid that error when his own time arrives.

Meanwhile elections take place and the boy picks up a stock of learning about "work" and "claims" and "services" and the like. He learns that offices are for the reward of "workers," and that consequently they should change hands frequently in order to give all the faithful a chance and stimulate the zeal of new recruits, and that office-holders owe it especially to their party to repay its favors by devoting time and money to its support. That seems good logic, and a natural coroliary is that a man is a "fraud" and a "traitor" who continues to stand when the party has put up a new candidate for his place. Much besides he hears, more or less delightfully mysterious, about "influence" and "making slates" and "healing breaches" and "selling out" and "restoring harmony."

By and by he attains to the proud privilege of the suffrage. He attends his neighborhood primary, but is surprised to see with what celerity matters seem to dispose of themselves, and of how little consequence his personal part in the affair is. Very possibly he finds the smooth working facilitated by the employment of printed ballots which some one has been at the trouble and expense of kindly providing. About this time he is getting into business and marries, and, finding cares increase, forgets all about the primaries, or runs in at the time if he remembers and can get away, but with the former result ; and he generally contents himself with voting the regular ticket prepared for him, admitting upon occasion that "the good men ought to combine" and then all would be well.

But perhaps he is more curious or more ardent than most young men, and bent upon finding out the secret springs of "politics," and if he is tonguey and shrewd, and shows no signs of impracticable notions, he is very soon taken into confidence, and learns that the primary is simply a formal ratification of a division of offices arranged beforehand by a little interested clique through a process of personal solicitation, balancing of claims, pledges, and bargains, barter and sale. He learns that working for the party and to save the country means "seeing" men who are "powers," buttonholing, cajoling, treating "the boys," slapping on the back, being hail-fellow well met, and some other things rather hinted at than described. If his aptitude for these patriotic arts is genuine, he takes a hand at the game and in a few years the county papers have paragraphs about "our rising and gifted young legislator" or "enterprising sheriff."

And by that time he has learned still another lesson, that the horror of the managers at the traitorous designs of the leaders of the opposite party is not inconsistent with very friendly social and private relations, and that the trading and bargaining are not always confined within the party lines ; that, in fact, a great deal of the indignant scorn heaped in public on the enemy is, like that of lawyers arguing a case, professional, and that, like them, the champions who have been shouting their slogans and hurling defiance can ignore their differences in private, or even laugh together over the amusing incidents of the encounter, and perhaps incidentally arrange a little compromise that may or may not result in the public good, but shall at any rate redound to the profit of the contracting parties.

What wonder, then, if he end where his more thoughtful schoolfellow began, in a contemptuous disbelief of the sincerity of all patriotic professions and a scoffing acquiescence in things as they are, "a belief qualified with scorn in all things extant." To him any assumption of virtue in private as well as in public is simply the indication that a man is literally what in his peculiar dialect he sneeringly dubs him, "high-priced." His secret opinion of the mass of voters is, that they are a great flock of sheep that will follow the bellwether, however unsavory, wherever he leaps, if only he displays agility and is tarred with the proper stick ; and it must be confessed he has some show of reason for so concluding.

Now, that is not a satisfactory result nor one agreeable to dwell upon, but it is a perfectly logical consequence of the training of which it is the outcome. And it does not seem very reasonable to expect any very great improvement in our politics until our boys are provided with some sort of preparation for the parts they are to play, and some sort of safeguard against the quackery and false pretence with which they will be beset.

W.

April 11, 1879.

Notes.

D. APPLETON & CO. have in press 'The Historical Poetry of the Ancient Hebrews, Translated and Critically Examined,' by M. Heilprin, a work which, while notable for its erudition, will be found eminently fresh and readable.——Henry Carey Baird announces a work on the 'Sugar Beet,' historical and practical, by Lewis S. Ware, C.E.——John Wiley & Sons have just published Part II. of Professor Charles E. Greene's 'Graphics for Engineers, Architects, and Builders.' Part I., relating to roof-trusses, was noticed in No. 610 of the *Nation* (March 8, 1877). The part now ready contains the analysis and discussion of bridge-trusses. Part III., completing the work, will relate to arches, and may be expected in the course of the year. The graphical method of treating the problems which arise in roof and bridge construction, though comparatively new, has met with general favor and acceptance wherever it has been introduced and studied ; but the number of books in the English language from which a knowledge of the method can be obtained is still very small. Professor Greene's work is designed to meet the wants of builders and designers of bridges and similar structures as well as to serve as a text-book in technical schools. It is made up largely of original matter, and is written in a simple and concise style. No knowledge of the higher mathematics is required for its use.——The annual report of the Connecticut Agricultural Experiment Station for 1878 is replete with valuable information for agriculturists everywhere. The work of the Station has not been confined to commercial fertilizers and feeding-stuffs, but has included also analyses of the sugar-beet, well-water, Paris green, white hellebore, etc. The discussion of the theory of the Stockbridge manures ; the chapter on the composition of the soil of the red sandstone of the Connecticut Valley ; and the experiments on the relation of soils to water, are especially deserving of attention.——The April number of the *New England Historical and Genealogical Register* is unusually strong in its own line. Dr. Osgood opens it with a biographic sketch of the late E. A. Duyckinck, whose portrait is prefixed ; there is a long and minute and very interesting account of Ezekiel Cheever, an old Boston Latin-School master at the close of the seventeenth century, whose 'Accidence' had a remarkable currency (the seventh edition bearing date of 1704, the latest of 1838); an outline of the Hazen Family for four generations has a timely interest ; and believers in hereditary genius will take comfort from the list of dignitaries composing the "family circle of Mrs. Ursula (Wolcott) Griswold."——The *Magazine of American History* for May contains a translation of Count Axel de Fersen's letters written from America during his connection with Rochambeau, as given in Klinckowström's recent biography of the gallant Swede. A portrait of Fersen at the age of twenty-eight shows a very prepossessing face, which might well have found favor with Marie Antoinette.——With Part VI. the first of the two volumes of Dr. Grove's 'Dictionary of Music and Musicians' (Macmillan & Co.) is concluded, ending with the letter I. It includes the great names of Handel and Haydn, of one of whom a mask is given, of the other a silhouette, besides lesser composers such as Gung'l, Halévy, Herold, F. Hiller, Stephen Heller, etc. Notices are also devoted to Sir John Hawkins, Helmholtz, Hanslick, Henry VIII., and Herschel. Among the instruments treated of are the harp, harpsichord, horn, and hurdygurdy. The Boston Handel and Haydn Society and Harvard Musical Association are not overlooked. Miss Hauck's success as *Carmen* is recorded before it is cold. The most important theoretical article is on Harmony.——

'Egypt under Ismail Pasha,' edited by Blanchard Jerrold; 'The Satsuma Rebellion,' by Augustus H. Mounsey; 'Primitive Manners and Customs,' by James A. Farrer; 'Pictures of the Past: Memories of Men I have met and Sights I have seen,' by Francis H. Grundy; and 'Cæsar,' a sketch by J. A. Froude, are late English announcements.——M. Francisque Sarcey, whose 'Comédiens et Comédiennes' we reviewed last spring, has begun the publication of a second series, to contain critical studies of the actors and actresses of the Comédie-Française omitted in the first series, and of the other important dramatic artists of Paris. The first two numbers already issued are devoted to M. Worms and to Mmes. Dinah Félix and Jeanne Samary. M. Léon Gaucherel, who did all the etching for the first series, will now be assisted by M. Lalauze.

—The Trustees of the Metropolitan Museum of Art, now installed in its new building in Central Park, have issued a circular defining the shortcomings of the present collection by reference to the aims of the Trustees, which are justly comprehensive, and calling for subscriptions to the amount of $150,000, payable when $100,000 shall have been subscribed. Among the immediate uses for the money are the purchase of the Avery collection of porcelain, the King collection of gems, the purchase of casts, architectural models, archæological antiquities, etc., the starting of a school of design for the arts and trades, the establishment of a system of medals or awards, and the creation of a fund for lectures on art. Subscribers who wish to favor any one of these objects rather than another will be permitted to dedicate their contributions accordingly. The Trustees point to the straitened resources of the Museum, and contrast it with the liberal support given to similar institutions in Philadelphia and Boston. We hope their appeal will not go unheeded.

—Public-spirited persons having scientific sympathies are addressed in the tenth annual report of the American Museum of Natural History, also in its new quarters on the west side of Central Park. The invaluable collection of fossils illustrating the natural history of New York State purchased of Mr. James Hall has not been fully paid for, and many specimens deposited with the privilege of purchase it is highly desirable to secure as the property of the Museum. On deposit are mentioned several thousand specimens gathered by Clarence King's Survey, and Professor Pumpelly's collections in California, China, and Japan. Some Peruvian rocks and fossils, with terra-cotta vases and figures from San Salvador and Peru, have been received from the estate of the late Dr. A. Habel; and from M. G. L. Feuardent three cases of stone and bronze implements of the Swiss lake-dwellers. The library at the Museum, including works deposited for safe keeping, embraces nearly 12,000 volumes. A heliotype view of the main hall accompanies the report.

—Beyond general indications of activity and prosperity there is little to remark in the annual report of the Astor Library for the year 1878. The most important accession was the Archives of the United States Sanitary Commission, of which the transfer was the last act of that honored organization. Mr. Astor's gifts included six MSS., from the eleventh century downwards, some of them richly illuminated; and two precious specimens of early printing, one from Gutenberg's press, the 'Catholicon' of 1460, and the other Zainer's Augsburg Bible of 1477. In addition to the comparatively recent card catalogue, the Library now publishes quarterly lists of books received, in a neat form. The capacity of the reading-rooms appears to be taxed to the utmost, and it is to be hoped that the Trustees will avail themselves at the first opportunity of a system of electric lighting in order to double the usefulness of the Library by keeping it open in the evening.

—We receive from Mr. L. W. Schmidt three numbers of 'The Classics of Painting,' which appears to be an edition in English of 'Klassiker der Malerei' This work is announced as by Dr. P. F. Krell, of Munich, assisted by Dr. O. Eisenmann, of Cassel, the photographic prints by Martin Rommel, of Stuttgart, and the work published at Stuttgart by Paul Neff. It is one more added to the already considerable number of publications which photography and photographic engraving have made it easy to publish, but it is rather hard on the young student to be asked to receive as classical painting, or as having any intimate relations with classical painting, these reproductions of line engravings. It is perfectly well known to every lover of old pictures that the celebrated engravings after them of the famous old masters of engraving are very unlike their declared originals. It is not pretended by lovers of old engravings that they are very close copies; they are liked for their independent merit and original power. And now a collection of photographs from sixty-eight engravings by Edelinck, Metz, Rainaldi, and the like are announced as the classics of *painting!* To call it the classics of engraving would be much more nearly accurate—so far, at least, as the illustrations go. There are notices of the different painters of celebrity. The three numbers before us give short biographical and critical notices of several artists of the Tuscan school; but, of course, it is still too early to judge of the value of the book in this respect.

—*Lippincott's* for May opens with a sensible paper, "Why do We like Paris?" by Mrs. Sarah B. Wister. Mr. H. M. Robinson, who lately discoursed of dog-sledging in the Hudson's Bay Territory, now writes with equal grace of the summer phase of life there—life as it used to be rather than is—namely, the periodic canoe-journeys between Norway, in the Red River country, and York, on Hayes River, about five miles from Hudson's Bay. Here there is no brutal side to the picture, and the hardships of the *voyageur* have a rich compensation known to all who earn their familiarity with primitive Nature by the sweat of their brow. Miss Annie Porter's "My Village in the South" we have found less interesting in this third paper than in the two preceding. In "My Hero," Isabella Anderson, once a resident of Venezuela with her father, gives some reminiscences of the late General Paez, one of the most remarkable characters of modern times, and repeats some of the more marvellous incidents in his military career as heard from the lips of the General's wife. The narrative could not fail to be entertaining; but in two respects the reader might have been further enlightened. It is not made clear that Paez was a man of color; one of those who, to use the words of Gervinus, "descended from the formerly down-trodden zambo, mulatto, or mestizo races, but now lifted up by the exalting nature of the events of time, rose to views and aims, knowledge and actions, such as we look for only amongst the most advanced classes of mankind." And reference might have been made to General Paez's autobiography, of which the first and we believe the only volume was published in this city in 1867.

—The eastern shore of the Chesapeake, which not long ago was made the subject of some capital papers in *Lippincott's*, is taken up again in *Harper's* by a writer possessed of less literary skill, but still sufficient, and having the advantage of being an artist with his pencil. Moreover, by "A Peninsular Canaan" Mr. Howard Pyle does not mean (at least not yet—perhaps we shall hear more from him) the Maryland paradise described in *Lippincott's*, but the extreme southern and therefore the Virginian end, of Northampton and Accomac counties—virgin soil, so far as we are aware, to the writers for the popular magazines. The charms of this region appear to be inferior to those of the adjoining Maryland counties; manners are ruder, the land less rich; but the ocean, bay, and inland waters are full of picturesqueness and of animal life, and the tourist in search of complete relaxation could hardly fare better elsewhere on the peninsula. Mr. Pyle has brought back a number of excellent stories which, with the pretty designs, give spice and relief to his account of his experiences. Other superabundantly illustrated papers are "The Study of Art in Boston," by G. P. Lathrop; Col. Waring's "Berg und Thal," No. 3; "The Piano and its Antecedents," by Julius Wilcox; and "Stratford-upon-Avon," by William Winter. As a literary performance, the last-named is superior to the rest, and is adorned with pencil memoranda of Mr. Abbey's sojourn in England. Mr. Lathrop conveys, to our thinking, more information than instruction; all is Art that comes to his net. He is convinced, he says, that, "below the high schools at any rate, the boys succeed better in original design than the girls do." Colonel Waring had the good fortune to meet at Dietenheim with William and Mary Howitt. "Thither we went to claim one ray of their genial sunshine before their declining day shall have set for ever." Before these words could be printed the apprehension had been realized for one of these "genial, active, and happy octogenarians." A fine portrait of the late William Howitt accompanies the text. Mr. E. P. Whipple gives a sort of *précis* of Dr. Holmes's biography of Motley, and Mr. William Blaikie discusses the "Risks of Athletic Work," arriving at the sound conclusion that they are overrated. It would have been useful to point out how small an amount of regular gymnastic exercise, such as one may readily carry on in his own room, will keep up the tone of a system which has once been braced and solidified by concentrated training.

—Stress being laid on the first fruits of *Scribner's* Brazilian expedition, it is proper to bear witness to the pictorial and literary attractiveness of Mr. Herbert H. Smith's paper on Pará. Still, while admitting the faithfulness of the descriptive portions, we must consider the writer exceeding his instructions when making political and social generalizations that imply a much longer familiarity with Brazil than an "expe-

dition" affords. Highly interesting, and only too brief and incomplete, is the opening paper by an Italian writer on "The New Museum at Rome." One is impatient that representations of the masterpieces of statuary discovered since 1870 are so slow in being made accessible to the art-loving public. The few that are shown in this number of *Scribner's* only whet the desire. There is a somewhat naïve story, by Mr. C. H. Farnham, of a day's tramp along the North and East River docks, with semi-poetic illustrations of characteristic sights and industries. Mr. Hassard writes knowingly of Wilhelmj and Reményi, and borrows from Mr. Wm. M. Chase two pen-and-ink sketches of these eminent violinists. Mr. Wyatt Eaton makes another half-success in a portrait of Dr. O. W. Holmes, for which Mr. F. H. Underwood supplies an article interesting for its personal facts in regard to the poet, but hardly to be called discriminating.

—The May number of the *Atlantic* is not remarkably excellent. Mr. C. C. Coffin contributes a vigorous optimistic article to show that the material prosperity of the world is greater now than ever before, that earnings have increased while the cost of living has relatively decreased, that pauperism and crime are on the wane, that capital and labor are "naturally helpful," that readjustments of labor are necessary, that men must conform to the laws of progress or be crushed, and that "the race is moving ever on to a higher plane of civilization." The unexpressed conclusion seems to be that men must wait with their hands in their pockets and the faith in their hearts that all will turn out right in the end. The other economic article, on "The Abolition of Poverty," describes various co-operative associations as examples to the workingmen, and urges them to try such associations for distribution before attempting associations for production. Among the literary articles an instructive account of Émile Zola's critical opinions on the Romantic School is especially valuable, for it consists mainly of translations from Zola's own letters to the St. Petersburg *Messenger of Europe*. A sketch of Colorado travel by "H. H.," a very entertaining account of Champfleury's "Le Violon de Faïence," of which a fine and curious edition has lately been printed, a criticism of the decoration of Trinity Church in Boston and the Assembly Chamber at Albany, and stories and poems of average merit complete the number.

—With the last concert of the Oratorio Society, which took place in Steinway Hall on Thursday last, the regular concert season of 1878–79 may be considered to have terminated. The remaining "farewell," "testimonial," and other performances, with the exception of Mr. Wilhelmj's four soirées of chamber-music, do not call for any particular attention. The oratorio concert introduced, for the first time in this country, two parts of an oratorio, "Christus," by Friedrich Kiel. The author has been for many years professor of composition and thorough-bass at the Imperial High-School of Music in Berlin, where he is considered one of the most accomplished and learned musicians of the day. The oratorio fully justifies this reputation. It is the work of a scholar and a student, not of a man of genius or an artist. It bears evidence of the care and intelligence with which the author has studied and entered into the spirit of the works of the two greatest masters in this field, Bach and Handel. But it is a copy, a dry, soulless copy only; nothing of the genius of these two masters can be found in Kiel's highly-finished but uninteresting work. All that study and intelligence can do has been accomplished, but nothing else. The laws of counterpoint and polyphonic writing are as familiar to the author as the most rudimentary principles of his art, but of the grandeur and rich melodies of Handel, of the purity and noble simplicity of Bach, he can only produce a feeble imitation. The second part of the programme was of a miscellaneous character. A violin solo by Mr. Wilhelmj seems out of place in an oratorio concert. Mozart's "Ave Verum" in D major, one of those exquisite melodies which abound in his church music, was very fairly sung by the solo quartet, Miss Henne, Mrs. Rice-Knox, and Messrs. Graff and Stoddard. The chorale from the "Meistersinger" was, as far as the chorus was concerned, an improvement on the last performance at the sixth Symphony Concert. The air for contralto with violin obligato accompaniment from Bach's "Matthew Passion" was very fairly sung by Mrs. Rice-Knox, and the violin part was played by Mr. Wilhelmj with his usual mastery.

—The first chamber-music concert was a disappointment. Seeing Mr. Wilhelmj's name connected with these concerts we were induced to believe that something of unusual merit would be presented, or at least compositions which had seldom or never been heard here before. This, however, was not the case. The first number was a quartet by Haydn, which was exceedingly well played, but better than on former occasions only so far as the first violinist was better than any other artist who has taken part in it here before. The adagio for two violins, by Bach, was the redeeming feature of the concert, and was admirably played by Messrs. Wilhelmj and Damrosch. Schumann's piano-forte quintet, one of the brightest and most vigorous of his compositions, every bar of which breathes youth, strength, and poetry, received a very tame and prosy rendering. The violin solo, an arrangement of the romance from Chopin's Piano-forte Concerto in E minor, lost all original character and beauty by being transposed to an instrument for which it was not intended by the composer, who could only write with effect for his own instrument—the piano. Mrs. Swift's singing of Mozart's "Voi che sapete," and of two very uninteresting songs by Mendelssohn, had no place in a concert intended for the performance of classical chamber-music.——Mr. Sherwood's first recital of piano-forte music, which took place in Steinway Hall, introduced a young artist possessed of many excellent qualities. An infallible technique, a delicate and refined touch, an intelligent and artistic conception of the works before him, ensure for Mr. Sherwood a high rank among the pianists of our day. He does not impart the character of strength and manliness that is required by such works as the Beethoven Sonata and the "Études Symphoniques" by Schumann, but he rendered the works of the modern school, such as Chopin, Liszt, and Rubinstein, with a warmth and delicacy of feeling, with a complete mastery of all difficulties, that was fully appreciated by a numerous audience, from whom he received a most gracious acknowledgment of his efforts.

—M. Saint-Saëns, next to Berlioz the most gifted and original orchestral composer France has so far produced, is now following the example of his great predecessor in making a tour through the principal cities of Germany and Austria, where he shows himself in the fourfold capacity of composer, director, pianist, and organist. His success so far has been great in every respect, although a certain class of musicians, to whom every melody is distasteful which was not sung to them in the cradle by their nurses, contrive, as in the case of Liszt and Rubinstein, to find much more to admire in his playing than in his compositions. When he came to Vienna, Dr. Hanslick of course found more or less to praise in his early and immature compositions, while the beauties of his later and more original works were not visible to the near-sighted professor. Saint-Saëns, however, did not commit suicide on this account, but consoled himself with the extraordinary success of his new opera, "Étienne Marcel," at Lyons. The production of this work at Lyons instead of Paris is a somewhat remarkable event in the history of French music, for it is the first time that a work of such importance has been performed first at a provincial theatre instead of at the capital. The way this came about was as follows: The Théâtre Lyrique no longer exists, and while the new opera was adjudged too serious for the Opéra-Comique, the Grand Opéra appears to have regarded it as too light to enter its portals—on the same principle, we suppose, that "Tannhäuser" was at first rejected at Berlin as being too lyrical and not adapted to the stage. Saint-Saëns finally lost patience and took his "Étienne Marcel" to Lyons, where, in the course of a few weeks, more than a dozen performances of it followed in rapid succession, and now the Paris critics are very jealous and indignant that a provincial city should have got such a trump into her hands. It is quite probable that Saint-Saëns's opera will follow him on his continental tour. The same happy fate will doubtless attend the "Benvenuto Cellini" of Berlioz, which, after lying in the desk so many years, has now been brought out very successfully at Hanover, owing to the commendable efforts of Von Bülow. It is proposed to follow up this triumph next season by putting on the boards Berlioz's other opera, "Béatrice et Benedict," for which Bülow intends to do what Berlioz once did for Weber's "Freischütz" at Paris, by changing the spoken dialogue into recitative.

—These dramatic works, together with Rubinstein's "Maccabees" and "Nero," and Hoffmann's "Armin" and "Aennchen von Tharau," to which we alluded some time ago, promise to infuse fresh life into the stale repertory of foreign theatres. Still more important, from this point of view, is, of course, the fact that Wagner's "Ring des Nibelungen" has now been produced entire at Leipzig, Munich, Vienna, and Hamburg, and in part at Cologne, Weimar, Schwerin, and other cities. The Trilogy, as everybody knows, really consists of four parts, the scenic overture "Rheingold" counting as one part. We have reason to believe that at Vienna there are some folks who feel exceedingly sorry that it does not consist of five or six parts instead of four. These are Hanslick, Spitzer, and Speidel, the three gentlemen who control the literary department of the

leading Vienna newspaper, the *Neue Freie Presse*. They have eagerly availed themselves of the opportunity afforded them by the production of the successive parts of the Trilogy to launch forth venomous criticisms and quasi-sarcastic essays past counting, so that one feels inclined to wonder sometimes what these three popular writers would have done for a living if Wagner had never been born. Ungrateful are the wasps which persist in pronouncing as bad the pear on which they feed and grow big! They will, doubtless, swarm over to Berlin as soon as the Imperial Opera there decides on purchasing the right to perform the Trilogy, although at present there seems little prospect that this will soon happen. The director, Herr von Hülsen, wishes to have the "Walküre" alone, while Wagner stubbornly refuses that unless he take the whole work. Three reasons are assigned by Von Hülsen for not wishing to do so. The first is quite ingenious: "It would disturb the present repertory." No doubt. The second is less original, having been advanced before: "It would ruin the voices of the vocalists." If he means by this that it spoils them for singing in the Italian bravura style, we may admit this too. The third reason assigned is shamefully sophistical. Ignoring the unexceptional pecuniary and artistic success of the Trilogy wherever produced, he—or rather his organ, the Berlin *Fremdenblatt*—signalizes as a warning omen the fact that not long ago, at a town on the Rhine, Wagner's "Meistersinger" could not be performed one evening because only a handful of people had appeared in the auditorium. To this one might reply that a small town like Mainz has not the means of giving such a difficult work in proper style, when even in Berlin the performance of it, as of Wagner's operas in general, is far inferior to what it is in Munich and Leipzig. But it was likewise at Mainz, and about the same time, that just fourteen dollars' worth of tickets were sold one evening for Mozart's "Figaro," while a third-rate operetta had a run of twenty-six nights to crowded houses.

—Stratford-on-Avon celebrates the three hundred and fifteenth anniversary of the birth of Shakspere by a series of entertainments, extending from Wednesday, April 23, to Saturday, May 3, in the Shakspere Memorial Theatre. This is the only part of the Memorial building, projected at the Tercentenary Celebration in 1864, which is finished. The other parts—a picture gallery and library—it is hoped will be completed during the summer. The opening exercises consist of the recitation by Miss Kate Field of a dedicatory address written by Dr. Westland Marston, and the performance of "Much Ado about Nothing," Barry Sullivan taking the part of *Benedick*, and Mrs. Theodore Martin (Helen Faucit) that of *Beatrice*. On Thursday and Saturday "Hamlet" will be produced, Mr. Sullivan taking the title rôle. Friday evening will be devoted to a concert under the direction of Sir Julius Benedict, with Mme. Arabella Goddard, Miss Kate Field, Mme. Antoinette Sterling, Mr. W. Shakespeare, and Mr. Santley for the principal artists. During the following week "Much Ado" and "Hamlet" will be repeated, and "As You Like It" will be produced. The festival will close with a morning performance on May 3. The committee announce that "any funds that may be subscribed beyond the amount necessary to complete and maintain the building and garden will be applied to the annual celebration of Shakspere's birthday, the advancement and improvement of the dramatic art by the establishment and maintenance of a school of acting, the delivery of lectures, the establishment of prizes for essays, and the relief and assistance of poor and deserving members of the theatrical profession."

—The second performance of a play after an interval of more than two centuries is certainly deserving of comment. The French theatrical managers make better use of their matinées than is done in this country: instead of always repeating the piece which they have played the night before, they often endeavor to give variety by reviving interesting old plays or by attempting promising new plays by young authors. At one of the theatres a series of revivals for one performance only of pieces of note in the history of French dramatic literature has been given, including the "Phèdre" of Pradon, which was opposed to the "Phèdre" of Racine; the "Pédant joué" of Cyrano de Bergerac, which is supposed to have given Molière a hint or two; and, lately, "Mirame," a tragedy in five acts, written, under the direction and inspiration of the Cardinal Duc de Richelieu, either by Desmarets, to whom it is generally credited, or by Boisrobert, to whom M. Sarcey and M. Vitu attribute it. The Cardinal brought out "Mirame" with great splendor in 1639, spending more than four hundred thousand livres on decorations and machinery, and building especially for it in the Palais-Cardinal a theatre which was occupied by Molière after the Palais-Cardinal had become the Palais-Royal. The play, which now to us seems absurd—most of the characters die in the fourth act and come to life again in the fifth—was not much, if any, worse than most other tragedies of that time. It was brought out during the height of Richelieu's power, before the assembled courtiers, all of whom would have been delighted to praise and applaud Richelieu's work, and yet it was performed amid a dead and oppressive silence, and has not been repeated until now. What was the cause of this failure, when there was apparently every reason for success? M. Auguste Vitu, the dramatic critic of the *Figaro*, prefaced the recent performance of "Mirame" with a brief lecture on the play, in which he solved this difficulty most happily. As was the fashion in those days, "Mirame," while decked in classic garb, was in reality a setting of contemporary history; it was an attack by Richelieu on the king's wife; its plot bore a transparent resemblance to the current scandalous stories about the intrigues of Anne of Austria and the Duke of Buckingham. M. Sarcey, in the *Temps*, points out another instance in which the circumstances of an ancient tragedy were at once applied to contemporaries: in the "Esther" of Racine everybody recognized Mme. de Montespan in *Vashti*. Other instances are not wanting; the "Bérénice," also by Racine, was a setting of the king's parting from a tender love for reasons of state.

GENERAL RICHARD TAYLOR'S REMINISCENCES.*

THIS book is both useful and mischievous: useful because every such contribution to the history of the time by an actor in it will be of more or less help in reaching just conclusions; and mischievous because the writer has used to the utmost his influence with the people of the Southern States to teach contempt for popular government, worship for aristocracy, whether of rank or of wealth, false notions of Northern society, dislike for all occupations except "planting," and a general belief that the triumph of the Government in the late war was the ruin of civilization on the continent. Southern youth need, of all things, practical business sense and a new idea of the dignity of labor in any honest employment; but this book will fool them to the top of their bent and strengthen all their most incorrect ideas. The author had the highest possible veneration and regard for gentlemen of colonial families and fine estates, and the poorest possible opinion of mechanics, shopkeepers, "scribbling attorneys," *et id genus omne*.

As a literary performance the book has necessarily a little of the appearance of patchwork; but this may not improperly be attributed to the ill-health of the writer, which has terminated in his death almost immediately upon the publication of his volume. The earlier chapters embody in substance two articles which appeared originally in the *North American Review*, and which were evidently finished with more effort at composition and a closer eye to effect than subsequent portions of the narrative. Indeed, one cannot help thinking that effect is so important in the writer's opinion that the story takes a color of uncertainty from this suspicion. The vein is rather too much that of 'Charles O'Malley' or 'Tom Burke of Ours' to be received as altogether veritable history. Stonewall Jackson is almost too constantly absorbed in silent prayer, and General Ewell's bird-like beak twitters quite too funnily, to leave a sense of harmony between the description and these men's soldierly deeds. This portion of the book is designed to tell the author's share in the campaign of Jackson against Banks and Frémont in 1862, and is followed by the history of his campaign in Louisiana in 1863–4, where he was again opposed to General Banks and defeated him at Sabine Cross Roads, or Mansfield. This latter part of the volume is the larger one, and is plainly its *raison d'être*. Departing from the connected-narrative style of the former part, it quotes largely from documents, from testimony given before the Congressional Committee on the Conduct of the War, and from correspondence of Admiral Porter and others, in a painstaking but not altogether well-digested argument to prove the merit and the importance of that campaign, and that it was conducted by himself to a successful conclusion that might have been even more disastrous to the Union arms had Taylor not been trammelled and finally stopped short by an incompetent superior officer, General Kirby Smith, commanding the "Trans-Mississippi Department"

Besides these two principal topics the author introduces several digressions in the form of estimates of the character and ability of men prominent on either side, like Lee, Johnston, McClellan, Jackson, Grant, Bragg, etc. He closes with chapters upon reconstruction under Johnson and Grant. In these he gives himself full rein as the prophet of pessim-

* 'Destruction and Reconstruction: Personal Experiences of the Late War. By Richard Taylor, Lieutenant-General in the Confederate Army.' New York: D. Appleton & Co. 8vo, pp. 274.

ism. Our disbanded volunteer generals are described as "gorged with loot," which they spent "as lavishly as Morgan's buccaneers after the sack of Panama," while "their women sat at meat or walked the highways resplendent in jewels, spoil of Southern matrons"; yet, as if to prove the Pickwickian character of this tirade, General B. F. Butler, who has been to Southern imaginations the incarnation of all he has described, and the one of whom General Taylor had best means of knowledge because he was opposed to him in person in Louisiana, has received in chapter viii. a full acquittal of the charge of thus profiting by the spoils of war. Grant's nepotism, the Crédit-Mobilier investigation, the Beecher scandal, the Freedman's Bank failure, Sickles's appointment to the Spanish embassy, Schenck's to the English, are grouped in spasmodic style to prove "of the popular idols of the day that, unveiled, they resemble Mokanna, and can each exclaim :

> "Here, judge if hell, with all its power to damn,
> Can add one curse to the foul thing I am."

On the natural principle that worshippers are like their idols, we are told in conclusion that "the examples of thousands of pure and upright people in the North were as powerless to mitigate the general corruption as song of seraphim to purify the orgies of harlots and burglars; for they were not in harmony with the brutal passions of the masses."

In General Taylor's judgments concerning prominent soldiers of both sides the same lack of poise and absence of self-control is very apparent, and greatly diminishes the value of the estimate he gives us. He can see little good in men against whom he is prejudiced, and he is prejudiced against all Northern officers and some Southern ones. It becomes even amusing to note that none but those who have shown sympathy with the Democratic party can obtain even the cold and negative commendation of the author. It is, therefore, in regard to Southern officers only, and those who never swerved in their adhesion to the secession cause, that his opinions have any value. His sketches of Lee, Joseph E. Johnston, Stonewall Jackson, and of several subordinate officers of different grades are discriminating, and seem to catch the salient outlines of character in a way to give liveliness and vitality to the picture. His estimate of Hood appears to us to fail by overlooking the fact that the essential condition of his investment with command when Johnston was relieved at Atlanta, was that he should substitute an aggressive for the defensive policy which had been adopted up to that time. This change of policy was notoriously dictated from Richmond, and for it the Confederate Administration there must bear the full responsibility. Assuming that this was the basis of the orders Hood received from Jefferson Davis, we question whether there was a general in the Confederate Army after Stonewall Jackson's death who could have shown more activity, audacity, or skill. If General Taylor had been put in command of Hood's army, as he apparently expected to be, in the fall of 1864, and had acted in accordance with the views expressed in his criticism of Hood, he would neither have troubled Sherman on his march to the sea, nor Thomas in his campaign in the central Southern States. In this respect his strictures on Hood are a weak apology, after the fact, for the blunder of the Davis Administration in relieving Johnston.

Of the two historical episodes in the book, the story of the campaign of 1862 in the valley of Virginia is the briefer, and is full of sprightliness and local color. It graphically indicates the way in which Jackson made Massanutten mountain the key of his clever strategy, and shows in the writer a good eye for the beauties of nature as well as for the strategic value of a position.

Upon the Louisiana Campaign of 1864 General Taylor sheds a good deal of light. He shows that the forces under his command were habitually exaggerated in the reports received by Banks and other Union commanders, and although he evidently regarded the organization of the Trans-Mississippi Department under Kirby Smith as unnecessarily trammelling himself and reducing him to a subordinate position, he gives us pretty good evidence that it had the effect of imposing upon the Federal officers by making them assume that there were rebel forces adequate to the high-sounding names of corps and divisions under a department command. He virtually declares Smith to have been a pompous incompetent, who organized complicated staff-bureaus at Shreveport, of which the only effect was to make unnecessary details of officers and men for staff-duty, to the weakening of the force in the field. Taylor himself was left to do all the fighting, and he does not hesitate to claim all the merit there was in the defeat of Bank's Red River Expedition, insisting that Smith's only part in that affair was to call off the troops at the moment when a more decisive victory was within their grasp. Whilst the condemnation of Kirby Smith seems in the main to be supported by good evidence, it is not so clear that Taylor would have accomplished what he expected if he had been allowed to have his own way. He had struck Banks's columns when they were greatly extended. An advance guard of a division of cavalry with two brigades of infantry had been routed, and a division of infantry sent to their support had been roughly handled at Sabine Cross-Roads. The cavalry train and much artillery had been captured as it became blocked in the single-track forest road. But Taylor admits that he was repulsed at Pleasant Hill as he attempted to follow up his advantage on the succeeding day, and when our forces were thus concentrated they were superior to him in numbers, and on any field where they could have delivered battle with *ensemble* their well-known fighting qualities were such that it is risking nothing to say they would have defeated him easily. The men who had fought at Vicksburg and Port Hudson could take a drubbing such as part of the command had received, and have stomach for hard fighting afterward. But again, Taylor's own story is wholly inconsistent with the pretence of a purpose to push the fighting on the 10th of April. On the preceding evening he had retreated seven miles. He calls it withdrawing for the purpose of getting to water. That was what Banks also said of his retreat to Grand Ecore. He also admits that portions of his command, notably Churchill's division, had become demoralized by being routed, and that Churchill was discouraged. With these facts in mind, no man of military experience will believe that he would have marched his command back on the morning of the 10th over the seven miles they had covered with their retreat after dark of the preceding day; or that the troops would have been in condition to give battle if he had done so. The truth is, as his narration shows, that he had enough of it at Pleasant Hill, and that when Banks continued his retrograde march to Grand Ecore, it was a godsend to his adversary, who sent the cavalry in pursuit and raised the shout of victory. Nor does Kirby Smith appear to have been altogether foolish, as Taylor maintains, in his next step. Gen. Steele was approaching with a Federal column from Arkansas; Banks was kept under the impression that Taylor with undiminished forces was still after him, whilst Kirby Smith withdrew the larger part of the infantry and himself led them, rumor exaggerating them into a new army not yet engaged, against Steele, who, on hearing of Banks's disaster, also retreated. If Taylor had no greater proof of Smith's incompetency than this he will hardly escape a judgment of jealous misrepresentation. The current reports of our officers showed that information came to them from Confederate sources to the effect that Taylor was relieved for insubordination and for attacking at Pleasant Hill without orders. The circumstances all tend to show that there was some foundation for this, and that Taylor's immediate commander, at least, did not treat that matter as a victory, however public policy might make the Confederates claim it as such. Taylor tells us that he was relieved at his own request, which no doubt was so in form, and is not inconsistent with the view we have taken. The failure of Banks's expedition made the campaign a successful one on the side of the Confederates, and Taylor's feelings were subsequently soothed by promotion to the rank of lieutenant-general, a grade equivalent to corps-commander with us, and by assignment to an undefined command in Alabama.

There is nothing in the history of the Red River Expedition that is very pleasant for Northern men to reflect upon. It is plain as day that neither Halleck, Grant, Sherman and Admiral Porter, nor Franklin, Smith, and probably other subordinates of Banks, had confidence in him. When Grant became lieutenant-general in command of all our armies, he said, in a despatch to Halleck, that for nine months he had had no confidence in Banks's capacity. Sherman showed the same feeling by insisting that he only "loaned" A. J. Smith's corps to Banks for thirty days, and in directing the latter to confer confidentially with Admiral Porter, as next friend to the Army of the Tennessee. Porter, in his letters to the Navy Department, charged Banks with utter incapacity. Franklin testified that he had no confidence in Banks's ability to handle troops. It is not hard to see that under such circumstances Banks was little less than foredoomed to failure. Nothing but extraordinary exhibition of energy and capacity as a commander could have given him the necessary grasp of his army, and no such miracle occurred. He put Franklin in command of the whole moving column on leaving Alexandria, but without well-defined responsibility. He went personally to the front when the cavalry became hotly engaged with the enemy, and ordered up infantry supports, although Franklin was of opinion that the cavalry should fall back, if overpowered, and let the infantry form on some near line, rather than crowd to the front in detachments, to be beaten in de-

tail. He attributed the disaster to the position of the cavalry baggage-train in front of the infantry, but he had given no orders respecting that train when he passed it on the road and knew that the cavalry was hotly engaged in advance. He neither took actual, efficient command of such sort as to control the order of march, as well as other important details, nor did he leave full responsibility with others. He assumed that the enemy were twice as numerous as they were, and accepted the moral conditions of defeat when less than half his force had fought at any one time. The army and navy forces were jealous of each other because, among other things, the navy claimed the right to make prize of cotton collected miles away from the gunboats. There was no common head, as there ought always to be in a combined military and naval movement. Political purposes of reconstruction were mixed up with proper military objects. In short, every conceivable circumstance that could ensure disaster was present in full force, and made a failure for the whole expedition out of what had no need to be more than a momentary check. For the military defeat Banks, as the commander on the field, cannot avoid responsibility. His attempt to shift it upon Franklin was wrong, though the latter's confessed lack of faith in his commander was fatal to the energetic and devoted support which alone could have retrieved affairs. But a large share of the blame must still rest with the Administration at Washington, which urged the expedition without attending to the only conditions of unity of command and of compact organization.

It is in this regard, as throwing new light on the history of that ill-starred expedition, that General Taylor's reminiscences will have permanent value. Had his narrative been modest throughout and free from gross extravagances of various sorts, we should give greater weight to the evidence which goes to show that his own part in the campaigns he describes indicated a high order of military ability. He, however, claims so much and so sweepingly that most readers will make considerable deductions from his own estimate of his exploits, whilst admitting that the facts, as far as corroborated, put him in the rank of vigorous and intelligent commanders of the second rank.

DOBELL'S LIFE AND LETTERS.*

IT was no fault of Sydney Dobell that the disparity between the excellence of his rare natural gifts and the meagreness of their literary result is so great, for the difficulties which beset him made partial failure inevitable. The disastrous nature of his early education has seldom been paralleled in the records of blighted genius, and in manhood, when he had emancipated himself from it to some degree, successive misfortunes struck down and maimed his powers. His parents were members of a Church which had been founded by his mother's father, a free-thinking Christian of the last century, to bring about a return to the apostolic practice, and was thought by them to be the germ of a great religious reform. They believed that Sydney, their first-born, was the chosen instrument of God for this work. The child was precocious in mind and endowed with all the susceptibility to emotion which belongs to the poetic temperament. Every new sign of intellectual strength or religious fervor was to his parents a fresh proof of the boy's divine calling, and their injudicious zeal stimulated a development which would have been abnormally rapid under the best care. His mission was instilled into his thoughts when he was four years old; at eight years his diary is filled with theology and his waste-paper with verses; at ten he falls in love; at twelve, enters his father's office and begins a life of business routine; at fourteen he is prostrated with nervous fever; at fifteen, is engaged to be married, and considering the publication of a drama on Napoleon which he had written and Campbell had read; at seventeen, we read of long-continued and exhausting prayer; eloquent church oratory follows; at twenty he is married; at twenty-three the blow falls, and he is prostrated with a nearly fatal disease which left him a man of broken health. The history of these years is given scantily in these volumes, but there are many indications of their unnatural life; his father says, for example, that in his delirium, when the sense of locality and the memory of faces were lost, he talked rationally on moral and reflective subjects; and his wife says of their courtship, in a remark of blended humor and pathos, "the more we loved, the more we prayed." He himself gives the clearest glimpse of the nervous intoxication of his boyhood in a letter to his sister, where he says, "I shall not cease to look back on the four or five years preceding my illness with a kind of self-reverence—as to an impossible saintdom to which I would not return, but which I can never equal on this side the grave. I see that I have a wider mission and a rougher excellence before me; but I cannot look back without a melancholy interest to the years when I never thought a thought or said a word but under the very eyes of God." Such experience necessarily left indelible traces; the practical result of his education was a physical blow, and it is easy to observe in his letters after this time symptoms of lingering disease, as when he speaks of having a double consciousness of locality, or of being seized by spontaneous trains of thought of unusual brilliance, but which he cannot recollect on coming out of this state.

With such a mind and body he began his literary career, against the remonstrance of his parents, who still believed in his apostolic mission. He published two dramas which have passed into literature, and a volume of war-lyrics. He was contemplating an epic on the millennium which should be his crowning work, and seems to have looked for no activity in other fields than literature. But ten years of writing, study, and business, added to the constant and wearying care of an invalid wife, overcame his shaken constitution, and at thirty-three a second illness practically put an end to his career. The two invalids tried all climates with little success; accident followed accident; he fell into a Roman drain and injured his spine, another fall from his horse nearly proved fatal; relapse followed relapse until after seventeen years, "wherein," he says, "the keen perception of all that should be done, and that so bitterly cries for doing, accompanies the consciousness of all I might but cannot do," he died in 1874.

Such warping and blighting influences made Sydney Dobell's public service fall so far short of his extraordinary capacities as to amount practically to failure. His senses were abnormally acute, like those of a savage, and this made his appreciation of natural loveliness remarkably keen; his powers of imagination and sympathy and his super-subtle reflective faculty completed his poetic endowment. The bent of his mind, the surcharging of his soul with religious emotion and mystical feeling, led him sometimes into that region of dreamy poetic conjecture with which readers of the transcendentalists are familiar, where the object, too vague for thought, is grasped at through symbols, and the qualities of the symbol extended fancifully to the unknown object. This, for example, reads like an excerpt from Novalis: "What if the visible universe stand in the relation to the Divine of the brain to the human soul; humanity upon its surface answering to the cineritious matter; these past six thousand years a passing illness of the Eternal Nature, and its scheme of salvation and ultimate golden issue a process of Divine physiology?" It is not often that he gets so far off his feet as in this passage. Here is one, of mystical suggestion, which in a letter to Charlotte Brontë he says was struck out of an article by the sapient editor of the *Eclectic*: "Yea, O divine earth! O incommunicable beauty! wearing thy crown of thorns and having on the purple robes of immemorial sunsets, we have parted thy garments among us, and for thy vesture have we cast lots"; and he is led to this *O altitudo!* because he has thrown down his pen "helpless before this unapproachable world," and the unapproachable world was merely apple-trees in blossom—"the very Avalon of apple-trees, that makes an awful rose of dawn toward the east." Such was the fervor and intensity of his poetic moods. On more prosaic ground he could be sensible enough, but his prejudices were sometimes very curious. "Aurora Leigh" he thought no poem because written by a woman, and he held "all feminine literature to be an error and an anomaly." To a sister he writes: "The passion for writing, especially among ladies, is the mental and spiritual nuisance of this age. What the young people of the day want to learn is that authorship, unless it be of the very best—the best and most competent minds expressed in the very best ways—is worse than useless"; and again, to resist "a temptation which bids fair to stain with ink the sweetest sanctuaries of life, and taint with the inevitable evils of every unnatural and abnormal gratification three-fourths of the women of England." Toward the theory of woman's rights and the theory of the equality of men he was extremely hostile; but in politics, in which he interested himself much, he was in enthusiastic sympathy with the Liberals. We read with wicked pleasure the letter in which he says he spent an hour walking in his garden, and repeating "the damnation of hell" after hearing that Mazzini was entrapped in Nuremberg, and with amusement the account of how Victor Emmanuel lost a present of one of the poet's dogs because he imprisoned Garibaldi. It will be seen that he had many interests—a man of business all his life as well as a poet and orator, a liberal as well as an aristocrat, the broadest of Broad Churchmen as well as an earnest Christian, a lover of horses and dogs, used to the saddle, the gun, and the rod; he was the most affable as

* 'The Life and Letters of Sydney Dobell. Edited by E. J.' In two volumes. London: Smith, Elder & Co. 1878.

well as the most merciless of critics, and he was the dearest of friends. Variously developed in these and many other directions, he saved much from the wreck; his private life evinces throughout a refined and noble character. He was a gentleman of the highest type, who made the most valuable acquisitions in life and shared them as widely as he could, who united grace of action in doing a thing to "the beauty of reason or feeling that causes it to be done"; he used to say, "To do the useful is the tenure by which we hold this world, to have done it beautifully the condition of our transit to a better," and called attention repeatedly to "that moral truth still older than formularized religion—that relation between the charitable heart and the idealizing eye, which the earliest Greeks unconsciously asserted when they entitled the Graces the Charities." To see how these principles found harmonious expression in a daily life of such pain and disappointment mitigates the sense of wasteful loss which these volumes arouse; his poetry is unwrought ore, his published prose stray leaves of thought, but in himself it is not too much to say he came near to his own conception of the poet's ideal life: "Thou wert the courteousest knight that ever bore shield; thou wert the truest friend that ever bestrode horse; thou wert the truest lover that ever loved woman; thou wert the kindest man that ever struck with sword; thou wert the goodliest person that ever came among press of knights; thou wert the meekest man and the gentlest that ever ate in hall with ladies; and thou wert the sternest knight to thy mortal foe that ever laid lance in rest."

RECENT NOVELS.*

A WONDER among books: a tale from Miss Yonge in which saints' days are hardly mentioned—daily service not at all; in which there is not even one of those noble beings, compounds of the loftiest birth and the finest sentiments, whose existences find their nutriment in the history of the peerage and "the ritual year of England's Church"; in which no description of the exquisite anguish endured by those distant descendants of noble families who are obliged to contaminate their lives by trade rends the souls of American readers. 'The Disturbing Element' is a simple, natural story—telling of the home-work of two old ladies who help the lassies of a little sea-side town, Poppleton St. Barbe, first to a sense of their ignorant inaccuracy, then to a little careful and thorough work, and to the various mental and moral rectifications which attend on work well done. The Disturbing (masculine) Element is treated with due consideration, and though if Miss Yonge lived on this side of the water she would certainly rid her pages of the foolish nicknames in which her young ladies rejoice, this is but a small fault to find with a book certainly pleasant and possibly useful.

Dr. MacDonald's new story is, to use a Scotch word, full of eerieness; nor, by this, do we mean to put ourselves among those who, the author says with some contempt, will declare his tale unnatural, for it is within nature, but nature at that point of extreme tenuity where it vanishes into the supernatural. In saying this we have in mind only Sir Gibbie himself, for the other characters are framed of the crudest Scotch earth. Sir Gibbie is a dumb child of a drunken father, bred in the streets, neglected, but with an irresistible instinct to be serviceable to every one; at first, he guides his father home at night by gyrating round him so that he cannot fall, and pushing him so that he must go on. After his father's death he watches the streets to do the accustomed service for any who may be in need of it, until the murder of a negro sailor before his eyes drives him from the city to the country, where he finds the most extraordinary opportunities for his gifts; is believed to be at first a "brownie," then a "beast-boy"; lives on a mountain with an old couple whose sheep he tends; performs the most difficult feats in saving the lives of animals, children, and men, during a great flood, which is described with great force and distinctness, until finally he becomes heir to a fortune and is married. Dr. MacDonald uses this child-creation, for he does not seem a day older at twenty-one than at six, as an example of instinctive love for all living creatures which finds joy only in service and looks for no return. This is the inevitable moral element in the novel, but for all that the treatment of the incidents and of nature is imaginative often in a high degree; and if one tires of the garrulity of some of the characters, and at times of the preacher's discourse itself, there is much more than enough in the tale to make it interesting to those who look only for pleasure, while the moralizing public could not have more wholesome food.

In a recent article on novel-reading in the *Nineteenth Century* Mr. Trollope has pointed out that the novel fills, in a great measure, in the education of modern youth, the place held in a different age by poetry. Novels are as a rule written for the young, and from their pages most young men and women get their first picture of life; they supply the gorgeous scenery, the heroic characters, and the thrilling events of those day-dreams on which the fancy of youth dwells, and so furnish unconsciously its ideals for future life. With regard to love and marriage, for instance, it would not be too much to say that novels are the sources from which in early life, long before we can know anything about the matter from actual experience, we derive some of our most deeply-rooted preconceptions. Most people in mature life can look back upon some one or two novels which suggested to them new objects of existence, a clearer insight into the poetry of life. It is unnecessary to say, by the way, that this applies only to English novels, and not to the fiction produced by the lively Gaul, who seldom unites the functions of saga-man and novelist in one person, and who draws pictures of love and life and marriage which are the reverse of improving. But the truth of Mr. Trollope's observation, applied to the English novel, is as undeniable as is the fact that Mr. Trollope is one of the last persons whom we should suspect from his own novel-writing of being much impressed with it. We admit a great liking for his novels. They are all true to life as most of us know it. His young men are good, and his old men are no less good, while his young women are charming. His pictures of modern English life are recognized as photographically true, though more interesting than photographs. Yet Mr. Trollope can hardly hope to be remembered as a novelist who has discharged the duties of the poet. There is nothing in his stories which invests life or love or marriage with a romantic or heroic interest. On the contrary, they represent those matters exactly as they are or may be every day in the year. But Mr. Trollope, though no poet, is beginning, if we are not mistaken, to show signs of a desire to assume another function which he also considers to be proper to the writer of fiction—that of the preacher. In 'The Way We Live Now' he read the London public a savage sermon upon modern manners; in 'An Eye for an Eye' we have a tale showing the evil consequences of weakness of character.

This, at least, is the only moral that we can extract from the story, which is not altogether a pleasant one, turning, as it does, upon the base behavior of the son of an English earl to a pretty young Irish girl, her ruin, his desertion, his murder by her mother, and the consequent confinement of the latter in a private asylum in the west of England, where the unfortunate woman is still repeating from morning till night, "An eye for an eye and a tooth for a tooth. Is it not the law?" The story is a painful one; for the weakness of the young man in refusing to marry Miss O'Hara is not made tragic but simply weak, while the repulsiveness of her disreputable father is made so glaring that the reader is at times left in doubt whether a marriage is not as entirely out of the question as the young man feels it to be himself. It is needless to say that all the story is well told. Mr. Trollope has the art of narration to perfection; while his characters—though none of them, as characters, fix themselves in our minds—all do their duty in the story as they are called upon to do it. We do not remember them, perhaps, as living men and women in the way that we remember the characters of Thackeray or Dickens. They are types, and true types, without being highly individualized. They have invariably the external form and appearance and manners and behavior of the class from which they are taken. His earls are always real earls, just as his bishops and vicars are always real bishops and vicars. The same thing is true of his women. If there is nothing more, we ask for nothing more. No one ever accused him of putting real people into his books, and the reason is very plain: the life and soul of reality in character—in other words, individuality—is wanting. The characters do not of themselves develop the story; they are used by the novelist to tell the story with. In his English characters this is more concealed; but when he takes a foreigner, like the American senator or the priest in 'An Eye for an Eye,' we feel at once that we are in the presence of a novelist's puppet rather than a real human being. This can hardly be set down, however, as a peculiarity of Mr. Trollope's. It is the peculiarity of one or two great novelists in a century that they are able to do something which he cannot.

'Quaker Cousins' is a pleasant, readable story, which gives the history of an orphan girl and boy left by their devout Quaker mother to the care of almost unknown cousins. The prosperity, the ill-doing, and the

* 'The Disturbing Element; or, Chronicles of the Blue Bell Society. By Charlotte M. Yonge, author of 'The Heir of Redclyffe,' etc.' New York: D. Appleton & Co.
'Sir Gibbie: A Novel. By George MacDonald, LL D.' Philadelphia: J. B. Lippincott & Co. 1879.

'An Eye for an Eye: A Novel. By Anthony Trollope.' New York: Harper & Bros. 1879. (Franklin Square Library.)
'Quaker Cousins. By Agnes Macdonell, author of 'For the King's Dues,' 'Martin's Vineyard,' etc.' New York: Harper & Bros. (Franklin Square Library.)

downfall of these cousins, and the steady rectitude and disinterested fidelity of the cheated wards, make the story. If Mrs. Macdonell were a débutante in authorship we should consider the many *motifs* of the story, some of which are never developed, as the mark of inexperience, but perhaps it is a sign of a fertile fancy, and she is certainly a good story-teller. The visit of the three "Friends" to enquire after the lambs once of their flock is decidedly dramatic and promises much, but nothing comes of it, and the wrongs of the children get no redress. Mrs. Burton, we think, is rather a favorite of the author, who describes with much care her muffled worldliness, her shallow content, and eternal striving for her own ends. Our favorite in the book is rather Mr. Forbes-Stokes, who, cheated into marrying an unloving beauty, gradually and painfully rectifies his lot by sheer nobility of nature. The opening of the story, which describes the life and household and the death of Susan Marsland, is very good indeed, and we wish there were more of the Quaker element in the book.

We should recommend the author of 'Lord Strahan' to learn to write the English language before publishing another book. After that it will be in order to consider peculiarities of style and plot. We give a few flowers of rhetoric selected from the first ten pages: "a lingering refrain of horn, spasmodic with distance"; "past villages snowed on either hand, with hills behind shadowed all askew by the flags of the forts sheeting thin to the breeze"; "now the water fluffy with sail has been left behind; the sand-absorbing dusk long astern."

There seems an unlimited demand for novels of the class of 'Castle Hohenwald,' and there is certainly an ample supply. The types in these German stories are oddly old-fashioned; the villain, the lover, the eccentric man, the traitor are wrought by a fixed pattern which has been laid aside for some time by English-speaking folk. The story is involved with the Franco-German war, but it does not modernize it.

'Joan the Maid' is the story of Jeanne D'Arc, told by a young Englishman, a prisoner in France, during her public career and after her death. Only the wicked people in the book doubt of the Maid's inspiration, and round the facts of the case are draped descriptions of private love affairs, and personal grief and discipline, which we suppose makes the story to some people seem humanized and possible, so that it settles comfortably into their minds, its difficulties quite untouched, but its outline a little blurred. We confess to a vivid dislike of this kind of books; people who write them seem like the Eskimo mothers chewing a bit of blubber to adapt it to their children's capacities, which is heresy to Mrs. Charles's numerous admirers.

'Famous Stories' includes two or three standard stories—among them De Quincey's ghostly 'Avenger'—and several very ordinary tales. On board ship or at a station where one had missed the train one would probably read them all.

'Bonne Marie' is a very attractive and original story, following an unusual line but fresh and coherent, and, though anything but didactic, is thoroughly well *orienté*. 'Philomène's Marriages' is hardly as attractive, though there is a little French country town and a cheery young French couple, partly artistic and wholly lively, which are charmingly described, but one gets bored with the meanness and the yellow face and the petty malice of Philomène.

E F Bickford 1878 2579

The Nation.

NEW YORK, THURSDAY, MAY 1, 1879.

The Week.

THE President has, as has been anticipated during the last fortnight, vetoed the Army Bill. He gives as his reasons: (1) That the danger of military interference with elections is already amply guarded against by existing statutes; and especially by the act of last session, which forbids the use of the troops as a *posse comitatus*, or otherwise, for the purpose of executing the laws, "except in cases authorized by the Constitution and an act of Congress"; and that this last piece of legislation was recognized by the Democrats as affording full security against the improper use of the army; (2) that, therefore, the omission of the words "or keep the peace at the polls" might deprive the Federal Government of the only means at its disposal of securing the fair election of members of Congress, and make all the legislation for this object now in existence a dead-letter; (3) that the practice of tacking general legislation to appropriation bills is pernicious, is condemned by public opinion, and forbidden by the constitutions of half the States, and ought now to be abandoned by Congress.

The message does not, as the Democrats hoped, base the veto on the form of the bill, and therefore make it possible to meet it by separating the appropriation from the repeal. It goes to the merits of the matter in controversy, and claims for the Federal Government the right to use the army in aid of the marshals to protect voters and repress disorders at Federal elections, or, in other words, to discharge duties which the Democratic theory reserves to the State governments exclusively. We think there can be little doubt that on this issue the Democrats will in the long run be beaten, though they will doubtless owe their defeat largely to the fact that the army is so small. They cannot make it appear that in its present dimensions it is dangerous as a police force, or is anything but a police force; nor can they convince people that the Federal Government needs no police force to execute the laws. It is to be observed, however, that though there have been threats of coercing the President, thus far there has been no coercion of him, and we feel very certain none will be attempted. The Democrats have got to the end of a very silly business, and will now probably refrain from utterly disgusting the country, by voting the appropriation or else continuing the appropriation of last year until December. Consequently there has been, and will be, no "revolution" or change in the structure of the Government, and no renewal of the late war.

The week, and indeed every week for the last month, has, according to the Washington correspondents, been filled with the greatest speeches ever delivered in Congress. Of course, no speech was a great speech if delivered by an orator of the other side, but accepting all the eulogies as well founded, no such floods of eloquence have ever been poured out in any country. On the other hand, no parliamentary body has, according to the same authority, ever witnessed within the same period so many examples of hopeless imbecility. The way in which, we are told, many Democrats, as well as Republicans, have disgusted their own side with their twaddle and then sat down confused and ashamed, has been something most painful. Ordinarily a man who rises to talk in a legislature has some glimmerings of reason, but according to the press, which is mostly Republican, large numbers of Democrats have lately discussed the constitutional powers of the general Government in a manner indicating idiocy. The reports in the *Congressional Record*, however, do not, we are glad to say, bear out either these encomiums or lamentations. The speeches have neither been so good nor so bad as the correspondents have represented. The Democrats have not been utterly crushed, nor have the Republicans outdone the eloquence of ancient and modern times. The best speech delivered in the House, as it appears in print, has been that of Mr. Robeson, of New Jersey, who, in the discussion on the Legislative, Executive, and Judicial Bill, made a very strong and apparently unanswerable argument in defence of the right of the Federal Government to regulate Federal elections. He overthrew all comers easily in a statement of the case, which contains almost everything one needs to know about it.

The speech that has attracted most attention, however, is that of Mr. Conkling in the Senate, and on it the correspondents lavished all the riches of their vocabulary. Mr. Conkling always makes a good impression on his audience, owing to his vehemence and his striking personal appearance, so that he is always sure of an ecstatic despatch from the reporters present, and remains for a day or two in the same rank with Demosthenes, Cicero, Chatham, and Daniel Webster. Then comes the verbatim report, and his fame dies as the laurel-leaf and the rose-leaf die. When one sits down and reads coldly one finds that he said nothing, after all, which forty or fifty of his benchmen might not have said. A striking instance of this dependence of his on his presence and voice was afforded by his treatment of the financial question at the last State Convention, which, from a Senator, was melancholy in the extreme. Another is the speech before us. He opened with an ingenious fallacy, in which, by giving the figures showing the amount of taxes *collected* in different States, he sought to produce the impression that these amounts represented also the proportion in which the different States *paid* the taxes. He then blundered in an illustration by supposing that Parliament in England is dissolved by "popular disapproval," the fact being that it is the disapproval of the Ministry by the majority of the House itself which leads to dissolution. He treated the mere attaching legislation to appropriation bills as in itself an attack on the Executive, which, of course, is untrue, and then dealt out some well-deserved invective against the attempt to deprive the President of the power to use the Army to execute the laws on election day. He showed what McClellan did in Baltimore on election day; pointed out that the Act of 1865 was a restricting and not an enabling Act; told the story of the New York election frauds in 1868; and eulogized General Grant, before whom, he said, "a continent beyond the sea rose and uncovered itself," which we are afraid will make much laughter on that continent. He pointed out with much force the absurdity and needlessness of this legislation now, and conjectured that it was intended to enable the Democrats to carry this State by fraud. He then castigated the Democrats; waved the bloody shirt freely; denounced "the ecstasy and gush" of conciliation; and drew attention to the number of soldiers sent up by the South to Congress contrasted with the number sent from the North, as showing the malignant and recalcitrant spirit of the South, but most unfairly, because the South drew on its population for the war to a degree never reached at the North and because the "brigadiers" of the South are really their leading men. He berated the Southerners for trying to get back into the United States Army and for removing old and faithful officers of the Senate, advised them not to be in such haste to get back into power, and closed with the customary expression of affection for all peaceable and well-disposed persons.

The Army Bill passed the Senate on Friday by a vote of 41 to 30, and the Legislative Bill, with all its objectionable features, was carried in the House on the following day by 140 to 119. The Senate has besides amused itself with a struggle over the offices appertaining to that body, in which the Republicans, though of course defeated, succeeded in putting the Democrats "on record"

as (1) wishing, contrary to good civil-service doctrine, to make those offices partisan prizes instead of simple ministrations to the comfort and business of the Senate; (2) depriving the President of the Senate, because of his Republicanism, of the right to supervise and confirm or reject appointments to these offices; (3) refusing to except from dismissal ex-Federal soldiers; (4) refusing to except from appointment ex-Confederate soldiers. Of these iniquities only Nos. 3 and 4 will be heard of in the next campaign. On Monday Mr. Pendleton called up his bill admitting Cabinet officers to seats and a voice in Congress, and supported it in a speech of great force and pertinency. He showed that the innovation required no Constitutional amendment, and was only carrying out the liberty which Congress has exercised in many ways in giving a hearing to outsiders, and was expressly provided for by existing law in the case of the Secretary of the Treasury. He was opposed by Mr. Morrill, of Vermont, for no better reason than that the proposal was "monarchical" and unnecessary. It remains to be seen whether a measure absolutely free from party considerations is to fail of Republican support generally. The monarchical objection applies with fatal force to the very existence of Congress, which is a direct copy of a monarchical institution.

The Supreme Court has rendered a judgment of some interest in view of the controversy in Congress over the Jurors' Test Oath. A case came up on appeal against the ruling of the Court below, viz., that a juror who, having been challenged and asked whether he had not taken part in the rebellion, refused to answer, was justified in refusing to answer, and in the absence of other proof of his participation in the rebellion was competent to serve. The Supreme Court has confirmed the ruling, on the ground that a man cannot be compelled to criminate himself, an admission that he had borne arms against the United States being a confession of treason. Judge Field went further, and declared the law requiring a test oath from jurors as to past conduct unconstitutional in time of peace. Judge Strong dissented from the opinion of the Court. Senator Conkling defended this law in the Senate the other day, on the ground that it did not affect men under thirty-five, and that "ex-rebels" over that age ought not to complain. But elderly rebels are, for the purposes of jury duty, certainly the most valuable portion of the Southern community, and everybody interested in the administration of justice suffers by their exclusion. As regards hostility to the negroes, we have no doubt they are much more impartial than the young men whom the act does not touch.

It is now estimated that the colored emigrants arriving at St. Louis since the beginning of the year have numbered 8,600, of whom all but a very small portion had no means to carry them further on their journey to Kansas. Their poverty, together with their utterly vague notions as to their destination, have caused them to be set down on the very threshold of the promised land, and have thus thrown a disproportionate and formidable burden on a small district. The mayors of Wyandotte and of Kansas City across the river have forbidden any more landings to be made, and with good reason, seeing that in the former city there are still 3,500 encamped in the suburbs, sick or helpless, and forming a nest of disease from which even the yellow fever may be apprehended as the season advances. Three thousand more have dispersed over the State, finding employment and perhaps truly bettering themselves. A correspondent of the Chicago *Tribune*, writing from Graham County, Kansas, shows how the so-called Nicodemus Colony, founded in the fall of 1877 by negroes from Kentucky and Tennessee, who knew the Northern methods of cultivation for a variety of crops, and were exceptionally well organized as a community and well located, were obliged to depend on systematic appeals to public charity until very recently, when the organization was disbanded and aid was no longer sought from without. He anticipates great hardships for the new-comers, more ignorant and less versatile, and wholly unorganized, when pushed further away from civilization upon Government lands.

Two large public meetings were held last week, in this city and in Boston, for the purpose of expressing sympathy with the emigration. Here the chief speaker was Capt. Tandy, of St. Louis, who seemed to think ill of any one who disapproved of a general unsettlement of the Southern negro population. He told some harrowing stories—"depositions" of emigrants at St. Louis—about the atrocities practised in Mississippi to deter those desirous of getting away. In Boston, Governor Talbot presided at Faneuil Hall, but the meeting was turned to political account by Mr. Boutwell and General Banks, the former statesman declaring that the Republican party must now become aggressive, and as soon as able must refuse a seat in Congress to any man "whose election is clouded by any informality or wrong-doing designed to obstruct or to defeat the full and free expression of the will of the people"; and if that fails, must fall back on the clause of the Constitution guaranteeing a republican form of government to every State. We do not observe that there was any denunciation of the mischievous tracts issued by the Principia Club or National Farmers' Association of Boston, for indiscriminate circulation in the South, and filled with the most extravagant appeals to the ignorance and fear of the blacks.

In a caustic message to the New York Legislature Governor Robinson has given his reasons for allowing the Apportionment Bill to become a law without his signature. He shows that the Constitution makes it the duty of that body in the first session immediately following a State census to alter the Senate and Assembly Districts, and that this provision was neglected for three sessions and has been tardily complied with now. He withholds his signature to the measure just perfected because it flagrantly disregards the Constitutional command that the apportionment shall as nearly as possible give an equal number of inhabitants to the respective districts. In the case of the Senate districts he shows discrepancies indicated in the extreme by the Nineteenth, which contains 101,693 inhabitants, and the Thirty-first, which contains 180,000. The "contiguous territory" called for has plainly been carved out with some other motive than a desire for geographical fitness. As for the Assembly districts, "Cattaraugus County, with 45,737 inhabitants, has two members, while Suffolk, with 50,330, is given but one"; Lawrence, with 78,014, gets as many representatives as Monroe, which has nearly 50,000 more inhabitants. The Governor's objections, which embrace many more details than we have cited, seem well taken.

George G. Barnard, the famous or infamous judge of the Supreme Court, so prominent in the Ring period in this city—that is, between 1868 and 1872—died on Sunday. He was the most conspicuous and ablest of the men by whom the Ring was built up and enabled to prey on the community, but there was nothing very remarkable about the man himself. Persons like him, both in the kind and degree of ability, are by no means scarce in the lower walks of the profession in all countries, and can be found in almost any of the better class of bar-rooms in this city. He owed his celebrity and powers of evil to the extraordinary social and political condition of the city during the ten years following the outbreak of the war. This brought his talents into play and put him on the bench, and secured him the impunity he so long enjoyed. If a monograph of the right kind is ever written on that singular episode in American history, the rule of the New York Ring, it will give but little space to Barnard's character and career—for he was simply a smart and audacious ruffian—and a great deal to the causes of the silence and submission of the bar which practised before him until the press had broken the power of his political confederates. It is this silence and submission which constitute the black passage in that strange story. Of the hundreds of upright, able, religious lawyers who for years witnessed his villany and indecency, and blushed over them, not a man had the courage to rise in court and denounce him, and appeal to the community against him.

Of the $121,000,000 United States 4 per cent. bonds taken on the 18th instant by the First National Bank syndicate it is announced that more than one-third have already been resold to permanent investors, and during the sales the market price has advanced to 101⅞. A good part of the buyers have been holders of the called 5-20 or 10-40 bonds. A considerable amount of the bonds has gone to London, where the price has advanced to 104⅝, and accordingly sterling exchange has not advanced as it usually does at this season when commercial bills are so scarce. There has also been a great demand for the ten-dollar certificates; but this has come more from brokers who took this roundabout way of getting 4 per cent. bonds than from the people for whom the certificates were designed. To check this buying by brokers and to reserve the certificates for people of small means the Secretary on the 28th issued a circular saying that the Treasury would not convert the certificates into 4 per cent. bonds until after July 1. At the Stock Exchange the speculation in Southwestern stocks has made further headway. Kansas Pacific stock, a majority of which Jay Gould bought recently at 12, has been advanced to 57; Wabash, which has had difficulty for many years—viz., providing for the interest on its debt (the present May interest, according to report, having in part been borrowed)—has been advanced to 35. The older stocks have been less active, but generally strong. Money has been very easy for borrowers, and the New York banks have further increased their surplus reserve to $12,350,000. Silver advanced in London to 50⅛*d.* and closed at 50*d.* The bullion value of the 412½-grain dollar at the close was $0.8430.

Lord Beaconsfield has obtained another vote of confidence in the House of Commons, his majority rising from 60, on Sir Charles Dilke's late motion, to 75, on the recent one of Mr. Rylands condemning the Ministerial financial policy, which was most effectively assailed. But the fact is that no majority has ever sat in the House more impervious to argument than the present one. They were elected on the Jingo platform, which had no argument in it, and, in fact, was made up of war-songs, worthy of the Zulus, and they are the more careful not to hasten a dissolution the more the tide of popular support seems to ebb from them, in this resembling the French Legitimists who were elected in 1871. The flagging of the war in Afghanistan, and the doubtfulness of its result, and the enormous responsibility it seems to involve if Yakub Khan holds out; the disasters in South Africa and the complication in Egypt, in which the Government cuts a ridiculous figure, and is thus far really defied by the Khedive; the break-down of the great Rumelian scheme—are all disheartening the Jingo voter, and producing silence in the music-halls. It seemed at one time as if Lord Beaconsfield might not live long enough to be found out by his followers, but that danger seems to have passed away.

The beleaguered British garrison at Ekowe under Colonel Pearson has been relieved, after a sharp fight, by the force under Lord Chelmsford, which advanced along the sea-coast. Pearson's force, which was sickly, has been withdrawn to the Tugela River, and the next job to be undertaken is the pursuit of Cetewayo to his kraal, which is said to be in a very inaccessible region, and will probably be desperately defended. The situation is complicated by the hostile attitude of the Dutch in the Transvaal, who produce a long string of grievances against the British in past years, ending with the loss of their independence, and even talk of hostilities. The negotiations with Yakub Khan in Afghanistan drag along very slowly, and it is not known at this date how they will end, or whether an advance on Cabul will be necessary; but now that the imperialist fever has abated considerably, the enterprise is no longer looked on with much eagerness. The army is described as sick of the war, which has consisted thus far of skirmishes with mountaineers, and apparently might last in this form indefinitely.

The Bulgarians have finished the work of making a government by electing a Prince in the person of Alexander of Battenberg, a member of the German ducal family of Hesse and a nephew of the Empress of Russia. He stipulates for the retention of the Russian employés now in Bulgaria for five years, which is probably necessary in order to get the administrative machine in motion. The continued blackening of the Bulgarian character by the English Tory press is one of the curious features of the situation. The object of it it would be hard to conjecture, but the result—the pushing of the province into the arms of Russia—is plain enough. The Rumelian question is not yet settled, although the time for the withdrawal of the Russians is close at hand. The mixed occupation scheme has broken down, and so has the prolonged occupation scheme, and it is certain that if nothing is settled before the Russians go, the people, probably assisted by the Bulgarians, will resist the passage of the Turkish troops to the Balkans. The Porte is still without funds, all plans for raising the wind having failed.

Turkey refuses to cede the town of Janina, which Greece claims as within the line recommended by the Treaty of Berlin. In this the Greeks have the support of Germany, Austria, France, and Russia. But England and Italy stand by Turkey, or rather suggest that Greece should not insist on Janina, but accept in place of it some territorial compensation in Thessaly. The main cause of the Turkish tenacity about Janina is the largeness of its Mussulman population, whose departure would undoubtedly be stimulated very effectively if it fell into Greek hands. One of the peculiarities of the gentle Turk is that he never likes to live in any country in which he does not belong to the ruling race, and it is also remarkable that whenever a Turkish province has fallen into Christian hands he has always been urgently requested by his neighbors of all races and creeds to emigrate as rapidly as possible. This has been the case in Hungary, Rumania, Servia, and Bulgaria, and will be the case everywhere in Europe as the Empire goes to pieces. The Jingo theory in London is, however, that this hostility to the poor Mussulman is a piece of pure and causeless malignity. The Ministers at Constantinople, who of course privately see the joke of the thing, have quite eagerly taken up the Jingo view, and every now and then address a circular to the Powers calling attention to the wanton and most singular dislike displayed towards the Turkish inhabitants by the Bulgarians and Eastern Rumelians. The last of these says the emigrants who have been driven out by "their Bulgarian countrymen" are filling Adrianople in such numbers as to cause great embarrassment to the Turkish authorities.

The state of things in Russia is extraordinary and bids fair to grow worse. Arrests are being made on an immense scale, followed by deportations to Siberia, and of course a large number, perhaps the larger number, on mere suspicion of liberal sympathies or opinions, and many through private malice. Porters armed with sticks are placed in great numbers along the streets in St. Petersburg to prevent the posting of Nihilist proclamations, and a general disarmament has been ordered. The Nihilist organizations, however, seem to have accepted the conflict without flinching, and assassinations still continue, and little difficulty seems to be experienced in finding agents ready to sacrifice themselves, if need be, for the purpose. In fact, the fight is rapidly taking the form of a rising of the educated and partly educated class against the bureaucracy in every department, and if the news be true that Nihilistic opinions have made serious inroads among the officers of the army and the secret police, it would seem as if the Emperor would have to give way, abdicate, and let his son institute a different policy. The crisis in one way bears a curious resemblance to that of 1789 in France; that is, it has undoubtedly been precipitated by the recent participation of the Russian army in delivering Servia and Bulgaria, and making them into free states with parliamentary institutions, just as the crisis in France was precipitated by her share in the Revolutionary war in this country. Russians who read and write and think naturally ask how it happens that the Bulgarian is fitted for a free government, and they, who freed him, are not?

THE CRISIS AT WASHINGTON.

IT is an established fact that Congress, under our system of government, although it has power to print the speeches of its members, has no constitutional means of compelling people to read them. It is owing to this cause, indeed, that the *Congressional Record* makes so little headway as a daily newspaper, and still has so comparatively limited a circulation. As a practical matter we must admit the fact that the pages of the *Record* are not scanned with eagerness with each recurring day by the thoughtful citizen desirous of ascertaining how the country stands, but that he gets most of his impressions on the subject from the daily press. And this may be the reason why the revolution now in progress at Washington attracts so little attention throughout the country. Under these circumstances the responsibility resting upon journalists is, of course, only increased, and we cannot but think that the disposition manifested by some of our contemporaries to make light of the crisis is very reprehensible.

Some of our readers are probably aware that there has been for a month past some trouble over the passage of an Army Appropriation Bill by Congress. It is, at any rate, a matter of common notoriety that when an army appropriation comes up in Congress speeches on the subject are always delivered by members, some being delivered orally, others to a messenger, who gives them to the Congressional printer. To a certain extent, therefore, it may be assumed that the public know that there was a debate on the Army Bill, but as to what was said in it we doubt whether many people can have any accurate knowledge. If they had there could hardly be that prevailing sense of false security which pervades the atmosphere. We have before us the speeches of Mr. George M. Robeson, late Secretary of the Navy, and of Mr. Blackburn, of Kentucky, made during the debate. From these it seems that Mr. Robeson gave the country timely warning as to the plot in which Mr. Blackburn is engaged, and Mr. Blackburn announced his intention to go on with it to the end, though he cautiously refrained from saying what the end would be.

The debate appears to have arisen over a somewhat nice legal question as to the power to "keep the peace" at the polls in Southern elections by calling in the army of the United States, a force which we believe now numbers in the Southern States seventy-four men and one commissioned officer. Mr. Robeson had a preliminary debate with Mr. McLane on the subject, which did not finally settle the question, for towards the end of it Mr. McLane, while declaring he had great respect for "the character of the gentleman from New Jersey," declined to commit himself as to his sentiments on the subject of Mr. Robeson's intellect, and, in fact, declared in that hypothetical manner which is the mark of real courtesy in debate, that if Mr. Robeson supposed that he [McLane] was confounding the meaning of the term "keep the peace" with the right of the Government to do something entirely different, he must confess himself unable to have "any respect at all for his intelligence."

Passing on to the main subject of the debate, Mr. Robeson declared that what Mr. Blackburn proposed was to take away the power of the President to direct the seventy-five soldiers who now hold the South under their iron heel to "keep the peace," or else to refuse all appropriations to carry on the Army. He then enquired whether if this "brings us to a stand-still and a destruction" it is not "revolutionary"? No one replying to this question, he went on to show that it was a mistake to suppose, as some people did, that republics are generally ruined by "troops." The fact is, Mr. Robeson says, that though the last final blow to liberty has usually come from the sword, this has not been "until some branch of the government has usurped to itself rights which it did not enjoy under the constitution and laws of the country, and has thus destroyed the unity and power of civil government." Thus it was, for instance, that the usurpation by "that stern soldier, Oliver Cromwell," was only rendered possible by the gross behavior of the Long Parliament; so, too, it was only "after the assemblies and councils of the French Republic had made France, with its fair corn-fields and its vine-clad hills, run red with the blood of its best and noblest," that Napoleon, with the forces appropriately referred to by Mr. Robeson as his "armed soldiery," was able to seize upon the French Government. Now, however indifferent we may be to the fact, it is nevertheless true, as Mr. Robeson next insisted, that ours is "a system of government with co-ordinate and limited powers"—"like the solar system in the heavens, each member of it dependent upon the other, each held in its place, each governed in its motions, each restrained in its orbit, by the power and the attraction of the other members of that system." Let one of these spheres invade the orbit of the others, and what becomes of it and the system? "It wanders abroad not only to the destruction of its co-ordinate spheres, but an object of terror to the universe and of destruction to itself." Mr. Robeson finally closed his remarks by predicting that if the revolution which was now in progress was aimed at the title of the President, "the excitement which is apparent throughout the country to-day is but the muttering of a storm which will increase in fury, will grow in strength and in resistless power, until the men and the party who endeavor to unsettle the title of the President of the United States will be swept for ever from the political horizon."

We have no space to dwell at length upon Mr. Blackburn's reply; but it was full and explicit. He declared that the ballot "shall be free"; that "the sovereign" shall not be longer subjected to "the surveillance of the soldier"; and that he desired to have the country understand that this was the difference between the position of the two parties—that one insists "that the Army shall not hold its mailed hand at the throat of the sovereign," while the other "refuses to release the throttling grasp, and declares that it will block the wheels of the Government and bring it to starvation." He also added that his side of the House of Representatives would not yield or surrender until this Congress should have come to an end; and, finally, amid great applause, declared that not a single man in the majority could ever recede, but would stand to his convictions come what might; pointedly adding that "he who dallies is a dastard, and he who doubts is damned."

When scenes like this occur at the capital of the country it would seem as if it were time for the public to arouse themselves from their lethargy; and yet the only other place where the revolution seems to have attracted any serious attention is in the new capitol at Albany, where last week, in the course of a debate on the proposed escort of General Grant from San Francisco to the Atlantic seaboard, some remarks were let fall which showed a determination on the part of at least two leaders of public opinion to prepare themselves and the public for the worst. Mr. Wheeler declared that for one he was "astonished at the spectacle in Washington" and anticipated "another war." For three years, he added, he had "followed a battle-flag" during the rebellion, and is willing "to follow it again." He assured his audience that he had "an old sabre at his home in Dutchess County" which he is "ready to buckle on again if that time should come." Mr. Alvord, the Speaker of the House, a man hitherto absorbed in peaceful pursuits, reminded his hearers that "a war was begun at Sumter by a single cannon-shot which lasted for four long years," and that "another cannon-shot has been fired at Washington which re-echoes here" (at Albany). He predicted that the people would again "march arm-in-arm with us in defence of that Union which is now in imminent peril once more."

There seems to be little doubt that a revolution has broken out which ought not to be lightly passed over. The Democrats are pledged to refuse supplies to carry on the Government unless the seventy-four soldiers and the officer now believed to be quartered in the South are forbidden to interfere with the freedom of elections by "keeping the peace," and the Republicans are pledged to prevent the passage of any bill which makes the withdrawal of this licentious soldiery a *sine quâ non*. As the parties are almost exactly balanced in the two houses, and Mr. Hayes is a President who always tries to do what he thinks bad men would dislike to have a good man do under the circumstances, it is pretty clear that, in the

beautiful language of Mr. Robeson, one of the "spheres" is going to "invade the orbit" of one of the other spheres, and the invasion must necessarily cause trouble. Moreover, General Grant is going to land simultaneously at San Francisco, whence he will be escorted across the continent by one of the most ferocious hordes of politicians ever let loose in any country. Predatory by disposition, occupation, and training, and serving, too, on committees of escort "without pay," it is not very difficult to see that by the time they reach the longitude of Washington, inflamed as their worst passions will then be by a week's intercourse with their old leader, they will be ready for any desperate attempt. A collision between Blackburn and his followers, maddened to fury by months of Congressional oratory, and the Union forces under Grant will be inevitable, and it is at least an even bet that the mailed hand of the Soldier will tighten round the throat of shrieking Liberty, strangled amid the tottering wrack of the three co-ordinate, yet independent, departments of government.

A gloomy picture! The worst of it is that we care so little about it. Not a man turns from his accustomed avocation to prepare himself for the fray. Not a man takes down the old family Bible at eventide and reads to his assembled household words reminding them of their duty in the hour of peril. Not even "a mass-meeting irrespective of party" (a measure of precaution seldom left untried in New York) has been called. On the contrary, the banker goes on banking, the merchant buying and selling, the stock-broker dealing in "puts" and "calls," the lawyer arguing his cases under the Code and the codifier changing the Code under which he argues them, the builder continues to build, and the real-estate speculator to take advantage of the recent shrinkage in real estate. The securities of railroads, too, go on improving in value, while the Government sells a hundred millions of four per cents at par.

The blow, perhaps, when it comes will be all the harder to bear. In South America and Mexico, where revolutions occur every year or two, the inhabitants who do not take part for or against the rising generally retire into their houses, barricade their doors and windows, and wait till the storm is over. Here, while a leader of one party is denouncing any person who "dallies" as a "dastard" and consigning doubters to eternal damnation, and a leader of another party is predicting an invasion and destruction of one co-ordinate sphere by another co-ordinate sphere, and Mr. Wheeler is estimating the expenses of a trip to his home in Dutchess County for his sabre, everybody goes on with his accustomed business as if there were no revolution in progress at all. Such a case is without parallel in the history of any country. In previous instances, it has been the people who have set the revolution in motion, and the politicians have rather reluctantly taken part in it. Here, the politicians in a most handsome way provide a revolution for the people, and the people will not have anything to do with it. Whether this is from sheer obstinacy, or from the fact that it has escaped their attention that there is a revolution in progress, it is perhaps as yet too early to say.

THE SILVER QUESTION IN ENGLAND.

THE recent address presented to Sir Stafford Northcote by a deputation of the Liverpool Chamber of Commerce on the silver question has moved the London *Economist* to make a novel suggestion for arresting the further fall in the price of that metal, and the consequent disturbance of the exchanges with India. The suggestion is no less than that the Bank of England be empowered to buy one-third or one-half of the unsold stock of the German Government at an agreed price, and issue notes against it, with the understanding that Germany shall not sell any more silver for a period of five or seven years. The unsold stock of Germany is estimated by the *Economist* at $75,000,000 to $100,000,000. By dividing the task of carrying this sum between the two countries for a fixed period it thinks that the pressure on the silver market might be removed, its former price restored, and the Indian exchanges rehabilitated, and all this without any alteration of the monetary standard of England. The plan provides further that any loss resulting to the bank from such purchase of silver shall be borne by the Government, and that any profit accruing from it shall be shared by the Government.

The fact that the grave and judicious organ of British finance has offered anything except stern opposition to the Liverpool movement must be taken as evidence that the fall in silver and the disturbance of the exchanges with the East have racked Lombard Street profoundly. Other evidence is not wanting, among which may be noted the recent confession of the Oriental Bank, an honestly-managed institution, that its losses growing directly or indirectly out of the derangement of the exchanges had swallowed up its whole accumulated reserve. Nevertheless England will hardly yet consent to a change of her monetary standard. The words of the late Mr. Bagehot—we quote from the *Economist* of December 30, 1876—are probably in the main a true description of the state of feeling and opinion on this subject still, although there may be more disposition now to reargue the grounds of such opinion than when he wrote:

"England (said Mr. Bagehot) has a currency now resting solely on the gold standard, which exactly suits her wants, which is known throughout the civilized world as hers, and which is most closely united to all her mercantile and banking habits. What motive, that an English Parliament could ever be got to understand, is there that would induce them to alter it? You cannot even begin an argument which would seem to have a sufficiently striking sound. Some time ago it was indeed said that the finances of our Indian Empire were thrown into confusion by the fall in the price of silver, and that, therefore, the English and the Indian currency should be assimilated and both be on the double-standard principle. But even in that case the English people would, rightly or wrongly, never have consented to change their currency; they would have told the Indian financiers to adjust their system of raising a revenue to the new circumstances. They would not have altered the sovereign for anything which might happen to the rupee."

This we judge to be decidedly the governing opinion of England to-day, the address of the Liverpool committee and the guarded hints of Lord Beaconsfield to the contrary notwithstanding. The holding and maintaining of such an opinion is not inconsistent with endeavors, even strenuous and costly ones, to prevent the further fall of silver and depression of the Indian exchanges. The *Economist* considers the mass of unsold silver in the German treasury the controlling factor in the market. It shows that the increased drawing of Indian Council bills (which take the place of silver shipments from England to India), from £4,000,000 per annum to £10,000,000 between the years 1868 and 1872, had no perceptible effect to depress the price of silver; from which it argues that the further increase of the drawings to £13,000,000 in 1874 did not contribute materially to the depression, although silver fell during that short interval 2*d.* per ounce. It was in 1872 that Germany came forward as a persistent seller of silver. The influence of the American mines the *Economist* deems as insignificant as the operations of the India Council. So long as a mass of silver equal to three thousand tons avoirdupois lies ready, or is supposed to be ready, to be thrown on the market, there can be no material advance in its price, while the possibilities of its further decline are measured only by the inclinations or needs of Germany. Remove this menace, argues the *Economist*, and we have all that England desires to accomplish.

But there are men in England of culture and position who will not be satisfied with this device, even if it be practicable to carry it into effect—and it is admitted by the *Economist* that it is only a temporary expedient—men like Mr. Ernest Seyd and Mr. Stephen Williamson, who are laboring for the double standard in England *per se*, aiming to bring about that which Mr. Bagehot said no Parliament would patiently listen to. They are not so foolish as to suppose that this can be brought about by one country alone—in this respect they differ from the majority of our silver-men. They are in favor of a new international conference, not daunted by the failure of the last one, which they think might have had a different result if the English delegates had not entered it under instructions to consent to nothing which should commit their own country to a

change of her monetary system. Believing that the end is to be gained only by concert of action among nations, in which England shall join, they deprecate all separate action, like that of the United States, as tending to relieve England, Germany, and other obstinate gold countries of a portion of their self-imposed distress, and thus to postpone the only possible cure for their malady. In their view things must be made as bad as possible in order that everybody may be forced to learn the truth. This is likewise the view of M. Cernuschi. "Stop coining silver if you want to bring us to our senses," is the adjuration of all the silver advocates in Europe to their friends and allies in the United States. Their friends and allies here, however, for the most part, reply in the enlightened phrase of Mr. Stanley Matthews, "What have we to do with 'abroad'?"

The Paris Conference was a foredoomed failure for this reason, among others, that the only countries capable of exercising a serious influence in favor of bi-metallism were either absent or hostile to its purposes. If England and Germany had been present and had joined in the proposed bi-metallic union, we should, at all events, have had the experiment tried. Not all the difficulties would have been surmounted by a vote, nor even by the opening of the mints to the free coinage of silver at a fixed ratio with gold, but the result of the experiment, whether favorable or otherwise, would have been worth much to the world by settling for ever a great controversy. Money must possess certain attributes which will cause people to seek it—to desire it—to prefer it as a medium of exchange. Gold has been self-elected to that office. The action of the German Government was merely a crowning illustration of the truth of this proposition. At considerable expense and sacrifice they changed their monetary system from silver to gold because the latter was *preferable*. It is not to be supposed that they did it out of caprice or in order to inflict a wound upon themselves. Can any international compact, however solemn, however fortified with good intentions, confer the attributes of money upon something which is not self-elected to the office? We grant that it can make silver legal tender, but that is only a small part of the problem. It must also cause people to desire silver equally with gold, else it cannot establish bi-metallism in practice. A conference which should do nothing more than give liberty to people and nations to "shove" silver upon each other would not have achieved any very desirable or lasting results. A conference assembled to stop the depression of the Indian exchanges, or to enable the German Government to get rid of its surplus silver, or to secure fair wages to Nevada miners, or to enable people to get out of debt, or to accomplish any other philanthropic achievement, would not be necessarily or primarily a monetary conference, because it would have for its object something else than ascertaining what is fit, suitable, good international money. Nevertheless, Americans will take a lively interest in any new conference which Mr. Williamson and his coadjutors in England may persuade their Government to initiate. The United States cannot be expected to take the lead in calling another after having failed to gain a single ally, great or small, among the specie-paying countries of the world, but they will cordially respond to an invitation coming from any respectable quarter. Meanwhile, we shall probably go on buying silver bullion at the rate of two millions per month without any aim or purpose that a thinking man, whether bi-metallist or "gold bug," can understand, relieving to that extent the pressure upon the Anglo-Indian exchanges and upon the German treasury, and postponing any real decision of the question at issue.

RAILROAD OWNERSHIP AND REGULATION IN GERMANY.

[THE following criticism, from a German point of view, of Mr. Charles Francis Adams, jr.'s, recent work on 'Railroads,' has been sent us from an authoritative source in Germany, and will be found to contain valuable information on a somewhat intricate subject.]

IT appears to us a principal merit of Mr. Adams that in the first part of his instructive and very interesting book he publishes the authentic documents connected with the first appearance of railroads in England and in the United States, whilst in the second part he very judiciously and with statistical proofs demonstrates the evil consequences arising from the chaos of railroads, and from the embittered wars of competition, which, destitute of a single economic idea, have a detrimental influence, not only on trade and commerce, but also on the railroads themselves and their shareholders. On the other hand, we cannot agree with the author in reference to the ways and means of reaching a healthier condition in the management of American railways. The arguments of Mr. Adams have often been influenced by the development of German railroad affairs, and the so-called "Union of German Railroads." But herein he has been wrongly informed on important points, and of course the conclusions which he draws from his false premises cannot be true. If in the following lines we undertake to correct Mr. Adams in this regard we do it without the least intention of reproaching him. As it is difficult even for a native to form a right idea of these complicated affairs, how much more difficult must it be for a stranger, who can only judge from pamphlets, newspaper articles, etc., obtainable with difficulty.

Omitting the unimportant mistakes referring to the non-Prussian German railroads (for instance, in Bavaria only the railroads on the right side of the Rhine belong to the state; all the railroads on the left side, in the Palatinate, are private property), we will in the first place take note of what Mr. Adams says of the development of railroad policy in Prussia, the leading German state.

The remarks on the railroad policy up to the years 1868 and 1869, on the appearance of Dr. Stroussberg (not Straussburg, p. 111), and on the collapse of private railways which had been, partly directly and partly indirectly, founded by him, are in general correct. But then the statements on pages 111 *et seq.* are incorrect. The above-named collapse took place in consequence of two famous speeches by the Deputy Lasker, delivered in the Prussian Chamber of Deputies on January 14 and February 7, 1873. A commission was appointed for the purpose of examining the principles on which the then Minister of Commerce, Count Itzenplitz, had given the concessions for building railroads, and of making propositions for a thorough reform of these principles. At the same time a new ministry was created in the German Empire, called "Reichseisenbahnamt," which had the superintendence of all the German railroads with the exception of those of Bavaria, which in most respects are not subject to the laws of the constitution of the German Empire. The report of this commission, whose tendency was to convert all the railways into state property, has been without direct consequences, and no new events took place in Prussian and German railroad politics from 1873 to the end of 1875. The only remarkable fact is that twice have the endeavors of the Reichseisenbahnamt to bring before the Bundesrath and the Reichstag a project of a railway law for the German Empire failed in consequence of the opposition of the separate governments.

Only this circumstance, and not the report of a commission (as Mr. Adams says, on page 113), was the motive of the co-called Reichseisenbahn project—*i.e.*, the Chancellor's plan to purchase the principal trunks of all railroads for the Empire. The first step toward the realization of this project was the bill concerning the transfer of the Prussian state roads to the Empire, brought in during the session of the Prussian Chambers in March, 1876, and accepted by them in April and May. Because Prussia, notwithstanding this law, has not yet offered its railroads to the Empire, Mr. Adams infers that Prince Bismarck has given up the idea of introducing the system of state ownership of railroads. On the contrary, he always insists upon this idea, only he tries to realize it in another way. Prince Bismarck's project encountered bitter resistance, arising from political motives, in the minor states, particularly in those which are themselves owners of railways. For this reason, already foreseen in the motives of the bill of 1876, the Prussian Government is beginning to enlarge and to consolidate the Prussian state railroad property by the acquisition of private railways.

The following data may prove what an ascendency Prussia would attain by the purchase of all the Prussian private roads, and how by this proceeding the question whether railroads should be state or private property would be for ever solved. On the 1st of January, 1879, the German railroads operated 20,250 miles of track; of these 5,675 miles were owned and managed by the Prussian Government; 5,504 miles were the property of private Prussian companies. The state property of the other larger German states amounts to about 6,000 miles. In case Prussia acquired all its *private* roads, its property would amount to 11,000 miles, whilst all the other states would possess only 6,000 miles, and the

remaining 3,000 miles of scattered private railways would be in total dependence on the consolidated union of 17,000 miles of state railroads.

The idea of dividing the Prussian Ministry of Commerce into a Ministry of Commerce and a Ministry of Railroads, which was first rejected in the year 1878 but has lately been adopted by the legislative bodies, has only been realized for the purpose of facilitating this difficult task of the minister, so that Mr. Adams is mistaken in supposing, on p. 114, that the creation of *a new ministry of railroads* was in question; the sole object was to free the minister who had had the direction of railroad affairs hitherto from all other business. The entrance of Baron von Weber into the Prussian service, which Mr. Adams supposes to be of so great importance, has not the least political consequence, and Baron von Weber is altogether much over-estimated abroad. He has never exercised the least influence in Prussian railroad politics. The leading person, next to the Chancellor, is the present Minister of Commerce, Mr. Maybach. The latest events which have taken place since the appearance of Mr. Adams's book prove that this minister, in full concurrence with Prince Bismarck, firmly and persistently pursues the project of state-ownership of all railroads. On February 15, 1879, the first treaty concerning the acquisition of a more important private railroad by the Government was agreed upon. Mr. Adams will see from the above facts that German statesmen do not at all incline toward the adoption of a railroad policy similar to that of Great Britain or America.

Mr. Adams, on pp. 112, 205, 206, speaks of the "Verein Deutscher Eisenbahnverwaltungen," which, at the close of 1876, embraced 110 managements, operating 31,000 miles of track. He declares that this union "makes all necessary arrangements respecting joint traffic, that it settles questions of fares and freights, and substitutes arbitration for wars of rates." He thinks it desirable that a similar agreement should take place between the American railroads, and sees principally in such a proceeding the solution of the railroad problem in the United States. But now this Union of German Railroads, to which belong the German, Austrian, Hungarian, Belgian, Dutch, Rumanian, and some of the Russian railroad managements, is not in the least concerned with tariffs and joint traffic. The freedom of tariffs, as far as it exists for the railroads belonging to the Union, is not at all compromised by the Union. Questions of rates lie quite beyond its compass; wars of rates have always been waged between the managements of the Union, and are being carried on at this moment. The Union has rather proposed to itself to secure as far as feasible a uniform management of the railroads belonging to it, and for this purpose has established uniform principles for the construction and the equipment of railways, for the quality of wagons, locomotives, etc., and for the operation itself. This uniformity has been generally recognized as very conducive to the promotion of commerce, and a similar union of the American railroads would doubtless exercise the same beneficial influence. But the real evil under which the management of the American railroads is suffering would not thereby be removed—nay, not even affected. This evil seems to us, according to the excellent enquiries of Mr. Adams, to consist in the *de facto* absolute liberty of tariffs for the American railroads, which is evidenced by the establishment of tariffs not in accordance with economic principles but in accordance with the whims and private interests of the managers. The experience of all civilized nations has proved that such defects cannot be healed by light, palliative means, but must be energetically handled so as to conquer them.

However, it would be advisable for America in regulating its railway tariffs to profit by the experience gained in this respect in Germany. Such circumstances as are represented in the article "Congress and Inter-State Commerce" (*Nation*, January 30, 1879, pp. 79, 80) are indeed impossible according to the present legislation and practice in Germany, and what in America is yet a desideratum is in Germany almost an "überwundene Standpunkt." Thus, for instance, the railroads are obliged to publish their tariffs; the application of unpublished tariffs and the granting of particular favors to individuals are strictly forbidden. It is very difficult to evade these prohibitions, and if the railways nevertheless do so, they are severely punished. Besides, all German railways have accepted a conformity in the establishment of their tariff system, and the governments have settled the maxima of rates, which cannot be exceeded without the permission of the Government, whilst the railroads have full liberty to take lower rates. These laws, to which all private and state railways are subject, and the execution of which the above-mentioned Reichseisenbahnamt carefully superintends, greatly restrict the liberty of tariffs. The introduction of similar laws in America, as is intended by the Reagan Tariff Bill, would be a great progress. But whether at the present time the Government of the United States, as would become its duty under that bill, has power to interfere; or whether, on the other hand, the Government has power to hinder the ever-progressing formation of railway states in the political States—this question we do not dare to decide, particularly as we are not personally acquainted with American railroad affairs, but have only taken our knowledge from books.

Correspondence.

GENERAL GRANT AND THE RASCALS.

To the Editor of The Nation:

Sir: You say there is not a rascal in the country but is eager to vote for Grant. If that is true he would be triumphantly elected; but all the rascals are on the Democratic side. The Rev. Jos. Cook has come out in his favor. Is he a rascal? As Greeley truly said: "Point where you please to an election district which you will pronounce morally rotten, given up to debauchery and vice, whose voters subsist by keeping policy offices, gambling houses, grog-shops, and darker dens of infamy—there is the Democratic party" for railroad wreckers and ciphering frauds.

Marquette.

[We say nothing of the kind. We said there was no Republican rascal who was not "a Grant man," and we say so still. All the bad element in the party is frantic in support of him. We began by stating explicitly that *all* Grant men were *not* rascals. Our correspondent's question about the Rev. Joseph Cook is, therefore, a little silly. The assertion that "all the rascals are on the Democratic side" has a pleasing sound, but unhappily it is not supported by experience. It is strange but true that the Republican party contains several of very superior quality. A correspondent of Colonel Forney's cheerful paper, the *Progress*, also asks, apropos of our paragraph, "Is it just that General Grant should be made to bear the sins of the men whom he commissioned in good faith, but who have in some instances violated their trust?" Of course not; but it *is* just that General Grant should be made to bear the sins of rascally officers whom he kept in office, on the "under-fire" rule—that is, after their rascality was discovered and clearly proved. The renomination of "Boss" Shepherd for the chairmanship of the Commission of the District of Columbia, for instance, immediately after he had been legislated out of office for corruption, which so shocked the Senate and the public at the time, was a case of responsibility for rascality which General Grant actually took pains to make plain. No one knows better than the joyous editor of *Progress* that if Grant is nominated the Democrats will only have to make extracts from the files of the Republican papers between 1870 and 1876 in order to compound a most damning and damnable campaign document. The Grant movement is, in fact, a proposal to confess that the party has neither policy, nor ideas, nor statesmen. It is saying substantially, "We have no plans, no policy, and no ideas to speak of; but we have a first-rate man. He has no plans, policy, or ideas either; but he is tough, decided, and combative, and will make the Democrats skip." If this is not imperialist talk, what is it?

We may add that the acceptance of the third-term idea would be, as every one saw plainly, or was supposed to see plainly, three years ago, virtually the adoption of the life-tenure for the Presidency and the abandonment of popular government. The gratitude, love, and admiration, or whatever it is, which makes people want to give Grant three terms would, of course, grow the longer he served, and would give him an irresistible claim to the place on the expiration of his sixth term. If, also, the Democrats should succeed in defeating him before he died, they would never admit that their man was anything short of a six-term man either, or ought to have less than three terms. The European nobles, too, would soon fall into the way of taking a hand in the Presidential canvass. When an ex-President arrived on their shores they would receive him with increasing honors on seeing that it tickled the Americans. Then,

if there were two ex-Presidents in the field pitted against each other, the campaign orators of each side would endeavor to show that their man had had bigger dinners in Europe, and had been received by more crowned heads, and had had more elephants in his procession than the other man. Would "government of the people by the people for the people" in this way grow in strength and dignity?—Ed. Nation.]

BIENNIAL SESSIONS OF THE LEGISLATURE.

To the Editor of The Nation:

Sir: Your very discriminating article upon my scheme for methodizing our legislation leaves but one thing to be desired—*i.e.*, that you should draw attention to the one great evil which has been brought about by the recent constitutional amendment limiting and prohibiting private and local legislation, and requiring that certain objects theretofore obtained by special and local laws should thereafter be achieved only by general laws. This amendment subjects the whole body of the general law to most insidious attacks dictated by special and local interests, and will hereafter beget numberless new general laws to effect such special or local objects. This evil will become in time so great and intolerable that a recurrence to the old system of indiscriminately passing local and special laws will be considered a relief from the mischiefs which we are now developing, by general legislation to effect such smaller and minor results.

The clamor for biennial sessions of the Legislature is of a piece with the empiricism which limits the legislative power instead of methodizing it. This is on the assumption that legislative sessions produce more harm than good, and that therefore the less we have of them the better. The absurdity of this way of dealing with a political evil is best illustrated by imagining the derision with which any reasonable human being would have met the suggestion of a reformer who in 1871 had proposed as a remedy for the corruption which disgraced the New York judicial system that Barnard, Cardoza, McCunn, etc., should sit but half terms. It does not at all follow that by sitting half the time they would do half the mischief, because they might readily crowd into any given number of days double the injustice that they did more leisurely before.

Respectfully, Simon Sterne.

New York, April 23, 1879.

"COMPARISONS ARE ODIOUS."

To the Editor of The Nation:

Sir: Mr. Shepard, in your paper for April 17, suggests Sir John Fortescue as the author from whom Shakspere may have derived Dogberry's "comparisons are odorous." I wonder that no commentator has called attention to Lyly's 'Euphues' as the most probable source of the suggestion. 'Euphues' was first published in 1579. In page 68 of Arber's reprint we read:

"Concerning *Liuia*, though she be faire, yet is she not so amiable as my *Lucilla*, whose seruaunt I have bene the terme of three yeres: but least comparisons should seeme odious, chiefely where both the parties be without comparison, I will omitte that, and seing that we had both rather be talking with them, then tatling of them, we will immediately goe to them."

Shakspere was fond of ridiculing the style of 'Euphues,' and would gladly use the opportunity of parodying it in the mouth of Dogberry.

Many persons, in attempting to quote Dogberry, spoil the joke by correcting him, and thus they quote 'Euphues' without knowing it. This is one of many absurd blunders made in popular quotations from Shakspere and other poets. A. B. Stark.

Logan Female College, Russellville, Ky., April 23, 1879.

STATE TAXATION.

To the Editor of The Nation:

Sir: Your statement in the article on State taxation in to-day's issue that a tax upon A.'s land and another upon B.'s mortgage upon the same land amounts to double taxation, receives a curious illustration here in Philadelphia.

The city imposes a tax upon the land, the State imposes a tax upon the interest on the mortgage, the latter ostensibly payable by the mortgagee. The mortgages, however, all contain a covenant that the mortgagor shall pay the State tax. Hence the result is that a landowner pays more taxes after he has mortgaged his property, when his own interest in it is really less and the State's interest can surely be no greater, than when it was unencumbered.

Very respectfully, Robert H. Neilson.

Philadelphia, April 24, 1879.

Notes.

After a period of comparative fixity the book-trade in this city has again begun to share the spring mania for removals. In conformity with the general uptown tendency, Henry Holt & Co. contemplate a new location on Twenty-third Street, between Fourth Avenue and Broadway, while F. W. Christern is already installed at No. 180 Fifth Avenue, next door to G. P. Putnam's Sons; and B. Westermann & Co. at 838 Broadway. Bangs & Co. have transferred their auction-rooms to 739 and 741 Broadway. *Per contra*, J. Sabin & Sons have moved further down town to No. 64 Nassau Street. The American branch of George Routledge & Sons, which still remains, as during the past thirteen years, at No. 416 Broome Street, celebrated last week the twenty-fifth anniversary of its foundation ——A new publishing firm with an old and familiar name is announced as having established itself at No. 714 Broadway. The senior partner of A. C. Armstrong & Son was lately well known as a long-time member of the house of Scribner, and his son has partly acquired his training in the same good school. For a beginning A. C. Armstrong & Son have purchased part of the standard stock of W. J. Widdleton, embracing Burton, Disraeli, Hallam, Milman, Lamb, etc.——The 17th volume of *Scribner's Monthly* bears a double frontispiece, the heads of Longfellow and Emerson, and is replete with good engraving and good reading, as we have testified from month to month.——Sheldon & Co. have in press a manual of English Literature based upon Professor Morley's well-known work, but largely original in matter and arrangement. Prof. Moses Coit Tyler is the editor.——President A. D. White's address on "Education in Political Science," on which we commented last week, has been published by John Murphy & Co., Baltimore, in pamphlet form. ——Candidates for fellowships at the Johns Hopkins University are notified to present their applications before the 15th instant. In a letter addressed to the President the previous reading and study and future intentions of the applicant should be stated, and some essay or thesis (not necessarily prepared for this occasion) should be offered in connection with it, together with references, etc. Five fellowships will be allotted this year to each of the departments of Greek, Mathematics, Chemistry, Physics, and Biology; and five at the discretion of the Faculty.——A second circular concerning private collegiate instruction for women at Harvard has just been issued by Mr. Arthur Gilman, Secretary, whose address is 5 Phillips Place, Cambridge. Admission to instruction will be granted those who pass satisfactorily the Harvard University Preliminary Examination for Women this month in Cambridge, New York, Philadelphia, and Cincinnati, in eight of ten subjects enumerated. The fee for the full year's instruction will be $200; for single courses, $75 to $100. ——The last report of the Davenport (Iowa) Academy of Natural Sciences shows a flourishing condition. Among the important acquisitions of the past year have been an exhumed tablet of stone, with inscriptions differing from, yet partly agreeing with, those of similar ones already exhumed and ascribed to the mound-builders; and two "animal" pipes, representing a bear, conjectured to be the grizzly, and an elephant. Mrs. Mary L. D. Putnam, one of the principal benefactors of the Academy, was chosen president for the current year.——Lovers of early English literature should procure the circulars of Mr. Edward Arber, Southgate, London, N., England, who publishes 'An English Garner: Ingatherings from our History and Literature,' the 'English Scholar's Library,' and other collections of reprints interesting for their intrinsic contents or for the rarity of their originals; the invaluable 'Transcript of the Stationers' Registers,' 1554–1640, etc., etc. All these publications are printed with accuracy and elegance, and sold for a very moderate price, Mr. Arber being not only the editor and publisher, but sole dealer in them.

—D. Appleton & Co. have just published a well-devised and well-executed 'Hand-book of Requirements for Admission to the Colleges of the United States,' compiled by A. F. Nightingale, A.M., Principal of the Lake View High-School, near Chicago. These requirements are tabulated, in a remarkably condensed manner, for forty-four of the leading colleges, and afterwards restated in the form of a general average, compliance with which will ensure admission anywhere. This informa-

tion is supplemented by specimen examination papers from Yale, Bowdoin, Dartmouth, and Boston University; and by the current circular of the Harvard Examinations for Women. Provision having thus been made for the capacity of the pupil, the parent's taste is consulted by a variety of statistics helpful in making a choice. There are lists of all the colleges in the United States, classified by States; of thirty-eight colleges, showing the attendance in the various schools, and whether men only or both sexes are admitted; of forty-four colleges in reference to church influence or control—all the State universities being classed as non-sectarian; of the same number in the order of their establishment, with the presidents' names, etc. The colleges are also divided according to their adherence to the English or the Roman pronunciation of Latin, and the schemes of the latter adopted at Michigan, Cornell, and Harvard are presented side by side. Still other statistics have chiefly a speculative interest. It appears, for example, from the data concerning the thirty-eight colleges, that in the New England thirteen nearly 75 per cent. of the students are in the classical course; in the nine of New York, New Jersey, Pennsylvania, nearly 54 per cent.; in the sixteen West and South, less than 43 per cent. The modern languages, and German above all, largely take the place of Greek in the Western colleges. In the mixed colleges, nearly 24 per cent. of the students are women, who pursue (31 per cent.) the classical course; (55 per cent.) the scientific or technical; (15 per cent.) the medical, etc. Finally, in all the above colleges medicine attracts 2,304 students, the law 1,840, and theology 456. The women number 2,053. Speaking generally, all the State universities and all the Methodist colleges enumerated admit both sexes. In the New England States there is one college to every 174,396 inhabitants; in the Middle States, one to every 126,545; in the Southeastern, one to every 93,178; in the North-Central, east of the Mississippi, one to every 82,249; in the North-Central, west, one to every 65,126; in the South-Central, one to every 77,240; in the Western (Pacific slope), one to every 24,451. These figures forcibly reveal the worthlessness of the term "college" as a criterion of the institution adopting it, or as an indication of the culture of any given State. Tennessee, with a population slightly inferior to that of Massachusetts and consisting one-third of freedmen, and with one-sixth the wealth, counts 27 "colleges" to Massachusetts' 9.

—Now that Lent is over, the theatres are applying themselves with great assiduity to the discovery of plays adapted to the short spring season. The Union Square, having reaped a magnificent winter's harvest from the "Banker's Daughter," has turned its attention to a field in which it has already made many hits, and brought out an adaptation of "Les Orphelins du Pont Notre Dame," in "five acts and eight tableaux." It is suggested by the manager that "a story that deals with the foundation of noble charities and benevolent institutions ought not to be uninteresting to the public of a city like this, whose public charitable institutions challenge comparison even with those of the city in which the noble Vincent de Paul founded the first asylum for the neglected and orphaned children of the poor." The story is that of two boys, one the son of the *Countess de St. Val* (Miss Linda Dietz), the other of *Catharine Fournier* (Miss Ida Vernon), both abandoned, one by his starving mother, the other by the wicked *Duke Savello di Savelli*, who, for purposes of his own, finds it convenient that the child of the countess should not be supposed to exist. The two children are, however, picked up by *Vincent de Paul* (Mr. John Parselle), and, needless to say, after incredible and blood-curdling adventures, are restored to their mothers. Mr. Parselle's acting of *Vincent* is, as his acting of almost any part is sure to be, very good. Indeed, he makes the most of it; but it is not a good part for him, and does not give his powers free scope. Mr. Thorne as *De Couci*, the poor but honorable knight who stands next friend to innocence and virtue through the play, acts with spirit, but possibly with not precisely the sort of spirit that would at once identify him as a veritable *De Couci*. Miss Dietz, as the countess, seems rather overpowered by her dress, which is of great magnificence, but not at all becoming to her. The best acting in the play is undoubtedly that of the two children (Miss Mabel Leonard and Miss Hattie Anderson). Their parts are well written and natural, and their acting quite charming. *A priori*, we should have doubted whether twelve is an age of sufficient maturity for successful dramatic presentation—so many plays are spoiled by the introduction of prattling infants—but all doubt is dissipated by the success of these two boys. In melodrama a boy of twelve seems quite in place. He is, after all, in that very world of incident and adventure and romance of which real boys of twelve are half the time dreaming. With "emotional" plays, in which there is an absolute impossibility of the child dramatically entering into or becoming a part of the situation, the case is different. The "Lost Children" is well put on the stage, several of the scenes, and especially the Bridge of Notre Dame, being masterpieces in their way.

—Most people in New York are probably chiefly familiar with Suppe's music through having heard his "Poet and Peasant" given at Thomas's Garden. From the slightly propagandist tendencies of Thomas as a concert-giver, the impression was created that Suppe was a sort of musical purist, and that in listening to him an audience was doing something to educate itself. The fact is, however, as the simple-minded population of this city has just discovered, that Suppe is an industrious writer of comic music of the lightest kind, and that, however much he may desire the improvement of the musical taste of the world, what he has been most strenuously endeavoring to do during all these years has been to write an uproariously funny and successful comic opera. This he has at last succeeded in doing. "Fatinitza," which was brought out last Wednesday evening at the Fifth Avenue Theatre, has, we believe, had enormously successful runs in half the capitals of Europe. Its success is not difficult to understand. The whole idea of the play is very comical, and many of the situations, particularly the scenes in which the Reform Pasha and his harem are introduced, extremely farcical. There is nothing very new in either the play or the music, for the idea of making a comedy turn upon the hopeless passion of one of the characters for a young woman, the young woman being actually a young man whom the lover has met masquerading in female attire, has been common dramatic property in all countries for several generations; while the music contains reminiscences of every opéra bouffe that Lecocq and Offenbach have ever produced. he music is undoubtedly Suppe's, and some of it, particularly the choruses, is very pretty; but it would not have been written had it not been for the composers we have mentioned. Here and there the origin is almost too directly traceable, as in the scene where the Turkish chorus effects an entrance into the Russian camp, which appears almost an infringement of the proprietary rights of the owners of "Giroflé-Girofla" and the "Fille de Madame Angot." The libretto is, even in its disfigured English version, very amusing, and in the original no doubt constituted a great part of the strength of the opera. It is fairly sung, and acted much better than we have ever seen anything of the kind given in English. The newspaper correspondent is a strong part, and ought to be put in the hands of an actor who has an exceptionally good voice.

—Mr. Bergner's annual concert, which took place on Wednesday week, presented an excellent programme, which was performed in a very satisfactory manner. The first number was Schumann's piano-forte trio in F major, one of the brightest and most characteristic of the master's compositions, full of that strong and manly humor which pervades many of the works dating from this happiest period of his life. Miss Henne, whose charming and sympathetic voice it is always a pleasure to listen to, sang a rather gloomy and monotonous song, by Gounod, followed by one of Rubinstein's, by no means a good specimen of this author's style, who has written many interesting and delightful compositions for the voice. Schumann's "Widmung" also was admirably sung. Mr. Bergner played a violoncello arrangement of an air by Pergolese and a mazurka by Popper. The concluding number was Beethoven's quartette for string instruments in C minor, Op. 18, No. 4.——Mr. Wilhelmj's second concert of chamber music was an improvement on the first in so far only as the selection was performed in a decidedly superior manner. In other respects it was equally disappointing. The programme did not contain a single number of concerted music that has not been heard here this season and often in previous years. It opened with the same quartette, by Beethoven, that was given only two days before at the Bergner concert. Schumann's trio in D minor was a few weeks ago admirably played by Messrs. Pinner, Damrosch, and Bergner at their chamber-music concerts in the Union League Theatre, and the andante with variations from Schubert's string quartet in D minor has likewise been performed at one of the chamber-music concerts given at Republican Hall by Messrs. Brandt, Matzka, and others. Mr. Pinner gained a decided success by a truly admirable and vigorous rendering of Bach's great organ toccata and fugue in E flat, arranged for the piano by Carl Tausig. The artist was received by the audience with particular warmth and heartiness, and in response to repeated recalls played a charming "Pastorale," by Scarlatti. His performance of the piano-forte part in Schumann's trio was equally artistic and intelligent. Miss Henne sang three Italian airs of the seventeenth century, Mozart's "Veilchen," and a delightful song by Rubinstein.

—More than half of the last number of the *Revue Politique* (April 5) is occupied by a study on Renan, by Charles Bigot. The writer has already discussed Feuillet, Lemoinne, A. Dumas, fils, and lately published a capital sketch of the Duke d'Audiffret-Pasquier; but Renan offers a much finer subject for psychological portraiture, and M. Bigot has profited by all its points. He is acute, ingenious, perhaps fanciful. He dissects M. Renan, classifies him, accounts for him, gives a "theory" of him, all in a few pages and in most agreeable French. The article was, of course, written on occasion of Renan's reception into the Academy. Renan's *Discours* at that time (very badly delivered, it is said, in a style to make Legouvé wince) has been published, and, as every one knows, has excited the ire of the Germans; but from the account given elsewhere in the *Revue* of Mézières' *Réponse*, that apparently ought to be published also, not merely because the author acquitted himself well of the difficult task of replying to such a predecessor, but because Renan's thesis—that great writers pay little attention to style—is false and dangerous, and was ingeniously opposed by Mézières with a reference to the style of the very man whom Renan had eulogized in the latter part of his discourse, his predecessor in the Academy, Claude Bernard. M. Mézières also dexterously guarded the Academy from the imputation of accepting all the scepticism of their new associate; and the whole response seems to have been an exhibition of fencing, courteous but a little malicious, interesting yet requiring for its full enjoyment a knowledge of the course of feeling in the Academy and in Paris.

—Several important monographs upon Roman history and antiquities have appeared in Germany in the course of the last year. Genz's 'Das patricische Rom' is the most important for the early period, and, being the most recent discussion upon the primitive institutions of Rome, ought to be consulted by all students of this period. It is in general founded upon Mommsen's views, from which, however, the author differs on some points, especially in regard to the three tribes, which Mommsen considers to have all existed in Palatine Rome, while Genz holds the common view—that the Sabine Tities inhabited the Quirinal. The chief puzzle of the tribal organization of Rome is the complication of the threefold division with a twofold (*e. g.*, the four pontiffs, augurs, and vestals, the doubling of the centuries of knights, etc.), and this Mommsen explains by the theory above mentioned, while Genz explains it by the later origin and inferior rank of the Luceres. The treatise (of 122 pages) consists of five chapters—"Die patricische Gens"; "Die Curien"; "Der Staat, Populus, Senatus, Rex"; "Die Stämme [Tribes]"; "Patriciat und Königthum." The theory of the *gens*, elaborated in the first chapter, gives the head of the gens almost the position of the chief of a Highland clan—as being, in fact, the proprietor of all the land of the gens, and the only *paterfamilias* in the strict sense of the term. On the other hand, the clients are regarded as members of the *gentes*, and therefore a part of the *populus*. The objection that they would thus have had a vote in the *comitia curiata* is ingeniously disposed of by the theory (p. 61) that the earliest mode of voting was (as in Homer) acclamation. The last chapter contains a striking and suggestive sketch of the contest between the early patrician institutions and the innovating royal power.——Dr. Schwartz, of Posen, has published a thin pamphlet, 'Der Ursprung der Stamm- und Gründungs-sage Roms unter dem Reflex indogermanischer Mythen.' It is an application of the theory of the "sun-myth," which has been made so familiar to us by Max Müller and Mr. Cox, and it traces in an interesting and ingenious manner the connection of this with the stories of early Rome. However far one may be willing to go in this interpretation, one is at any rate surprised at the number and the closeness of the parallelisms which are here pointed out with the stories of Romulus and of Servius Tullius, the worship of Picus and of Vesta.

—Dr. Holzapfel's dissertation 'De Transitione ad Plebem' touches a fundamental point in the gentile system of the Romans, which is of interest, therefore, as a question of Roman constitutional law, and historically interesting, moreover, in virtue of the important case of Clodius; the dissertation is, indeed, mainly devoted to the consideration of this case. Dr. Holzapfel adopts the view of Mommsen, that the transition to the plebs (a different thing from adoption into a plebeian family) was regularly effected by an oath of *patriciatus abdicatio* taken personally before the *comitia calata*. He does not, however, follow Mommsen in identifying this act with the *detestatio sacrorum*, and he thinks that both previous action by the *comitia centuriata* and some formal subsequent action in the plebeian assembly of the tribes were essential to it. It was because Clodius failed to get this necessary authority for his transition in 60 that he had recourse the next year to the clumsy expedient of *adrogatio*, being adopted by a plebeian young enough to be his own son. So far the case may be considered as settled, at least in its main features; the difficulty is in explaining how Clodius, after adoption, was able to retain his old name. This he thinks was by an abuse, with the connivance of the pontifex maximus (Cæsar); it was on this ground, therefore, that Cicero always denied the legality of the tribuneship of Clodius, and therefore the validity of his laws.——'Die agrarische Frage im alten Rom' is a popular lecture, delivered in Heidelberg, by Dr. Heinrich Buhl. It does not aim to enlarge our knowledge of the agrarian laws, or to solve any of the puzzling problems in which this question still abounds; but it presents in a brief and interesting way the substance of what Mommsen has to say upon the subject.——A good summary of the revenue system of the Roman republic will be found in 'Beiträge zur Kenntniss des römischen Staatspächtersystems,' by Dr. Dietrich. The most original part of the treatise is that which treats of the publicans, in two chapters; the one upon their companies, *societates publicanorum*, the other upon the definition of the term, which is shown to apply not only to farmers of the revenue, but to contractors of public works, and also to those who rented mines, fisheries, etc., belonging to the state. Other chapters discuss the method of assigning contracts, both for farming the revenues and for constructing public works.——Belonging to the same general head is Hirschfeld's 'Untersuchungen auf dem Gebiete der römischen Verwaltungsgeschichte'; the first volume containing the administrative officials of the empire, down to the time of Diocletian. It makes a volume of 323 pages, and contains an exhaustive account of nearly all branches of administration—such as the treasury system, the postal system, the fleets, the aqueducts, games, libraries, etc. The next volume, which will be delayed by other duties, will contain the system of taxation and the provincial administration of the empire.

—A topic of the highest importance is discussed by Bernhard Heisterbergk, in 'Die Entstehung des Colonats.' It is known that at about the third century of our era the free peasantry of Italy and many parts of the empire is found to have been superseded by a body of prædial serfs, and the origin of this condition, *colonatus*, has been one of the most difficult problems in the history of the empire. Dr. Heisterbergk clearly states and discusses all the leading theories in regard to the subject, those of Savigny, Puchta, Huschke, etc.; but devotes most of his polemics to that of Rodbertus. Rodbertus, an economist rather than a philologist or jurist like his predecessors, attempted to find the explanation of the phenomenon in Von Thünen's theory of "the Isolated State"—an ingenious demonstration of the forms which will be taken by agricultural industry at different distances from a given centre; its proximity to Rome forced Italy to a garden culture, and the previous disappearance of the free peasantry in the formation of the great estates, or *latifundia*, made it necessary to use slaves for this purpose, giving them a semi-free condition. Heisterbergk, after showing the untenableness of this view, maintains that the *colonatus* did not begin in Italy, but in those provinces (as Africa and Spain) which were the chief sources of the supply of corn, and upon which fell a heavy burden of taxation, from which Italy was free; that it was "the characteristic feature of the formation of *latifundia* upon tributary soil." Then came legislation and made the condition uniform over the whole empire. The special value of the treatise lies in the thoroughness and lucidity with which the working of economical laws is traced in the social events of this distant period.

—We print in another column some German comments on a recent notable work by Mr. Charles Francis Adams, jr. At the same time we are in receipt of a handsome and not slender report on the operation of American railroads, prepared by a Prussian railway inspector, H. Bartels, in accordance with the instructions of the Minister of Commerce. Herr Bartels came to this country in connection with the German exhibit at the Centennial, and was able to make a flying trip to the Pacific and towards the Gulf, in the course of which he had an opportunity to observe the management and construction of the most important roads on this continent. He expresses warmly his thanks to the railway officials, who gave him every facility in their power "in willfährigster und aufopferndster Weise," and supplied him freely with reports, photographs, drawings, etc. While endeavoring to make a purely objective showing of the appliances of our roads, he points out in his preface the danger of borrowing American methods and contrivances for adoption under wholly different conditions. He praises highly the American inventiveness and desire to have the best thing from whatever source it is presented; and our railway-engineering audacity, aptness, and success he also extols in the most gratifying terms. The volume before us is Part I., and deals

only with railway stations and signals. It is illustrated with numerous excellent wood-cuts and thirteen copper-plate maps, and is printed in the Roman character. We suppose we hazard nothing in saying that for the two subjects treated there is no work in the English language to be compared with it on the score of information alone, while the foreign point of view even in selection and description must considerably enhance its value. The title of the report is 'Betriebs-Einrichtungen auf Amerikanischen Eisenbahnen : Bahnhofsanlagen und Signale' (Berlin : Ernst & Korn.)

DRONE ON COPYRIGHT.*

THE English Commission on Copyright in their recent report on the subject of literary property, speaking of the English legislation, say: "The law is wholly destitute of any sort of arrangement, incomplete, often obscure, and even when it is intelligible upon long study, it is in many parts so ill expressed that no one who does not give such study to it can expect to understand it." The copyright laws of the United States are free from some of the faults which make a chaos of the English statutes, but Mr. Drone hardly overstates the case as a whole when he declares at the outset of his interesting book that "meaningless, inconsistent, and inadequate statutory provisions ; ambiguous, erroneous, and conflicting decisions, cover the law of copyright with doubt, difficulties, and confusion."

The causes of this are not difficult to understand. Literary property is a species of ownership which is of entirely modern development. Some writers on the subject have touched upon the Roman law in its bearing on copyright ; but beyond a text which, if we remember right, decides that a manuscript written upon the paper of another becomes the property of the latter because the paper is his, the Roman law has hardly anything applicable to the matter, and that little is of the very slightest importance, for the single reason that the Romans did not understand the use of types. It is only since the invention of printing—that is, within the last three hundred years—that copyright has become of any value as property, and consequently it is in the laws and decisions of this period that we must look for the development of it as a branch of the law of property. To the student it presents an interesting instance of the development, almost within the memory of men now living (for the copyright question can hardly be said to have been seriously discussed except during the last hundred years of the period which we have mentioned), of a new and distinct species of property resting on precisely the same foundations with other proprietary rights, but differing from all others in its nature and attributes. The idea of property in these is so familiar to us that it is difficult to conceive of a state of society in which it is not recognized. Recent research has, however, made us familiar with the fact that the idea of property is a product of civilization ; that in pre-historic times, among the races which now consider themselves charged with the especial duty of protecting and preserving it, the institution of private property did not exist, and that it has been slowly developed out of a primitive communism. In copyright, however, we have a sort of property which is even now, under our very eyes, freeing itself from the early communistic fetters, and establishing for itself a footing, at first infirm and precarious, but gradually becoming fixed and unquestionable in all civilized countries. This is a fact which we do not propose to prove by any abstruse legal argument. Whether, as some eminent lawyers have maintained, copyright did exist at common law (*i.e.*, independently of any statutory provisions), or whether it is simply a creature of statute, there is one fact which cannot be disputed by any one familiar with the history of literary property—that with the past hundred years the rights of authors in intellectual productions have been gradually but steadily extended in every direction. For, it must be remembered, there are several directions in which a right of property may extend itself. It may be increased in duration of time (as, for example, the ownership may exist for a limited term of years, or for life, or for ever), in the power of disposition (*e.g.*, it may be enjoyable by the author himself, or he may have the right to sell it, in whole or in part) ; it may be strengthened by international as distinguished from local recognition. Now, comparing copyright as it existed in England during the last century with copyright as it exists to-day, there is no doubt that there has been a steady progress in one direction. By the first English copyright statute passed in Queen Anne's time (1710) the period for which authors' rights were guaranteed was only fourteen years, with a return to the author of an additional fourteen years' privilege. A century later (1814) we find this lengthened to a period of twenty-eight years absolutely, and the lifetime of the author. By the present law of the United States it is twenty-eight years in the first instance, with a right of renewal for fourteen years more. By the present law of England it is the life of the author and seven years more, or forty-two years—whichever is the longer period. In Germany it is life and thirty years ; in France, life and fifty years ; and in Italy, life and forty years, or a fixed period of eighty years (equivalent to rather more than two lives)—whichever is the longer. Finally, the English Commission, after a mature consideration of the whole subject, have recommended a still further lengthening of the period in Great Britain, and this recommendation will undoubtedly be adopted by Parliament.

Taking the world at large, therefore, it is not unfair to say that the development of the idea of literary property, so far as relates to *duration*, has reached a point at which there is a pretty general consensus of opinion that the author of a book, a play, a poem, a history, ought to have the opportunity of making what he can out of it during the term of his natural life, and that his children after him should have a qualified right of inheritance for a short time longer ; and that this right is recognized by all countries. It is clear that there is but a very short step from this to the position that copyright should be put on the same footing with all other property ; in other words, made perpetual. This step, as to what is now called play-right or stage-right (the right of public representation of dramatic works), has actually been taken in many American courts in a series of decisions which are, by the way, remarkable instances of the advantages of the system of judicial legislation in a case where the legislature itself, from defects in intelligence and morality, cannot be relied upon to relieve the courts of this duty.

While copyright has thus been strengthening itself with regard to *duration*, it has also gained, as a form of property, an almost universal international recognition. All civilized countries except the United States now recognize, by treaty or by general laws, the duty of protecting authors from piracy as being of the same obligation as the duty of protecting other owners of property, no matter whether citizens or strangers, from injury to their rights ; and in the United States the only obstacle in the way of a recognition of the principle is the interest of the manufacturers of books, who even now, from time to time, profess their perfect readiness to have foreign authors' rights protected, provided they publish their books here, or, in other words, pay a royalty to American publishers. We believe this position is taken, curiously enough, by publishers who are ardent advocates of free-trade. The fact, however, of a general progress in this country in the direction of foreign authors' rights will not be disputed.

The progress from non-recognition to recognition of literary property in the last hundred years has been so clear that the attitude of mind produced in most impartial persons who examine the subject is one of surprise and indignation that the copyright question was not long ago settled. Mr. Drone, who has made a painstaking and exhaustive study of the subject, frequently expresses this in the strongest way ; and, from the professional point of view, it is a defect in his treatise that he does not always distinguish with a perfectly judicial fairness (with the fairness which is such a marked characteristic, for instance, of Sir James Stephen) between the law as it is and the law as he would have it. To the non-professional reader, however, who cares less for what the law is actually decided to be by the judges than for what it ought to be in a well-governed state, Mr. Drone's strong expressions will appear—as, indeed, they generally are—no more than justified by the facts, and he will ask himself, as we have often asked ourselves, why this question is always arising and never being settled; why, with all our boasting about this age as one particularly devoted to the honor of authors, literary property should still to-day be the worst-protected kind of property there is.

Of course the fundamental reason is that it is a kind of property difficult to protect ; that the author is himself absolutely helpless in the matter, and that his only security is the common sense of justice and right, which is not always as strong a social force as it should be. All other kinds of property—houses, lands, chattels—are protected, in the first instance, by the strong hand of the owner ; in the case of copyright he has no protection except what the law gives him. But apart from this, if we examine the reasons which have been put forward to show why the law should not give him complete protection, we shall find that the reason most commonly advanced, and the one which has had the greatest weight in the discussions on the subject, is that of monopoly. Of course we do not mean that this is advanced as a reason

* 'A Treatise on the Law of Property in Intellectual Productions in Great Britain and the United States. Embracing copyright in works of literature and art, and play-right in dramatic and musical compositions. By Eaton S. Drone.' Boston : Little, Brown & Co. 1879. 8vo.

against *international* copyright; but in all the discussions of the proper *duration* of copyright, from the time of the great decision of Lord Mansfield in the case of Millar *vs.* Taylor down to our time, monopoly has always been a favorite argument with the enemies of copyright.

We believe, however, that the whole argument as to monopoly rests on a pure fallacy. Monopolies and property rights have nothing whatever to do with one another. Property is simply the absolute right of individual enjoyment and disposition of the thing owned. A monopoly is the grant of an exclusive *privilege* for the benefit of private persons, which they otherwise would not have had. The distinction is so clear in practice that it is difficult to see why it should be so difficult to grasp in a new subject. The exclusive right to sell tobacco, which is, under ordinary circumstances, open to all the world, is a monopoly. The right of the owners of a particular newspaper is a right of property. Now, literature is a business in which any one may engage, and to give the sole right of producing a particular kind of book, as histories, novels, or poems, would clearly be the creation of a monopoly; but the right to enjoy and dispose of a particular literary composition is a right of property belonging to the author, or it is nothing at all.

The matter has been much confused by a supposed resemblance between books and mechanical inventions. This difference between patent right and copyright, however, is fundamental. It seems to be perfectly well established as a fact that in the progress of the application of science to the useful arts the question of discovery is merely a question of time. All inventions are pretty sure to be made by some one, sooner or later. Some of the most important discoveries which have marked epochs in the history of civilization have been made independently in different countries at different times. This has been the case with printing, with gunpowder, and with the use of steam as a motive power. With regard to mechanical inventions, patents are every day being taken out in different countries on substantially identical processes. It is not, therefore, unfair to say that a patent right is a grant of an exclusive privilege in something which in a certain sense is common property. This privilege may properly be limited by legislation to a reasonable period. But with books the case is totally different. If Shakspere and Milton had not lived, the world would indubitably, to the end of time, have been without "Hamlet" and "Paradise Lost." It is perfectly clear, too, that neither Shakspere nor Milton was under any sort of obligation to write. They were at liberty to gain their livelihood in any way they pleased. Literature itself is, of course, an occupation open to all, and a grant of the general privilege to a particular person to write books, or to write books on a particular subject, would create a monopoly; but to protect a particular author against piracy is merely guaranteeing him in the enjoyment of the fruits of his original, individual labor. To say that full property rights in this would be a monopoly is merely to say that all property is a monopoly.

It is hardly necessary to remark that nothing will be found in Mr. Drone's book in conflict with these views. He is an ardent advocate of copyright as a branch of the law of property, and has devoted the first hundred pages of his book to an enquiry into its origin, nature, and history. This part of the volume will probably be found of most general interest. The subject, as a branch of the history of literature, well repays study. It is in its main outlines easy of comprehension to the non-professional reader. The same thing cannot be said of common-law property in unpublished works, discussed in chapter i., or of common-law play-right in unpublished dramas (chapter xiii.), though the decisions of the courts as to these are often very entertaining and instructive reading. But we have left ourselves little space to speak of the book in detail. In another edition we should recommend Mr. Drone to moderate some of the epithets which he applies to the decisions of the courts; for, though these may be from a philosophical point of view justified, they always injure a law-book with the legal public, and sometimes diminish the reputation to which very great books are justly entitled, as in the case of Austin, whose 'Jurisprudence' would unquestionably have found much greater favor with practical lawyers had it not been for his ferocious assaults upon Sir William Blackstone. We should not omit to add that Mr. Drone discusses copyright in works of art and in musical compositions, as well as book copyright; in another edition he might render his book still more valuable by an examination (like that which he has given to literary property) of the theoretical basis on which copyright in these should rest. We feel a reluctance, however, at expressing any opinion which might seem to raise a question as to the value of the book as it stands. Mr. Drone's collection of authorities is exhaustive and his statement of them accurate; he is, moreover (a rare thing with legal writers in this day and generation), so thoroughly at home in his subject that he brings to bear upon the discussion of each point in it a mass of information derived from familiarity with all the other points, and has, as a result, produced by far the best treatise on copyright that has been published in England or America.

Personal Memories: Social, Political, and Literary. With sketches of many noted people. 1803–1843. By E. D. Mansfield, LL.D. (Cincinnati: Robert Clarke & Co. 1879.)—This book, originally letters to the author's children, and showing few marks of editing in its present form, hardly calls for criticism as a literary performance. As a contribution to the history of a period for which we have no good standard work, it possesses both interest and value, but neither in the degree which might be inferred from a mere statement of its contents. Dr. Mansfield was born in New Haven, in 1801; at the age of fourteen he entered the West Point Academy, where his father was the first teacher, and graduated in 1819; the next year he entered Princeton, and graduated in 1822; the year following he entered a private law-school in Litchfield, Conn., and was admitted in 1825 to the bar of the same county, but almost immediately removed to Ohio, of which State he has ever since been a resident. He had previously as a little child accompanied his parents to Cincinnati, while the city was in its own babyhood, and he remembers hearing the howl of wolves and seeing flocks of green and gold paroquets near what is now Spring Grove Cemetery. He was ten years old when the Mississippi Valley was shaken by the tremendous earthquake of December 16, 1811, which produced the most violent disturbances in the neighborhood of New Madrid, Missouri, and permanently altered the relations of land and water. For five months afterwards, as tested by a pendulum which his father hung at a front window, there was a constant trembling, with occasional smart shocks, during one of which the writer, while at a neighboring log-house, heard the corn on the upper floor "roll from one side of the house to the other." But the moral effects of this phenomenon did not compare, in Ohio at least, with those of the Asiatic cholera in 1832 and 1849, which Dr. Mansfield describes with some particularity. In Cincinnati, during the latter visitation, he estimates that one in twenty-nine of the total population (116,000) perished; of the Germans and Irish together, one in sixteen. In 1826 he assisted in taking a private census of the city, which then had but 16,200 inhabitants.

On the whole, Dr. Mansfield is inclined to believe politics no worse in our day than in the third and fourth decades of this century, while, by the decline of intemperance and of the respectable vice of gambling, society has been greatly improved. Judging "from newspaper accounts," he thinks the stage, too, has been purified, but he seems to doubt "whether we can imagine the early Christians to have frequented theatres." A marked social difference is illustrated in the following anecdote of an English auctioneer in New Haven (1812–13):

"The habit of intemperance at last brought him to the poor-house, but not to that degradation, either of position or character, which now attends the inmates of poor-houses. He had been the associate of gentlemen, and continued to be so when in the poor-house. Mr. Bishop and other gentlemen used to supply him with the best of clothes, and he went round visiting as he pleased. It happened that while he was in the poor-house the descendants of some of the first merchants of New Haven were also there. Capt. Powell was asked if he did not feel the want of society. 'Oh! no,' he replied, 'I enjoy there the society of the best families of New Haven'" (pp. 55. 56).

This was true of many other New England poor-houses until the pauper class became distinctively foreign. Scarcely less hard to realize is the following idyllic scene from the same section:

"It was about the middle of June, 1823, that my father and I drove up to Grove Catlin's tavern, on the 'Green' of Litchfield. . . . One of the first objects which struck my eyes was interesting and picturesque. This was a long procession of school-girls, coming down North Street, walking under the lofty elms, and moving to the music of a flute and flageolet. The girls were gayly dressed and evidently enjoying their evening parade, in this most balmy season of the year. It was the school of Miss Sally Pierce, whom I have mentioned before as one of the earliest and best of the pioneers in American education. That scene has never faded from my memory. The beauty of nature, the loveliness of the season, the sudden appearance of this school of girls, all united to strike and charm the mind of a young man who, however varied his experience, had never beheld a scene like that" (pp. 122, 123).

Turning to his adopted section, we have from Dr. Mansfield some candid appreciations of Western character which are even now instructive. Speaking of Henry Clay's fitness to be a leader:

"If he had been more of a scholar, and more of what the world calls a moralist, he would have had fewer followers and admirers among the

Western people, who loved more the frankness, courage, and gallantry of their chief than they did the acquirements of a scholar or the strict manners of a moralist" (p. 215).

"Mr. Clay was unable to carry for Adams any one of the States which had voted for himself. Mr. Adams held and carried all his own strength, while he derived none from Mr. Clay. The causes of this were very obvious. The Western States which had voted for Clay were composed of exactly those people who are most susceptible to the idea of military glory. In fine, they were carried by the Battle of New Orleans" (p. 229).

Here is a "Veteran Observer's" comfort for those just now in mortal dread of "revolution":

"Apparently Mr. Adams was defeated by a very large majority of the electoral vote, but really the majority was comparatively small. Jackson had received a popular majority over Adams, in 1824, of 50,000, in a vote of 350,000. In 1828 he received a majority of 138,000 in a vote of 1,156,000—not so large, in proportion, as before. In 1824, five States chose electors by the legislatures. Any one can see, by examining the votes of 1828, how little the strength of parties has changed since. The truth is, that politics, like religion, descend from father to son, with little variation" (p. 235).

Again, of the hard-cider campaign of 1840 :

"The vote at the Presidential election was nearly a million of votes greater than that at the previous election. This showed the popular excitement, but did not show any great change of parties. For example, the State of Ohio, with all this effort, gave only 23,000 majority for Harrison, who had received 9,000 at the previous election. The increase of majority was 14,000, and half of that, 7,000, were all the votes actually gained from the Democrats" (p. 321).

"General Harrison received the electoral votes of all the States but six. This, however, did not represent the true proportion of parties; for, while he received this great electoral vote, he received only 147,000 majority in 2,500,000 votes. Maine, Pennsylvania, and one or two other States had only given him three or four hundred majority. The general result, therefore, was that while the triumph was complete, the real strength of parties was not materially changed" (p. 323).

We have left ourselves no room in which to make extracts concerning the various public characters whom our author encountered more or less familiarly in his youth and early manhood. Timothy Dwight; the third Governor Oliver Wolcott, who used to say, "You don't want a man of genius for President. You want a plain, practical man. There is old Sitgreaves, of Pennsylvania ['a member of Congress, full of statistics and political economy'], will make as good a President as any other"; Lyman Beecher at Litchfield (where "it is said that he would return from a funeral and send forth the quickest airs from his fiddle"), and afterwards at Cincinnati; Clay; "Tom Corwin, the wagon-boy"; J. G. Percival; Alexander Campbell, founder of the sect bearing his name; Thomas Smith Grimké; General Ormsby Macknight Mitchel (singularly enough, though he was Dr. Mansfield's law partner, spelt Ormsby McNight Mitchell throughout); Caroline Lee Hentz (spelt Hentze throughout), and other personages, noted and unimportant, figure in these pages, never very vividly, and not always, so far as anecdotes are concerned, freshly. The author's very positive judgments of men and books and measures call for cautious acceptance on the part of inexperienced readers; they may curtly be defined as the views of a Presbyterian Protectionist Republican. Dr. Mansfield's age would excuse errors like the killing of *Owen* Lovejoy (p. 281) instead of Elijah; but the printer is the most constant offender. Between them lies the grotesque substitution, on p. 187, of *bon ami* for *bonhomie;* perhaps a case of "heterophemy."

The Odyssey of Homer done into English prose. By S. H. Butcher, M.A., and A. Lang, M.A. (London and New York: Macmillan & Co. 1879.)—We have in this book an attempt to solve on a new theory the problem of translating Homer. After all the discussion of the problem a few years ago, and the numerous experiments that were made by the late Lord Derby, Newman, Wright, Worsley, Bryant, and others, there was still left one plan that was not tried, though it was mentioned by Matthew Arnold. It was always assumed from the time of Chapman down that the translation of a poem must be in metrical form. The present translators have broken with that tradition for reasons which they give in their preface. They hold that there is a want in regard to Homer still unsatisfied, and which no verse-translation can satisfy. What is wanted is "the simple truth about the matter of the poems," the content of them as historical documents giving information as to the manners and institutions, the thoughts and pursuits, the hopes and fears—in a word, the human life—of their age. Now, a verse-translation cannot precisely meet this demand, for the poetical style of one age differs necessarily from that of another, and the characteristic element, whatever it may be, of the poetical style of any age since the epic will be foreign to Homer. Thus, "for the Elizabethan age Chapman supplied . . . the mannerisms that were then deemed of the essence of poetry—namely, daring and luxurious conceits." So Pope for the age of Anne, Cowper for that of the Georges. Then, when some forty years ago there was a craze for the ballad as the earliest form of popular literature, the ballad element was recognized in the Homeric poems, and there came attempts to reproduce them in ballad form. In every case the special characteristic of the poetry which commends it to the age for which it is written, that element without which it would hardly seem then to be poetry, is either a distinct addition to Homer or else the exaggeration of what in him is subordinated to other things. For these reasons the present translators have undertaken to give in prose that simple truth about Homer which cannot be given in verse. The theory seems to be correct, for there can be little doubt that the demand for knowledge of the contents of the poems is stronger now, under the influence of modern historical methods, than it has ever been before. And the success of their attempt, when compared with any verse-translation, further justifies the theory. Indeed, we are not sure that the use of prose for the translation of Homer may not be defended on other ground than that taken in this preface. It may be merely a testimony to the skill with which the work is done, but while we were reading it the question arose whether this is not after all the true corresponding medium in English to the Greek hexameter of the heroic age, at least for the 'Odyssey.' This smooth, melodious, slightly antiquated, but strong and noble prose goes on serenely through sorrow, disaster, death, adventure, feasting, jesting, peril, and triumph in the wonderful story with very much such an effect upon an English ear as the hexameter may have had on the more rhythmical Greek ear. Certainly no verse-translation that we have yet had can carry one through the poem with so much interest and so little sense of monotony. The medium interposes no bar between the reader's mind and the poet's thought, and that can never be the case with a verse-translation. To a scholar who reads it with the text in hand it may often happen that this translation will not seem altogether right; thus, in the very first sentence the change of subject in "many were the men" disturbs the relation of thought in the original, although it preserves the emphasis of order. But even he will feel anew the charm of the *story*, though not that of the poem, and will find many a valuable hint as to the sense, while the general reader who takes up this book to get his first real knowledge of the 'Odyssey' will find nothing to embarrass or mislead and much to delight him. One such, we happen to know, has read the whole book with keen interest in two short evenings.

Army Sacrifices; or, Briefs from Official Pigeon-Holes. By James B. Fry, Colonel, Adjutant-General's Department, and Brevet Major-General United States Army. (New York: D. Van Nostrand. 1879.)—The author describes his work as consisting of brief sketches of actual occurrences, scattered over a period of nearly thirty years, presented as examples of the dangers and privations to which our soldiers in active service in the Indian country are continually exposed, and the gallantry and fortitude they display. In this respect the sketches enforce the practical estimate announced by life-insurance companies, that the so-called peace periods of our national history are fraught with risks demanding premiums not charged to the officers and soldiers in other services, and they are of interest as giving to the public some narratives not accessible except to heads of bureaux in charge of official documents. No great praise can be bestowed upon their style of composition. The author saves his own literary reputation by declaring that there is, in some instances, no change in the terms of the recitals as originally reported, but the faults of sometimes affected and often slipshod writing are only thus shifted upon the other officers of the Army who actually made the reports.

Carelessness or ignorance is shown in matters of more importance than mere style. On page 49 "a band of Pah Vaut Indians (Eutaws)" is mentioned. Pah Vaut may be a typographical error for Pah Vant, but Eutaw recalls more readily a hotel at Baltimore than the Ute division of the Numa family, in which division the Pah Vants are a political subdivision of the body recognized as the "Utes proper." On page 149 it is broadly stated that Indians have not the least aptitude in constructing artificial defences; whereas elaborate and efficient defensive works of stockades, palisades strengthened with earth, sometimes with parapets and loopholes, were found when the Iroquois and Muskoki in the east, the Chinooks on the Columbia, and the Arikaras on the Missouri were first met; and such examples can be multiplied wholly apart from the relics of the mound-builders and cliff-dwellers. It is too much the habit of

army officers to generalize from the present condition of the one or two tribes with which they may have been engaged. The author displays the same want of comprehensive and historic knowledge in his preface, which is obviously designed to favor the transfer of the Indian Bureau to the War Department. He doubts whether, after "so many years of trial," the Indian *race* has given any assurance of receiving our civilization. If it were not proved that great and permanent advances have been actually made by the American aborigines, under highly adverse circumstances, it would still show ignorance of modern science to harp upon the racial theories given in a past generation of school-books. It is now generally agreed that conclusions once founded on assumed hereditary varieties or races must be greatly modified, and that mankind should be treated as of homogeneous nature though found in different degrees of civilization, the progress toward which is still everywhere in regular operation. The several distinctive and conflicting classifications invented from bodily configuration, hair, color of skin, etc., are now little regarded. We must look upon the North American Indians as representing our own ancestors of the Stone Age, and as well able to emerge in time from savagery and barbarism as were the pristine men of Asia and Europe, whom they strongly resemble in their customs and mythology. The author unconsciously presents a good argument against the transfer of the Indians to the Army, as true statesmanship would entrust them to the care of agents who believe in and hope for, not to those who deny the possibility of their civilization.

Artists of the Nineteenth Century and their Works: A Hand-book containing two thousand and fifty Biographical Sketches. By Clara Erskine Clement and Lawrence Hutton. (Boston : Houghton, Osgood & Co. 1879. 2 vols., pp. lxxxvii. 386, 43, and lviii. 373. 43.)—In these convenient volumes of ready reference the whole array of indices is twice repeated. Each volume contains an alphabetical list of artists' names, an index to the authorities quoted, an index of places, and a general index—each and all of these tables of reference being for the whole work, so that the tables in one volume are exactly the same as those in the other. This swells the size of each volume by twenty-five leaves or so, but adds to the facility with which the book can be consulted. The authors have rightly felt that this matter of handiness was the most important consideration in such a work after accuracy. As for accuracy, the avowed plan has been to send circulars to the artists who were to be noticed, and, where no answer was received, to print a statement to that effect. It would have been a good plan to have limited the notices to such dry facts as one would naturally furnish in answer to an enquiry about his own career ; or to these with the addition of citations of important works. In this way would have been spared the feeble repetition of such phrases as "displayed a taste for art at an early age," and the like. As to mere errors of statement, it is impossible to avoid them wholly in such a book, and difficult to detect them. Mr. C. C. Coleman's most important contribution to the Paris Exhibition of last year is not named, while his "decorative panel" is mentioned ; Mr. La Farge's "New England Pasture-Land," rightly spoken of as the property of Miss Hooper, is the same picture that went to Paris in 1878, and made a sensation there ; Millais's well-known picture is called by the common and erroneous name, "The Huguenot Lovers." Slight errors all, but of this nature are all the faults of statement that we have marked. Clumsy translations are not uncommon, and reach the dignity of downright errors in some cases, as when Méryon is called a "marine," in obvious misunderstanding of the significance of the word *marin*, and the world-renowned Pont-Neuf, new in Henry IV.'s time, indeed, is called "The New Bridge." The list of names is very full ; the only omissions we have wondered at are the names of some artists best known as illustrators of books, such as Charles Keene, and the architect, Viollet-le-Duc, who, if better known as a writer than as an "artist," at least has the same claim as Mr. Ruskin to be included in the book. It is to be mentioned as creditable to all concerned that the double sirnames so common in modern French society are correctly given : Viollet-le-Duc (the painter), Bastien-Lepage, Albert-Lefeuvre, Feyen-Perrin, Alma-Tadema, and a number more.

So far all goes well ; nobody need avoid trusting the book on account of such faults as have been cited. But we have to warn the public most earnestly against reading the critical remarks which, taken at haphazard out of the books nearest at hand, are added in smaller type to the notices. Some good authorities are quoted indeed, but the worst possible are quoted just as freely. It should be observed that there is no way of indicating a preference, or of letting it be known that the compilers give more authority to one than to another ; the only plan is to exclude the trifling ones, and to cite only those writers who carry some weight. Who is a suggestive and thoughtful writer on modern art ? Mr. Hamerton is, and he, indeed, is quoted forty-six times (as the index states). But so is Mr. Comyns Carr, who is quoted three times, Professor Colvin seven times, Mr. Wedmore not once ! Who has influenced the largest number of persons ? Mr. Ruskin, and he is quoted forty-five times in all ; to be sure, a small allowance in view of the fact that most readers want to know what that author thinks about an artist, whether they follow him or not. But Mr. Jarves, whose vague remarks upon American artists printed many years ago might as well be forgotten now, is quoted fifty-seven times. It is the same thing among the French writers. Mr. Charles Blanc is quoted five times ; Mr. Burty twice ; Mr. Chesneau, Mr. Yriarte, Mr. Gustave Planche, Mr. Paul de St. Victor not once. And it is so with the periodicals : the least critical of all journals concerned with art, the London *Art Journal*, is cited more than two hundred times, or about four times as often as the *Gazette des Beaux-Arts* itself and ten times as often as the *Portfolio*. As to the American dailies, there seems to be no attempt to choose between them, and the few which give especial attention to the subject and employ competent observers and careful writers are not quoted so often as newspapers in country towns whose New York or Boston correspondence has a smart twang to it. We have not space to do justice to this part of our subject, and can only repeat the expression of our disappointment that this obvious and tolerably easy way of giving to this book a peculiar value should have been partly neglected and partly abused in this fashion.

Histoire de la Russie, depuis les origines jusqu'à l'année 1877. Par Alfred Rambaud. (Paris : Hachette ; New York : F. W. Christern. 1878.)—This work, the latest of the well-known series published by Hachette under the superintendence of M. Duruy, comes to us crowned by the French Academy. In plan it holds the middle rank between the mere compendium and the exhaustive work of many volumes. It is easy to see that it owes the approval of the Academy not so much to its absolute merit as to its relative superiority. Books about Russia which are neither party pamphlets nor *chroniques scandaleuses* are rare enough to make M. Rambaud's fairness of statement and, so to speak, generosity of view remarkable. Great skill is shown in tracing the development of the scattered communities which were finally united under the grand princes of Moscow, and in defining and making prominent the main current of events throughout the history. The Polish question is treated as one of the secular conflicts of history—as Pushkin called it,

"An ancient household strife, oft judged but still unending."

To this view, unusual enough for a Frenchman, is due much of the commendation which the book has received from the Russians themselves. Equally gratifying to them must be M. Rambaud's account of the events of a later time. It must surprise English readers, who inherit with implicit faith the popular traditions of Wellington, to find how large a share in the overthrow of Napoleon can be attributed to Alexander I. Nor will they easily recognize the "Eastern Question" in M. Rambaud's presentation of it.

It is a pity to have to say of a book of such evident merits that it is withal not interesting. It is a mass of material arranged in good chronological order, but the narrative lacks proportion and relief. The revolt of the Ukraine is told with as much force, and no less, as the sorrows of "the time of troubles." One cannot distinguish between the fall of Kiev and the fall of Novgorod. The very attempt at fairness impairs the author's power. It is indifference, not justice. A certain amount of personal conviction is necessary even for a judicial opinion, but of M. Rambaud one can only make out his doubts about Poland and a somewhat colorless sympathy with Slavophil and Panslavist. So, we say, the book lacks interest. As a work of reference it will have its uses, but no one will be drawn by it to the study of Russian history. Throughout the narrative is too exclusively military. There is scarcely anything about the language. So rare an event as the creation of an alphabet and a written language out of hand is dismissed with a scant allusion of half a line. One could not have believed that a book about orthodox Russia would be deemed complete which contained no mention of the rites or tenets of the Greek Church.

It is not only upon these points of the national speech and the national church that the baffled student will find himself compelled to seek information elsewhere. M. Rambaud's habits, as a writer, are evidently those of the *reviewer*, who writes with the expectation that his readers will appeal to the book he criticises. In this way he permits himself a

host of allusions which at the worst mislead and at the best exasperate. Of the brief phrase about the alphabet we have already spoken. So the burning of the Golden Book has not a word of explanation to account for the consent and co-operation of the nobles in so summary a proceeding, nor to explain its connection with Peter the Great's institution of the *tchin*, in the next generation. "Le jour funeste de Saint-George," "Sophie d'Anhalt." "le droit de Magdebourg," "l'ingratitude d'Autriche," are only stumbling-blocks in the text. Even "la Sainte Alliance" is not familiar enough to the reader of to-day for the bare words to suffice. Nothing about Russia so impressed itself upon the last generation as the revolt of the Guards and the fate of the "Dekabrists" at the accession of Nicholas. Was it a deep and wide-spread conspiracy in which some of the wisest and best of Russia had pledged themselves to wholesale massacre, and to which Nicholas was justified in showing no mercy; or was it the rash scheme of a few daring spirits who availed themselves of the confusion of the interregnum, and brought upon scores of the innocent the terrible vengeance of an outraged autocrat? From M. Rambaud's indistinct and incoherent statements one could never infer any theory about the catastrophe, and much less frame any judgment about it.

His comparisons with more familiar events and personages are often helpful, but the parallels in general terms might be misleading. To compare the wonderful popular uprising under Minim and Pozharski, which put an end to "the time of troubles," with the movement in France under Jeanne Darc is to do it no more than justice; but the use of the term States-General, in regard to Russia, can be only a figure of speech. The Renaissance in Russia, too, must be hard to find. Doubtless the foreigners who went there in the sixteenth century took with them the much or the little of its spirit they had themselves imbibed, but there could have been no such spontaneous intellectual and artistic awakening in Russia as in Western Europe. Indeed, M. Rambaud refutes himself. He says: "La Renaissance se manifeste surtout par le nombre et la magnificence des temples orthodoxes." Mark the *surtout*, and then note, a page beyond, the church of Vassili the Happy at Moscow, the *chef d'œuvre*, which cost the architect his eyes for fear he might repeat the marvel. M. Rambaud calls it "ce monstre polychrome" where "une fantaisie a bravé toute symétrie."

The few paragraphs about literature can certainly make no pretence to be a history of the subject. These names and dates only serve to confuse the little and the great. If as bare facts they are accurate, they are too often grossly wrong by suggestion. Bielinski is curtly described as "the prince of critics, who founded successively the *Observer*, the *Annals of the Fatherland*, and the *Contemporary*." The facts are just as true, and the estimate of the man's position and influence just as inadequate, as if one were to describe Carlyle (the great work of the two men—that of inspiring others—was contemporary) as "the prince of critics, who contributed successively to the *Edinburgh*, the *Westminster*, and the *Foreign Review*." It may be urged in reply to these criticisms that not even seven hundred pages will hold everything. But it is not more that is wanted. The details are too many already. Rather are needed the well-digested statements, the concise summing up of facts, such as M. Rambaud can well make, as any one knows who has read his 'Russie épique,' or the account of the emancipation of the serfs in this very volume. He would, doubtless, insist that he had not meant to write a history of parties, but since he has shown us Slavophil and Panslavist, he ought at least to have hinted that there is an opposing party, one of dignity and not without influence. It is of that party that Mr. Gladstone is thinking when he writes of the Russian *people* as distinguished from the official and military class.

Deutsche Literaturgeschichte. Von Robert Koenig. (Leipzig: Velhagen & Klasing; New York: L. W. Schmidt. 1878.)—At the present day, when histories of German literature are so numerous, one is naturally disposed to scrutinize sharply the credentials of each new-comer. Does it clear up for us any doubtful or complicated point, does it enable us to grasp more firmly the general movement of German thought, or to appreciate more fully the character of German thinkers? If not, why spoil good ink and paper in the printing of it? To apply such a test to the present work would be to condemn it at the outset. The author says nothing that has not been already said by his predecessors, and by many of them said more accurately or more forcibly. Nevertheless we take the liberty of commending his book most heartily. We even go so far as to say that no teacher of German literature should be without it, for it supplies a long-felt want.

Whoever is called upon to instruct a class in the history of the literature of a language knows that the task is anything but easy. Whether the instruction be in the shape of lectures or consist in reading a manual, the chief difficulty is to impress upon the pupil's mind a sense of the *actuality* of the persons and events discussed. They are to him little more than names or dates. Hence everything must be of service that will make the persons concrete, and give to the events a "local habitation"—everything, in short, that appeals to the *eye*.

What Kurz undertook, years ago, in his cumbrous four-volume *Geschichte*, Koenig has carried out in one volume of moderate size. We speak within bounds when we say that the profuseness of his illustrations is astonishing. We cannot make even the attempt to classify them. In part first, for instance, there are full-page facsimiles of Vulfila's Gothic Bible, the *Leben der Jungfrau* by Wernher v. Tegernsee, the *Wessobrunner Gebet*, Otfrid's *Evangelienharmonie*, Heinrich von Veldeke's portrait (Manesse MS.), Frauenlob's (same MS.), and numerous vignettes, initials, and other minor pieces. In part second we find—almost everything; full-page portraits of all the great authors, from Luther down to Herder, facsimiles of Luther's New Testament of 1523, of Luther's *Ein' feste Burg* in the original manuscript with the music, the title-page of Fischart's *Bienenkorb*, 1581, of Fust and Schöffer's Psalter of 1457 (from the copy in Vienna), Albrecht Dürer's title-page to Willibald Pirkheimer's Plutarch, and so on, down to the manuscript of Lessing's Minna von Barnhelm. In part first there are some quotations from the Old and Middle High-German originals, and numerous metrical renderings in modern German. Part third, which completes the work (including the present generation of authors) contains, *e.g.*, a facsimile of the title-page of Goethe's first literary venture with some of the notation to 'Einst ging ich meinem Mädchen nach' (Leipzig: Breitkopf, 1770); also various likenesses of Goethe and Schiller (see especially the one by Reinhart, depicting the poet on the back of a Karlsbad donkey), and facsimiles of Goethe and Schiller MSS. The portrait of Chamisso (p. 541), and Kerner's ink-blot "developed" into a butterfly, with the accompanying verses, will be found supereminently characteristic.

More surprising even than the profuseness and excellence of the illustrations is the cheapness of the book; the price is only four thalers. One wonders how the publishers can afford to give so much for so little. Doubtless they count upon a large demand, in which we hope they will not be disappointed. Paper and press-work are excellent. As concerns the text itself, we must speak less confidently. It is evident at a glance that the author is no philologist. Thus we read, p. 9, that "Gothic is the mother of our modern High-German speech," a misstatement flagrant enough to arouse Jacob Grimm from his last resting-place. And all through part first, which treats of Old and Middle High-German, are indications that the author has derived his knowledge at second-hand. Yet his views are in the main correct enough, and the mistakes can be easily rectified by the teacher. We shall be glad to see the book introduced in our higher German classes. It will serve at least to teach the pupil something about mediæval diplomatics, and illumination, and the growth of the art of printing. The numerous portraits and vignettes make one feel almost at home with the authors of the seventeenth, eighteenth, and nineteenth centuries.

*** *Publishers will confer a favor by always marking the price of their books on the wrapper.*

JUST READY.

Wanderings in Patagonia;

Or, Life among the Ostrich Hunters. By Julius Beerbohm. 16mo (Leisure-Hour Series), $1. Of which

The N. Y. *Evening Post* says: "If there were not a word of truth in it, . . . would deserve the widest possible popularity. The book has as much interest as any novel of adventure. . . . To this it adds all the charm of a veracious record of travel, which it is, and travel through a strange land and among strange people. The story is told with admirable directness and force."

The London *Academy* says: "An amusing book, and for those who have never read any account of that strange country 'Wanderings in Patagonia' will be interesting from the first page to the last."

COMMUNISM IN AMERICA. By Henry Ammon James. 4to, large paper, cloth, $1 50; paper, $1.

TAINE'S ENGLISH LITERATURE. New edition. 1 vol. large 12mo, $1 25.

SYMONDS'S RENAISSANCE IN ITALY: The Fine Arts. 8vo, $3 50.

HENRY HOLT & CO., New York.

"Vigorous, just, and powerful."—*Prof. Moses Coit Tyler.*
"We do not remember its equal, as an image-breaker, since Byron's 'English Bards and Scotch Reviewers.'"—*Publishers' Circular, London.*

American Publishers and English Authors.
By STYLUS. Every publisher, bookseller, and author should read this powerful pamphlet.
WHAT IS SAID OF IT IN ENGLAND AND AMERICA.
"An extraordinarily clever brochure."—*Publishers' Circular.*
"A trenchant pamphlet . . . written with extraordinary fervor."—*E. Marston, London Publisher.*
"The book will do good by creating a healthy—no, a truthfulness of the subject."—*Appleton Morgan, New York*
"It should do something towards the removal of the greatest existing obstruction to American literature."—*Prof. Moses Coit Tyler, Michigan.*
"Stylus has produced a pamphlet that is spicy and bright. . . . The arguments are forcibly put."—*Robinson's Epitome of Literature, Phila.*
"A slashing pamphlet, . . . abounding in point, anecdote, and a trenchant summing-up of bards and other competitors for fame."—*Publishers' Circular, London.*
Will be sent, prepaid, on receipt of the price, 30 cents.
EUGENE L. DIDIER, Publisher, 56 George St., Baltimore.

DOLL & RICHARDS,

2 PARK STREET, BOSTON.

SALE OF

Paintings & Water-Colors

By GEORGE L. BROWN,

Comprising examples of his work from 1832 to 1879, of Indian and American Scenes.

Exhibition from Monday, April 28, at Gallery, No. 2 Park Street.

Sale at the Hawthorne Rooms on WEDNESDAY, THURSDAY, FRIDAY, and SATURDAY, May 7, 8, 9, and 10, at 2.30 o'clock each day.

CONTENTS OF
The Plumber and Sanitary Engineer
FOR MAY:

Plumbing Inspection.
The American Chemical Society.
Malaria: its Cause and the Means of Prevention. By Col. Geo. E. Waring, Jr.
Water-Supply for Small Towns. By Edw. S. Philbrick, C.E.

Heating and Ventilation of Roosevelt Hospital and Dr. Hall's Church.
Plans of Model Tenements.
Contamination of Drinking-Water.
How to Choose a House.
Edison's Electric Light. By T. O'Conor Sloane, Ph.D.
Besides many other articles of interest to Architects, Engineers, Physicians, and Householders generally.
Published Monthly, at $1 50 per year, at 140 William Street. Single copies, 15 cents. For sale by all newsdealers.

THE NATION.—Volumes and Back Numbers for sale. Address the publisher.

"The course of the *Nation* newspaper in its treatment of subjects connected with money, currency, financial legislation, and capital and labor, has always, I believe, been eminently sound and wise; and its files contain the greatest body of serviceable teaching respecting these subjects which can be found in this country. It has also many valuable studies of some of the changes which have been going on during the last fifteen years in our laws, in our methods of political action, and in the character of our people. It is a necessity for clergymen and all students of our national thought and life."—REV. J. B. HARRISON, in the *Christian Register* of August 17, 1878, in an article on the American Literature of Capital and Labor and the Organization of Society on the Principles of Justice.

The Holy Mass.

AN IMPORTANT WORK NOW READY.

PRICE $1 25, NET.

The first of the kind ever issued in the English Language.

A BOOK FOR CLERGY AND LAITY.

A HISTORY OF THE MASS AND ITS CEREMONIES IN THE EASTERN AND WESTERN CHURCH. By the Rev. John O'Brien, A.M., Professor of Sacred Liturgy in Mount St. Mary's College, Emmittsburg, Md.

This work contains a full account of all the Oriental Rites, and gives the meaning of everything that is done in the Holy Sacrifice of the Mass. It has a dissertation on the varying Rites within the Latin Church at the present day, such as the Mozarabic, Ambrosian or Milanese, Carthusian, Carmelite, and Dominican, and gives also a history of the celebrated Rite of Sarum, which, in the good old days, formed the chief glory of the Catholic Church in England.

Also, just published,

Private Charities, Public Lands, and Public Money.

Grants of Land and Gifts of Money to Catholic and non-Catholic Institutions in New York compared.

GROVE'S

Dictionary of Music.

NOW READY,

Part VI., price $1 25, completing the First Volume.

A

Dictionary of Music and Musicians,

BY

EMINENT WRITERS, ENGLISH AND FOREIGN.

EDITED BY

GEORGE GROVE, D.C.L.

(TO BE COMPLETED IN TWO VOLUMES.)

Volume I., price $6, in a few days.

"The topics are well chosen, the scholarship is exact, the explanations are almost always complete and clear, the historical articles show research, and the illustrations are abundant and useful. The new 'Dictionary' has no rival in our language."—*New York Tribune.*

"Upon the whole we can heartily congratulate Mr. Grove upon the production of a work which not only *surpasses all other musical dictionaries in the language*, but is so far in advance of the best of its predecessors that there is really no opportunity for comparison."—*New York Tribune.*

"We look forward with eagerness to the successive instalments of this noble work, and we commend it heartily, with full conviction of its great value, to all lovers and professors of the divine art."—*Dwight's Journal of Music.*

"It would be a great mistake to regard this work as useful only for purposes of reference. It is a collection of interesting and valuable articles on all kinds of musical subjects, which amateurs who take a genuine interest in the art they profess to love will read from beginning to end."—*London Daily News.*

"The articles bearing on technical subjects, both instrumental and notational, are very full and lucid, and in nearly every instance are illustrated and explained by means of printed music. . . . When finished it will be one of the most complete productions of its kind."—*Musical Opinion.*

"When finished it will be a storehouse of knowledge and a most valuable reference-book which no musician can help coveting."—*New Haven Palladium.*

The Nation.

NEW YORK, THURSDAY, MAY 8, 1879.

The Week.

THE timely death of a member of the House enabled the "revolutionists," by adjournment, to gain a little time for considering the President's veto informally before facing it in their seats. On Thursday, however, the veto was sustained, without debate, 120 voting for the passage of the bill, and 110 opposing. Congress then resolved itself once more into caucuses, with the result of framing a bill "to prohibit military interference at elections," which was reported in the House on Monday, and passed the following day by yeas 124, nays 90—a party vote, yet not calling out the full strength of the Republicans, who expect the President to sign the bill. A good deal of its value in Democratic eyes appears to lie in the preamble, which declares that the presence of troops at the polls is contrary to the spirit of our institutions and to our traditions, and tends to destroy the freedom of elections. Its single clause makes it unlawful to bring troops to or employ them at any place where a general or special election is in progress, unless to repel the armed enemies of the United States or to enforce Mr. Boutwell's main-stay, Article IV., Section iv., of the Constitution; and repeals so much of all laws as is inconsistent with this. The President may consider the bill as harmlessly redundant legislation, seeing how the use of the Army is already hedged about; but this of itself would hardly furnish him with an excuse for vetoing it, and he probably will not do so unless, with the aid of the Senate lawyers, he discovers meantime in the repealing section some encroachment which he will feel it his duty to resist. The Senate has been enlivened with a debate over a resolution authorizing the taking of testimony by which Kellogg's title to his seat would be once more reopened, in favor of the former contestant, Mr. Spofford. The proceeding is sufficiently extraordinary from the parliamentary point of view to warrant all the deliberation the Republicans demand for it; but it is also pretty certainly the result of nice political calculations as to the balance of power in the Senate of 1881.

The *World* undertakes to show us that we are mistaken in our position about the Army Bill, first, in saying that the Federal Government needs the Army for a police force, and, secondly, in saying that because the Army is small it cannot be dangerous. The marshals and deputy-marshals, and the surrounding males over fifteen years of age, it says, constitute the proper and only police force of the United States, and the smallest Army may be made large enough to be mischievous. But the trouble is, esteemed contemporary, that in many parts of the country the males over fifteen who might happen to be around the polls on election day would often be unable to aid the marshals and deputy-marshals in keeping the peace, owing to their being already engaged in making a disturbance. No man can act as policeman and rioter at the same time. This may be an unpleasant and uncharitable thing to say, but, esteemed contemporary, you know it is true. We admit freely that the Army may be made large enough to be dangerous to our liberties, and threaten us with a *coup d'état* at the bidding of a wicked commander. We also admit that the police force of New York City might be so enlarged and commanded as to overawe the citizens, and compel them to pay blackmail to protect themselves against clubbing; but inasmuch as this is not probable, we view the present size of the force with perfect tranquillity. In like manner we think it so unlikely that the present Army will become large enough to threaten our liberties that we should witness its employment anywhere in saving life or property with a curious absence of anxiety. We will now ask our esteemed contemporary, in all sincerity, to lay its hand on its heart, or thereabouts, and say whether it does not believe that the whole movement to modify the Army Bill was not got up because it was the only subject on which the party could be got to unite; whether, in short, this gallant attempt to protect the people from the "iron heel" had not the same ignoble origin as Bill Chandler's love of the "bloody shirt"?

It is a suggestive fact that one of the most ardent promoters of the Grant movement is the St. Louis *Globe-Democrat*, whose editors of that day were so seriously involved in the "Whiskey Thieves" prosecutions of 1876, when Babcock tried in vain to get his friends out of their scrape. It now calls on *Harper's Weekly* to "wheel into line and help whoop up the boys for the boom"—advice which the *Weekly*, for the present at least, declines to follow. The singular collection of arguments in favor of Grant's nomination which we present on another page is a striking example of the kind of political talk now current among Republican citizens of the more intelligent and well-to-do class. We venture to assert that it is in no respect superior to what may be heard among the peasants at any ale-house or cabaret in Ireland, Germany, or France, and probably resembles very much the process by which the Bretons brought themselves to vote for Louis Napoleon in 1852.

A so-called Mississippi Valley Labor Convention met on Monday at Vicksburg, and was attended by the leading men of the State, of both colors, who amicably divided the offices between them, and showed equal consideration in giving a hearing to each other. It was, in reality, a sort of treaty conference, in which the blacks were invited to unfold their grievances, and were led to expect from the whites guaranties of security and fair treatment hereafter, as a condition of remaining in the State and discouraging emigration. The Committee on Resolutions represented both parties, and their report recommended changes in the prevailing contract system, and the discountenance and repeal of "laws authorizing liens on crops for advances of articles—other than those of prime necessity, at moderate profits." Mutual concession was shown by the resolution declaring the absolute legal equality of the colored race with the white, and their right to vote without fear of "fraud, intimidation, or bull-dozing on the part of the whites," which the Convention pledged itself to respect and enforce; and by the resolution binding the colored members to contradict the false and extravagant rumors which induced the ignorant to migrate to Kansas, in the expectation of acquiring there, without labor or price, land, mules, and pecuniary assistance. At the same time, the right to emigrate was freely acknowledged for all who had honestly fulfilled their contracts, and it was declared that no obstacle would be put in their way. These resolutions were adopted, however, only by white votes, it being evident that the blacks considered themselves masters of the situation, and were more ready to listen to promises of reform than to put implicit faith in them.

In this they were doubtless not over-prudent. Some part of the good intentions of the whites can be carried out if they are in earnest, such as the proposed modification of the laws, and the adoption of a more liberal policy in the matter of rent-charges and charges for ginning and the like. But the store-keeper, with his extravagant prices and extortionate interest, who by concurrent testimony is the greatest oppressor of the blacks in an economical point of view, is not likely to be affected by the opinion of a class to which he does not belong, is not certain to be reached by stringent usury laws, and perhaps is too important to be driven away in the summary Southern fashion. As for personal security, the judges will doubtless follow closely the lead of the planters, but the dangers to which a colored man is exposed all over the South from malicious molestation on the highway or in his own home, can only

be effectively removed by such reforms and such an opposition between the upper and lower white strata as Southern society is far from being prepared for. The habit of carrying concealed weapons, the code of honor in avenging personal or family wrongs or insults, the general approval of lynch law, and the universal consumption of whiskey, unite the humblest and the lowest in the sanction and practice of violence from which the blacks are the greatest but not the only sufferers. These are factors, too, which, however much fair play at the polls may be promised, seem to defy any guaranty against intimidation. It is very significant that the only practical-seeming measure proposed to secure the political rights of the blacks excited strong feelings of opposition and was suppressed. Ex-Governor Foote offered resolutions providing for a committee of three to carry out the wishes of the Convention (with special reference to political fair play); this committee to appoint sub-committees in every county and parish of the State, and be the guardians of the interests of the blacks, listening to their grievances and endeavoring to redress them, and devising legal expedients if necessary against a recurrence of them. For this he was called a political trickster and a demagogue by a white speaker, and he may be that; but his plan at least "meant business."

The trial of Cox in Augusta for killing Alston in a fight about a contract, and in which at this writing the case has been given to the jury, brought out some curious traits of manners. Alston, before his death, told a friend that Cox drew a knife on him in a private room in order to force him to sign the contract. Afterwards he saw him searching for him with a pistol, and knew he meant to kill him, and in the State Treasurer's office in the Capitol deplored his fate in being "hounded in this way" to other persons present. But it never seems to have occurred to him or to them to seek legal protection against the ruffian. No one suggested his arrest by the police, and it seemed to be acknowledged on all hands that if the fellow chose to attack anybody with deadly weapons in the State House, no means beyond gentle persuasion ought to be used to prevent it. Alston accordingly tried to persuade him not to murder him, but his arguments made no impression on him. Judging from some of the evidence, too, it would appear that the greatest anxiety of the spectators about Alston was not lest he should be killed, but lest he should show any dislike to being killed in the shape of bodily fear. Alston seems to have been a man of far superior type to Cox, but he was nevertheless content—partly, doubtless, because "he came of fighting stock"—to live by a code in no respect superior to that of a pirate's cave. There was much weeping at the trial. Cox wept, the counsel wept, and the jurymen wept also.

The Supreme Court on Tuesday affirmed on appeal the constitutionality of the Thurman Sinking-Fund Act passed a year ago, and which has been separately contested by the two Pacific Railroad companies. By this Act the whole amount of compensation due the railroads from time to time for Government transportation is to be retained by the United States, and one-half applied to the liquidation of the interest on the bonds issued to the companies, the other turned into the sinking fund which the Act establishes for the redemption of the principal of these bonds at maturity. Each road must also pay annually, on February 1, a sum which, in addition to the compensation for services rendered and the 5 per cent. of net earnings payable under the Act of 1862, will equal 25 per cent. of the net earnings of the company for the year ending December 31 next preceding. This measure, it will be remembered, passed the Senate by 40 to 19, and the House with but two negative votes, and it is therefore gratifying to find the United States Circuit Court of California, the Court of Claims, and the Supreme Court at one in sustaining its legality. Justices Field, Bradley, and Strong dissent, however, on three grounds: (1) that the Act changes the contract between the United States and the companies, and between the companies and the holders of the first-mortgage bonds; (2) that the decision declares the United States not bound to keep their contracts; and (3) that the Act "interferes with the right and power of the State of California to control its own corporation." The first two objections are virtually one, and would seem to be met by the express reservation in the Act of 1862, and still more broadly in that of 1864, of the right of Congress to alter, amend, or repeal. As regards the question of State right, it is set forth that the Central Pacific was incorporated under the laws of California before the national railroad acts were passed; that the Thurman Act requires with penalties a deposit as security for the payment of bonds issued by the company to other parties than the United States, who have never required this security, and for whose protection a law of California requires the creation of a fund in another way—a law which has been always obeyed. On this point we defer comment until the full text of the decisions is published.

Talmage will probably be acquitted by a large majority. The curious feature of this is that the court, composed in the main of professional moralists, is divided on facts which are not disputed. The question finally submitted to them was not, in other words, as we understood it, whether certain acts had been committed by the defendant, but whether they were blameworthy. Ten members of the Presbytery, at least, hold that they amounted to untruthfulness and deceit, and the others that they were entirely harmless. One of the charges, let us add, was of having, for the purpose of raising money for the church, resorted to the device of asking a man publicly to set down his name for a sum which, by private understanding with Talmage, he was not to pay, in order to influence others. This is really a modification of the mock-auctioneer's plan of operations; but the majority of a church court have declared that they see no wrong in it, or, at all events, no punishable wrong. Another curious incident occurred on the trial illustrative of the odd notions of morality prevailing in some ecclesiastical circles. One charge was that Talmage had slandered a brother minister named Hathaway. The proof appeared pretty clear, but it was disposed of by a reconciliation between Hathaway and the accused, the notion of many members of the court being that slander was no offence in a minister if the victim did not complain. The two wrote each other buncombe letters of forgiveness, which were read in court, and were intended simply to throw dust in the eyes of the public, like some of the documents with which the public was made familiar in the Beecher trial.

The week was not a remarkable one in the financial world. Money commanded very low rates both in London and New York, and in both cities there was a large demand for U. S. 4 per cent. bonds; in the former the London and Westminster Bank, the leading joint-stock bank of England, took $5,000,000 of these bonds. Here the sales by the Syndicate bankers ranged from $3,000,000 to $4,000,000 per day, and the market price of the bonds advanced from 101¼ to 101⅓ to 102 to 102⅔. All classes of investments were in demand, and there were large speculative purchases of bonds like those of the reorganized Erie and Jersey Central companies. The speculation in the new Southwestern stocks having the word "Kansas" in their title was at times strong, but not continuously so. Silver ruled at 50*d.* to 50⅛*d.* per ounce in London, and the market here was dull.

Sir William Harcourt, whose attacks on the Beaconsfield Ministry are greatly raising his reputation as a debater, and are very remarkable specimens of political fence, has been delivering another of them, this time at Sheffield, and perhaps the most remorseless of them all. He made a most happy use of the Jingo verse—

> "We've got the ships, we've got the men,
> And we've got the money, too,"

against Sir Stafford Northcote's budget, which postpones the payment of the cost of the Imperial policy. The Jingo, he showed, hasn't got the money after all, and will not put his hand in his

pocket to find it. He likes "just as much swagger as he can get for nothing." Equally effective was Sir William's comparison of Sir Bartle Frere at the Cape of Good Hope to the women in the country towns, who only get the fashions three months after they have passed away in the capital. Sir Bartle thought Jingoism was still the reigning mode in London, and accordingly attacked Cetewayo, only, however, to get snubbed by his superiors.

The most effective thrust of all was at Lord Beaconsfield about the Greek-frontier affair. When the Premier came back with "peace and honor" from Berlin, his admirers gave him a huge dinner in the Duke of Wellington's Riding School, at which he declared, in the midst of his boasting, that, "owing to the proposition of Lord Salisbury, Greece had the opportunity of obtaining a greater increase of territory than would be attained by any of the rebellious provinces." This was in allusion to the recommendation of Congress as to the new boundary line. Nine months having elapsed, during which Turkey has refused to pay any attention to this recommendation, and England having done nothing to make her, he rose in the House of Lords on the 3d of April, and calmly said:

"All that was intended by the notice given by the plenipotentiary for France with regard to what should be the materials of a satisfactory settlement was accepted by the Powers in that spirit, and nearly at the end of the Conference the President said that no Power was bound by the suggestion which had been made by the French plenipotentiary, and certainly not Turkey."

Here it has become "the suggestion of the French plenipotentiary," and not "the proposal of Lord Salisbury," and is of no particular moment.

There is still nothing decisive either from Afghanistan or the Cape of Good Hope. The negotiations with Yakub Khan go on, and there are rumors now that he is coming to India to make up personally with the Viceroy; but Sir Samuel Browne's column, in the meantime, keeps ready to push on to Cabul. The great fear in India is, that the advance may have to be made and Yakub Khan run away. In this case some one would have to be set up in his place, as in 1838, and kept up afterwards, which would be a horrible prospect, in view of the present condition of Indian finances, which has already made necessary a loan of $50,000,000 from the Home Government without interest. In the meantime there is more or less disputation as to whether "the scientific frontier" has been achieved or not. Lord Beaconsfield says it has, but then to keep it the troops must hold the passes, to which the mountain tribes object in the strongest manner, and they have already shown that their opposition is no joke. They have been bribed or cajoled into peaceableness thus far in the belief that the British occupation was temporary and for the purpose merely of getting at Shir Ali. As soon as it becomes plain that it is to be permanent they are likely to become very troublesome and cause heavy outlay.

Since the relief of Ekowe and the rescue of Colonel Pearson's force, the operations in South Africa seem to be at a standstill, and according to the last news Lord Chelmsford has asked for another brigade preparatory to a final advance. The recently-arrived troops are naturally sickly, and the cavalry horses in such poor condition that seven miles a day is all that can be got out of them. Moreover, there is no knowing how far it may be necessary to follow Cetewayo, if he holds out, and if followed at all it must be through a most difficult country and with very defective means of transportation. On the other hand, two brothers of the king, Oham and Azeguloo, have surrendered with a considerable body of followers, and other chiefs are said to be desirous of following their example. The fight at Gingelova seems to have been very bloody to the Zulus, who certainly show a courage almost unprecedented in war. There is nothing finer in military history than their repeated assaults on fortified positions in dense masses, and mostly without other arms than the lance and shield, and the sang-froid with which they bear being shot down. They are evidently a fine race, and if it were possible to substitute them at the South for our own colored people they would save the Chandlers and Blaines a world of trouble and sleeplessness. The conquest of their territory by the British arrests midway a most interesting experiment in what Mr. Bagehot calls "nation-making." They have during the past century been engaged in building up an organized political community of great strength, in the very way in which every great nation in Europe made its beginnings.

The news from Russia does not improve, although no fresh victims of note are reported. The *Cologne Gazette* has published a letter from St. Petersburg, written before the late attempt on the Emperor's life, and evidently the production of a well-informed person. He gives the history of the Nihilist organization, as far as it is known to the outer world, and describes with minuteness its mode of propagandism through its paper, *Land and Liberty*, printed no one knows where, and circulated no one knows how. One of the printing offices was betrayed by an informer for a reward, but he was soon after found dead, with his sentence, written out on paper, attached to his breast. The aim of the conspirators, as set out in this and other publications, is the destruction of the higher class of officials who surround the Emperor, and in particular of the "Third Section of the Imperial Chancellery," which is a sort of board of secret police, raised above the law, and armed with unlimited power. The head of this, General Mezenzeff, has been already killed, and everybody else connected with it has been warned. The dismissal of two hundred officials, whose names are published, is demanded of the Government on pain of death. The principal charge brought against them is the inhuman and corrupt use of power, especially towards prisoners. There does not appear, however, thus far to be any aim set out by the revolutionary organ beyond administrative reform.

The French Government has encountered a most perplexing incident in the Blanqui election. Bordeaux is the third city in the kingdom, rich, commercial, and by no means "Red" in its antecedents. At the late election the Republicans put up a Moderate, M. Lavertusson, and felt absolutely sure of electing him. The Radicals, however, nominated Blanqui, the celebrated conspirator and revolutionist, who has passed nearly forty years of his life in prison, is now in prison, and is over seventy years of age. Nobody knows exactly what his political opinions are, for he has headed revolts against almost every known form of government. But he appears to consider it the first duty of the citizen to rebel, and he has made no secret of his belief—though of course, as usual, he is a mild-mannered man, fond of flowers, birds, and little children, and addicted to vegetable diet—that he considers no revolution complete without cutting off plenty of heads. He once opposed in debate a colleague who desired a liberal use of the guillotine, on the ground that public executions by the guillotine excited sympathy for the victims, and maintained that the true plan was to go round and kill the enemies of the people privately in their houses. The Government flattered itself that such a monster would only get five hundred votes. He has actually got seven thousand, and has been elected. The Conservatives are, of course, rejoiced, for they say this shows what kind of thing the Republic is, or rather is likely to become, and the Republicans are filled with consternation. The ministry is greatly puzzled. If Blanqui's election is declared null on the ground of his ineligibility, the danger is that he will be re-elected indefinitely. If he is liberated from prison in order to take his place in the Assembly, it will, apart from the scandal of the thing, point out to the Radical constituencies a ready mode of securing the pardon and rehabilitation of other notorious Communists. And then there remains behind it all the ominous question, What does this mean? What opinion or feeling of the masses, in such a city as Bordeaux, does such a choice express?

SHAM POLITICAL WARFARE.

NOW that the "revolution" in Washington is over, and the Republican press has even confessed that, seeing the extreme facility with which the Democrats have backed down from their position, there never was any danger of a revolution at all, we hope it will not be considered inopportune to call attention once more to the various and, as it seems to us, weighty objections which exist to what may be called the revolutionary mode of meeting Democratic attempts at mischievous legislation. Ever since the Democrats obtained a majority in the House of Representatives, the Republican leaders, followed by a considerable portion of the Republican press, have adopted the policy of treating them as enemies of the Government, seeking by fair means or foul not legislation embodying their own ideas of political expediency, but the absolute destruction of the whole political fabric. During the last Presidential canvass, opened by Mr. Wheeler, the voters were urged to meet the Democrats at the polls in the spirit if not with the weapons by which they were met at Gettysburg. The Republican Secretary of the Treasury even went so far as to predict the repudiation of the public debt in case the Democratic candidate was successful, thus presenting the country to the world, through its highest financial officer, as a revolutionary country of the South American type, in which only one party was capable of the orderly conduct of its affairs. Since then all possible pains have been taken by leading Republicans to represent the presence of the Southern Democratic members of the House as dangerous to the Constitution, and the whole Democratic majority as in some sort an alien and hostile body, bent on accomplishing in the guise of legislation what they had failed to accomplish by open war. The appearance of "Confederate brigadiers" in the House and Senate—that is, the return to the national legislature of the most prominent and representative men of the States lately in rebellion—is constantly pointed to by Republican orators and newspapers as a most alarming and unexpected phenomenon. Indeed, one paper—the *Tribune*—has published songs, in the style of Béranger, showing that their presence in Congress indicates that the war was a failure. Nevertheless it is strictly and literally true that the object of the war, the object for which 200,000 men perished and $3,000,000,000 were spent, was to bring these "brigadiers" back to Congress, and compel them to participate in the working of the Government under the Constitution. This is what the restoration of the Union meant. It did not mean the subjection of the South to the rule of right-minded men from the Northern States. It meant the meeting of representatives from both sections in a common legislature in such proportions as the voters might prescribe. Nor did it mean the return of such representatives and senators by Southern constituencies as Northern men would approve. It meant the return of such men as would represent Southern constituencies just as they were—with manners, aspirations, and ideas widely different from ours, and, as most of us believe, much inferior to ours. It meant, too, that when they came back, embittered by defeat and hating many of the things we most revere, they were to be met and vanquished by the usual weapons of free and settled government—that is, by debate in the legislature and appeals to public opinion out of doors, and not by threats of fresh violence or frequent appeals to the memories and passions of the armed strife.

Forgetfulness of these things, or the wilful attempt to disregard them, is likely to have one of two effects: either it will make all efforts to draw attention to what is really mischievous in Democratic designs wear the air of cries of "wolf," or it will alienate the public from the old-fashioned methods of free government, and diffuse among the rising generation a most dangerous expectation of, if not readiness for, shorter and more summary processes. Take, for instance, the case of the Potter Committee. Nobody who knew much of the ideas and aims of the Democratic majority in Congress really believed that this committee was organized with the view of furnishing an excuse for ousting Mr. Hayes from the Presidency in the middle of his term. In fact, almost as soon as the accusation was made the Democrats hastened to repudiate it formally. That the public at large put no such interpretation on the move was shown by the complete indifference to it of the business men. That it was intended simply to procure materials for a huge campaign document, it needed but very slight observation of the tactics of politicians to infer. Nevertheless, in June, 1878, the Republican address to the voters of the United States, signed by Messrs. Hale and Gorham, declared it to be the first step in a scheme "for the revolutionary expulsion of the President from his office," which would "paralyze business of all kinds," "cast gloom over every household," and, worse than all, "bring the nation into reproach before the civilized world." It was also an attempt, according to the same authority, to "inaugurate anarchy and Mexicanize the Government." When one recalls the subsequent history of the investigation, and then takes up the report in which it resulted, one does not know whether to be amused or astonished by this mode of carrying on political warfare. Of course no American household ever suffered five minutes of "gloom" from the operations of the Potter Committee, and no farmer or trader ever really believed for a moment that his business calculations were likely to be disturbed by "anarchy" or "Mexicanization."

The construction put on the late attempt of the Democrats to procure the repeal of the legislation for the protection of the suffrage, arising out of the war, has been of much the same character. It is easy enough to see why the Democrats seek this repeal. Some of their objections to the legislation are a tradition from the old States'-rights doctrine; others are part and parcel of the hostility to negro suffrage; others are due to a desire to secure the vote of certain places—this city for one—by fair means or foul; others to a belief held by large numbers of really honest and sincere men that the Republicans mean to use the army at the next election, as they are accused of having used it at the last, to keep themselves in power, by overawing their opponents in some parts of the country at the polls. These errors or delusions or evil designs are quite compatible with a desire to carry on the United States Government through party struggles in peaceful and ordinary fashion; and the condition of industry and trade, and of the public credit and of the money market, shows clearly that the body of the people believe they are. Moreover, as soon as the Democratic leaders saw that their threat to coerce the President by stopping the appropriations was in danger of being taken seriously by the country, they made haste one by one to declare they did not mean it; or, in other words, to confess that their threats had been simply a piece of the too common "bluff" of the political game. We have consequently, if the talk of the Republican politicians be correct, just been treated to the somewhat comic spectacle of bloody-minded and open revolutionists abandoning their enterprise on finding that their opponents really believe them to be in earnest.

It is impossible to avoid the conclusion that the plan of meeting the Democrats by sham preparations for armed hostilities and for attempts to overthrow the Government must result in deepening the average voter's feeling that politics, instead of being the most serious business of the citizen, is simply a sort of game played by professionals, partly for their own amusement and partly to decide who is to have the offices. Such addresses to the country as that from which we have quoted have, read in the light of subsequent events, all the air of a charivari, and the repetition of them cannot but help to banish in ordinary times all real gravity from the discussion of public affairs.

There is another effect of the resort to sham alarms which is even more serious. The whole of the community is not struck by the farcical character of the performance. On the contrary, a very large part of the more earnest people—those, for instance, who gave most to the war and suffered most from it, and therefore hold the Democratic party in deepest horror, and whose sense of humor is but imperfectly developed—even though they may not have been led by the cry of "revolution" to believe that revolution was really impending, have been filled by it with vague alarm. They have been led to believe that if it does not come now it will come next year or the year after, and that they may wake up any morning to find that

the Southern "brigadiers" have called the Communists to arms, and begun issuing paper money. It is the growth of this state of mind which has enabled the office-jobbers and "whiskey thieves," who were the original promoters of the Grant movement, to enlist in its support a powerful and respectable portion of the Republican party, and to diffuse through its ranks that extraordinary loss of faith in popular government, that forgetfulness of the very nature of American institutions, and that readiness to take refuge in the breeches-pocket of a "strong man," of which we furnish some curious illustrations on another page. That any mental condition so closely resembling that in which the French property-holders set up Louis Napoleon in 1852 would grow up among us within a century from the adoption of the Constitution, is certainly a surprising fact. The Stalwarts have of late tried to cover their shame by pretending that their enthusiasm for Grant resembles that which carried General Jackson into the Presidential chair in 1828; but they forget that Jackson won his hold on popular regard in all parts of the Union in conflict with a foreign enemy, and was when elected a politician of solid even if mistaken convictions, and of long civil experience. General Grant, on the other hand, would now be chosen as Louis Napoleon was elected Emperor, in despair over the failure of our institutions, and as a menace of force against nearly half his own countrymen, and in spite of his somewhat marked ignorance of and indifference to all the traditions, maxims, and experiences of statesmanship. Nor must we forget the effect of the oratory and argumentation of the supporters of General Grant on the generation whose political recollections do not go back before the war, and whose notions of the conditions of free government have already been somewhat confused by the abnormal processes of reconstruction at the South. It is useless to provide schools and colleges and handbooks and histories to teach the young the nature of the government which their fathers set up, and the principles on which it rests, and the dangers which threaten it, and the means by which it must be saved, if they hear their elders preaching its failure, and working might and main to get the people to acknowledge that a party has arisen under it too strong to be controlled by the laws, and that there is not among forty millions of people a civilian honest or wise enough to fill its highest office during a critical period. In fact, if there were nothing else to make the talk of the Grantites detestable it would be the poison it is spreading among the future voters of the country. This alone would make it the solemn duty of those who still believe in the possibility of free government on this continent not to allow voters to be shut up in 1880 to the choice between such candidates as Grant and Tilden, with which we are now menaced, or to be confined during the canvass to the task of showing which of the two is the less unworthy.

THE EDUCATIONAL CRISIS IN FRANCE.

THE educational question in France, which is now occupying all minds and filling the press, is probably the hardest nut the Republic has yet had to crack. Nothing which has occurred for a long time has so thoroughly roused the Catholic clergy. Some of the bishops have published fiery pastorals on it, and others have addressed very trenchant letters to the Minister, M. Jules Ferry, who is the author of the obnoxious measure now pending before the Assembly, for the resumption by the state of the sole power of granting university degrees, with which it parted three or four years ago under the old régime. Petitions against the measure are being prepared by the priests all over France, and would probably receive an enormous number of signatures if the Government did not avail itself of the law directing them to be affixed at the mayor's office in each commune. Under this rule, of course, only zealous and full-grown Catholics are likely to sign. A very large number who would sign anything that was brought them will not leave their homes for the purpose of signing, and of course all resort to pious fraud is cut off by the official supervision. The alarm the bill has excited in clerical circles is still further intensified by the probability that the privileges now enjoyed by the ecclesiastical teachers, or "Congréganistes," as they are called, of the communal and other elementary schools will also be cut off. At present all lay teachers have to be provided with a state "brevet," or certificate of competency. The monks and nuns, who are largely engaged in the educational work—out of 58,992 female teachers 37,216 are "Congréganistes"—are, however, exempt from this requirement; they have simply to be provided with a "letter of obedience" or commission of their ecclesiastical superiors. Even with this very insufficient indication of capacity they have little difficulty in defying the competition of the lay teachers. Among the well-to-do classes, whether of the bourgeoisie or of the "monde élégant," the reluctance to entrust the training of children to any lay schoolmaster or schoolmistress, particularly in the case of girls, is very great. Indeed, it may be said that the girls of France, in all but the peasant and artisan families, are taught exclusively in convents; parents refusing to accept any guarantee of character or ability on the part of teachers but those furnished by the Church. This success of the religious orders in keeping hold of the schools is not due to the goodness of their teaching so much as to the peculiar attitude of Frenchmen, in the middle classes especially, towards religion. They are mostly sceptical, but not actively or defiantly sceptical. They will not, in fact, take the trouble to profess infidelity. They all take their "first communion" faithfully at the age of fifteen or sixteen, and mostly entertain through life a vague intention of taking the sacraments at the hour of death, or, as they call it, of dying in a Christian manner (*chrétiennement*); but the cultivation of the religious sentiment they regard as the province of women exclusively, and leave their wives to look after it in their children, and are careful not to interfere with them. The women in choosing schools act under the advice of the clergy and with the result we have named.

The objection of the Republicans to this state of things is partly the result of the traditional association of liberal political opinions with hostility to the Church, which has come down from the days of the Encyclopædists. But it is due in a still larger degree to the fierce and bitter hostility of the Church to the Republic, and its readiness to enter into alliance with whichever of the Monarchical parties will make it largest promises. In the late conflict between the Republicans and the Broglie-Fourtou faction the bishops threw the whole weight of their influence into the scale on the side of the reactionaries. Some of them ordered prayers in the churches of their dioceses for the success of the MacMahon ticket at the elections, and when the Marshal visited Bordeaux on his electioneering tour the cardinal-archbishop received him in the cathedral with a fulsome eulogy, in which he declared him to be the last hope of religion and social order in France.

The Republicans have accordingly come into power in no very placable temper towards the clergy, and with a very fixed determination to strike at the roots of what they call "clericalism," or the opinion that the Church is superior to the state and ought to enjoy in the management of its affairs exemption from state control. The principal root of this is, of course, the predominance of the clergy in the education of the young. It is accordingly proposed to take from them the exceptional position they now occupy as teachers, and subject them to the common law, as regards Government certificates and inspection, and to deprive them altogether of the power of granting university degrees. The bitterness of the fight the bishops are making in defence of this will be better understood if it is remembered that a university degree is in France necessary for nearly all professorships, for admission to practice in most of the professions, for a large number of the best places in the Government service. What the probable effect of the proposed legislation on public opinion will be it is hard to say. It undoubtedly excites fierce hostility among the women of the middle class, and among both the men and women of the fashionable and wealthy circles. In the University Bill the peasantry take less interest, and they are perhaps prepared in a greater or less degree in many districts for the removal of the schools from the charge of the "Congréganistes," by the rather frequent cases of immorality which show themselves in the rela-

tions of the teaching Brothers with their pupils. But, after all, it is not the proposed change in the educational machinery which frightens the Conservatives so much as the belief that it is but the first of a series of changes of all sorts. Every French conservative is a Stalwart, and cultivates as a duty the Stalwart state of mind. Now, the Stalwart state of mind is not one of sorrow so much as foreboding. He is not altogether dissatisfied with the present; it is the future which causes him anxiety. The French Stalwart will acknowledge freely enough that the Republicans have done no great harm thus far, but he is sure they mean infinite mischief, including "anarchy," attacks on property and family, and the destruction of religious worship. Out of this nothing will reason him, because a prophet cannot be refuted. To him, therefore, the Ferry Bill is but the beginning of the destruction of everything respectable in French institutions, and nothing will bring him to reason but the non-realization of his anticipations.

A movement which has been attracting a good deal of attention, and promises to assume respectable proportions, has been lately set on foot by way of putting an end to this feud between religion and liberal politics. It consists in nothing less than secession from Romanism to Protestantism on the part of a number of thoughtful men who are troubled by the existing situation. They are unwilling to face the future without any religion at all. They see its necessity for their families if not for themselves, and at the same time see no chance of bringing the Catholic Church into hearty sympathy with liberal institutions. They see, moreover, or think they see, that the obstinate adherence of the Latin races to Catholicism is throwing them hopelessly into the rear in the march of modern progress, and they propose frankly to get out of the difficulty by adopting the only creed which has been found compatible in our time with the fullest political and intellectual as well as material development. They are ashamed of the weight which the Catholic clergy still possess in French politics, and are ashamed of the kind of education they give their children, and they are growing more and more sensitive to the fact that the girls sent out from the convents by the nuns cannot be trusted for five minutes alone with the boys turned out by the Christian Brothers; or, in other words, with the training and position of Frenchwomen. Of course, the movement is still in its infancy; but if it simply results in attracting more attention to the necessity for more lay attention to religious questions in France, it will do a world of good.

HOOSIER NOTIONS OF A REPUBLICAN CHIEF MAGISTRATE.

THE Indianapolis *Journal*, bettering the example of the New York *Times*, has lately (April 23) reported the preferences of a thousand Indiana Republicans, in all parts of the State, for the next Presidential candidate. The name of each person whose opinion is quoted is given, and generally his occupation. Almost all are business men not actively engaged in politics. The result is, to use the *Journal's* own summary, "that about seventy-five per cent. of them are for Grant, about fifteen per cent. for Sherman, and the remainder equally divided between Garfield, Blaine, Conkling, Washburne, and Harrison, and with some mention of Zach. Chandler."

We have had the curiosity to tabulate the reasons advanced for the renomination of Grant by his supporters, and have not been disappointed in the instructiveness of this analysis. In the first place it appears that a third term is with many Republicans a fatal objection to Grant, with some an objection which may be waived at a critical moment; but those who mention it at all with scruple generally regard it as the one serious defect in a title otherwise flawless. A few make their adhesion conditional upon "certain contingencies" of which there are "present indications." Thus, they will vote for him—*

if he is the only man that can beat a Democrat;
if the country is unsettled;
if the rebels continue as they are doing;
if the rebels keep stirring things up;
if the rebels come too much to the front;
if those infernal rebels in Congress persist in their course and show up too strong;
if those fellows down at Washington get obstreperous;
if the South doesn't accept the issues of the war;
if we have to whip Southern rebels again;
if we are to have another war;
in case of revolution by the Democrats, etc.

The Stalwarts who qualify, however, are in a pitiful minority, and scarcely more numerous than the expressions just cited. The rest are in varying degrees positive, if not "all 'booming' for U. S. Grant." There is the red-hot Grant man; the through-and-through Grant man; the deputy-sheriff who is "teeth and toe-nails for Grant"; the man who is for him from the word "go"; and a large number who are for him every time, or "first, last, and all the time." Between these and the class who give no reasons at all for their preference the range is very great. We meet with the postmaster who is "unreservedly for Grant on general principles," and the admirer who thinks his good qualities too numerous to discuss. In detail the candidate's portrait is about as follows: He is without a spot on his personal character, and the smell of the fires of corruption was never on his garments; he is consequently an honest man, and his integrity is unquestionable and unimpeachable. Moreover, he is a good and pure man, a man among men. His fidelity is eminent; he sticks to his friends; as a true man he has gained the confidence of the whole world. Hence we ought not to be surprised that he is reliable, and will do to trust. He will do (and the South knows it) what he says he will do, though he is rather a man of deeds than of promises. When he takes hold of a thing he don't let go; another Andrew Jackson, he can accomplish anything he undertakes; he means business, gets right down to business, and is the best man for "the business." He has solid sense, good common sense, and good judgment; he loves fair play and justice, and will do what is right. He is a man of fixed principles, whose actions are dictated by his own conscience, and who can't be ruled by outside influences. Nor is this odd, seeing that he has a head of his own, a mind of his own, and a will of his own, the last being of iron, determined, and indomitable.

That General Grant will not budge is repeated in divers ways. He is firm and experienced, firm and true, sound and firm; he is stanch, he has grit, he has stability in him, he possesses great stamina, he has (inestimable gift) backbone. As for his courage, it is enough to say that he "has the nerve," though some explain that he is a great soldier and a good fighter. He is, withal, a thorough and true patriot, a true American, loyal to the core; a No. 1 Union man, who believes that this government is not a rope of sand, that it is a nation and not a confederacy, and who keeps before the people the fact that the nation triumphed in the war. His character in this particular is summed up in the sentence, "No rebel need apply." If we concede further that he is least ambitious among all the candidates for the Presidency, it is impossible to avoid the conclusion so comforting to many that the best interests of the nation would be safe in his hands.

But we have not exhausted the list of his good qualities. He is thoroughly Republican, the embodiment of old Republican ideas to a greater extent than other man; in fact, the representative man of the party. What more likely, then, than that he should unite the party, poll the most Republican votes North and South (being, indeed, the only man who can get any considerable support from the South), create enthusiasm, and beat any man the Democrats can put up. It is clear to not a few that he is the man to oppose Tilden in particular. This alone should settle the question of his availability, a consideration which has prime weight with his supporters. He is, in their parlance, the strongest man, the man to win in the race against the Southern Confederacy; he has "political strength." They assure us, quite consistently, that he is a man of immense popularity, the most popular man in the country; that he has the necessary popularity with the masses, who favor his election; that he is a man of the people and the people's man; the people want him—he is the people's choice. He is a friend of the soldiers, and will get the soldiers' vote; he is also a friend of the colored race, and would command the votes of young men. He has been just to all sections of the country, and is the only man who has offered full protection to the people of the South; his policy is better than Hayes's or any other man's. He will enforce the laws without fear or favor (forcibly if required). He was the best organizer the nation ever had, with more sense and executive ability; the only man since Lincoln able to successfully preside over the destinies of our country; the best President since Washington; the best we ever had. Not to put too fine a point on it, he is the greatest man America has produced; the greatest living American, therefore, who has done more for the country than any other man. His

* The citations throughout this article are verbatim, but for typographical reasons we omit the quotation-marks except in a few cases.

voyage around the world will but add to his already peculiar fitness for the Presidential office: his thorough knowledge of foreign affairs will ensure our relations with other countries being satisfactory in every respect; his administration record procured him flattering attention and high respect among the nations through which he has been travelling, and he is recognized by all nations as the leading man of the world. Naturally, since his visit to Europe he has taken a stronger hold on the affections of the people.

We approach the crowning merit of General Grant in the eyes of his Indiana friends, which makes him emphatically the right sort of man, and the right man in the right place as next President. They want him, with marked unanimity—

because he saved the country once;
because he licked the rebels;
because he taught them a lesson in 1861;
because he wasn't afraid to burn powder, and will do it again if necessary;
because he can whip rebels in the field, and can do it again at the ballot-box and in Congress;
because of late rebel speeches in Congress;
because of the recent actions of the rebel Congress;
because the men who now have control of Congress are lawless;
because the revolutionary tendency of the Democracy demands a stern President;
because he is the only tried man who can nip a revolution in the bud;
because his election would be understood by the revolutionists;
because the present Congress would subside if they saw him going back to the White House;
because he would clean out the Confederate Congress;
because he held the Government and particularly the South with a steady hand;
because he can do more with the South than any other man;
because he can best manage Confederate brigadiers;
because he knows how to handle the people of the South;
because he is the only man who can control Southern rebels ("he done it in time of war, and can do it as an Executive");
because he is the only man that can keep those rebels quiet in the South;
because he can best straighten out Southern affairs;
because he rattles these Southerners and keeps the Government straight;
because he would hold the South in submission;
because he would keep down those Southern chaps;
because those Southerners would behave themselves;
because he would hold the rifle-clubs level;
because he would hold the brigadiers level;
because he is the man to hold those fellows level;
because he will enforce Union doctrine on rebel brigadiers;
because he has the will and the power to treat the rebels as they deserve, and will stand no nonsense;
because he will not compromise with rebels;
because he is a wet blanket on the fires of rebels and traitors;
because he would oppose the Solid South and rule vigorously;
because he is some one the d——d rebels would be afraid of;
because the Solid South is afraid of him;
because he is the only man the Johnnies are afraid of;
because the d——d Confederates and their Northern allies are afraid of him;
because his name is a terror to Southern rebels;
because he will strike terror to the Democracy;
because the Indiana Republican is opposed to rebel supremacy;
because he is tired of the bull-doze air of the Southern gentry, and thinks Grant would sit down on 'em;
because—"Grant, by God, sir; can't bull-doze him";
because he will make it lively for the rebels, etc.

The forms of expression are endless, the idea is the same. Our Hoosier fellow-citizens believe that hostilities have not yet ceased, or are about to recommence, and frankly admit that their choice of Grant is "on the war-issue account." They want him, if we may be pardoned a few more elegant phrases—

to beat the Confederates;
to whip the Johnnies again;
to put his foot on the South unless they behave themselves;
to bring the rebels to terms or to unconditional surrender;
to quiet the disloyal elements;
to settle the rebel hash;
to mash the d——d rebels;
to teach rebels where they belong;
to rebuke the rebel yell;
that rebels may take back seats;
that treason may be made odious, etc.

These expectations are not incompatible with this other, that Grant will "ensure the Union," in the sense at least in which he did so by his military services during the rebellion; but they hardly inspire confidence that he will "bring back things somewhere near an equilibrium," or "by his stability and firmness settle the country without any conflict," or "bring the country to that Governmental order and active prosperity the people long for." Less than half a dozen of his Indiana adherents remember him gratefully for his "resolute devotion to sound currency" and his "paving the way to resumption by vetoing the first inflation bill." When they declare him "the man to master the situation," the "emergency man," "time-tried and fire-tested"—"we know him," "we know where he is"—it is not as a great civil administrator that they are thinking of him. Still less do they pin their faith to him as a constitutional ruler. It is simply the hero of Appomattox, continued in the President who proposed that Congress should overturn the state government in Arkansas; who allowed Federal troops to determine the qualifications of members of the Louisiana legislature; and who accused Governor Hampton of "impertinence" in apprising him of the South Carolina Supreme Court's confirmation of his (Hampton's) election—it is this historical character who is regarded as "the best man on American sod" and "the best man on earth to serve a free people."

THE FINANCES OF PARIS.—II.

PARIS, April 18, 1879.

I HAVE not exhausted the subject of the budget of the city of Paris, as I have only spoken so far of one of the resources of this budget, the *octroi*. I said that this *octroi* gives in the budget of the receipts a sum equivalent, if not superior, to the annuity of the debt. The sum inscribed for the present *exercice* (we call *exercice* the budgetary year) amounts to $25,340,620. I come now to the other items of the budget of receipts:

1st. Communal centimes—special imposts—tax on dogs; the whole amounting to $4,915,220. These receipts are taken directly from the proprietors and the tradesmen by the "perceptor" (this is the name of our tax-gatherer). The name of *communal* centimes arises from the fact that we have a series of laws allowing the imposition for specified purposes of a certain number of centimes per franc of the great state taxes, called land tax, personal tax, *mobilier* tax. Our land tax is called *contribution foncière*, as it applies to houses as well as to land; the personal tax is levied with the tax called *mobilière*, which is levied on the amount of furniture supposed to be in a house or apartment, and also supposed to be in proportion to the rent. We use often in our budget the expression "the *principal* of the land tax," or of the personal and furniture contribution.

You will now better understand the detail of the communal taxes of Paris. In the year 1879 the inhabitants of Paris will have to pay 690,000 francs for five centimes additional to the principal of the land tax; 452,300 francs for five centimes additional to the principal of the personal and furniture tax; 1,767,000 francs for eight centimes additional to the principal of the *patentes* (the special tax paid for every trade); 42,000 francs as additional to the tax on horses and carriages.

These first centimes are called ordinary, as there is a law (of May 15, 1818) obliging all municipalities to levy them every year. There are other centimes which the municipalities are at liberty to levy, called special or extraordinary; but the law gives them the option to levy as many as they choose, provided they remain within a certain maximum limit. The Parisians will have to pay in 1879 under this head of special and extraordinary centimes 1,531,000 francs, amounting to three centimes additional to the principal of the four direct state taxes (land, personal and furniture taxes, and doors-and-windows) for the expenses of primary education; 2,041,800 for four *extraordinary* centimes additional to this same principal; 3,965,500 for ten extraordinary centimes additional to the principal of the land, personal and furniture, doors-and-windows taxes, and for five centimes additional to the principal of the *patentes*; 5,943,900 for seventeen centimes on one side, and five on the other, similar to the preceding ones; 7,532,800 for seventeen centimes on one side, and twelve on

the other, similar to the preceding ones. In all we have therefore to pay, 1st, fifty-three additional centimes to the land tax, or a little more than half that great state tax; 2d, fifty-six centimes additional to each franc of the personal and furniture tax; 3d, fifty-one centimes additional to each franc of the doors-and-windows tax; 4th, thirty-seven centimes additional to each franc of the tax on the *patentes*. It may, therefore, be said, *en gros*, that besides the *octroi* the Parisian has to pay half a franc to the city of Paris, while he pays a franc to the imperial treasury.

The whole machinery of our departmental and municipal taxes is built on the foundation of what we call the principals of the great imperial taxes. The Government tax-gatherer classifies all the taxes he receives under these items: land tax, personal and furniture, doors-and-windows, *patentes;* the general items for these imperial taxes are fixed every year in the Chambers, and determined by law; the municipal and departmental taxes are then established on the principle of the centimes additional to the francs of the imperial taxes. Of course the departmental and communal centimes are not the only resource of the departments and of the communes, but they form one of their considerable resources. I have said that Paris will receive under this head $4,915,220 in 1879. One of the advantages of the system is this: the Government tax-gatherer receives the communal taxes; he has only to add so many centimes to each franc; he pays back to the treasury of the city what he has received as centimes, and he pays the francs into the imperial treasury. We have, therefore, no perceptors special to the city; the perceptor does the work of the Government as well as the municipality. This is the chief reason why we stick to our system of additional centimes, which seems very odd and almost absurd to many foreigners.

The city of Paris will derive in 1879 the sum of $1,977,331 from letting the water of the city to private houses. The city of Paris had no other water for a long time than the water of the Seine, which was pumped by very antiquated machines. Only a few years ago the old and quaint Pompe Notre-Dame could be seen at a little distance from the Pont Royal. Aqueducts were built afterwards; the aqueduct of Arcueil brought to the city the water of the nearest wells. The canal of the Ourcq was a great improvement, as it allowed the cleaning of the streets by water. The artesian wells of Grenelle and of Passy were bored. As the population constantly increased, the water of the Seine and of the Ourcq became insufficient, and immense works were made in order to bring to Paris the water of two rivers, the Dhuis and the Vanne. There is now a large amount of water in the immense reservoirs built in Ménilmontant in 1865, and at Montsouris in 1875; but more money will have to be spent in order to increase the number of water engines on the Seine, to tap a river called Cochepié, lately bought by the department of the Seine, and especially for great changes in the canalization of the water in the city. It is very necessary to separate more completely the water which is used for domestic purposes (the Dhuis, the Vanne, the Seine water) from the water merely employed for the streets and the public services (the Ourcq, the Marne, the artesian wells, and the Seine below Paris). In a very short time the drinking water will be completely distinct from what may be called the municipal water, used for monumental fountains, fires, streets, etc. Under the Second Empire the city of Paris sold its own water; it derived an annual income from the sale of water at the public reservoirs to the *Auvergnats* (the water-carriers were chiefly from Auvergne), who took water in little casks, and carried it from house to house in some quarters and from story to story in each house. There are still some Auvergnats of this sort to be seen; but we are getting more civilized. A company has been formed which has farmed the water service, and sells the water it receives in the municipal reservoirs, and makes arrangements for the distribution of the water in the houses. The company has introduced the water into 40,000 houses at every story; at the present moment its work is still unfinished, as it must introduce the water into 30,000 more houses. The company remits its receipts to the city, after having paid its expenses, of course, and given a remuneration to its own capital, according to certain conditions accepted by the city and embodied in a contract.

The city of Paris will receive under this head in 1879 the sum of $1,977,331. The city will receive also a sum of $1,700,000 from our great gas company. All our ancient gas companies of Paris found it to their advantage to unite, and the powerful company called "Compagnie parisienne d'éclairage et de chauffage par le gaz" has made contracts with the city, the last dated 1870. The city, in exchange for the monopoly in gas conceded to the company, has reserved itself the right of making a double tariff for each cubic metre of gas: one price is fixed for all the Parisians; another price, and of course a lower, for the gas of the city, streets, boulevards, municipal buildings, etc. Besides, the city of Paris receives from the company a certain sum for the lease of the parts of the public streets occupied by the canalization of the gas, and a certain sum of *octroi* duty for each cubic metre of gas burned in Paris; and the excess of profit over a fixed amount it shares with the company. The city has besides reserved itself the right to try and to authorize any other mode of lighting, such as electric light. The prices fixed in the contract are the following: 30 centimes the cubic metre for private individuals, and 15 centimes the cubic metre for the city. The company pays $40,000 yearly for the municipal land which it occupies for its canalization. It pays 2 centimes of *octroi* for each cubic metre burned in the city; after having paid 10 per cent. interest and dividend, which amounts to $2,280,000 francs, it divides the surplus of the profits with the city. This half of the surplus amounted in 1869 to nearly $1,000,000. In 1870 it was only $270,000; and in 1871 it was *nil*. The amounts have since increased: we find in 1872, $1,000,000; in 1873, $1,020,000; in 1874, $1,200,000; in 1875, $1,600,000; in 1876, $1,660,000; in 1877, $1,700,000.

We know there is a great outcry among economists against monopolies; but I would invite all engineers to visit the gas-works of our great Parisian company, to see how well the city is lighted, with what punctuality, what excellent gas. There remains, I know, the question of price; but the price is a matter of discussion between the city and the company; after the expiration of the contract the price will certainly be lowered; the contract can always be rescinded under certain conditions.

Paris derives $1,389,180 from the lease of places in its markets, halls, and slaughter-houses. I will merely give a list of its other receipts: Contributions of property-owners to the expenses of the streets, cleansing of the streets, lighting of the streets, $1,198,319; license for stands of public conveyances, $866,100; product of the slaughter-houses, $590,000; tax of *balayage* (sweeping the streets), $520,000; receipts of various establishments of public instruction, $502,786; leases in the entrepôts (city docks), $420,000; concessions of land in cemeteries, $344,340; exploitation of the sewers (that is, the leasing of the sewage to various companies, and the waters of the sewers to the farmers of the plain of Genevilliers), $318,600; rent of communal lands and houses, $257,834; leases on the public streets and promenades (such as seats, kiosks, portable shops, tables before cafés, etc.), $180,963; funereal taxes, $171,429; licenses for shooting, $126,540; *droits de voirie* (paid by builders, by all those who work on the sidewalks or in the streets), $120,000; public scales, $68,800; cessions of parcels of the public land, $40,120; tax on the copying of official documents, $51,600; divers items, $228,253.

Correspondence.

THE CHINESE QUESTION.

[THE following extracts are from a private letter bearing date San Francisco, April 16. The writer, not a native of the United States, though long resident on the Pacific Coast, is an impartial observer, whose views are entitled to entire respect.—ED. NATION.]

"The articles in the *Nation* on the Chinese question show that the writer has considered it in more than one of its phases, and is conscious that he is not in a position to settle the rights and wrongs of the matter authoritatively. This is more than can be said for most of the independent editorialism of the Eastern press during the discussion. Still, he made a great mistake in assuming that the cry against Chinese immigration was a hoodlum cry, or even that the demand for the passage of the Blaine bill was a hoodlum demand. I do not boast of a very extensive acquaintance, but still I know people here of most classes of the community, except hoodlums; and yet I could hardly name one who was not disappointed more or less at the veto. For myself, I may say that I all along regarded the bill as an outrage on decency and international comity, but the feeling against Chinese immigration is so general that I have found hardly any one to agree with me. No doubt there are many who agree with me, but I have not the pleasure of knowing them, and they are without a newspaper organ in California, so far as I am aware. It therefore seems to me that it is a great mistake to treat the question as if it was one of ignorant spite or industrial jealousy.

"I have now had to do with California, more or less, for fifteen years, and I have found it very hard to make up my mind about the Chinese. For a long time I held to the idea that the cry against them was an unreasonable one, and that either their presence was no evil or that the evil

would correct itself in time. Gradually I have come round to the opinion that the country would be better without them—socially, if not industrially—and that under certain contingencies the presence of the Chinese might become a gigantic evil. No doubt there has been a great deal of nonsense talked by those who oppose the Chinese ; there has been a great deal of false political economy, and the Chinese have been blamed for evils that are merely the result of the hard times that prevail throughout the civilized world. But, on the other hand, it is a very shallow view of the matter to say that because the Eastern States have never winced under the pressure of immigration from Europe, and because the Chinese in New York trouble nobody, therefore the movement here must be due to the wicked and stupid perversity of the people of California. There is no comparison whatever. The Eastern States have never been exposed to an immigration of masses of men of an alien and unassimilable race. The social and political institutions of the country have grown up under a system of free immigration of people of our own race who have come to stay, and who begin to assimilate from the day of their arrival. Nothing could be more absurd than to say, as has often been hinted, that the reason the Chinese do not assimilate is because they are persecuted.

"It seems an anomaly that whereas people are always complaining that the Chinese prevent the employment of white people, the wages of white labor are still higher than elsewhere throughout the country, while the prices of necessaries and the conditions of life are very little less favorable on the average. There seems to be no doubt that California is avoided by white laborers on account of the presence of the Chinese. I have sometimes thought whether a comparison might not be instituted between the state of things here and that which existed in the South under slavery. Then, if I am not mistaken, what white laborers and mechanics there were (at least in the cities) were better paid than in the North, and yet the South was avoided by white laborers. One of the strongest complaints against the Chinese is that they interfere with the employment of boys and girls, and their being trained up in habits of industry. It is difficult to know the full extent of the evil. No doubt the presence of the Chinese makes it more difficult for boys and girls to get work ; but a large and increasing number of white boys and girls are employed at good wages, and there can be no doubt that a great deal of idleness is due to the carelessness of parents and the want of the pressure of necessity to compel them to work.

"I have glanced at only one or two phases of the Chinese question very cursorily. It does not lie in a nutshell. For the moment it is dormant, and all minds are occupied with the sand-lot constitution. As time goes on I feel less and less fear of its adoption. The article in the *Nation* of the 3d on the subject has been extensively copied, and I hope has done good. It seems as if the interests attacked were too various for there to be much danger of its passing. But the ideas of the people on the subject of taxation are very crude, and the plan of taxing solvent debts and stocks is very tempting."

FURTHER ABUSES OF THE PARDONING POWER.

To the Editor of The Nation :

Sir : The letter of your correspondent "M. C. L.," in a late number of the *Nation* (January, 1879), entitled "Abuse of the Pardoning Power," suggests the mention of two similar instances which have recently occurred in this district.

In one case a mail-agent in the employ of the Post-Office Department began, within a few weeks after having taken the oath of office, a systematic course of pilfering money from letters. After some months of watching he was arrested, pleaded guilty, and was sentenced to two years' imprisonment. At the end of a year application was made for his pardon. His petition was referred to the district-attorney and judge who tried the case, and both reported against it. He was pardoned, however, upon the ground of his previous good character and because his father had refunded the money stolen. His pardon was signed the day before Christmas, and so regardful was the Attorney-General of the sentimental features of the case that he *telegraphed the marshal to release him in advance of his pardon*, that the excellent young man might eat his Christmas dinner among his sympathizing friends ! It is obvious that in cases of this kind if previous good character be accepted as sufficient excuse for a pardon it would result in the release of every defaulting clerk in the country, as it is fair to presume that no man of notoriously bad character would be appointed to responsible positions of this description. The fact that his father was able to replace the stolen funds argues nothing to the credit of the young man, and affords very slight ground for executive interference.

In the other case, a teller in a national bank, a man of mature age, embezzled funds of the bank to the amount of $15,000, by a series of defalcations extending through several years, was arrested in his flight to Canada, pleaded guilty, and was sentenced to five years' imprisonment—the minimum punishment allowed by law. He was pardoned at the end of nine months upon the petition of the officers of the bank, and the certificate of the prison physician that his confinement was undermining his health and might endanger his life. In this instance the usual form of a reference to the district-attorney was entirely dispensed with, out of consideration for a friend of the prisoner, who had gone to Washington with the petition in his pocket and was in a hurry to return home ! He, too, like every other defaulting bank officer, had previously borne a good character. It is needless to add that both these pardons were obtained through the influence of prominent members of Congress.

The moral of these cases is that every defaulter of previously good character who is able to refund the money stolen or to obtain a certificate that his health is imperilled by confinement, is deserving a pardon. It is said to be a fact that not a single application for Executive clemency from this district has been denied by the present Administration. With this fatal facility in escaping the consequences of crime what wonder is it that each week reveals a new embezzlement, or that civil-service reform is making but slow progress ? Is President Hayes envious of the closing days of Mr. Johnson's Administration ? Quaere.

Detroit, April, 1879.

MR. STORY ON LATIN PRONUNCIATION.

To the Editor of The Nation :

Sir : It seems to me that Mr. W. W. Story's articles on Latin pronunciation in the January and April numbers of the *North American Review* ought not to be allowed to pass without protest. Mr Story's well-deserved reputation as an artist and writer, and the admission of his views into a periodical like the *North American*, may give to his utterances on this subject an importance which in themselves they are far from deserving. Persons who think that Mr. Wendell Phillips's great services in the anti-slavery cause have made him a good financier, or that Mr. A. C. Swinburne's mastery of poetic form makes him an authority on the Eastern Question, may think that Mr. Story's statues and poetry entitle him to speak with authority on Latin pronunciation. How well entitled, the most cursory examination will show.

Mr. Story's first argument shows his lack of acquaintance with the Latin alphabet, his last betrays his ignorance of Latin syntax, and the arguments between do not shine by way of contrast. This is pretty harsh language ; but what else can be said of an argument which attempts to prove the soft sound of the Latin *c* before *e* and *i* from its accidental resemblance to a well-known form of the Greek sigma, never found in Latin inscriptions ? What else can be said of the attempt to prove the non-pronunciation of final *s* from the Virgilian expression, *cui nomen amello*, which he finds in the 'Æneid,' and prints with a large *a* ? What shall we think of a writer who is "tempted to ask" why "Caius" is spelled in Greek *Γαιος (sic)*? What shall we think of the weight attached to spellings of Latin words such as no inscription earlier than the fourth century contains ? What shall we think of a writer who considers *j* (or *y*) and *w* "only" vowels ? It would be useless and wearisome to complete the catalogue of errors ; but one point of a different character may be properly mentioned.

There may perhaps be a difference of opinion as to the taste of Mr. Story's numerous slurs on the Germans ; there can be none as to the extraordinary character of some of his statements. That he should confuse two entirely different questions—How the Romans pronounced, and How we should pronounce Latin—is not very strange ; that so practised a writer should not succeed in making clear what he wishes to say is hard to believe ; that a gentleman like Mr. Story should designedly convey a wrong impression is still harder ; and we are reduced to supposing him ignorant of what five minutes in any German gymnasium would show him : that the Germans do not pronounce *c* hard before *e* and *i*, nor *v* like *w*. Though Ritschl was a German and a philologist, Mr. Story would doubtless recognize the truth of his remark : "Der Welt Heil hängt nicht an diesen Dingen, aber . . . ordentlich oder gar nicht."

Mr. Story's articles furnish another good illustration of the ease with which men persuade themselves that genius is better than wretched art—*ingenium misera fortunatius arte*—and Mr. Story is not the first man of

talent to whom the careful reading of Pliny's 'Natural History,' xxxv. 36, 12, ought to be affectionately recommended by judicious friends.

W.

[The plain truth is that Mr. Story has taken hold of a question which is beyond his scholarship. Such an extraordinary collection of blunders has not been printed since the Portuguese 'New Guide of the Conversation.' In the older days of the *North American* this production would hardly have been published.—Ed. Nation.]

THE LATE JUDGE BARNARD AND THE BAR.

To the Editor of The Nation:

Sir: In the mention of the late George G. Barnard you speak of the bar as submitting to him in court without courage to denounce him. This is an error. Barnard as a judge was on daily exhibition before audiences of whom not one-tenth part were lawyers. During his reckless and abominable conduct, in an office to which the people twice but the lawyers never called him, while he made property, person, and character unsafe, the body of citizens most exposed to injury made no movement. The first and only attack upon him came from the bar; and those who began persevered until his final overthrow.

The idea of rising in court to denounce or appealing to the public against him is now suggested. But such a performance would have been as useless to check Barnard as it would have been sure to send the incautious zealot to prison.

The bar, having less interest in the matter than men of commerce and property, yet boldly undertook the labor of chasing from the bench the corrupt judges. The Bar Association of the City of New York took up the matter, and assumed the great labor and expense of collecting evidence, framing charges, and presenting and urging the prosecution through a long period of enquiry and trial. Every lawyer who engaged in the work, either by furnishing information and proofs, by working up the case as attorney or counsel, by consenting to give his own testimony, by contributing to pay the heavy expenses, or in any way promoting and sustaining the prosecution, put in peril his license to practise and exposed himself to the total ruin of his professional business. Yet the risks were taken, and the war was maintained; and in the end three judges were cast out, not by the hands of those citizens whose property and business were thus protected, but by the bar, those whom you flatteringly style "hundreds of upright, able, religious lawyers," who did have the courage and also the wisdom and sagacity which the crisis demanded.

It is not amiss to recall those scenes. The memory of them will assure the timid that if another day is announced when bad men must be stripped of the ermine for the public safety, there will not be lacking at the bar worthy successors of those who once volunteered so freely and fought so bravely and with so great effect.

Charles Tracy.

[Barnard first mounted the bench of the Supreme Court in 1861. He was re-elected in 1868. During his first term his character was perfectly well known to the bar, although his misconduct did not become glaring until his second term. But his administration from 1868 until 1871 was a series of shocking scandals, in which he showed increasing audacity. The Erie litigation, in fact, began in 1868 and lasted until his downfall in 1872. Consequently the bar was acquainted with his character as a judge for ten years, and witnessed his ruffianism on the bench for at least three years without giving any sign. In July, 1871, the New York *Times* crowned its attacks on the Ring by publishing the accounts, and this roused the fever of indignation which culminated in the election of that year. The Bar Association then, when this indignation was raging, in the winter of 1871–2, began to take measures for Barnard's impeachment, and he was accordingly impeached in March, 1872. These facts, we think, entirely sustain our position that the Bar bore with him for years until the press had overthrown his confederates. We, of course, had no intention in our remarks of belittling the efforts of those who began the impeachment proceedings and carried them to a successful issue; far from it. Nor did we mean the words "rise in court to denounce him" to be taken literally. This would have been simply a *coup de théâtre*. We meant manly and proper criticism, at the proper time, of his illegal conduct, followed by his exposure to the legislature and the public with a view to his punishment.—Ed. Nation.]

Notes.

MACMILLAN & CO. will be the publishers this season of a 'Dictionary of London,' compiled by Mr. Charles Dickens, and intended to contain "an intelligible epitome of every kind of practical information about London." The design is novel, and so, it is said, the arrangement will be.——The Society for Photographing Relics of Old London have resolved to double their annual publications together with the subscription. Twelve permanent prints will now be issued each year for one guinea. The present is the fifth year, and the subjects selected are Canonbury Tower, Barnard's Inn, Christ's Hospital, Churchyard of St. Lawrence Pountney, and some old houses. All the previous issues are obtainable at half a guinea the set. Mr. Alfred Marks, Long Ditton, Surrey, continues to receive subscriptions.——Sidney S. Rider, Providence, has in preparation for his Rhode Island Historical Tracts: No. 5, "Memoir Concerning the French Settlements and French Settlers in the Colony of Rhode Island," by Elisha R. Potter; No. 8, "Account of the Colonial Currency of Rhode Island," by the same writer; and No. 7, "Journal of a Brigade Chaplain in the Campaign of 1779 against the Six Nations," by the Rev. William Rogers, D.D. He will also shortly publish, by subscription only, and in an edition of but seventy-five copies, an "Alphabetical Index of the Births, Marriages, and Deaths, Recorded in Providence from 1636 to 1850, inclusive," by Edwin M. Snow, M.D.——G. P. Putnam's Sons announce 'Roman Days,' by the Swedish author, Viktor Rydberg.——The Managers of the American Bible Society inform us that hereafter they will cease to rely exclusively on their auxiliary societies for the sale of their publications, and will resort to the usual trade channels. They send us a specimen twenty-five cent Bible and five-cent Testament, which, being both substantially bound, would seem to be the *ne plus ultra* of cheapness.——We have received the first number of the *Century*, a weekly eclectic journal, depending for its contents on European periodicals, and differing only in typographic form from its predecessors, whether defunct or flourishing. It is published at 335 Broadway. The *Library Table* has terminated its brief "reorganized" existence.——The *Art Amateur*, a monthly journal devoted to the cultivation of art in the household, will shortly make its appearance in this city under favorable auspices.——The growing extent and importance of our export trade are forcibly suggested by two monthly publications before us, the *American Mail and Export Journal* (Howard Lockwood) and the *American Exporter* (Root & Tinker), both of this city, and both in their third volumes. They correspond to the English periodicals devoted to the colonial or foreign trade, and, like them, must have a very stimulating effect on commercial relations. Each of them is well supplied with consular information, and with advertisements calculated to instruct even American readers.——Dr. S. Austin Allibone entered last week upon his duties as librarian of the Lenox Library in this city. Mr. George H. Moore continues to be the Superintendent, and furnishes tickets of admission on application.——The Council of the Society of Arts, of which the Prince of Wales is President, has reported in favor of printing a catalogue of all printed books in the British Museum from 1450 to the present year. They estimate that 2,500,000 entries would fill 45 volumes, blue-book size, of 1,000 pages each, and that the work could be completed in five years. This they think, very justly, would be "laying a solid foundation" for the proposed Universal Catalogue of English Printed Literature.——The Belgian Société Bibliographique has offered a prize for the best complete systematic bibliography of works published from 1830 to 1880, on the history of Belgium from the earliest times to the death of Leopold I. The society considers that the chief merit of such a work must lie in a judicious and scientific classification, which shall give the enquirer as quickly as possible the materials he needs, whatever the special point he is engaged upon. For such an object the society would do well to add the phrase "with an index" to its requirements.——It is at Brussels, by the way, that is to be held the third International Congress of Americanists on September 23–26, 1879. Its object is to promote ethnographic, linguistic, and historic studies relative to the two continents, especially prior to their discovery by Columbus. For particulars as to the subjects appointed for discussion at the approaching session, the conditions of reception, of membership, etc., application may be made to the Rev. B. F. DeCosta, 15 West Twenty-sixth Street.

—We have received from the Hydrographic Office at Washington a meteorological chart of the North Pacific Ocean, also a copy of "Revised Instructions for Keeping the Ship's Log-Book and for Compiling the New Meteorological Returns," and a blank Meteorological Journal [Log], all of which are furnished free to such captains as shall promise in return to forward the above-mentioned journal when filled to the Meteorological Bureau. This bargain seems useful because likely to stimulate some captains to greater care in keeping their logs; though, as we have before remarked in speaking of meteorological observations at sea, the value of such records would probably fall short of scientific recognition, on the score of inaccuracy necessarily resulting from the mobility of the viewpoint. It is undeniable that no cosmic generalizations can have value unless evenly distributed—*i.e.*, unless they include oceanic observations; but the importance of such observations should not blind us to their unattainability. The revised instructions appropriately commence with illustrations of errors in logs already forwarded. The directions which follow these illustrations are clear and efficient. It is unfortunate that the unity and practicalness of the work are marred by the interpolation of explanations of ocean currents. Grammatical errors also occur.

—One of the most remarkable of the many remarkable things connected with the present controversy about the negroes is that though their political condition has been frequently enquired into and reported on by Committees of Congress, no official investigation of their social and economical condition has, to our knowledge, ever been made. Another very remarkable thing is, that those writers and speakers at the North who have most to say about their condition, and say it with most vehemence, are, as a general rule, persons who have either never visited the South in their lives, or have never visited it since the war. If they were to talk with similar heat and positiveness and appearance of authority about the land question and labor question in Ireland, or Russia, or Hungary, where these questions are not nearly so complicated as they are in the Southern States, it would excite either pain or anxiety among their friends, but it seems to be a peculiarity of the Southern problem that the less minute a man's knowledge of it the more weight he carries in descanting on it. Another peculiarity of the subject is, that if a Northern man of proper experience and equipment examines it on the spot, and reports that freedom is doing for the negroes what before emancipation we all expected and most of us predicted it would do, the inference is drawn by many of our papers that he must have been flogged or otherwise abused physically before he made his statement, and ought to submit his person to examination for bruises in order to entitle him to a hearing.

—Looking at the matter from this point of view, Mr. Edward Atkinson, the well-known economist and cotton manufacturer of Boston, must, though he will probably deny it for obvious reasons, have received an unusually severe and brutal beating. He has been travelling in Georgia, South Carolina, and Virginia, and reports, since his return, that in Savannah he found the best negro laborers working for good wages, saving money, and buying little places around the city. He found the rice plantations in the neighborhood in good order, and the laborers comfortable and contented. He found the colored schools in Charleston in a very satisfactory condition, and saw evidence of "large ownership of real estate by negroes," and was much impressed by "the vast extent and admirable cultivation of the market gardens for several miles" around Charleston, "thoroughly drained and scientifically cultivated," and all by negroes. In travelling through Georgia and South Carolina he found "marked signs of improvement and progress" within two years even, because he was down there two years ago, and was then also, doubtless, well whipped and made to tell a somewhat similar tale. In Columbia, S. C., he found a "new suburb, built up principally by negroes." In Lynchburg, Virginia, he found negro families earning from $40 to $50 a week and owning their houses "by the hundred." They are building a church to cost $25,000, and the minister receives $1,100 a year. In South Carolina he found no evidence of any feeling adverse to the negroes "except as to the control of the Legislature." In short, his conclusion as to the state of things in four States was that "the main difficulties with respect to the relations of the two races had been surmounted, and that the colored population is rated according to the ability and industry of individuals." He confirms what has been reported, however, as to the enormous profits made on credit accounts with the negroes by the cross-roads storekeepers, who are largely Germans. The wickedness of spreading these stories at a most important crisis in the history of the Republican party we need not comment on. Mr. Atkinson is nearly as bad as Dr. Cooke.

—The third of the Wilhelmj chamber-music concerts was another disappointment. With the exception of Svendsen's string quartette in A minor, which is a very bright and melodious composition, and was excellently well played by Messrs. Wilhelmj, Damrosch, Schwarz, and Bergner, there was hardly a single number that would require special attention. The second movement of the quartette, a graceful andantino, was particularly well rendered, and afforded Mr. Wilhelmj an opportunity of displaying all the beauty and fulness of his tone. Signor Tagliapietra was altogether unequal to the first two numbers of his selection, Schubert's "Wanderer" and Wagner's "Abendstern" from "Tannhäuser." He sang these two beautiful songs without intelligence and artistic feeling; he was more at home in a very tame and insignificant song by Mr. Wilhelmj. Mme. Carreno played Chopin's great Ballade in G minor, one of the most difficult works of this composer, and took the pianoforte part in the Thema with variations from Beethoven's Kreutzer Sonata, and in Mendelssohn's Trio in C minor, which terminated a weak and unsatisfactory performance.

—The concert in aid of the relief fund for the sufferers by the Szegedin inundation was in every way a success. The programme was of a miscellaneous character, and presented several features of interest. The opening number was Rubinstein's octette for piano with wind and string instruments, Op. 9. This composition, though one of the master's earliest works, shows all the best features of his style: striking and vigorous ideas, delightful melodies, and entirely original phrasing and instrumentation. Mr. Rummel played the pianoforte part with uncommon brilliancy and power, and was ably supported by the New York Philharmonic Club. The same artist gave afterwards an excellent rendering of Liszt's great Polonaise in E major, and of Chopin's Nocturne in F sharp. Mr. Wilhelmj played Ernst's "Airs Hongrois," and Bach's air from the orchestra suite in B major. The vocal part consisted of an air from "I Puritani" and of songs by Schumann, Jensen, Abt, and Knight, which were sung by Mrs. Granger-Dow, Miss Henne, and Mr. Frederick Steins. Messrs. Wilhelmj and Damrosch played the same duo for two violins, by Bach, which they gave at one of the Friday chamber-music concerts; and two movements of Mendelssohn's quintette for string instruments in B flat brought a very pleasing entertainment to an end. The hall, which Mr. William Steinway had kindly placed at the disposal of the committee, was well filled, and as all the artists had volunteered their gratuitous services, we have no doubt that a satisfactory result has been obtained for the benefit of a noble charity.

—"Boulevard journalism," an extraordinary product of the literary activity and cheap printing of our day, has lost its founder and master spirit by the death of M. de Villemessant, of the Paris *Figaro*. It is very doubtful whether this noted editor left the world the better for his labors, but the impress of his mind upon the last thirty years has been deep, and he exerted a strong influence upon the journalism of this country and England, as well as upon that of France. His aim was simply to please the public, never to guide or instruct it. To this end his whole life was devoted, and a great fortune and an extended reputation were the rewards of his success. He haunted the boulevards and cafés to catch the interests and opinions of the hour, and reflected them faithfully and wittily in the columns of his journal. The *Figaro* was steered by the ever-changing vane of popular feeling, and any writer who failed to suit the momentary taste of the boulevard was instantly dismissed. A word of commendation or of disgust carelessly uttered over an ice by a reader of the *Figaro*, and overheard by the vigilant editor, was sufficient for the advancement or disgrace of the literary aspirant whose article had excited comment. Under this system the staff of the *Figaro* were but birds of passage. A new man with something new to say was eagerly welcomed, to be soon supplanted in his turn. The phrase "exhausted by the *Figaro*" was proverbial. M. de Villemessant believed that every man had at least one idea to ventilate, and that idea he skilfully appropriated. On this principle he once installed a chimney-sweeper in the editorial chair, who justified his theory by a few lines which excited the laughter of the cafés. M. de Villemessant insisted that the true Parisian preferred to learn how the Princesse de Metternich's poodle had been run over in front of Tortoni's to news from London or Berlin, and to this taste for trifles and gossip he catered with unparalleled assiduity and success. He found many imitators in France, and his methods have been followed in England by Mr. Yates and Mr. Labouchère. M. de Villemessant was much liked and much hated, and both for good reason. He was a faithful friend, an affectionate father, and a man of unlimited generosity, but he was also a bitter and powerful enemy, and the weapon of ridicule, of which he knew the power so well, was employed to sell his paper rather than

to soothe the political passions in the midst of which his life was largely spent.

—The change of feeling in France towards Germany has recently been illustrated by two different but almost equally significant incidents. One is the bestowal of a prize on Dr. Julius Schmidt, director of the Observatory at Athens, for his published work on the Moon, by the Académie des Sciences: the first scientific recognition of a German since the war of 1870. Dr. Schmidt's merit is conspicuous and the honor entirely deserved. His map of the Moon, the labor of many years, has even been held up as a reproach to New York, whose territory is far from being as thoroughly or accurately surveyed as that of the earth's satellite. The other incident we referred to is the first contribution by an eminent French littérateur to a German periodical since the war. It is M. Émile Augier, of the French Academy, who has broken the ice, and *Nord und Sud* which he has favored. In the April number of that daintily-printed magazine will be found a metrical fragment from an unpublished comedy by M. Augier, beginning:

"J'ai connu dans ma vie un seigneur très-charmant
Qui n'a jamais voulu se laisser voir dormant,
Parceque, disait-il, c'est la seule attitude
Qui ne puisse asservir la nature à l'étude."

This gentleman's fastidiousness is justified on the ground that in sleep we lose our free-will and relapse into a state of nature, and that sleep is the only function of man which is indocile and cannot be improved upon. We have tutors in everything except the art of sleeping:

"Et l'on ne trouve pas pour se donner des charmes
Des maîtres de sommeil comme des maîtres d'armes."

Nature being in this respect without appeal, concludes the "Fragment," every prudent and tender father who desires to know his son-in-law undisguisedly should endeavor to "catch him napping," as our English phrase is. This trifle is rendered rather indifferently into German on an opposite page by E. Dohm (and no wonder, considering how much of its felicity resides in the expression), and is followed by a somewhat elaborate *étude* of its author from the competent pen of the editor, Paul Lindau, who prefaces an account of the dramatist's career with an instructive enquiry into the reasons for his want of popularity in Germany in comparison with Sardou and Dumas. An admirably etched portrait of M. Augier serves as a frontispiece to the number.

—The March and April numbers of the *Deutsche Rundschau* contain a most interesting account of Count Moltke's wanderings through Rome and the surrounding country during 1845–46, when the great strategist was major in the Engineer Corps of the Prussian army, and temporarily attached as adjutant to the suite of Prince Henry of Prussia. After a short introductory remark, the article consists entirely of extracts from Moltke's own manuscript journal, which, as the editor informs us, has been placed at his disposal by the general's courtesy. To this day Moltke's two maps, *Carta Topografica di Roma, etc.*, and *Carta Topografica dei Contorni di Roma*, are most desirable guides for the visitor to the classic ground of the Roman Campagna. This early work of the great general is the fruit of the abundant leisure which his position afforded, and which led to the peaceful conquest of a solitude which had been until then, for strictly scientific purposes, an almost unexplored desert. "Not one reliable map," says Moltke in his journal, "based on geometrical measurements, existed. A host of talented artists had painted excellent pictures of the majestic solitude of the Campagna; a crowd of scholars had written learned works on the ancient roads and ruins, but no one had ever entered it with the theodolite and the sextant." Moltke went to work with all the enthusiasm of his profession, and in less than six months he finished a complete survey of more than ten German square miles. His keen eye foresaw a project which has become the aim of Italy's greatest statesmen and most patriotic citizens, and which in these days seems to be approaching realization: the colonization of the Roman Campagna by an agricultural population. We quote a few extracts from his journal to show with what bright spirits and cheerful disposition the Prussian major entered upon his survey:

"The labors of my task have been more than compensated by the pleasure it has given me. To you, my unknown successor, I prophesy great enjoyment in this splendid country. How delightful it is to drive in the fresh morning hours through the slumbering streets, to leave the narrow walls of the city, to enter into the vast open plain and begin with renewed strength the day's work. You chose your point of observation, your delighted eye surveys the magnificent panorama. Profound stillness reigns over the lonely land, the sound of the bells of the three hundred and sixty churches of the Eternal City does not reach your ear. No human being, no dwelling-place is visible; only a bright-colored lizard stares at you curiously from an old wall with his intelligent eyes. Now the sun rises over the Sabine mountains: a gentle breeze murmurs through the pines; in clearest outlines you recognize objects at a distance of more than fifteen miles—the villas that dot the wooded hills of Frascati, even the white, shining sails on the blue sea."

In this effusiveness it is difficult to recognize the stern conqueror of Sadowa and Sedan.

—The historical recollections of the country made a profound impression on Moltke. He considers the *locality* the only remaining reality of the great events of the past. It is the fossil from which the skeleton of the action may be reproduced, and the picture which history gives us in half-effaced lines appears through it in bright, sharply-defined form. Thousands of years have left unchanged the ocean, with its ever-moving waters. We see it in its colossal simplicity as the Argonauts saw it. The Bedouin to-day waters his horses and camels at the same springs which Abraham and Mahomet knew; the valleys around Jerusalem are the same to-day as when Jesus taught his disciples. On the other hand, past events give a character and dignity to localities which they would not otherwise possess. Who would care to look at the barren hill of Bunarbashi, at the sandy shore of Kumkaleh, if he knew not that here arose the proud walls of Pergamos and here the ships of the Achæans lay at anchor? Whether the Greeks ever stormed Ilion may be doubtful; but it is certain that the blind poet of the 'Iliad' was thoroughly familiar with the country east of the Dardanelles. Hercules and Romulus may be myths, but what has been sung about them is perfectly accurate as regards the description, in its minutest details, of the scene of their actions. "A narrative," says Moltke, "may be historically untrue, but can be quite correct as far as local descriptions are concerned." There is no spot on the face of the earth where so many great and important events have taken place as the narrow circle encompassed in Moltke's map. In a few brilliant and spirited strokes he passes in review the leading events of the city and its environs, from its foundation to the days when he saw it. The past of this small patch of land is so great that it overcomes the present. Every step leads us to monuments rich in memories. A few yards separate a battle-field of the republic from a mediæval castle, the Nymphæum of a water-god from the chapel of a saint; a few minutes divide the localities of events which are separated by centuries. The remaining portion of Moltke's journal is taken up with a scholarly account of the geological features of the ground, a most ingenious description of the aspect of the country in the earliest days of the city, and finally with climatological and meteorological observations. Whoever admires Moltke's genius as a soldier will be glad to become acquainted with him as one of the most brilliant and vigorous masters of German prose, and as a traveller whose keen eye and artistic taste lend a peculiar charm and interest to everything he describes.

HAECKEL'S REPLY TO VIRCHOW.*

GREAT was the excitement produced in certain quarters by Virchow's address against Haeckel's methods and doctrines at the fiftieth assembly of German naturalists and physicians at Munich. Here was a learned German professor, distinguished no less for his contributions to medical science than for his political activity, who suddenly came forward, with an air of infallibility, to announce that the theory of Development, which the vast majority of scientific men have now adopted, does not yet rest on a sufficiently secure basis to be introduced into any of our schools. It would have been prudent, however, to have enquired whether the Berlin professor is really the proper person to pass a final verdict on the theory of Development. Virchow is not a naturalist. The original work to which he owes his fame as a man of science belongs chiefly to a special branch of medicine—to pathological anatomy; and even here his best work was done before the appearance of Darwin's new methods of research. During the last twenty years—that is, ever since the appearance of the 'Origin of Species'—most of his time and his best energies have been given to politics, which, especially in Germany, is such a complicated affair that it leaves its votaries little leisure to attend to other matters.

On these and various other grounds Haeckel accuses Virchow of being incompetent to act as supreme judge in a matter of such great moment. After repeatedly perusing all the writings of Virchow, he has come to the conclusion that his former teacher has never read even the works of Darwin with sufficient attention to realize the proper import of the arguments therein advanced. Bold and almost comic as this reproach may

* 'Freie Wissenschaft und Freie Lehre. Von Ernst Haeckel.' Stuttgart: Koch; New York: L. W. Schmidt. Pp. 106.

appear, a careful examination of Virchow's Munich lecture leads to the conviction that Haeckel is not altogether mistaken in his suspicions. We recently had occasion in these columns to refer to the absurd discussion at present carried on in Germany regarding Darwinism and Social-democracy. For this discussion no one is to blame but Virchow, who, in his address, first called attention to the fancied alliance between these two doctrines, which in reality have about as much affinity with each other as oil has with water; Darwinism being highly aristocratic —socially, politically, and morally—while Socialism is in every sense ultra-democratic. As Virchow has for many years been one of the foremost politicians of his country, and Socialism one of the questions most constantly under discussion, we must assume that he knows pretty well what Socialism is. By confounding it, therefore, with the theory of Development he showed that his confusion of thought arose from his unfamiliarity with the second term of the comparison.

We see from this instance how crude the notions of a distinguished German specialist can be on topics outside of his immediate sphere of activity; and the case ought to serve as a warning to those people whose mental *vis inertiæ* leads them so easily to accept ready-made opinions on authority, instead of investigating facts for themselves. In his Munich address Virchow laid particular emphasis on the phrase: "That which most adorns me is the knowledge of my ignorance." But Haeckel regrets that he must question this arrogant modesty, and insists that Virchow does *not* know how ignorant he is in morphology. And, indeed, it is almost incredible that, had he been more familiar with the literature of Darwinism, he would have advanced in such a pompous manner, and with such exclusive stress, the stale argument of the missing link—an apparent difficulty which Darwin himself was the first to call attention to as a break in the chain of evidence. All men are liable to the weakness of exaggerating the importance of their hobbies; and Virchow's conduct is explained by the fact that for some years he had given a good deal of attention to anthropology, or rather to a comparatively unprofitable branch of it—craniometry. It is natural, therefore, that he should have attached undue weight to the absence, hitherto, of the fossil remains of the semi-human progenitors of man. But Lyell, Darwin, and others have offered so many cogent reasons why the palæontological record is, and must remain, imperfect, that we have as yet no rational grounds for despair or scepticism on this point. Virchow is greatly mistaken in supposing that the scientific truth of the theory of Descent depends on the discovery of a few skulls or bones. The strength of the theory lies in the vast number of biological and zoölogical facts which it explains and harmonizes, and which without it are utterly inexplicable, *e.g.*, the facts of embryology, of morphology, of comparative anatomy, and especially the rudimentary organs, "eyes which do not see, wings which do not fly, muscles which do not move," etc. (Haeckel's Dysteleology).

All these things, however, Virchow ignored in his Munich address. He was disconsolate because he could not find his bone, or add a new skull to his collection; and until that bone has been produced he denies that we have a right to open the doors of our schools to the theory of Development. It was this, the pedagogic, part of Virchow's lecture, which gave most gratification to the enemies of modern science and progress; and it was precisely in this part that he was most seriously mistaken. Virchow practically demands that only those sciences should be taught to our youth which rest on an objective, or absolutely certain, basis, secured by the experimental method. The theory of Development has no such basis, hence it only constitutes a problem of research, and not material for instruction. Had he given a little closer attention to Haeckel's lecture, he would have seen that Haeckel himself points out in emphatic language that the theory he advocates is not capable, nor ever will be capable, of exact or experimental proof. The human mind knows no such thing as absolute truth. Even mathematical axioms, as Helmholtz correctly maintains, have only an infinite degree of probability for us. All knowledge, all science, is a matter of greater or less probability, and we must accept and teach that which to the best informed appears to be most probable. Provisionally we must adopt those theories which are most in harmony with facts. It is for this reason that our chemists teach the atomic theory, our physicists the undulatory theory of light, our astronomers the nebular hypothesis, although they are fully aware that the very existence of atoms and of an ethereal medium is as yet unproved. According to Tyndall, the foremost men of the age accept these theories because thousands of isolated facts are accounted for by them, and because they "trace out illuminated paths through what would otherwise be the most hopeless jungle of phenomena in which human thought could be involved." The same is true of Development, only that the phenomena here are so much more complicated than in the theories just mentioned that more time and labor will be required before they can all be properly classified and reduced to order. If some facts still remain unexplained, it must be kept in mind that they do not contradict the theory in any case. Amid all the countless and complicated details of comparative anatomy, the distinguished Carl Gegenbaur discovered not one fact opposing it. Biologists assure us of the same thing. Is it possible that this should be so were the theory false? Or is it probable that all those best informed in such matters should have adopted it, not as a traditional opinion, blindly imbibed in youth, but as an independent opinion based on a personal examination of facts bearing on the question, and even involving in most cases the very disagreeable process of unlearning hosts of false doctrines? If under such circumstances our leading naturalists have adopted the doctrines of Lamarck and Darwin, as not only one step, but a hundred steps nearer the truth than any opposing theory, then must these doctrines also be taught in schools, or else natural science must be altogether excluded from them.

Let us not be misunderstood. We do not advocate the introduction of text-books on Darwinism into primary or even secondary schools. Professor Oscar Schmidt, one of the first of the German Darwinists, rightly insists that the appreciation of these modern theories explaining the origin and development of living organisms requires more mature mental faculties than are to be found in such elementary institutes of instruction. What we do insist on is that as soon as natural science *is* taught, it must be taught on the basis which is now accepted by the best authorities. But it must always be taught, not as absolute truth, but, as in the case of the atoms and the ether, as the nearest *approximation* to the truth. Nothing is more injurious to the development and growth of the human brain than the overloading of it at an early age with dogmas, be they scientific or religious. The great object of education is to preserve the brain in a plastic condition, capable of receiving or originating new ideas and impressions; and this can best be accomplished by informing it at an early age of the relativity and uncertainty of human knowledge, not in a one-sided manner, as Virchow has done by singling out the theory of Development, but in a more just and comprehensive manner, by showing that the uncertainty also extends to the physical sciences, and still more to history, sociology, psychology, and so forth. With this understanding it will even be safe to teach the theories of spontaneous generation, and of Haeckel's "Plastidul soul" and his "genealogical romance," without injury to young men or women. The scientific value of such brilliant efforts of the imagination much more than neutralizes the evil effects which Virchow fears will accrue to science by a loss of faith in it, should any of these speculations turn out to be incorrect.

No one can deny—and Virchow would be the last to do so—that Darwinism, as the only satisfactory method of accounting for organic development, has during the last two decades acted as one of the strongest ferments which have ever put life into stagnant human thought. The comparison between Newton and Darwin has been so often made as to have almost degenerated into a commonplace. The analogy, however, is closer than is commonly supposed. Newton annihilated space, Darwin time. Newton pointed out that the laws which guide a falling planet can be ascertained by studying the laws which guide a falling stone. Darwin showed that by observing the stages through which an individual passes in his embryonic growth we get an epitome of the lower forms of animal life through which his ancestors have passed in their generic development in the course of ages. He, moreover, traced out and formulated the laws of nature by which this development was brought about—variation, heredity, adaptation, use and disuse, correlated growth, selection, etc., and thus supplied a new method of studying nature, "a new genus of thought," as a hostile witness, Max Müller, calls it, which it would be as irrational to keep from our higher schools as it would be to exclude from them microscopes, telescopes, and spectroscopes. That fatal indifference with which American students are so often reproached can best be overcome by plunging them at once in this strong current of modern thought, and teaching them how to swim without being blindly carried along by the force of the current, as they certainly will be if they are not taught to swim in time. The great extent to which all modern literature, periodical and non-periodical, is spiced with evolution ideas will bring them into daily contact with these doctrines anyhow; and the only way to guard them from excesses in any direction is to afford them intelligent and systematic instruction in these matters.

Haeckel's brochure, which we have used as the text of our "lay sermon," is to appear shortly in an English version, with a preface by Prof. Huxley. A French translation is also in preparation. But those who are familiar with German should read the original text, as Haeckel is one of the best prose writers Germany has at present. Were he a Frenchman his style could not be more clear, vigorous, and pointed. Although some will find this last work of his somewhat too personal and exuberant, it must yet be commended to all who are interested in the scientific movement, and who wish to hear the latest words of the high-priest of German evolutionists.

RECENT POETRY.*

'ZÓPHIËL; or, The Bride of Seven,' the most important work of Maria del Occidente (Mrs. Maria Gowen Brooks), was published nearly fifty years ago in London, and had the fortune to be praised by Southey and left unread by the public. The editor of this reprint apparently trusts to the treacherous critical power of Southey, and ventures to go beyond him. He had called her "the most impassioned and most imaginative of all poetesses," but the editor has allowed her enthusiasm to betray her into saying that the music of "Zóphiël" surpasses Moore's, that its description of an oriental bower is more thoughtful and warm in feeling than Tennyson's "Lotus Eaters," that Swinburne and Byron are outdone in parts, that Milton is equalled in quality and his "Satan" distanced, and, to crown all, that "the soul-current vitalizing" this epic and Dante's "Inferno" "is the warm and brilliant, passionate and profound tide of a like inspiration." Such a sense of the value of "Zóphiël" is a sufficient excuse for the forcible resurrection of a forgotten book, always a somewhat melancholy spectacle; for usually it means a second and a speedier death. The story of the "epic" is founded on that of Tobias in the Apocrypha, and is told musically and vigorously. Fancy rather than imagination, and felicity of natural description rather than force of characterization, are displayed in it, and the interest it awakens is that which inheres in the strange, the unearthly, and the superstitious, rather than in human thought or power. Zóphiël, the fallen angel who wooes the heroine, is an original creation, and is attractive because nothing of sin seems to adhere to him; he defies the devil and seeks only the good; essentially he is an incarnation of love which finds all its efforts foiled. But, except this, there is nothing peculiar to the poem, while the absence in it of strong appeal to human interests and its unreal and visionary machinery must make its audience small. It will not raise its author to the first nor yet the third class of poets, it will furnish a new count against Southey's critical power, and will disappoint those who have expected to find it a treasure. Much power, some lyrical music, some fine descriptions of the beauty or the splendor of the luxury of the East are enough to excuse the publication of a new work, but not enough to warrant the uncalled-for reprint of a book once rejected. The editor promises another work of the same author—an autobiographical story.

The scene of 'Constance' is also laid in the East, and begins with a description of the mountain scenery of the Himāla. It was written in 1831, but apparently is now first published with other miscellaneous poems previously privately printed. It has the touch of Byron's influence in it, and comes like a breath from a distant literary past. The hero, the son of an exiled English lord who won an Indian kingdom of which England despoiled him, is a dark, beautiful, melancholy man, whose extraordinary powers are concentrated for years on avenging his father by overthrowing the Indian Empire. He stirs up a great revolt, and finally dies from a lightning stroke. With this is woven a graceful love-story, and a happy dénouement compensates for much horror. The workmanship is even and faithful, and while its human interest belongs to an earlier literary age, its natural description is impressive. Among the miscellaneous pieces is another version of Whittier's poem on Lucknow, and the prose story from which both are taken is printed in full.

Of the lesser things 'Thorns and Flowers' is likely to afford most amusement, for the author has thrown off all restraints and has written verses which some might think ill-bred, it is true, but which have the charm of novelty. We doubt if James Russell Lowell was ever apostrophized before in such fashion as this:

> "I love thee, for thy sins are like my own."

We remember that Mr. Lowell has been attacked by English critics for his profanity in the 'Biglow Papers,' but certainly he never dreamed of equalling this poet's "sins" in that line, for an oath comes as easily to his verse as a rhyme. In this mood he writes many political sonnets, usually on the French crisis, nor would it be an inexcusable conjecture if we should guess his morning newspaper frequently furnished the text for the forenoon's labor at the divine art. He exhausts the subject when he touches it; here, for example, are sonnets to his lady's hair, mole, nose, ear, feet, and mouth. He is irreverential toward the Pope, he tries to fire the heart of Sitting Bull, and suggests the difference between the touch of Midas and that of General Grant:

> "if all that you uphold
> "Should turn to steel, 'twere not astonishing,"

and thus apostrophizes those who caused "In God we trust" to be put upon the coins of the United States:

> "Is there no shame that thus ye dare disgrace
> The fleeting winter of a poor old god?"

Connoisseurs in the eccentric would be pleased to look over the volumes for a short time, and it must be confessed that the author, although without poetic taste, would be witty if his brightness were cleansed of vulgarity, but in that case nothing of this book would be left.

'Modern Rhymes' is as free from metrical restraint as 'Thorns and Flowers' from taste. Much of it is written in harsh prose printed in verse, and the author's discoveries in grammar and word inventions frequently obscure the sense. He might follow with profit Coleridge's early advice to Tennyson to write only in one or two well-known and strictly-defined metres, such as the heroic couplet or the octave stanza, and this is the more necessary as there is nothing in the contents of his verse to improve or amuse the reader. 'Humanity and the Man' is a poem of one hundred and thirty pages of equally bad verse, describing the history of the world through remarks of a guardian seraph to Adam. 'A Dream of Arcadia' and 'Drift from York Harbor, Maine' are, by comparison, collections of graceful verse, but one might read both without a line from either remaining in his memory, unless we should except four short stanzas "To a Belle of Six Summers." 'A Voyage with Death, and Other Poems' comes to us from California, and possesses a local flavor. It is unpretentious, and the author's first publication; it shows care and strength, and here and there are good lines direct and vivid, but the poems are of very uneven merit.

Mr. Payne is a disciple of that poetic school which has in recent years illustrated a wrong theory with such brilliant talents, and frequently with such fine artistic work, that it has obscured the fundamental canons of poetry. This poem is its last utterance, and while it would be unjust to hold any school responsible for the peculiar aberrations of individuals whose moods and methods attach them to it, the extravagance of this poem throws a good deal of light on the character and tendency of some of the common sympathies which unify the group of men who follow art for art's sake. The author has absorbed more of the French influence than his companions. He is the translator of Villon, his book is dedicated to Leconte de Lisle, and all his work has been highly praised by Théodore de Banville. In emulation of the example set by Baudelaire, he has attempted in 'Lautrec' to make a horrible and revolting subject attractive by artistic treatment. It is the confession of a vampire, one of those dead women "into whom has been infused an unholy and nocturnal vitality, by dint whereof they break sepulchre, and, wandering over the earth in the full splendor of the moon, fearsomely feed on the blood of sleeping folk." She tells the tale as she lies shut within her bier and hears the working of midnight charms setting free the black souls and upleaping hell-hounds:

> "I know them all—ghost, witch, and beast;
> I hear them hurtle through the gloom;
> The glad ghosts scatter from their room;
> The ghouls fare forth unto the feast—
> Still I lie fast within the tomb."

As she lies thus, waiting for the moonlight to come and set her free to go upon her own errand of foulness, she tells how Lautrec, a simple knight, won her love; how he went forth to the Crusade, and news of his loss by

capture or death came, and she died of sorrow, to wake in the church and find her soul spellbound by the moonlight streaming on her bier, and filled with "passion of strange hunger," "longings tiger-like," yearnings "upon some fearful thing to feed." Thither soon after comes Lautrec, and she is made sensible of his presence. In some way, which we fail to unravel, she "felt his eyes" summon her "soul back from the deep of death," and fell asleep in his arms. They appear to have been married like ordinary mortals, and on the wedding night, when the moon rose and worked its charm upon her, she set her lips, "the bright blood spouted," and she took her fill, saw Lautrec dead, fell dead by his side, and woke to find herself once more shut within her bier in the church.

Such a story can only be saved by the most wonderful skill, if at all. We confess to having laid down the book with a shudder of disgust. Still, the workmanship shows great power of vivid fancy, great resource in verbal beauty and verse harmonies, and is ornate with all the elegance of which the artificial is capable. The mannerisms of the school are everywhere, it is true. We have "flower-soft" and "star-soft" things in profusion; burning mists, bloody moonshot mists, year-mists, and the like; and such words as ness, treen, ywis, halidame, wherethoroúgh, fiendis, allegresse, and phrases like "but how me knoweth not," occur with oppressive frequency. Notwithstanding all this, the work is from a poetic mind of much vigor and fineness, and of a remarkable pictorial power—lost, it seems to us, in the mazes of a theory.

Life of Richard Fuller, D.D. By J. H. Cuthbert, D.D., pastor of the First Baptist Church, Washington, D. C. (New York: Sheldon & Co.)—The familiar burst of melody in the line "Massa Fuller a-sittin' on de tree ob life," as sung by the black Jubilee Singers, is, perhaps, the most enduring monument of the clergyman whose biography is here written. The line would seem to be a memorial rather of the good nature than of the affection of those who sing it; for nothing vanished more utterly during the war, or disappeared more completely beyond all bounds of discovery, than the supposed emotion of love on the part of the former slaves towards their masters. There was little of vindictive feeling, but on the other hand there was absolutely no visible feeling of regret or tender longing. When Parson Fuller stood among them once more after emancipation, beneath the live-oaks of Beaufort, there was a general good-natured wish to look at him again, and even take him by the hand; a wish only intensified, no doubt, by a general chuckle of satisfaction in the thought that they were their own masters, and that their hands were now their own property.

The memoir itself carries us back to that singular confusion of moral right and wrong which existed in the ante-bellum times. It is claimed, for instance, as a peculiar honor for Dr. Fuller, that during twelve years of parish service he devoted his salary to the spiritual instruction of his slaves (pp. 157, 287). "His private income," says his biographer, "was sufficient to his support"; and this income, it seems, was derived from the unpaid labor of the slaves themselves—two or three hundred in all! There seems now something almost incredible in the state of mind which could regard this as an attitude of generosity; and, to do Dr. Fuller justice, he seems at times to have had glimpses of the inconsistency. In a very manly and courageous address before the Colonization Society in 1851—a society, by the way, which represented much of the timidity of the North and much of the anti-slavery impulses of the South—he declared slavery to be "not a good thing, or a thing to be perpetuated"; and frankly conceded some of its most obvious evils. "I think I may well appeal to every Christian," he said, "whether when God says, 'Search the Scriptures,' the human mind ought to be shut out from reading the Scriptures; whether, when Jesus Christ says, 'What therefore God has joined together, let not man put asunder,' husbands and wives ought to separated; whether labor ought to be received without compensation" (p. 195). It was this last honest doubt, let us hope, which led Dr. Fuller to devote his salary to the service of his slaves.

He had foreseen and deprecated the rebellion; at its outbreak he resided in Baltimore, and tried hard to avoid being involved; but by taking part at Savannah, during 1861, in a Baptist Convention which passed a vote of sympathy with the Confederacy, he was credited with having drawn up the obnoxious resolutions, and was pronounced by the New York *Tribune* "the most dangerous rebel in Baltimore." He was not, however, arrested; and he doubtless tried, during the war, to soften the bitterness of the feud. After the war he accepted its results frankly, visited Port Royal with Secretary Chase, and gave excellent counsel to his former slaves. He told them that many at the North were predicting that they would be idle and dissolute, and asked if they were going thus to bring shame upon those who had befriended them (p. 110).

Dr. Fuller was a man of imposing physique, and had the voice and mien of an orator; he had distinguished himself in his early days at Harvard College and during a short career at the bar, and his life was undoubtedly devoted to doing good, subject to the limitations and inconsistencies of a slaveholder. Yet his memoir fails to be interesting, partly from a confused arrangement, and partly because much of it is occupied with those clerical details which have little attraction for the general reader. Of all religious controversies, that carried on by the Baptists is probably least impressive or important to the outer world. When we find Dr. Fuller and his biographer rejoicing over a converted Episcopalian as over a sinner saved, it is impossible not to reflect that there were also devout Episcopalian clergymen just then rejoicing, no doubt, over some converted Baptist; and in view of an actual wrong like slavery, for instance, this petty game of mutual proselyting seems child's play. Then the book is written in that strain of adoring enthusiasm with which almost every clergyman is described by his biographer; and this soon wearies. An occasional touch of humor comes as a relief, and there is one of those racy but rather irreverent anecdotes in which sound divines often seem to delight, bearing in this case upon a pious deacon in Georgia whose house and buildings had been laid waste by Sherman's raiders. He had always given much religious exhortation to those in trouble, and his neighbors now rallied round him with similar comfort—a task of some difficulty, as he was old and deaf. When their loud-voiced consolations had at last reached his ears he quite refused to accept their suggestions. "I don't remember," said he, "ever supposing a case like this; and I am tempted to think that Providence went a little too far this time" (p. 183).

Wild Life in a Southern County. (Boston: Roberts Bros. 1879. 16mo, pp. viii. 344.)—This is a book of contemporaneous animal interest at least. It brings us late news of our furred, scaled, and feathered connections' doings, whether in field, stream, or forest, in a wild region in the south of Wales; for the "Wick" here described can be, according to our gazetteer, no other place than the parish of that name in Glamorgan County. The fox's ambush, snake-trapping, rook-shooting, the trials of the heron when fish are scarce, the rabbit left in dolorous case by the weasel, blackbirds at their bath, the cuckoo's return, the thrush smartly cracking the shell of the live snail upon the sarsen-stone about lunch-time, the oratory of the starlings, the crakes' ventriloquism—the entire gabblement and transactions, in short, of the "parliament of foules"—these are chief among the subjects of which this agreeable observer has written, and written so minutely that little remains, one would almost say, for the future observer in his county. One is struck by the great variety of visible animal life in that corner of Wales (as, indeed, in most parts of Western Europe); it far outdoes that of this country, which, in popular belief at least, is much "wilder" than the old world:

"The farmhouse, garden, orchard, and rickyard at Wick are constantly visited by about thirty-five wild creatures, and, in addition, five others come now and then, making a total of forty. Of these forty, twenty-six are birds, two bats, eight quadrupeds, and four reptiles. This does not include some few additional birds that only come at long intervals, nor those that simply fly overhead."

Upon plant-life our author's notes are less full, but charged with detail. Here is a passage on nutting which will recall, by contrast, the procedure of the boy Wordsworth among the hazels "tall and erect, with milk-white clusters hung," when he "dragg'd to earth both branch and bough, with crash and merciless ravage." Our author proceeds more gently:

"When they will 'slip udd' is the proper time to gather them—*i.e.*, when the hood or outer green covering slips off at a touch, leaving the light-brown nut in the palm; it is a delicately-shaded brown. Cut off just the tip of the nut with a penknife; insert the blade ever so slightly, and a gentle turn splits the shell and shows two onyx-white hemispheres of kernel. With a little care the tallest boughs may be pulled down uninjured; if dragged down rudely the bough will be 'sprung' where it joins the stole below, and will then wither and die."

About the human animal and his ways "R. J." tells us less in this than in his earlier volume, 'The Gamekeeper at Home' (see *Nation* of March 20, 1879), thus omitting, *pace* H. D. Thoreau, a source of interest. We especially miss the character of "the judicious poacher" in these pages; but our author notes the country-people from time to time, and records their views, scientific and other, as here:

"Some of the old cottage-folk are still positive that it is not the lightning but the thunder that splits the trees; they ask if a great noise does

not make the windows rattle, and want to know whether a still greater one may not rive an oak. They allow, however, that the mischief is sometimes done by a thunderbolt."

One fault we have to find with our author—namely, that he has added another unsuccessful attempt to the many that have already been made to express in "lower-case" type the songs of birds. It cannot be done; and the sooner the matter is relegated to Mr. Xenos Clark, of the *Naturalist*, and to the musicians the better. For the rest, the book is an enjoyable one. Whether or not it belongs on the same shelf with 'The Natural History of Selborne,' "R. J." has only to "write out" his name to enter into his distinction.

Miscellanies, Literary and Religious. By Chr. Wordsworth, D.D., Bishop of Lincoln. In three volumes. (London: Rivingtons; New York: E. P. Dutton & Co. 1879.)—These three bulky volumes of the Bishop of Lincoln display much varied learning upon a multitude of topics. Apparently all the less important literary work of the voluminous author has been collected, for, while we have long essays upon the inspiration of the Bible and like matters, some things have been included of which the earthly interest to any one except the author is not obvious, such as a letter to the Archbishop of Cyprus introducing the Rev. Josiah Spencer, and so the volumes have been swelled to a size which we fear will seem oppressive to the worldly. What is of most curious interest is the treatment of the prophets, for their words are applied to modern times and are interpreted in a *bona-fide* manner which is rare in this century; the essays "On the Destiny of Mohammedanism" and "The Decline of Mohammedanism a Signal for a Greater Spread of the Gospel, which will be to some a Woe," may be cited in illustration. It is impossible to do more than indicate what these volumes contain, for a criticism would carry us into too many fields of research; but classical scholars will be interested in the author's discoveries detailed in "Pompeian Inscriptions" and in his discussion of what Horace would have been had he known Christianity; the notes of travel are of very varied interest and cover entertaining subjects, but the larger space is occupied by purely clerical matters, discussions of confirmation, confession, and absolution, the Holy Sacraments and the Holy Communion, or pastoral letters, hymns of no extraordinary merit, and collections of aphorisms, selected and original. In this collection we observed some sayings which were tinged with a facetiousness uncommon in the author's other work, of which an example or two may not be out of place: "God *foresees* all things, but *forces* nothing," or "Μὴ βλέπε τὰ ἴδια, ἀλλὰ τὰ ἀίδια"; these "are designed specially for the use of students in training for holy orders." The contents of the volumes, as will be seen, are removed somewhat from the interests of the American public, but the structure of a modern bishop's mind and the character of his interests are here revealed with extraordinary lucidity for those whom it may concern.

Fourteen Weeks in Botany. By Alphonso Wood, A.M., etc., and J. Dorman Steele, Ph.D. (New York: A. S. Barnes & Co. 1879. Pp. 318, 18mo.)—Professor Wood, as we know, has been more than fourteen weeks in botany, being a veteran popular author of botanical text-books. Dr. Steele may be as new as that to the subject, and this may account for some curious statements in a book which has in many respects a good deal to recommend it. Here are a few points which we have noticed in turning over the pages: "The cryptogams are numerous and minute beyond conception." "By a wise provision the albumen is deposited [in a seed] in the form of starch, which is insoluble in water, or else the first rain would dissolve and waste the young plant's inheritance." On the same page "*æstivas*" is given as Latin for summer. The context shows that this is no misprint for *æstivus*, which means pertaining to summer. "On account of their hypogynous stamens and the entire freedom or distinctness of all their floral organs, botanists have assigned the buttercups and their order to the highest rank in the vegetable kingdom." Apropos of buttercups, the analyses in the letterpress on p. 46 do not really represent the species of early crowfoot they are ascribed to, nor does the full-page figure of the bulbous crowfoot on p. 51 represent that species or agree in foliage with what is said of it in the letterpress immediately following. The fluid secreted by the fly-trap of Dionæa is said to be "forced out." Trifoliolate leaves are everywhere said to be "trifoliate." Leaves of pines are said to last "through the winter, until those of the next season are full grown"; and—about as near the mark—"Herbs fruiting after a long term of years only once and then dying, are said to be *monocarpic*." "The common oat is said to be a native of the Island of Juan Fernandez." Yes, Anson, the circumnavigator, said it, but we did not expect it to be said in our day, nor to have to consider how the ancient Germans contrived to procure from thence their principal breadstuff. On page 221 we come upon a more modern geographical puzzle, a "View in Calaveras," showing some of the "big trees," with El Capitan of the Yosemite Valley in the background! It is a good two days' journey from the one to the other. But our authors have visited this grove, and state that they counted the layers on the stump which is figured in the picture. They ought to know if the view is correct. The most notable discovery in the volume is recorded on page 162, that of dimorphism in the flower of Dodecatheon. But in reading the account of it a suspicion arises. The description does not agree well with Dodecatheon, but does agree with the primrose, and with the species which bears in England the popular name of cowslip. Now, in this book, Dodecatheon is called the American cowslip. Can it be possible that the dimorphism of the one is assumed for the other through an identity of popular name? If so, then the preface rightly declares that "The plan of this work differs from that of the ordinary Botany."

The plan—which is said "to introduce the pupil at once to the study of the plant itself, by means of elaborate illustrations and living specimens"—is in this respect wholly commendable, being that adopted by all competent and right-minded teachers. The particular method of the volume—that of teaching by a series of studies of certain selected common plants—is essentially the plan of Lindley's 'Ladies' Botany' and of Le Maont's 'Leçons Élémentaires.' The latter is the best book of the kind we know. The present book is better on the whole than our extracts would lead one to expect.

The Fairy-Land of Science. By Arabella B. Buckley. (New York: D. Appleton & Co. 1879.)—This is a graceful attempt to take advantage of the fascination which stories of genii and fairies have for children, and to make the various manifestations of energy play the rôle of fairies. In the story of the "Sleeping Beauty," at the fairy's touch the whole palace goes to sleep—the princess in her chamber, the butler and the dog, the horses in the stalls, and the doves upon the roof. In the fairy-land of science Frost is the fairy, at the touch of whose wand all flowers and plants are wrapped in slumber until another fairy, Heat, comes to awaken them to life. It is a pretty conceit, and well worked out. There are ten lectures, in which cohesion, gravitation, chemical force, light, heat, and sound are treated, together with the history of a piece of coal, the growth of plants, and the habits of bees. The author takes every occasion to point a moral, and inculcates the good lesson that science should be studied not merely for its facts but for the love of it. In the study of botany the method of investigation can be carried out from the first, and we should have been better pleased with the part of the book which treats of that science if this method had been more emphatically enforced upon the mothers' minds. We take it for granted that most children will prefer to hear 'The Fairy-Land of Science' read to them, and will not desert the account of a real out-and-out encounter between genii in 'The Arabian Nights' Entertainments' for the description of a struggle between the manifestation of cohesion and heat.

An evanescent interest in science can be easily created in children's minds. The problem is to train their growing perceptive faculties in the right way. This book hopes to create an interest in the study of science by a direct appeal to the imaginative power. There is no doubt that science should be made attractive in this way; but this method must be supplemented by another far more efficacious in producing permanent results, and which consists not in making the pupils passive recipients, but in guiding them to observe nature for themselves. This method in botany is ably illustrated by Prof. Goodale, in one of the series of guides for science-teaching published lately by the Boston Society of Natural History. While Miss Buckley's book makes us wish that she had given such methods that the mothers' minds could maintain the interest excited in children by her treatise, we confess to have been absorbed by its perusal. The chapter on bees is especially fascinating. The book is quite exact in its statements; in one case, however, too much prominence is given to the part which osmose plays in the circulation of sap.

Dress. By Mrs. Oliphant. (Philadelphia: Porter & Coates. 1879.)—We are disappointed in this book. It is one of the "Art at Home" series, but it gives neither first principles nor any good range of suggestion. The treatment of the subject is historical, and the essay is in great measure devoted to proving that men have been as absurd as women in their dress, which needs no proof and does not advance the matter a step.

The subject deserves a master hand—so large a portion of the toil and the expense of common life are bestowed on dress, and there is such helpless drifting in what people are pleased to call their thoughts on the subject, the viewless tyranny of fashion is so unresisted by nine hundred and ninety-nine people in a thousand, that any one who could help men and women at least to have a notion of what they are about would be a great benefactor. It is no simple matter: the claims of health, fitness, and beauty are to be reconciled with the question of expense, and the enormous variations of our climate bring in a farther complication. Independence, a harmonious individuality, and good taste are prerequisites to any reasonable thinking on the matter, and these qualifications are so common! The only book which we remember as applying principles to dress is a thin volume by Pugin, who, being satisfied that "all cathedrals are Christian; all Christians are or should be cathedrals," applies his theories of construction and ornament to dresses and draperies.

Decisive Events of History. By Thomas Archer. Illustrated. (New York: Cassell, Petter & Galpin. Large 18mo, pp. 178.)—The sixteen events of history selected by Mr. Archer as "decisive" deserve that name perhaps as well as any that could be chosen; such a choice is of course to a certain extent arbitrary, and it would be easy to find others that would seem to present as strong a claim as some of those here given—some incident, for instance, in the life of Julius Cæsar or of Clovis, the capture of Constantinople in 1453, or the discovery or colonization of America; at any rate no exception can well be taken to any of those here included. The plan of the book is simple and is well carried out. Each event is illustrated by a full-page picture of great merit, and the story is then told in a graphic style and at moderate length. There is a little monotony in the narrations, which always begin, like Thackeray's novels, with a description of the decisive event represented by the picture, and then go back to narrate the events that preceded it. The style is generally good, although not so good in some chapters as in others. The most common fault is that of stringing along a number of relatives one after another, as in the following extract, in which also there is a clumsy use of tenses: [Gregory VII.] "hearing that Henry IV., whom he has excommunicated, has appeared in Italy, where he has been welcomed by the Italian princes and bishops, who are also under the papal interdict, he was afraid to pursue his journey, and therefore sought safety in this stronghold [Canossa] of his powerful adherent" (p. 91). There is, by the way, in this passage an error in the use of the term *interdict*, which is properly applied not to the excommunication of individuals, but to a ban laid upon an entire kingdom or community.

Such books as this are on every account to be recommended to young people, for, whatever may be our opinion as to the real importance of individual events and persons in the great current of history, it is just these, at any rate, which make the best general introduction to historical reading. They inspire interest, they exercise a salutary influence on the character, and they help to bring into prominence series of events which, in any point of view, are worth remembering.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Alden (Rev. J.), First Principles in Political Economy	(Davis, Bardeen & Co.) $0 75
Baring-Gould (S.), The Vicar of Morwenstow	(Thomas Whittaker) 1 75

HENRY HOLT & CO.

WILL PUBLISH ON SATURDAY

PROF. F. A. WALKER'S NEW WORK,

Money in its Relations to Trade and Industry.

16mo, $1 25.

Wanderings in Patagonia.

By Julius Beerbohm. 16mo (Leisure-Hour Series), $1.

"Few recent books of travel and adventure have a more romantic interest. . . . Mr. Beerbohm's adventures are thoroughly romantic, and his report of them and of the scene of them thoroughly attractive. . . . He writes with a frankness and simplicity that are charming."—*N. Y. World.*

SYMONDS'S RENAISSANCE IN ITALY: The Fine Arts. 8vo, $3 50.

F. W. CHRISTERN,
Foreign Bookseller and Importer,
180 FIFTH AVENUE, NEW YORK.

The principal publications of Charpentier, Didier, Didot, Hachette, Levy, etc., on hand; also, complete sets of Tauchnitz's collection of British Authors and Teubner's Greek and Roman Classics. Catalogues mailed on demand. European Periodicals received weekly.

THE NATION.—Volumes and Back Numbers for sale. Address the publisher.

"The course of the *Nation* newspaper in its treatment of subjects connected with money, currency, financial legislation, and capital and labor, has always, I believe, been eminently sound and wise; and its files contain the greatest body of serviceable teaching respecting these subjects which can be found in this country. It has also many valuable studies of some of the changes which have been going on during the last fifteen years in our laws, in our methods of political action, and in the character of our people. It is a necessity for clergymen and all students of our national thought and life."—REV. J. B. HARRISON, in the *Christian Register* of August 17, 1878, in an article on the American Literature of Capital and Labor and the Organization of Society on the Principles of Justice.

WANTED—Vol. I. of THE NATION, *at* $5. X., *Nation* office.

EUROPEAN TOURISTS
SHOULD TAKE WITH THEM
AUGUSTUS J. C. HARE'S
Invaluable Books of Travel.

WALKS IN LONDON. With 100 Illustrations. 2 vols. 12mo, cloth, $5; or the two vols. in one, 12mo, cloth, $3 50.

"The man who goes for the first time to London should take with him the new book called 'Walks in London,' by Augustus J. C. Hare. It is by all odds the pleasantest and most instructive hand-book of the great metropolis that has come under our notice."—*Philadelphia Evening Bulletin.*

WALKS IN ROME. 12mo, cloth, $3 50.

"We know no single work that can replace this of Mr. Hare. We heartily recommend it to past and future visitors to Rome; they will find it a condensed library of information about the Eternal City."—*Atlantic Monthly.*

CITIES OF NORTHERN AND CENTRAL Italy. With Maps and Illustrations. 3 vols. 12mo, cloth, $6.

"By all odds it is the most complete, elegant, and interesting work designed for the use of sojourners and tourists in the most visited parts of Italy that has ever come to our notice."—*Boston Traveller.*

WANDERINGS IN SPAIN. With Illustrations. 12mo, cloth, $3.

"We recollect no book that so vividly recalls the country to those who have visited it, and we should recommend intending tourists to carry it with them as a companion of travel."—*London Times.*

☞ Any of the above works will be sent by mail, postage paid, to any part of the United States on receipt of price by the Publishers.

GEORGE ROUTLEDGE & SONS,

The Nation.

NEW YORK, THURSDAY, MAY 15, 1879.

The Week.

THE President's veto of the Military Interference Bill is shorter, and on the whole stronger, than the first. The bill, as passed by Congress, provided that "it shall not be lawful to bring to or employ at any place where a general or special election is being held in a State" any part of the army or navy, unless it be required "to repel the armed enemies of the United States," or to enforce that clause of the Constitution which authorizes the use of troops on the application of the legislature or executive of a State. It also repeals any statutory provisions inconsistent with these. The President's objections to the bill are, that it will seriously impair the efficiency of the Executive; that from the beginning of the Government there have been laws on the statute-book authorizing the use of the military forces in case of opposition to the authority of the Government, not coming within the two excepted cases in the bill; that it was under these enactments and the fundamental necessity on which they are based that the Pennsylvania "Whiskey rebellion" of 1794 was suppressed, that the Burr conspiracy of 1806 was broken up, that Jackson brought nullification to an end, and that Lincoln issued his proclamation for troops in 1861. The bill, moreover, discriminates in favor of State and against national authority. Under it the use of troops might be lawful to secure a peaceful State election against domestic violence, while it would be unlawful to secure a peaceful national election at the same time and place against the same violence. Besides all this, there are many important statutes relating to extradition, to crimes against the election laws, to quarantine regulations, to neutrality, to Indian reservations, to civil rights, etc., all of which the bill repeals by implication. These objections appear to be unanswerable, and are made all the stronger by Mr. Hayes's again professing his entire readiness to sign a properly drawn bill to prevent interference with elections.

It is difficult to make out from the press despatches what will be the consequences of this second veto. The Republican papers say that "the people" approve the veto, and the Democratic papers declare that the people approve the bill; so that there ought to be a good deal of popular rejoicing over the present condition of affairs. Moreover, it should be observed—and it is singular that this point has escaped attention throughout—that there is a substantial unanimity of all parties on the subject of the use of troops at the polls. The President is perfectly ready to sign any measure which the Democrats may pass to accomplish this end; so that if the Democrats make a few more experiments they are nearly certain in the end to succeed. The simplest way would seem to be to submit a draught of a bill in advance to the President, or have Mr. Evarts "compare views" with the committee having the matter in charge. This is what is always done with appropriation bills, and by adopting the same plan in this case a great deal of time might be saved. It is only fair to say, however, that, according to the *Times*, the situation is regarded by the Democrats as so serious that "even the most far-sighted and sagacious leaders are unwilling to advise as to what action should be taken."

On Wednesday week the Senate, by a vote of 26 to 17, ordered an investigation into Kellogg's title to his seat, and by the same resolution permitted his contestant's election to be also enquired into. On Friday Mr. Edmunds delivered a long and notable speech on the Military Interference Bill, which was very closely followed in its line of argument by the message accompanying the President's veto. He took what we believe to be impregnable ground as to the right of the Government, at all times and in all places, election days and the neighborhood of the polls not excepted, to execute the laws with all the force that may be requisite, and to preserve the peace. "The peace of the United States" he very happily defined as "that order and tranquillity which is found in the due execution of its laws without forcible and violent obstruction." The bill none the less passed by yeas 33, nays 23, and so went to the President. On Saturday, the Legislative Appropriation Bill being under discussion, Mr. Hill replied effectively to Mr. Conkling's recent statistics about the contributions of North and South respectively to the Government revenues. The House has been discussing the Warner Silver Bill, a measure fraught with infinite mischief but little likely to become a law; on Thursday it killed an eight-hour bill, laying it finally on the table by a large majority; on Monday refused to suspend the rules to pass an income-tax bill, by yeas 108, nays 94, and only refused to pass an Army Appropriation Bill pure and simple by eight majority, all but one of the Greenbackers voting with the Republicans. The veto of the Military Interference Bill was sustained on Tuesday.

There appears to be continued confusion in the minds of some Republican papers about the late attempt at "revolution" in Washington. The *Evening Post* maintains that although it may be true that the Democrats did not contemplate an armed revolution, they did contemplate "a peaceful revolution," which also was dangerous. We must point out to this esteemed contemporary that a "peaceful revolution" is never dangerous, because no such thing can happen or ever has happened in a free country without the consent of the great majority of the people. In fact, the United States Constitution itself provides for "peaceful revolution" by amendment. In this way the President might not only be stripped of his veto but confined to the duty of copying papers. The horrors of a "peaceful revolution" are, therefore, the figments of the esteemed contemporary's own imagination.

The Boston *Journal* in like manner asks us what does all the late legislation and attempts at legislation of the Democrats mean if "not to deprive the Federal Government of its authority and supremacy"? They mean undoubtedly the practice of a theory of the relations of the Federal to the State Government known as the State-rights theory. But these attempts are part of the usual working of party government. They are to be witnessed to-day in England, France, Italy, and Germany. They are doubtless mischievous, but they are not necessarily revolutionary. They are to be met not in arms but on the stump and in the newspapers, and if the people do not like them they will punish their authors at the polls next election; just as in 1874 they punished the Republicans for carpet-baggery and whiskey-thievery. The humor of the situation lies in the fact that the esteemed contemporaries and the thundering Stalwart orators secretly agree with us in all this. At Washington the Stalwarts may be seen any day laughing and joking with the revolutionary "brigadiers," and those of them who have any money privately invest it, as do the esteemed contemporaries, on the shameless hypothesis that their own talk about "revolution" is all gammon, and that the future of the country is unclouded. They expect confidently to knock the Democratic theories on the head at the next election.

The Grant movement during the past week has shown signs of waning, and the anti-Grant Republicans have cheered themselves with the prospect of a "Sherman boom" in Ohio. The supporters of Grant, however, deride this, saying that it is not a big enough "boom" for the Presidency, but will do only for a governorship, or at most a seat in the Senate. It is not at all reassuring to know, as appears from an interview with Mr. G. W. Childs, of Philadelphia, published within a few days, that the subject of another Presidential

term is never discussed or considered by General Grant, even in his intercourse with his most intimate friends. He has occasionally been heard to declare that he is glad to be rid of the cares of office, and that he cannot conceive of any circumstances which would ever induce him to accept office again, and when he left Washington in 1876 he was, it seems, "as gay as a boy" who had escaped from school. If, however, the people should come to the conclusion that "they really need him" he would not be at liberty to refuse a call to the White House, and the good Mr. Childs is pained to hear that there are Republicans who, under such circumstances, could not feel it to be their duty to support him. This sounds altogether too much like Tilden. The aversion of all our great men to office, increasing as it does with the chances of nomination, is one of the most mysterious traits of their character.

The Stalwart Republicans will have it that the pangs they have been experiencing during the last two years are caused by the Hayes lemonade having disagreed with them. A writer in the Philadelphia *Evening Telegraph*, signing himself "J. W. F.," and whose figures we have already quoted, erroneously supposing him to be Colonel Forney, keeps, however, showing them in the most remorseless way, by mathematical demonstration, that it is the old Grant whiskey which has disordered their system, and that it will be little short of madness for them to take another pull at the bottle by way of relieving themselves. In a recent letter he shows that from 1872 to 1874 the Grant régime kept handing Republican States over to the Democrats or cutting down Republican majorities with the most deadly efficiency. In 1872, for instance, the Republican majority in Massachusetts was over 74,000; in 1874 the Democrats carried the State by 7,032 majority. In New York the Republican majority in 1872 was over 51,000; in 1874 the Democratic majority was over 50,000. In Pennsylvania Hartranft was elected in 1872 by over 34,000 majority; in 1874 the Democrats elected the lieutenant-governor by 4,679 majority. In Ohio the Republicans carried the State in 1872 by over 34,000 majority; in 1874 the Democrats carried it by 17,202 majority. In Illinois the Republicans carried the State in 1872 by 53,420; in 1874 the Democrats carried it by 30,506. Like results were reached in all the other States North and South in spite of "the steady hand at the helm." So much for the effects of whiskey.

Now let us see what the lemonade has done. In the first place, as "J. W. F." points out, the first two years of Mr. Hayes's administration have passed without a single scandal. No breath of suspicion has overtaken the President or any of his advisers or friends. The result is that the Democratic force in the House from the Northern States fell in the elections of 1878 from 97 to 50, and the Republican rose from 90 to 125. In other words, the Democrats lost nearly 50 per cent. and the Republicans gained nearly 40 per cent. Now, this seems to show pretty clearly that the people of the North do not like "a steady hand at the helm," and we trust will bring home clearly to all Stalwarts, who are not gone clean daft, that what they need is more cooling drinks and an absolute abandonment of the black bottle. "J. W. F." complains that he cannot get them to read his figures, but we advise him nevertheless to ply them with them vigorously. They will bless him yet for his kindly pertinacity when they get over their debauch.

The adoption of the California Constitution has brought the people of that State face to face with some very serious questions, and, as might have been predicted, the vote has produced a feeling in all the centres of population little short of dismay. The majority seems to have come from the agricultural portions of the State, the farmers being misled partly by the Granger features of the constitution and partly by the provisions with regard to the taxation of mortgages. The plan of taxing only the difference between the assessed value of the property and the amount of the mortgage is one eminently calculated to catch the popular fancy, and is abstractly more just than the barbarous method pursued in many of the Eastern States of taxing the land at its full value and the mortgage in addition. Of course the provision is not likely to produce the effects its framers intended, inasmuch as the mortgagee will exact in the shape of increased interest whatever he is likely to become liable for in the way of taxes. A more serious evil appears to be the complete change introduced in the taxation of corporations. The San Francisco *Price Current* has published a list of banks in that city whose taxable property under the new constitution will by its operation be at once increased from six to *seventy-two* millions. The railroads will be handed over to a commission of three, which will have almost despotic powers. Under the pressure of the present popular excitement a good commission may be elected, in which case the day of reckoning will be postponed. The election of a good judiciary also would go far to make the new system endurable, as good judges would no doubt, by a liberal and rational system of interpretation, deprive the instrument of some of its terrors. But to obviate the danger of this the reformers have, by Article VI., Sec. 10, made judges of the Superior Courts removable at the pleasure of the Legislature, by a two-thirds vote, on a summary process wholly unlike that of impeachment.

A National Colored Conference, gathered from all parts of the South, has been in session during the week at Nashville, where the hall of the House of Representatives at the State capitol was opened to it. It had been called before the recent migration, for a general presentation of the condition of the race at the South, but the new movement was the absorbing topic and greatly divided the conference. The presiding officer, Mr. J. R. Lynch, formerly a member of Congress from Mississippi, where he was emancipated by the war, and a man of force and character, deprecated leaving the South unless for the best of reasons, and this sentiment carried the day when the address came to be reported from Committee by ex-Governor Pinchback, of Louisiana. Still, it was declared that "the disposition to leave the communities in which they feel insecure is an evidence of a healthy growth in manly independence, and should receive the commendation and support of all philanthropists"; and the National Emigration Aid Society at Washington was "heartily endorsed." The Vicksburg treaty was regarded favorably as a mode of settlement between blacks and whites, but ex-Congressman Rainey insisted that white promises could no longer be trusted, having been so often broken; and Pinchback's prediction that Grant would be renominated was received with great enthusiasm.

We estimated the majority for Mr. Talmage's acquittal too high last week. Twenty-four of the Presbytery voted for his acquittal and twenty for conviction on some or all of the charges. The laymen, curiously enough, stood nine to three for conviction, so that the main body of his defenders and apologists were found among the ministers. The excuses for his conduct put forward in the judgments rendered were absolutely worthless, and in many cases very disgraceful, showing apparently that the inferences drawn of late as to the general morality of the churches from the misconduct of prominent members have not been by any means unwarranted. Falsehood of various degrees was covered by members of the court by references to Talmage's usefulness in saving souls and arousing religious interest. The lachrymoseness of the court, too, considering that the members of it are Presbyterians of the Scotch branch, usually considered hitherto an austere and stern sect, was very singular. The witnesses, counsel, judges, and accused all wept with more or less copiousness, and the tears often came into their eyes when they merely looked at each other. Nothing has occurred for a long time so likely to bring discredit on religion as the whole proceeding. In the Beecher case there was some dispute about the facts; but here the facts were substantially admitted. Talmage made an insolent and contemptuous speech to the court, in the style of a "Bowery boy," before leaving. We are glad to hear that the case is going up to the Synod. No church can afford to let such a judgment as this stand. It shows what inroads the Catholic dread of scandal, and readiness to swallow doubtful things to avoid

scandal, has made on Protestant morality. Some of the casuistry of the defence was worthy of the Jesuit fathers in their worst days.

An article was published in the *Nation*, on the 18th of December, 1873, consisting in the main of a résumé of a pamphlet published by Mr. T. S. Paffard, one of the English stockholders of the Emma Mining Company, in which Mr. Silas Williams, the superintendent of the mine at the time of the sale, was accused of having "occupied himself in plastering and engrafting silver ore on to the limestone rock." Mr. Williams fully denied this charge at the time, but we considered ourselves unable, with the knowledge then at our command, to treat his denial as conclusive, or make him reparation in the terms he desired. He accordingly soon after commenced an action for libel, which has ever since been pending. In the interval, the sale of the Emma Mine has been made the subject of judicial investigation in another suit, and an examination of the evidence therein taken, as well as of that taken by ourselves, has satisfied us that the charges made against Mr. Williams in the article in question had no foundation in fact. We, of course, regret very much that he should have lain under them so long; and we may add that we have not, in the course of extensive enquiry, met with any imputation whatever on his honor or integrity.

There were no extraordinary changes during the week in the trade or financial markets. In London money was 1 to 1¼ per cent. and in New York the quotation was 2 to 3 per cent. Further progress was made in marketing the U. S. 4 per cent. bonds, and it is said on authority that of the $160,000,000 of these bonds taken by the Bank of Commerce and the First National Bank Syndicate in April less than $70,000,000 remain unsold, or only about $20,000,000 more than the amount of called bonds held by the Treasury to secure National bank-note circulation, which called bonds must be replaced by the banks before July 1. Notwithstanding the large sales the price of these bonds has advanced to 102⅝. The foreign demand for them is not large enough to offset the return of called 5-20s and 10-40s, and the result is that sterling bills have been in better demand and rates have advanced to near the gold-exporting point. The market for silver bullion in London was rather firmer and the price advanced to 50¼*d.* per oz.; the bullion value of the 412½-grain dollar here advanced to $0.8469. General trade throughout the country is fairly good, and, although the season is backward, fully average crops of cereals are looked for in the Western States. Much comfort has been taken from the reports of the bad outlook for English crops.

The French Cabinet has been reported during the week to be divided over the question of returning to Paris, as well as over the Ferry educational measures; but it is now declared that the differences were not serious and have been settled, owing to the personal influence of President Grévy. The difficulty about the return of the Assembly is not so trifling as it seems. The only buildings in which it could sit in Paris are surrounded by great open spaces, in which it is the custom of the people to assemble in vast masses in times of political excitement, and the crowd is apt to become so great by the time attention is called to it that its dispersal without opening on it with artillery becomes impossible. Troops can make no impression on it, and, indeed, are apt to be swept away by it, and if it is let alone "an invasion" of the chambers is almost sure to follow, and invasion means revolution. For these reasons a great many good Republicans, even, are not willing to go back to Paris, and a good many more, if willing to go back, are not willing to leave the management of the city police in the hands of the Common Council. The Government appears to hold firm about Blanqui, with whom the correspondent of the London *Times* has had a curious interview in his prison at Clairvaux, and obtained from him a slight sketch of his opinions. He said "he had no theory, and was not a professor of politics or Socialism; he was a man of action." "What exists is bad; something else must take its place, and gradually things will become what they ought to be." He would "unchristianize France," tax capital heavily, and abolish armies; but this was as near a distinct programme as he could come.

Yakub Khan has come into Gundamuck to negotiate with Major Cavagnari, but there is no truth, it is announced, in the story that he had conceded everything. On the contrary, nothing is settled. If he concedes everything he will undoubtedly need assistance to keep on the throne, and this is what he neither likes to ask for nor the Indian Government to give. From South Africa there is no further news. Lord Chelmsford is making preparations for "a general advance," as Cetewayo shows no signs of yielding; but following him into his fastnesses will be no light matter, owing to the enormous difficulties of transportation, and the difficulty of meeting the Zulu tactics on open ground. In the meantime the Cabinet hangs on and refuses to dissolve Parliament, although the sixth year of its existence has been reached, because it says it would never do to let the enemies of England suppose there was any danger of a change of policy when so many important operations and negotiations are on foot. The Opposition, on the other hand, is equally confident that the real obstacle to dissolution is the fear of meeting the constituencies in their present state of mind, and the hope that by waiting another year something will turn up. In the meantime the Ministry has been helped somewhat by another injudicious Liberal attack in the shape of a resolution by Mr. Rylands, which both Mr. Gladstone and Lord Hartington condemned, accusing the Government of unconstitutional conduct in withdrawing important matters from the control of Parliament and carrying them out under the Queen's name. In fact, the motion seemed to strike directly at the Queen, and roused a great deal of opposition therefore on both sides of the House.

The affair has derived most of its importance from a growing feeling of sensitiveness about the alleged interference of what is called the "Court set" or "Court circle" in politics. This set, which consists of all the Royal family and their friends, attendants, and followers, has been growing very large of late years, owing to the number of the Queen's children who have reached maturity and set up establishments of their own. Since George the Third's family grew up the Court has, in fact, never formed so important an element in English society, and it is hard for a circle so composed to be thoroughly discreet. A curious illustration of the touchiness which it is creating has been furnished by a savage letter of Sir Robert Peel to *Vanity Fair*, in reply to an announcement made in that paper that, owing to some unpleasant allusions of his in the House to George the Fourth, none of the Princes would take any further notice of him. This was untrue, as the Prince of Wales took occasion to say, but on the supposition that it was true Sir Robert wrote a letter, which *Vanity Fair* published, expressing in very strong language the contempt he felt for the Court and courtiers. The incident has caused a deep sensation all over England, a man of the upper class who declares himself indifferent to Court favor or recognition being looked upon as a desperate or slightly deranged person.

John Henry Newman has at last formally received the cardinal's hat, the Pope in bestowing it expressing in strong terms his sense of the service he was rendering to the Church, to society, and to the College. The fact is that Newman is not only perhaps the most distinguished Englishman of his time—that is, the Englishman whom all other Englishmen most delight to honor—but the most serviceable Catholic the Church has had to show within the present century. That he should have been forty years in her ranks without receiving any signal mark of favor is a curious illustration of the nature of the Papal régime since 1848. No one has done so much to make Catholicism attractive, and no one, we might add, of modern theologians has done so much to make faith and devotion respected by the sceptical. Not the least powerful of the instruments by which he has charmed two generations of his countrymen is his English style, which in simplicity, purity, clearness, and grace may fairly be called matchless.

WHY ARE REPUBLICANS HOPEFUL?

THAT the prospects of the Republican party have greatly improved during the past two years is a fact so patent to every close observer of the political situation as to need no formal proof. It may be questioned, however, whether many of us now realize how seemingly hopeless the situation of the party was when President Hayes assumed the reins of government. For ten years it had given its countenance and support to a reign of fraud and corruption in the Southern States such as can hardly be paralleled in any enlightened country during the present century, even using the military to keep in power the very men who were politically associated with that fraud and corruption. So intense had the public feeling even of the North against the Grant policy become, that when Governor Hampton visited this State in 1877 he was greeted as a public benefactor by great numbers of men who never had the slightest sympathy with the Democratic party. Had President Hayes not abstained from military interference in South Carolina and Louisiana, the fate of his party would have been doubtful in most of the Northern States. The worst of the matter was that the party could do nothing to help itself, since it was itself the doer of the very mischief which now had to be undone. The accession of its candidate to the Presidency was accomplished under circumstances which only added to its demoralization. How cogent soever the arguments by which we may persuade ourselves that the action of the returning boards was entirely legal, they are emasculated by the fact that the agents were the political associates of the men who had made carpet-bag government a by-word of reproach, and belonged to a class whom every well-informed person knew to be ready to commit any fraud to keep themselves in power. The cry of fraud needed no evidence to enforce it, for the simple reason that all non-partisan men were ready to believe, or at least to suspect, it without any other evidence than the reputation of the actors.

Suppose, now, that the Democratic leaders had secretly determined that the Republicans must be kept in power, and had placed this problem before themselves: How shall we arrange our policy in such a way that while outwardly showing, on all occasions, the greatest zeal on behalf of our party, everything we do shall practically tend to Democratic defeat and to Republican success? Would their course have been in any way different from what it has been? To answer this question let us see how, as sagacious and far-seeing men, they would have reasoned on the subject if they had determined on being relieved from the responsibility of power. The most comprehensive view they would have taken of the situation would have been about this:

"It is evident," they would say, "that our policy cannot be one of inactivity, because, unless we take active measures to prevent it, the election of a Democratic President in 1880 is inevitable. Should we carry only as many Northern States as in 1876, our candidate will be elected. But the whole tendency of things is to tempt recruits from the Republicans into our ranks. These recruits are of three classes, each of which must be warned away from us by such a course on our part as shall best conduce to that end.

"There are, first, the reformers who are disgusted with the corruption of the Grant régime, and believe the experiment of reform within the party to be a failure, and who are ready to vote for a change merely to punish the corruptionists of their own party, if they are only allowed to believe that we will not make things positively worse. Then, there are plenty of pure and simple-minded Republicans who believe that Tilden was honestly elected, and who are ready to stay away from the polls, or even to vote for our candidate next time, just to secure fair play. There are also large numbers of country people who think it is time we had a change, and who cannot be induced to vote for keeping a party in power more than twenty years without some cogent reason.

"This last class is the one it will be most difficult to keep away, because its members have no very definite ideas of public policy, and therefore look upon the work of government as little more than a matter of routine. The other classes may make up their minds that the cause of reform will be best promoted by keeping the existing party in power, and that the members of the Returning Board were not so bad as they were supposed to be. But the last class cannot be reached by Republican arguments at all, because their conclusion is founded not on reasoning but on an instinctive sense of fairness. The whole class of conservative men, who take little interest in the conflict of party, can be reached only through the sense of fear. We must, therefore, adopt such a course that their minds shall be filled with a vague apprehension that something very serious may happen if we are allowed complete control of both the legislative and executive departments of the Government. It is not necessary that this apprehension should assume a well-defined form, or that we should convince them that we are going to pursue some particularly reckless policy, because it is not necessary that the exact nature of an object should be known in order that it may excite apprehensions. An indefinite dread of an unknown and ill-defined object is more difficult to appease than that of a well-known and clearly-perceived object. The excitation of such fears is very easy, because not having been in uncontrolled power since a majority of our party attempted to overthrow the Union, it is very easy to persuade timid people that we are ready to do something very reckless as soon as we have an opportunity. We must, therefore, do all we can to keep the public mind in a state of ferment, and supply the Republican managers with materials for deluding people into the belief that we are all ready to do some dreadful thing without letting them know exactly what that thing is."

We may readily imagine the proceedings of the Potter Committee and the contest over the Army Bill to have been organized with this sole end. It cannot for a moment be maintained that the result of either of these acts conduced in any manner to the success of the party which demanded them. Everybody had fully made up his mind that the politics of Louisiana were a mass of corruption which it was beyond the power of any investigating tribunal to fathom, and the most that the committee did was to show this belief well founded. Nor can it reasonably be supposed that a single electoral vote will be gained for the Democrats by requiring the 500 soldiers who are scattered in the military posts of the Southern sea-board to keep away from the polls. But the Potter Committee did succeed in making great numbers of excellent people fear that they meant to oust Mr. Hayes from the Presidential chair, this fear being founded not so much on the simple organization of the Committee as on the extraordinary manner in which the investigation was ordered after nearly every leading Democrat had declared himself opposed to any such investigation. This made it comparatively easy to maintain that the whole party was completely under the influence of unknown and possibly reckless leaders, who would be guilty of no one knows what excesses should they once acquire power. The most instructive illustration of the liberal way in which the Democratic Congress has supplied its opponents with ammunition is afforded by the curious reasons quoted in our last number why Grant is supported for re-election by the Republicans of Indiana. Those who will only support him on certain contingencies define those contingencies in such terms as "the country is unsettled," "the rebels keep stirring things up," "those fellows are getting to be obstreperous," "we are going to have another war," etc. The scores of reasons given by those who support him unconditionally are all founded on the idea that the past and present Congress have been trying to do things inimical to the public tranquillity. Now, however ill-founded this idea may be, it can hardly be denied that it derives its vitality largely from the political excitement which the Democrats in Congress have stirred up, first on one question and then on another. When men labor under the apprehensions that a party may possibly do something inimical, all excitement and activity on the part of such a party necessarily tends to strengthen the impression.

The Democrats had a great deal to expect from the temporary or permanent accession of reformers to their ranks. Suppose that, in pursuance of the idea we have been following out, they had de-

termined to let slip no opportunity of showing that they entertained an entire contempt for reform, would their course have been in any manner different from that which they have actually pursued? Let us take, for instance, the recent Democratic action in rescinding the rule which requires the assent of the Vice-President to the removal of certain of the minor employees of the Senate. We here make no reference to the removal of the Secretary and Sergeant-at-Arms, at least one of whom held his office as a political worker for the other party, but to those whose offices had no political significance whatever. If the Senate majority had been awaiting such an opportunity as we have supposed, a better one could not have been found. We do not for a moment assert that no good reason could be assigned for the action referred to, or that this action was prompted with the intention of making wholesale or improper removals. But, granting that it was not intended to make a single removal, the case becomes all the stronger in favor of our supposed theory that the sole object of the measure was to disseminate the belief that the Democrats were determined to make more use of the public service as a political engine than the Republicans had ever done. The case is not dissimilar to that of a New York candidate for office, strongly suspected of burglarious instincts, choosing the night before the election to cut a hole in the party-wall between his own dwelling and the money-vault of his next-door neighbor. He may prove his act perfectly innocent, and yet find it admirably adapted to secure his defeat.

The party which is to profit by the moral effect of suspected fraud on the part of its competitor must be scrupulously careful not only to keep its own skirts clean, but to show the public by its actions that it is incapable of the act with which it charges others. The decisions of the contested election cases which came before the last Congress have been such as to neutralize all the moral advantage the Democrats might have enjoyed, while the tissue ballots of the late elections may be left to speak for themselves. Again, the repeal of the election laws can hardly be pressed on the ground that these laws are productive of crying evil, yet the agitation of the subject under the circumstances is well adapted to excite among a million of voters the belief that the only object of the repeal is free fraud.

It is becoming more and more common among Republicans to admit that their chances of success depend more on the bad management of their opponents than on their own merits. It is undeniable that their prospects have improved greatly without their having done or being able to do any especially meritorious act, or proving in any way that they have especial fitness for governmental management. We commend to thinking Democrats, as an instructive subject for reflection, the question how far this change is due to themselves, and how far the Republican theory just cited is correct.

THE LAST ATTEMPT AT MUNICIPAL REFORM.

IF people had not such very short memories in politics the newspaper accounts of the present crisis in the city government would furnish them with very entertaining reading. Ever since the foreigners began to form a large element in the city population the Democrats have had the city majority on their side; the Irish and Germans both, for reasons not necessary to examine here, never having taken to the Republicans to any great extent. That the result has been atrociously bad government there is no denying. Even as early as 1857 the working of universal suffrage in the city had excited so much alarm that the Republican Legislature sought to counteract it by putting one department of the city government —the Police—in the hands of a commission appointed at Albany. From that time the theory of the Republicans has been that the root of the city troubles lay in the fact that the city patronage was in the hands of bad men, and that if they could be in some manner deprived of the appointing power, or forced to share it with good men (who were, of course, *ex vi termini* Republicans), all would be well, or as nearly well as the imperfections of human nature would permit. The plan of bringing about this result by means of annual alterations in the charter, and the appointment of commissions by the State government, was tried for a good while with varying success. As soon as the Democrats began to recover themselves in the State after the war, and the charter-tinkering began to be ludicrous, and a consequent reaction in public opinion in favor of municipal self-government set in, the plan of dividing the Democratic vote and making an alliance with the minority began to find favor, and received a great stimulus from the successful overthrow of the Ring by a combination of honest men of all parties.

The state of things on which this new plan was tried, and indeed the normal state of things in city politics, is this: the Democratic majority is ruled by a Boss, who is the chief man of the Tammany Society, holds one important office himself, and distributes the others among his most active political workers. As the number of offices is limited and that of the workers very large, one office is often made to satisfy two or three, by compelling the man who does the work to pay a percentage on his salary to one or two others, who simply loaf in the City Hall or new Court-house and converse with bystanders on "politics." For a while after a new Boss comes in all goes well, and "harmony" reigns in the ranks. But after a short period many workers who have "claims" discover that there is no chance of their being satisfied; that, in short, there are not "enough offices to go round," as the saying is, and that there is no chance of their getting anything without a "new deal." There then arises a great cry about the corruption and villany of Tammany Hall, in which the regular Republican press eagerly joins, and very soon reports are seen of combination meetings in which Republican workers confer with the Democratic malcontents as to the best mode of relieving the city of the tyranny of this abominable organization. By and by the municipal election draws nigh, and a plan of joint operations is agreed upon, based of course on an equitable division of the offices in case of success, and the "Reform Ticket" speedily makes its appearance. The task which then devolves on the Republican papers is one which must excite the pity of gods and men. The ticket has in the nature of the case to contain the names of several notorious rascals as candidates for important places, who differ from the Boss simply in being his inferior in dexterity, and have in the bottom of their hearts nothing against him except that he has not dealt "on the square" with them. These men have nevertheless to be in some manner presented as the friends of purer manners and better laws. The labors of the Republican editors in drawing their portraits as "reformers" are among the most amusing *tours de force* in modern literature. The election which follows is then made to bear the character of a popular "uprising" against the corrupt régime, and the result of success is treated as final. The blow is always one from which Tammany will never recover. The Boss's followers, having discovered his weakness, which they had never before suspected, are to desert him in great numbers; the good men, having discovered the secret of their strength, are thereafter to go promptly to the polls, and the Boss system will become a mere name and memory.

This description applies with almost literal accuracy to the uprising against Tammany last fall by which Mayor Cooper was elected. The New York *Times*, representing the Republican managers, assured the public that the downfall of Kelly was to mean "better government, purer politics, and a higher standard of public life." The new Mayor was to give tone and character to the city government "for half a dozen years." "An opportunity of ridding New York of the incubus of incapacity and corruption which was working its ruin," at last had presented itself. It added, with a burst of indignant eloquence: "The Republican who hesitates about voting for Edward Cooper, the candidate of the people, in preference to Augustus Schell, the candidate of John Kelly, because the election of the former might help the prospects of Samuel J. Tilden, while the election of the latter might hinder them, debases partisanship to the level where it winks at corruption and apologizes for fraud." There would be nothing worth quoting in this if it had been an unfamiliar sound; but the fact was, the city had heard it or something like it a dozen times in the previous

twenty years, and there was no more familiar sight in city politics than "partisanship" on "the level where it winks at corruption and apologizes for fraud." Indeed, few city residents had for many a long day found it doing anything but "wink" and "apologize" as aforesaid.

We need hardly add that the glowing anticipations in which our hopeful contemporary indulged and wanted its readers to share have not been realized. In fact, it has taken its place in the pulpit within a day or two to explain to the bewildered congregation that, owing to circumstances over which it had no control, the great uprising against the Boss has left things pretty much as they were before, and the cause of the failure it describes as follows:

"Sometimes the people become more than usually indignant with the men who abuse their trust and waste their money, and make such effort as they can to place some one at the head of affairs whom they think capable of getting a little more than fifty cents' worth of service out of every two dollars of taxation. His election is hailed as a triumph of reform, and the people, assuming that they have done their entire duty, calmly wait for results. But the new manager no sooner proceeds to set in order the various departments of public business which are slovenly or wastefully conducted than he finds that his hands are tied. He must consult with certain other elected agents of the people, whose concurrence is necessary to his new appointments; he cannot safely ignore the wishes of the nominal representatives of the political organizations to whom he owed his own nomination; and if he attempts to conduct the business entrusted to him without reference to the men who have the power to make laws for the State, he will be sharply reminded that the same authority from which he derives his powers can also take them away."

In other words, no matter how good Mr. Cooper's intentions may be, the system he has to work is such that he cannot carry them out. Finding, as he has found, that he has to make appointments for political reasons, he calls on the managers of the two parties to supply him with the reasons, and they are very simple. To all outward appearance, the Democrats suggest the men who will do most to promote the nomination of Mr. Samuel J. Tilden at the next Presidential Convention, and give him the vote of the State of New York afterwards; so that the solemn adjuration of the *Times* last year to the voters to disregard the rumors that Cooper's election would be "a Tilden move," has unhappily not been supported by the course of events. The city of New York, if well managed, may give the Democrats the State, and the State may give them the Presidency, and in view of this the merely municipal interests of course have an insignificant and paltry look.

There are, however, certain boards which are divided between the two parties, and some simple-minded people, perhaps, suppose that the Republican contribution to their composition does something towards that reign of "better government, purer politics, and higher standard of political life" which we were promised last fall from the downfall of Kelly. Nothing of the sort. Mr. Cooper leaves it to the Republican Committee of which Mr. Arthur, the late collector, is chairman, to nominate persons for the Republican vacancies, and they supply precisely the same sort of men as the Democrats, and with probably a similar end in view. That is to say, neither from one side nor from the other does there come the slightest sign of a desire to infuse a new spirit into the city government, or to bring men of more competency into the administration of its affairs. The city charities, for instance, including the care of the paupers, criminals, lunatics, and destitute sick, are a vast undertaking, making the highest demands not only on the morality of the community but on its skill in this field of benevolence. There are plenty of men and women among us more than willing to devote themselves to the work for its own sake, and to bring to bear on it the fruits of much experience and observation in this and other countries. But we believe we are within the mark when we say that the appointment of any such person on the Board of Charities and Correction would be treated by the managers on both sides as an absurdity. For that place the Republicans present, we believe, an obscure German butcher of considerable political ambition. The nominations for all the boards are made from the ranks of the working municipal politicians, of whose names few people outside political circles have ever heard, and who make no pretension to any special fitness or equipment for the places, and who will be relied on to get out of them all the electioneering advantage possible.

It is true, as the *Times* says, that the Mayor is not by any means wholly to blame for this state of things. He can defend his poorest nominations by saying that he must make nominations which the Board of Aldermen will confirm. But it can hardly be said that in confining himself to such nominations he is doing the work expected from a reform Mayor, elected by an "uprising." What the friends of "better government, purer politics, and higher standard of public life" have a right to expect from such a Mayor is an appeal to the better sentiment of the community through nominations of the very best sort, divested of partisan aims or associations, thus throwing on the Aldermen the responsibility of rejection, and making clear to the public what is meant by the separation of municipal government from politics. A mayor who did this faithfully, and kept at it until he had made the proper impression, would probably at last rouse the better class of voters, who live by other things than politics, to the need of a reform which would put the charter out of the reach of the Legislature and concentrate responsibility. As matters are now going, Mr. Cooper will probably leave office with the usual reputation of failure, and the old hurdy-gurdy of "reform" will be got out again next year to stir up the faithful to one more final and definitive overthrow of the corrupt politicians.

THE STRATFORD MEMORIAL AND THE ENGLISH STAGE.

LONDON, April 26, 1879.

ENGLAND cannot be said to have been very deeply interested in the memorial performances at Stratford-on-Avon, which have been going on during the past week. They did not rise above the level of a provincial and local celebration. A munificent family, whose energy and business qualities have earned for the town in which Shakspere was born and died a reputation for good ale which Shakspere would have been the last to despise, and an enterprising and energetic countrywoman of yours, have been the chief agents in the festivities of the past few days. Great credit is due to Miss Field and to Mr. Flower—the names have a country freshness in them which combines them well together, and suits the poet of Nature in whose honor they have been associated—for their intentions and for their exertion; but the most sacred spot of English earth has been rather profaned than honored by the well-meant revelries of the week. The place where Shakspere first saw light, where he breathed in those earliest impressions of nature and of life which form and color all the rest; the place to which he retired in his maturity, to brood over those treasures of observation and reflection which he had amassed in his intercourse with the world and with his own soul, is full of associations on which the noise and bustle of crowds jar. There Shakspere lived before he entered the great world. From that quiet shelter he looked out on it with the eagerness of youth. To that shelter he turned in his meditative age. It was his cradle and refuge. Thither he made his escape from the stage. To follow him there with a memorial theatre is not to honor the genius of the place, but to do it violence. The place, as Shakspere saw it, as it was when he moved about in its streets and among its people, is what men of English speech and blood in his own island or from beyond the seas desire to have before their eyes and in their thoughts. The ugly Memorial Theatre breaks the charm. It recalls not Shakspere and the Globe Play-house, but the Messrs. Flower and their brewery.

So many Americans visit Stratford-on-Avon that it is probably better known on your side of the water than on ours. It is best seen by solitary pilgrims, or in friendly groups. There are few old towns which have undergone so little change. Apart from the staring red brick abomination and innovation of the Memorial Theatre, it is to a very large extent such as it was when Shakspere looked upon it. The natural landmarks are of course there. The church, the grammar-school, the river, the old house of John Shakspere faithfully restored, in which Shakspere's infancy and boyhood were spent, the garden and the relics of New Place; in the neighborhood the hall of the Lucys and the cottage of Ann Hathaway, carry the visitor back over more than three centuries. Even the very faces of the people, some observers have fancied or perceived, recall the image of Shakspere. This may be to consider too curiously, but the thing is not impossible. In out-of-the-way nooks and corners of Eng-

land, where the population is stationary, from which there is some emigration, but into which there is no immigration, and in which a limited number of families marry and intermarry, a sort of local type of face and figure establishes itself. From some such causes as these the Shakspere head and bearing are recognizable, physiognomists contend, with more than ordinary frequency, and with a good deal more than accidental resemblance, in the streets and country roads and lanes of Stratford and its neighborhood. Comparison is easy with the bust in the church, the authenticity and resemblance of which rest on good grounds of probability and evidence. An eminent English sculptor has, I believe, expressed the opinion that the face was carved after a cast taken from the face of Shakspere himself after death. There is a drawn look about the lips and a pinched look about the nostrils which suggest this. The explanation for which technical reasons appreciable by experts are given is acceptable on other grounds It partially accounts for an expression in the face which one would willingly think was not that of Shakspere as he lived. There is a sort of supercilious look as of a too self-consciously prosperous citizen about it. It suggests a man who, having left Stratford a ne'er-do-well, has come back to be the great man of the place. You can suppose him condescendingly holding out a couple of fingers to some less fortunate acquaintance with a few words of patronizing recognition. The attitude of the figure, which, with pen in hand, seems to be writing an autograph, or, if the anachronism be allowed to the imaginative beholder, a check, confirms this idea. There is an indescribable air of self-importance about the bust which is the more annoying from the fact that it fits in only too plausibly with the outline of Shakspere's external life. After seeing the bust it is desirable to read "The Tempest" or "As You Like It." There, at any rate, in spite of Miss Delia Bacon, you may feel sure that you have the real Shakspere. The church, John Shakspere's house, and Anne Hathaway's cottage are the true memorial. The two old ladies who act as the custodians of the cottage in which Shakspere was born ought not to be forgotten. Their explanation of their real position in life, and of the altered circumstances which have led them to take the office they now discharge, with their allusions to their cousin, the former Vicar of Stratford, would have commended them to the chronicler of Dogberry's losses and his two gowns. They are performers much more interesting than any of those very meritorious ladies and gentlemen who have lately been displaying their zeal for Shakspere in the Memorial Theatre.

The fact that it was necessary to revive Miss Helen Faucit for the performance of *Beatrice* in "Much Ado About Nothing," and to associate Mr. Barry Sullivan with her as *Benedick*, is a proof of the low point to which the poetic drama has declined in England. Miss Faucit would have been an admirable if a somewhat mature *Beatrice* five-and-twenty years ago. Mr. Barry Sullivan, who has been the *Hamlet* as well as the *Benedick* of the Stratford Memorial performances, is, I believe, known to you in America. Here he splits the ears of the groundlings in country theatres, visiting London at long intervals and for short periods. The Memorial Theatre at Stratford was absurdly intended as a school of acting ; a school in a place to which it would be impossible to attract either teachers or pupils, and in which it would be difficult to get an audience, is an idea which could have occurred only to a practical people like the English. The Memorial Theatre at Stratford is simply a cenotaph. The spirit of Shakspere is as little there as his body. Formerly there used to be schools of acting in the provinces. The York and Bath circuits, and more lately the theatres in some large towns, such as Manchester, Liverpool, Edinburgh, and Dublin, performed this office for the London stage ; but all that has ceased now. Mr. Macready in the two great theatres of Covent Garden and Drury Lane, Mr. Phelps at Sadler's Wells, and Mr. Charles Kean in the Princess's, had under them thoroughly trained and disciplined companies. The acting was often based on absurd conventions and traditions, but the performers had an intention in all they did, and understood the ends at which they aimed, and the means for realizing those ends. The contrasts, however, between the schools and nature were often extreme, and the reaction from the unreal conventions of the serious stage produced the era of burlesque and extravaganza on the one side, and of what has been called the blue-china or teacup-and-saucer school on the other. The former caricatured the prevalent absurdities of the legitimate style of acting ; the latter strove in its own fashion to reverse them. Instead of creatures unlike any human beings who had anywhere or ever existed, or who could anywhere or ever exist, an attempt was made to represent people of the day literally in their habits as they lived, both those furnished by Poole and Worth, and those moral dispositions in which men and women are clothed as in a garment. An imitation of manners as close and as clever as that which you get in the sketches of Leech was often the result. In default of the ability to study and portray character, it was something to be able to study and exhibit clothes and deportment, and to delineate the mannerisms of the age. The dramas of the late Mr. Tom Robertson and his imitators were, in their rather poor way, a return to nature and life—such second nature, it is true, and such artificial life, as existed for him to paint, or as he could penetrate to and they could recognize, in the class of and for whom he wrote. That there was a deeper nature and a truer life even in them than he exhibited or than they knew may be admitted, but he was not the prophet to penetrate to these hidden sources of life, or to reveal men to themselves. Nevertheless, within the limits of his powers and opportunities he made a return to faithful perception and accurate delineation. In the companies of the Prince of Wales's Theatre, and more recently of the Court Theatre, he and his school have had almost perfect interpreters. The acting of modern manners, and of such emotions as the conventional restraints of society allow men and women to display, could not be more finished or delicate than it is in the personations of the two Bancrofts, the two Kendalls, and Mr. Hare. This return to the nature of prosaic and conventional life has prepared the way for a return to the higher nature of poetry and of those elemental passions with which the poetic drama, and especially that of Shakspere, deal. Of this Mr. Henry Irving is the chief interpreter, and, except as he impresses his spirit and aims upon his colleagues, the only one upon the English stage. Of course the nature of *Hamlet* and *Richard* is not the nature of the man in the streets, the drawing-rooms, and the clubs—the actor of ideal character and poetic passion cannot have the conventional naturalness of the actor of modern manners. Often he shelters himself from it in a conventional unnaturalness which is painful. Mr. Irving cannot always be acquitted of this fault ; but, through his mannerisms of accent, of gesture, and deportment—some of them strange to the verge of whimsicality—an original and poetic mind appears. This is the source of his great power over his audiences—a power which many of his critics are unable to understand. They have derived their canons of acting from a school which, with the mutations of fashion, is passing away. When a performer arises who breaks loose from them they follow him with hue and cry. The prosaic naturalness of Miss Ellen Terry, who justly shares Mr. Irving's successes at the Lyceum, is within the range of most critics' ken. Her graceful and touching performances, just because they lack the nimble air and pure fire of poetic genius, suit the prosaic school in which modern theatrical criticism in England has been trained. No acting can be better which lacks wings and never rises from the ground.

† † †

THE ELECTION OF BLANQUI.

PARIS, April 25, 1879.

THE Blanqui question is taking serious proportions. A little more than three weeks ago the organs of the Left Centre side of the Ministry were unable to see a speck of any kind on the horizon. They predicted that, at the outside, five hundred of the most extreme Radicals of Bordeaux, which is by no means a "Red" city, would vote for the Clairvaux prisoner. M. Jules Ferry about that time, in giving to a journalist materials for a leading article in the *Temps*, rejoiced at the Blanqui candidature because he thought it would give the Waddington portion of the Cabinet an opportunity to win a brilliant victory.

"It is," he said, "the greatest piece of luck that has fallen in M. Waddington's way since he accepted the presidency of the Ministerial Council. Blanqui will, at the outside, poll five hundred. We have received from the Prefect of the Gironde the most positive assurances that this candidature will be an absurd failure, and when it turns out as we expect our hands will be considerably strengthened in the Chambers and everywhere else. Diplomacy affects not to trust in the solidity of the Waddington Ministry, and pays an amount of attention to Gambetta which is not flattering to the least advanced portion of the Government. The triumph of M. Lavertujon at Bordeaux will put an end to this situation. He has, in his journal, indirectly attacked Gambetta by sustaining with as much warmth as discretion the claims of M. Jules Simon to the Presidency of the Senate."

A few days subsequent to this communication the ballot-boxes were opened in the Department of the Gironde. When the bulletins were counted in the evening it was found that Blanqui had polled 3,700 votes. No candidate having obtained an absolute majority, there was, last Sunday, another trial of electoral strength, out of which the Blanquists emerged the victors. The news that the aged and captive revolutionist had behind him 7,000 Bordelais caused no small stir in political circles

here. Many earnest Republicans saw in the great majority in Blanqui's favor the hand of the Jesuits, who, they rushed to the conclusion, aimed at throwing over a Ministry which is for the greater part composed of Protestants. The clericals—so they reasoned—were particularly anxious to get rid of M. Jules Ferry, whose bill, even though mutilated in the Senate, would deprive them of the advantages secured to them by the legislation of the Versailles Assembly on public instruction. Feminine influence is a power in the world which is used with marvellous address by the disciples of Loyola. Now, Mme. Jules Ferry—an accomplished, beautiful, and high-souled young woman—belongs to the most liberal section of the Lutheran community, into which she has brought her husband from nominal Catholicism. M. Edmond About and M. Charles Chassin, who manfully under the Empire bore persecution for the sake of his political flag, took this view. The former publicist is a man of keen penetration and strong intellect, brightened up with the finest wit. But he sometimes—for he is of a warm temper—allows his anger to override his judgment. He proposed to the Government, as the best means of getting rid of the Blanqui difficulty, which took him by surprise, to direct the Prefect of the Gironde to treat as null the 7,000 votes, and to declare Lavertujon elected. There are three eminent jurists in the Cabinet—Leroyer, Lepère, and Cochery—who at once saw the impracticability of the course suggested by M. Edmond About. Unfortunately, his idea was taken up by M. Tirard, Minister of Public Instruction, who is on the staff of the *XIXe Siècle* and a jeweller by profession. By French law the Chamber alone has a right to decide who is or who is not eligible to sit in it. M. About's article had, therefore, no other effect than to give the Radical prints of an advanced dye occasion to cry out that a breach of privilege was meditated. These journals treated the defeat of Lavertujon as an affront offered to the Government by the third city of the Republic, and the least Red of any of the great towns. *La Marseillaise* jeered at M. Waddington and his Left Centre colleagues for bearing on their cheeks the marks of the slap given to them by Blanqui's seven thousand electors. That was what they got by not granting a full amnesty ; and they would meet with a worse humiliation if they did not at once kiss the rod and liberate the prisoner of Clairvaux. The organs of the different monarchical parties naturally rejoiced in the agitation arising from Blanqui's election, and gave prominence in their columns to the Radical onslaught on the Cabinet. *La Révolution Française*, which passes for being inspired by M. Ranc, considerably added to the turmoil by a leader headed, "La Question Grévy," in which it was shown that if the President did not without delay exercise the prerogative of mercy in Blanqui's favor he would fall along with his ministers. The head of the French Republic, it so happens, is extremely sensitive. Perhaps in Europe there is no more thin-skinned public man, unless Mr. Gladstone. M. Grévy has the pride of a Spaniard, and would prefer living in a miserable garret to remaining in a palace where daws are able to peck at him. It is, therefore, very possible that, if he is involved with his ministers in the "Question Blanqui," and shaken about in their frail bark, he may resign next May, when the Chamber validates, as I believe it will, the Bordeaux election.

On legal grounds it would be hard to do otherwise than admit Blanqui to the Legislature. Universal suffrage reigns in France, and its delegates govern. Ever since the Revolution of '48 its prerogative to wipe out political transgression has been admitted. The two articles of the electoral law of '49, in which this prerogative is formulated, were not cancelled by any subsequent legislation. The sovereign people can, therefore, elect Blanqui to represent them at Versailles, as they elected Henri Rochefort to represent them at the Palais Bourbon ten years ago. To render M. Ranc, who was the arch-wirepuller in the Bordeaux election, ineligible, care was taken by the De Broglie Government that he should be charged before the court-martial which tried him *par contumace* with being a party to the massacre of the hostages in the civil war by the Commune. He was accordingly found guilty of a common-law offence and sentenced to death. M. Leroyer, the actual Minister of Justice, in drawing up the Amnesty Bill took care to blot out effectually the judgment recorded against M. Ranc, which had no analogy beyond its injustice with the last sentence passed on Blanqui.

Bismarck called the Celtic races the women of the Caucasian stock, and France the lady of the family. His figure of speech is a correct one. This nation is capable of the heroism of a finely-organized woman. Its generosity is unreflecting ; moved by enthusiasm, it is capable of accomplishing very sublime or very foolish actions. In its every-day mood it is governed by the sober sense and practical shrewdness which we find in ladies who have children to bring up, and households to govern. Like them, it is also subject to fits of nervous irritability, and liable to be panic-stricken for a few moments, if a danger suddenly presents itself. Another feminine quality in the French nation is elasticity readily depressed or terrified ; it soon recovers pluck and good spirits, and makes light of obstacles which had appeared "lions in its path." We are at present suffering from irritated nerves, and from fears which no reality can justify. Blanqui in the Chamber will not be a public danger. It has been well observed that it is the safest place in which to keep him.

I am at a loss to think on what grounds the *Débats* persists in declaring the Government will not amnesty the elect of Bordeaux. The ministers are all in the provinces attending councils-general. No doubt some of them may be in communication, by post or telegraph, with the journal of the Rue des Prêtres, which is not in the habit of making rash assertions. If MM. Léon Say and Waddington correspond with M. John Lemoinne, and the *Débats* echoes what they tell it, a ministerial crisis is inevitable at the beginning of the session, Gambetta having declared for the validation of the Bordeaux election.

You may ask, in case M. Waddington decides to fall upon the Blanqui issue, who will take his place ? This question nobody, not even Gambetta himself, can answer. Gambetta is called upon by *La France* to prepare to assume the cares and responsibilities of office. His intimate friends, on the other hand, entreat him to remain at the Petit Bourbon. Personally he would be glad to stay there for many more sessions. It is a delectable haven, the quiet of which is grateful to him after the agitated life he led from the day on which he revealed himself a tribune in the Baudin affair to the accession of M. Grévy to the Presidency. If Gambetta were sure that the actual chief of the executive would remain in office to the end of the term of years for which he was elected he would not lend so willing an ear to those members of his *entourage* who say to him, "Do not as a minister use up your popularity ; reserve it for the next Presidential election." Owing to M. Grévy's extreme touchiness, his retirement is to be looked forward to. Why should he retire, it may be asked, since he admits the constitutional theory of ministers being responsible to the Chambers. Does he not consider himself the servant of Parliament, both houses of which elected him ? He does. But there are conditions under which he would deem it beneath his dignity to serve. He said not long ago :

"I far prefer going back to the Rue St. Arnaud to wearing at the Élysée the livery of M. Gambetta. I will never suffer him to come here to find fault with my Cabinet, and if the Chamber at his bidding overturns M. Waddington, I shall hold it unfaithful to its mandate, which was not to take orders from any one in particular, but serve the nation and the Republic according to the best of its ability."

Gambetta is well aware of the extreme sensitiveness of M. Grévy, whom he respects and appreciates according to his great merit, without liking him. He is careful not to let his hand be seen in the bureaux of those ministers who are attached to him, and count upon his assistance to come again to the top in the event of M. Waddington's retirement. For the present his policy is an expectant one. M. Ranc forced his hand in the Bordeaux election, and committed him to side with Blanqui's electors. An article written by that remarkable man in the *République Française*, and posted in the Gironde on last Sunday morning, helped to swell the majority which was for releasing the Clairvaux prisoner. Indeed, I think it may be safely alleged that were Ranc, whose influence on Gambetta is unbounded, still in exile, there would not be now an embarrassing "Question Blanqui."

The fall of the Cabinet will not interfere with the passing through the Chamber of M. Jules Ferry's bill on Public Instruction. I do not anticipate the passage through the Senate of this measure without some of its clauses being lopped off or profoundly modified ; but I look forward to the one on the conferring of degrees being carried. M. Paul Bert, the probable successor of M. Jules Ferry in the event of a Cabinet crisis in May, will bring with him a reforming spirit into the Ministry of Public Instruction. He is a bright light of science, in the prime of life, a man of open nature, warm sympathies, quick and solid intellect, and energetic will. Though a *savant* he is an *homme d'esprit*. His conversation is adorned with those light graces which disarm opposition and seduce adversaries. M. Spuller has been talked of as the coming Minister of Public Instruction. He would be an excellent grand master of the University, but not the man to carry reform into the schools and colleges of France and to defend the rights of the state against clerical reaction. The power of this reaction has been shown at the meetings of the councils-general which in the name of "parental authority" have attacked the Ferry bill.

C.

Notes.

J. B. LIPPINCOTT & CO. have in press 'The Great Living Men of Our Country,' a biographical dictionary; 'The French and Belgians,' from a domestic point of view, by Phœbe E. Gibbons; and 'Instructions in Rifle-Firing,' by Col. T. T. S. Laidley, Ordnance Department, U.S.A.——Houghton, Osgood & Co. will shortly publish 'Color-Blindness: its Dangers and Detection,' by Dr. B. Joy Jeffries. The author makes this announcement in a letter to the *Railroad Gazette* of May 9, discussing some recent English and American railway accidents attributable, if not attributed, to this defect. He remarks that among men color-blindness prevails in one out of twenty-five, "while it is a very rare occurrence among females." An English authority whom he cites refers to the fact that color-blindness may be acquired as "well known"; but this must be true of scientific circles only. — The stitched quarto, without paper covers, to which the Harpers have been driven rather than resorted, in their "Franklin Square Library," has just been adopted also by A. K. Loring, of Boston, who sends us in that form Florence Marryat's 'A Lucky Disappointment.' "Loring's *Hub* Library" is the symbolic title adopted.——Col. John G. James, Superintendent of the Texas Military Institute at Austin, will receive subscriptions for a semi-centenary edition of Mr. Paul H. Hayne's complete poetical works. It will be elegantly illustrated with portraits on steel and wood and original designs, and appropriately bound. The edition will include the contents of previous volumes from 1854 to 1875, and subsequent uncollected pieces. The profits of the work will go to the poet.——A selection from the fugitive poems of Caspar Butz, a "Forty-eighter," is announced to be published in handsome style by A. Uhlendorff & Co., Chicago.——A. S. Barnes & Co. publish immediately a 'Manual of International Law,' by Prof. Edward M. Gallaudet.——A. Williams & Co., Boston, have nearly ready a 'History of the Town of Hollis, N. H., from its first settlement to the year 1879,' by Samuel T. Worcester, brother of the lexicographer.——A biographical 'History of Medicine in New Jersey,' from the settlement of the Province to the year 1800, by Stephen Wickes, M.D., is in the press of Martin R. Dennis & Co., Newark.——The April *Bulletin* of the Boston Public Library contains for its principal feature a list of individual genealogies, both belonging to the Library and yet to be acquired. Bibliographical lists of works and articles on the Indian Question, and on Mountain Railways, are also given.——By the will of the late Mr. W. B. Howes, of Beverly, Mass., the Boston Athenæum has fallen heir to $150,000 for the use of the library. The largest gifts which the Athenæum has previously had were, in 1821, Mr. James Perkins's mansion-house, valued at $20,000; $25,000 from Mr. John Bromfield in 1846; and $20,000 from Mr. George Bemis, received in the present year. The new donation is apparently unrestricted, which greatly increases its value.——Mr. J. H. Emerton's fourth summer course in Zoölogy (Peabody Academy of Science, Salem, Mass.) will begin July 7 and continue four weeks. It is especially intended for teachers and students of High and Normal schools. The fee is $10, and for a fee of $5 non-attendants at this course will be admitted from June 1 to Sept. 1 to a sea-shore laboratory for the study of marine animals.——The Woodruff Scientific Expedition round the World has been again abandoned for want of support, and we hope this is the last we shall hear of this preposterous undertaking. The endorsement of it by prominent clergymen, and even by prominent scientists, who had not properly informed themselves in regard to it and its projector, happily failed to enlist the necessary complement of "students" and tourists. But the spectacle ought not to be repeated.——*Nature* for April 24 contains an engraved portrait of Agassiz, with the usual biographical sketch, in its "Science Worthies" series. It is to be regretted that the admirable artist has just failed to catch the likeness.——Recent English announcements which we find in the *Academy* are a 'History of India,' by Mr. Talboys Wheeler (Macmillan); 'Round the World in Six Months,' by Lieut.-Col. E. S. Bridges, and 'Holidays in Eastern France,' by M. Betham-Edwards (Hurst & Blackett); 'Life of Bishop Wilberforce,' by the Rev. A. R. Ashwell; a 'Life of Jonathan Swift'; a 'History of Ancient Geography,' by E. H. Bunbury; and 'The River of Golden Sand,' a narrative of a journey through China to Burmah, by Capt. W. Gill (Murray).——Mr. Christern has received the 'Atlas graphique et statistique du Commerce de la France avec les Pays étrangers' which was awarded a diploma at the Paris Exposition of 1878. It was officially prepared by M. Ferdinand Bonnange, and shows in graphic tables the movement of exports and imports, by country, of live stock, cereals, wine, sugar, textile fabrics, leather, coal, metals, machines, etc. Intelligent merchants ought to find their account in studying it, especially now that we seem to be on the eve of a reciprocity treaty with France. The respective series are sold separately as well as together.——"A Study of Mme. de Staël" is the title of a lecture to be delivered this evening at Association Hall, corner of Twenty-third Street and Fourth Avenue, by Mr. John Foster Kirk, the well-known historian and present editor of *Lippincott's Magazine*. The entrance of so careful a scholar and excellent a writer into the lecture-field deserves favorable public recognition.

—A monograph has been written on the Wisconsin tornadoes of May 23, 1878, by W. W. Daniells, Professor in the University of Wisconsin. There were, in fact, three simultaneous tornadoes, almost completing a single straight line of devastation, "extending nearly across Wisconsin, surpassing in extent and violence any storm before recorded in the history of the State." The loss of life seems indeed to have been very large, and was enhanced by the circumstance that a town, Mineral Point, lay in the path. But the author's superlative would seem more deliberate if he had given a few figures of comparison with the whirlwind at Menomonee which in its time was represented as almost miraculous. This tornado of 1878 was eminently normal; it accompanied an area of low pressure; its velocity was of twenty-five miles per hour, from west to east; its character was strictly cyclonic—*i.e.*, rotatory—"having its motion of revolution in a direction opposite to that of the sun, or from the east to the north, west, south, to the east again. This fact was very evident to one following its path even for a short distance." It was accompanied by thunder and lightning and by "hail as large as the fist."

—Three children's books which have lately come to hand are worth buying now as well as remembering in the special season of gifts. One is a translation of the great Niebuhr's "Greek Hero-Stories,' as told for the benefit of his little son, Marcus (New York: Dodd, Mead & Co.) These deserve a place with Kingsley's and Hawthorne's narrations of the old myths, though we should not assign them the first rank in such a collection; the story of the Herakleidae, for example, is overweighted with genealogical details. The book is nicely printed in large type, and the translation, by Mr. Benjamin Hoppin, has been well executed. But purists will find fault with his mingling Latin names of gods and heroes with the ultra Greek forms of other proper names; and for the latter an English child needs some guide to the pronunciation, which Mr. Hoppin might well have provided. The allusions to Italian sites and scenes, due to the circumstances of composition, also merited explanation in each instance, and perhaps would have furnished more useful illustrations than those of Mr. Augustus Hoppin, which are not altogether satisfactory.——The Messrs. Rivington have published as one of their "English School-Classics" Southey's 'Life of Nelson.' The print is close and hardly to be called inviting, but the editing, by Mr. W. E. Mullins, is excellent, correcting and elucidating the original text with a single eye to historical truth.——From the same house, through E. P. Dutton & Co., we have received 'Selections from Hauff's Stories,' by W. E. Mullins and Francis Storr, designed as a first German reading-book for schools. The editors say rightly that "all that the reader will require outside this volume is the declension of adjectives and pronouns." The minuteness of the vocabulary, which is not alphabetical, but follows the order of the narrative, is exhaustive; and as if this were not enough, an index of words is added referring to the vocabulary, while two of the stories, "Little Mudj" and "The False Prince," are translated literally into good English, unless we except the Americanism, "made himself scarce," on p. 211 (for "machte sich einstweilen aus dem Staub"). The book can be most profitably used under a teacher.

—The Massachusetts Historical Society, the oldest in the United States, has brought out an elegant volume of nearly 600 pages, embodying a transcript of the Society's Proceedings from its foundation to 1835, with much additional matter. The Proceedings began to be published regularly in 1855, and a second volume will be needed to bridge the interval. The editors of the one before us, Messrs. Charles Deane and Charles C. Smith, have well discharged their duty, supplying abundant notes, inserting in their proper places papers referred to in the Proceedings as on file, and procuring thirty-nine biographical notices of deceased members never before prepared, and some of which, like Mr. Lodge's memoir of Caleb Strong, in length and importance attain the dignity of monographs. They have also been fortunate enough to secure authentic portraits of nine out of the ten founders of 1790–91, reproduced by the heliotype process, together with portraits of Presidents of the Socie-

ty, and of one or two other members. Finally, excellent fac-similes of prospectuses, newspaper headings, MS., etc., and views of the several homes of the Society, complete the illustrations which add so much to the interest and value of the record ; and a minute index, bristling with great names, by Mr. George Dexter, unlocks the whole treasure. Dr. Jeremy Belknap, the founder *par excellence*, is shown to have had a most comprehensive idea of what constitutes history, and his circular "list of articles on which the Society request information" would not discredit the most enlightened Census Superintendent of our times. Natural history had a prominent place in his scheme, and this of course involved a museum, which amassed a goodly number of Indian relics, geological and botanical specimens, and the like ; but most of these were eventually distributed among societies which the progress of subdivision in science had called into existence. We have no need to dwell on what the Society has achieved in its proper field.

—Mr. John T. Hassam's interesting paper on 'Ezekiel Cheever and Some of His Descendants' in the *N. E. Historical and Genealogical Register* for April has been printed separately with some additions. The notices of his contemporaries show how fitly the subject of this biographical sketch is commemorated. "August 21st, this year [1708]," says Governor Hutchinson, "died Ezekiel Cheever, venerable not merely for his great age, 94, but for having been the schoolmaster of most of the principal gentlemen of Boston who were then upon the stage." His career is well described by Judge Sewall, in a few strokes : "He was born January 25, 1614. Came over to N. E. 1637, to Boston. To New Haven, 1638. Married in the Fall, & begun to teach School : which Work he was constant in till now. First, at New Haven ; then at Ipswich ; then at Charlestown ; then at Boston, whither he came 1670. So that he has Laboured in that Calling, Skillfully, diligently, constantly, Religiously, Seventy years. A rare Instance of Piety, Health, Strength, Serviceableness. The Wellfare of the Province was much upon his Spirit. He abominated Perriwiggs." This antipathy, which Sewall, by the way, fully shared, is also hinted at in Cotton Mather's "Essay on the Memory of my Venerable Master":

> "Cloath'd in the Good Old Way, his Garb did wage
> A War with the Vain Fashions of the Age."

In this artificial verse, here printed in full, there are not a few felicitous couplets, but the sermon also, of which Mr. Hassam gives extracts, is uncommonly pithy. "He that was my Master," says Dr. Mather, "Seven and Thirty Years ago, was a Master to many of my Betters, no less than Seventy Years ago ; so long ago, that I must even mention my Fathers Tutor for one of them." And again : "But I will say very much in a Little. Out of the School, he was One, *Antiqua Fide, priscis moribus ;* A Christian of the Old Fashion : An *Old New-English Christian :* And I may tell you, That was as Venerable a Sight, as the World, since the Days of Primitive Christianity, has ever look'd upon." The Cheever MS. in the Boston Athenæum contains a number of Latin and Greek poems which have heretofore been regarded as of his own composing. Mr. Hassam, who prints them for the first time in full in the appendix, points out that some are derived from Martial, and others from Petronius and Posidippus. The remainder still await identification, but a classical origin is possible in the case only of one or two.

—"The Snowball," as brought out at "Wallack's," has proved a substantial success, chiefly through the merits of the acting ; for the play has little to recommend it. It is a farce in three acts, turning upon the complications and embarrassments in which a husband is involved by the ingenuity of his wife. The whole play is made to turn upon the confusion as to a letter written by *Mr. Felix Featherstone* (Mr. C. F. Coghlan) to *Mrs. Featherstone* (Miss Coghlan) caused by the fact that it is turned over by the lady to her maid. The consequences of this little trick, as is always the case in a genuine farce, are very far-reaching. That it drives *Mr. Featherstone*, a hitherto happy husband, into a state of despair and wretchedness bordering on lunacy, in which, to extricate himself from his difficulties, he is ready to pledge himself to any nefarious scheme that may be suggested, and as ready to get out of the difficulties entailed by his dishonorable conduct by equally infamous breaches of faith ; that it opens to the maid a brief but brilliant career of domestic blackmail ; and that the trouble ends in an *éclaircissement*, and a reconciliation—all this is the faintest hint of a plot replete with surprises which, if they are improbable, are certainly laughable. The acting of Mr. and Miss Coghlan, of Mr. Gilbert as the sceptical and unprincipled uncle, and Miss Germon as the maid, is throughout excellent. "Delicate Ground," which precedes "The Snowball," is a play of a very different order. It is a genuine comedy, of a light character, the interest of which turns upon a not impossible human situation. With the French original from which this play is taken New York audiences may be said to be entirely unacquainted ; but it will always be known in England and America in the form in which it was immortalized by the genius of Mr. Charles Mathews. The play, though it deals with a French subject, is in reality, in its adapted form, much more English than French. The dialogue is bright and witty ; Miss Rogers as *Pauline*, Mr. E. M. Holland as *Alphonse*, and Mr. Coghlan as *Citizen Sangfroid*, all act with much cleverness. The characters are somewhat exaggerated, as might be expected in a play which is half a moral lesson in matrimony, and at times the exaggeration is a little oppressive. In most of the scenes, however, this is not the case. As a means of bringing out Mr. Coghlan's remarkable versatility we can hardly imagine two better chosen parts than *Felix Featherstone* and *Sangfroid*. They are at the opposite poles of comedy ; and *à priori* it would seem almost impossible for an actor to do both well. Mr. Coghlan not only does both well, but never for a moment, as is the case with so many comedians, confounds the two different worlds of farce and comedy to which they belong.

—Mr. Rummel's first piano-forte recital, which took place at Steinway Hall on Thursday afternoon, presented a long and intelligently-arranged programme, extending over the entire field of piano-forte music from Bach to Chopin. So much has been said on all sides in praise of Mr. Rummel's admirable qualities that we need only add that by his performance of this elaborate and difficult programme he fully maintained the high opinion which the public has formed of him. Mr. Rummel came to this country at the beginning of the season, entirely unknown and unheralded, as a member of a concert company among which he was the only artist worthy of the name, and which, fortunately, had but a very brief existence. But even when heard under these unfavorable circumstances he produced a great impression, so much so that Dr. Damrosch was induced to engage him for the third symphony concert, where he made a brilliant début with Grieg's delightful piano-forte concerto in A minor. After this first appearance under circumstances worthy of his rank, Mr. Rummel was assigned a place among the best piano-forte players that have been heard in this country, and his many excellent qualities—unusual fire and brilliancy, a marvellous technique and an astonishing memory—richly merit this distinction. His best efforts at last Thursday's recital were Bach's prelude and fugue in A minor and Handel's suite in E major, with the familiar air and variations known as "The Harmonious Blacksmith." He played these two numbers with an earnestness and dignity of manner, with a total absence of all attempts at sensational effects, that call for the highest praise. Beethoven's sonata in F minor, Op. 57, received an equally intelligent and artistic rendering as regards the first and last movement. The second movement, the andante con moto, was lacking in that poetical and delicate expression required by this wonderful composition. Mendelssohn's "Variations sérieuses" were played with great spirit, and Schumann's "Faschingschwank" (with the exception of some unwarranted liberties with the tempo) was likewise exceedingly well played. The concert terminated with four pieces by Chopin—Berceuse in D flat, Op. 57 ; Impromptu in A flat, Op. 29 ; Valse in D flat, Op. 64, and Polonaise in A, Op. 40. The Valse in D flat was played in so bewildering a tempo that its charm was almost lost ; but the great Polonaise was given with extraordinary fire and vigor.

—The last of the Wilhelmj chamber-music concerts was in every respect the best of the series, in fact the only one which realized the anticipations that were entertained of these concerts. Beethoven's string quartette in A minor, Op. 132, one of the immortal six that belong to the last epoch of the master's life, was the opening number. It was excellently rendered by Messrs. Wilhelmj, Damrosch, Schwarz, and Bergner, and the hearty applause which followed each of the five long movements, particularly the adagio "Thanksgiving of a convalescent, in the Lydian mode," showed how deep was the impression produced by this noble work on the crowded audience. Mendelssohn's quartette in A minor, and Bach's Chaconne for violin solo, by Mr. Wilhelmj, were the remaining instrumental numbers. Miss Drasdil was the vocalist of the evening, and delighted the audience by an excellent rendering of an old Italian air by Stradella and of Schubert's "Erl King."

—Since the emigration of Mr. Theodore Thomas to Cincinnati no really earnest attempt has been made to re-establish in this city the sort of amusement which his summer-nights' concerts used to afford. Gilmore has, it is true, given concerts at his garden, and even Offenbach has been imported to lead an orchestra there ; but the public has generally

refused to recognize Gilmore as competent to furnish such music as Thomas once furnished, and, having pretty much given up hope of a revival of the Central Park Garden, have fallen into a lamentable condition of apathy on the subject, in which the "Last Rose of Summer," as played by the world-renowned Levy on the Coney Island beach, has come to seem almost an elevated and refined entertainment. The lack of popular music-halls or gardens in New York is all the more remarkable, too, in connection with the enormous development of the beer interest within the past few years. The connection between beer and music is so close in all cities in which there is a large and thoughtful German population that it was a constant source of wonder to us that no really energetic effort had been made since Thomas's disappearance to effect a combination of the two interests for the popular benefit. The attempt has now been made in a small way in Twenty-third Street, and the immediate success with which it has met shows conclusively that on a larger scale it could hardly be a failure. The building selected is the old Bryant's Opera House, which has been run through to Twenty-fourth Street; the interior has been decorated with a good deal of taste, and fitted up with an organ, a platform for the orchestra, and innumerable tables and chairs; a leader has been brought over from Berlin, and music is provided of a popular character, but still not bad of its kind—Strauss waltzes, overtures from well-known operas, and so on. The orchestra is small, but very good, and the audience, half German and half American, is thoroughly well-behaved. The place overflows nightly with people. Of course it is not to be compared with the Central Park Garden of five or six years ago; but its immediate success is such a convincing proof of the popular appetite for summer amusements of this kind that we cannot help wondering again why Thomas was ever allowed to leave New York.

SECRETARY SHERMAN'S SPEECHES.*

SECRETARY SHERMAN'S identification with the public finances from the beginning of the Civil War, at which time the question of finance began to be one of serious difficulty and responsibility, to the resumption of specie payments and the refunding of the 5-20 and 10-40 bonds, has been so prominent and continuous that a history of the national debt and of the existing paper currency might be compiled from this volume with slight recourse to other authorities. That the author of these speeches and reports can support a claim for "consistency" in his treatment of the grave problems that arose from time to time and passed under his review, no reader can for a moment imagine. The most that can be allowed upon this score is that his inclinations were in the right direction, his perceptions of the truth sufficiently keen, and his industry always equal to the task before him; but that he was too susceptible to the breezes and draughts of popularity (or what he conceived to be such), and was always, so to speak, catching cold by exposure to them. His backsliding in 1868, when he declared that equity and justice would be fully satisfied by redeeming the 5-20 bonds at their maturity "in money of the same kind and the same intrinsic value existing at the time they were issued"—*i.e.*, in greenbacks—exposed the country to grave peril, and one cannot now read the speech in which this doctrine was promulgated without mortification and regret. The cheap demagogism of the hour which heralded the notion that an evidence of indebtedness bearing interest at a specified rate, and payable at a particular time, could be justly and equitably discharged by tendering to the holder another evidence of indebtedness bearing no interest, payable at no time, and possessing no higher security, became formidable when the Chairman of the Senate Committee on Finance gave his adhesion to it, and not before. There are other, though minor, flaws in Secretary Sherman's record which stamp him as inferior to Huskisson, Peel, Hamilton, and other great finance ministers—the difference between them and him being not that they were wiser in their generation, or even more consistent, but that they always gave to the public their best thoughts and their best service as time and occasion called; in other words, they could always be depended upon.

We shall not pause to collate flaws, numerous and considerable though they be, upon which we commented at the time of their first utterance. Although it is a capital defect of Mr. Sherman's make-up as a financier that he is a politician of the canny sort—finance not being amenable in the slightest degree to the exigencies of politics—it must be admitted that his diagnosis of the economic condition of the country from time to time was singularly accurate, so that we cannot recall the name of any public man whose judgments were oftener verified by the subsequent course of events. Even when giving his vote for some erroneous measure which the majority insisted upon passing, he has let fall a remark, half-apologetic, signifying that he knew better and that he would do better if it were not so inconvenient.

The first four hundred pages of the volume relate to the measures by which the public debt, the greenback currency, and the National banking system were created, with remarks here and there on tariffs and internal taxes. They possess considerable historic interest, but being merely excerpts from the published proceedings of Congress have no exclusive claim upon attention. The remainder, commencing with the author's speech upon the Inflation Bill of 1874, relates to subjects which are still fresh and which constitute a part of current discussions on financial policy. Mr. Sherman's speeches of January 16, 1874, and March 6, 1876, strike us as the best efforts of his legislative career. In the former, which was delivered in opposition to the so-called Inflation Bill, he elucidated the position of the country and especially of the Republican party toward the currency and the public debt most happily, and pushed the late Senator Morton to the wall with something like savageness, insisting on an answer to the question at what time, under what circumstances, in what condition of trade and industry it would be expedient to take steps for the resumption of specie payments. We had gone through a period of great apparent prosperity, of overflowing revenues, of unexampled internal development, but we had taken no steps toward resumption because we were making money so fast—we could not afford to pause in this prosperous and cheering race long enough to pay our debts and put our currency at par with gold. We had now fallen into adversity, and we could not resume because the times were so bad. During all this time, however, the Republican party had been committed, in its national platform, to a "speedy resumption of specie payments." Hence, it appeared that at one time we were too rich and at another time too poor to take any steps toward resumption, and consequently that a speedy resumption meant no resumption at any time whatever. It is needless to add that Mr. Morton did not answer the question propounded to him.

In his speech of December 22, 1874, on the Resumption Act, Mr. Sherman gave only a feeble and hesitating support to that measure; for although it did, as he alleged, "provide ample means to prepare for resumption and to maintain it," its *modus operandi* was not in his judgment the best that the case admitted of. He favored the plan of converting the greenbacks into bonds, and thus gradually appreciating the notes to par with gold. Nevertheless, he would support the bill as the best one that the majority in Congress could be got to favor. It was in the course of this speech that he was asked by Senator Schurz whether, under the operation of the bill, the redeemed greenbacks could be reissued. He declined to answer the question, or even to give his own opinion upon its legal construction. On the 6th of March, 1876, he made amends for his reluctant support of the bill while it was pending by delivering a speech on the resolutions laid before the Senate by the New York Chamber of Commerce on the subject of specie payments. In this speech he defended the Resumption Act at great length with marked ability and vigor, and although falling into some errors which were then shared by nearly all the friends of resumption, and which time has since corrected, he left little to be desired in his vindication of the wisdom of the measure and the need of strictly enforcing it. It was his belief at that time that a favorable balance of trade was not only not necessary to the success of resumption, but was "utterly immaterial to the question"; if, however, it was deemed material by anybody, he insisted that the right time had come, since the balance of trade was now largely in our favor. He believed, also, that any plan of resumption would, when about to take effect, produce some contraction of the paper currency. The course of events has proved that the favorable balance of trade has been by far the largest factor in the successful solution of the problem, since that and that alone enabled the Treasury to accumulate its stock of gold, and to keep it after the doors were opened for resumption. It has also been proved that no contraction of the currency took place on the eve of resumption or since, if by "contraction" is meant a lessening of the amount of paper currency in the hands of the banks and the people. These were certainly excusable errors, and are only mentioned here as showing how imperfectly the real course of events was foreseen even by the best judges.

Mr. Sherman's treatment of the silver question has been by no means so satisfactory as his handling of specie resumption and the refunding of the bonded debt. He first appears, in his report on the Paris Monetary

* 'Selected Speeches and Reports on Finance and Taxation from 1859 to 1878. By John Sherman.' New York: D. Appleton & Co. 1879. Pp. 640.

Conference of 1867, as an advocate of the single gold standard. In 1876 (June 8) he advocates the coining of silver dollars and offering them in exchange for greenbacks to anybody who wants them, opposing, however, the bill to make them unlimited legal tender. A few months later (August 12) he addressed the people of Marietta, Ohio, and offered the opinion that it would be both legal and right to take advantage of the fall in the price of silver to recoin the silver dollar and with it pay off the greenbacks. His next public declaration is furnished in his report of December 3, 1877, as Secretary of the Treasury, in which he strongly opposes the remonetization of silver except on condition that it shall be kept of equal value with gold by some process of redemption. After the remonetizing bill had passed without any such provision, he stated to the Senate Finance Committee in an interview officially reported and published that silver dollars would not be any impediment to resumption, but might be an aid to it—that is, he made himself an accomplice after the fact. Still later he reached the conclusion that a safe adjustment might be made by increasing the weight of the silver dollar, or decreasing the weight of the gold dollar, or by increasing the one and decreasing the other simultaneously—this at Toledo, August 26, 1878. Finally, in his report as Secretary of the Treasury, December 2, 1878, he says that the continued coinage of silver dollars is a menace to resumption, and he recommends that the maximum of such coinage be limited to fifty millions. In this prolonged vibration of discordant sounds we perceive, not for the first time, that Mr. Sherman's views as a financier are subject largely to the exigencies of politics. It must be set down to his credit, however, that he has not yielded to the demand of the silver-men that he should pay out silver dollars to bondholders, pensioners, clerks, contractors, congressmen, judges, army officers, and all other people who do not want them.

The late remarkable success in refunding the public debt at 4 per cent. does not fall within the scope of this volume, and is therefore not properly subject to review in this place. In a letter written and published since these speeches and reports came from the press Secretary Sherman attributes his success in this particular, as well as in the resumption of specie payments, to a fortunate conjunction of circumstances. This ascription is equally modest and true. But for the favorable balance of trade and the low rate of interest, both of which are consequences of the crisis of 1873, neither of these results would have been so easily achieved, if achieved at all. But as it is the mark of wise statesmanship to take advantage of every fortunate conjunction of circumstances, Mr. Sherman is well entitled to wear the laurel of triumph, for he has in every case struck while the iron was hot.

GEIKIE'S ENGLISH REFORMATION.*

THE title-page of Dr. Geikie's 'English Reformation' expresses very well its character—that it is not primarily a history, but a pamphlet. It is called out by the Ritualistic movement, which the author regards as anti-Protestant, and indeed anti-Christian: he sees that this movement, in plain terms, denies the validity of the English Reformation, and attacks its motives and its methods no less vehemently than the Catholics themselves. He undertakes, therefore, to vindicate the work of Henry VIII., and this in the only way it can be done, by frankly admitting the corruption and selfishness of the monarch, and showing how he was, in spite of himself, made the instrument of a great and wholesome work. Wolsey also he visits with entire condemnation, while Cromwell and Cranmer, the two principal agents of the Reformation, are heartily praised.

As being avowedly a partisan work it is unmeasured in its praise and blame, and equally so in its judgments as to historical events. Cranmer and Cromwell receive praise, and nothing but praise; Gardiner and Bonner receive blame, and nothing but blame; Catherine of Aragon was a selfish and intriguing woman, Anne Boleyn pure and a friend of the Reformation; the monasteries were, with hardly an exception, sinks of iniquity; the Romish system a foul and senseless one; the Pope was Antichrist. In short, the fault of the book is intemperance of language. No doubt there is much to justify this. The Church was in this age at its lowest point of morality; the monastic class were notorious for their vices; and one's blood cannot but boil at the recital of the cruelties perpetrated under Henry VIII. and Queen Mary in the name of religion. We are so far from extenuating these things that we are ready to declare in the strongest terms that the worst misfortune which can befall a land or a people is to be placed under ecclesiastical rule. No tyranny is so cruel and relentless as that of priests. So far as Dr. Geikie's book helps to strengthen this conviction in the people of England and America it will do good service. But what we should condemn is the thing itself—the power of the priesthood—and not this or that Church which has been able to exercise this power. The Church of Rome is not a sinner above all sinners in this respect, except as it has been the object of exceptional veneration, and therefore has had greater power than almost any other priesthood in history. But the Church of England itself, under Elizabeth, was guilty of atrocities in the way of religious persecution only less than those of the Church of Rome in the degree in which the claims of the Church of England are inferior to those of the Church of Rome.

Dr. Geikie speaks of these events with almost the passionate earnestness of one who himself took part in them; but the mature judgment of history must modify much of this vehemence of sympathy. The monasteries were bad enough, but Cromwell's commission is proved to have made them out to be worse than they were; Catherine's demeanor is pronounced by the highest authorities to have been upright and dignified; and Anne Boleyn's good name is, we fear, not so unimpeachable as our author would make out. Nay, this correction of the exaggerations of the Protestants has gone so far that even Protestant writers of the present day are prone to extenuate the cruelties of the Catholic persecutions, and make their own side appear the worst. This is the natural result of exaggerated statements, and for this reason we are sorry to see an author with whom we agree in the main in views, and certainly in sympathies, depart so constantly from a judicial temper. His tone is, it is true, that of contemporaries—the laborers and sufferers themselves; but after all, what is the use of historical investigation if not to correct the one-sidedness of earnest partisans, who, from the very nature of things, could only see one side?

In short, Dr. Geikie shows no ability to comprehend the real spirit of the period he is describing, and to appreciate the complex motives and interests which led men to place themselves on different sides in the great movement that was going on. We find, therefore, no clearness of conception in the statement of the successive stages of the Reformation—under Cranmer, in the last years of Henry VIII., under Edward, and under Elizabeth. For example, in what sense were Henry and Elizabeth respectively heads of the Church? We know that Elizabeth refused the title of "Supreme Head of the Church," satisfying herself with the formula, "in all causes, as well ecclesiastical as civil, supreme," a distinction which, says Ranke, made no essential difference. Still it appears to us that there was a real difference. Neither monarch can properly be called Head of the Church in the full spiritual sense, because neither had received ordination. Their authority was exercised *over*, rather than *in*, the Church, and in this respect they differed fundamentally from the Pope. But, if we are not mistaken, this was a more important point with Elizabeth than with Henry. Henry's scheme, as represented by Cranmer, made the Church simply a branch of the Government, and ordination so far a secular act that ecclesiastical rank could be bestowed by the prince by his own authority; and this authority belonged to him by divine right as king, so that he needed no distinct spiritual dignity. Elizabeth, on the other hand, held to the Romish doctrine of apostolic succession, never pretending to be head of the Church in strictly ecclesiastical matters, but only in so far as the Church was comprehended in the state.

So with the account of indulgences, p. 114; no doubt the corrupt practice of this age did promise freedom from the pains of purgatory, but it ought to be said that this was distinctly a corruption of the recognized doctrine of the Church. On page 128 both Henry VII. and Ferdinand V. are called usurpers; with what right the latter, we cannot guess. On the next page Bergenroth's notion that Juana's alleged insanity was false—now generally given up—is assumed as proved. No date is given (p. 275) for the execution of Anne Boleyn. Henry is said (p. 253) to have burned Catholics as well as Protestants; so he did, but not as Catholics, but for denying his supremacy, which he chose to regard as an article of faith. Whenever a sum of money is mentioned, it is stated that it was worth twelve times as much as at the present day; the repetition is rather tiresome, and the statement, we think, incorrect. The value since that day is stated by Roscher (vol. i. p. 412, American translation) to have diminished in the ratio of three or four to one.

We have spoken fully of the faults of the book, because we consider them likely to interfere seriously with the end which the author has in mind. On the other hand, it deserves the praise of being a hearty, honest, and very interesting sketch of an important series of events.

* 'The English Reformation: How it came about, and Why we should uphold it. By Cunningham Geikie, D.D., author of 'The Life and Words of Christ,' etc.' New York: D. Appleton & Co. 1879. 12mo, pp. 512.

Wanderings in Patagonia; or, Life among the Ostrich-Hunters. By Julius Beerbohm. Leisure-Hour Series. (New York: Henry Holt & Co. 1879.)—In the month of August, 1877, Mr. Beerbohm found himself on board ship with a party of engineers bound for Port San Julian, on the coast of Patagonia. The engineers were on a surveying expedition; but our author while at San Julian received letters making his speedy return to Buenos Ayres imperative. At about the same time a party of ostrich-hunters stopped on their way to Sandy Point on the Straits of Magellan, and as he found that he would there be able to take a steamer for Buenos Ayres, he determined to join the party. His book is mainly an account of his subsequent adventures, which were neither few nor uninteresting. Mr. Beerbohm is a thorough master of the art of telling a story, and the simplicity and directness with which he narrates his adventures, carry a conviction of truth to the reader's mind that might well excite the envy of many a hardened writer of fiction. Ostrich-hunting—at least in Patagonia—is a life not so much of danger as of exposure and privation. There are no wild beasts to be guarded against, the puma being apparently too great a coward to be dreaded; the Indians are friendly. But the rains and the bitter winds and the swollen rivers of the pampas are, as Mr. Beerbohm found to his cost, apt to make the life of an ostrich-hunter one of hardship. The sport is not a very lucrative pursuit, and the life is followed chiefly for its own sake, by a class of men apparently not unlike the Western backwoodsmen of two or three generations ago, men who prefer a vagabond life for the sake of its freedom from restraint, responsibility, and mental anxiety. The ostrich-hunters of this book are, first, Isidoro, an Argentine Gaucho with a dash of Indian blood, a famous horse-tamer, taciturn, watchful, honest, good-natured, and a general favorite; Garcia, another Gaucho, formerly a soldier and later a cattle-driver, more talkative than Isidoro, and but slightly his inferior in horsemanship and as a hunter; Guillaume, a Frenchman, once a blacksmith, gifted with an homeric appetite, capable of despatching a whole side of a young guanaco at a sitting, but, nevertheless, always thin and with a hungry appearance; and, finally, Maximo, an Austrian, twenty years old, of herculean size and strength, once a sailor, and master of several languages. The capitalist of the party was Isidoro, who owned thirty fine horses.

From San Julian to Santa Cruz Mr. Beerbohm's trip seems to have been pleasant enough, and the chapters of his book devoted to it contain an entertaining description of running down ostriches with dogs and *bolas*, of exhilarating gallops over the pampas, and of the manners and customs of the Tuelche Indians. After the arrival of the party at Santa Cruz it was determined that Isidoro, Guillaume, and Mr. Beerbohm, with twenty-eight horses and five dogs, should push on to Sandy Point, Isidoro taking with him some two hundred and fifty pounds of ostrich feathers, the spoils of his unerring *bo'as*. The rest of the trip was one uninterrupted succession of mishaps. It was becoming more and more important to press on to Sandy Point, as the time for catching the steamer was quickly slipping away; but meantime snows and sleet and rain were rapidly changing the shallow streams of the pampas into raging and impassable torrents. Crossing Coy Inlet, however, the party pushed on to the Rio Gallegos, the last formidable river between them and Sandy Point. A fifty-mile ride from Coy Inlet brought them to the ravine through which the Gallegos runs. Breaking into a gallop, they pushed forward to catch a glimpse of it. Suddenly it burst upon their sight, no longer a shallow stream, but a wide and furious torrent, rushing between banks rapidly growing too narrow for it, and impassable for man or beast. Isidoro was of the opinion that in eight days the river would sink to its ordinary level. Meanwhile the provisions of the party had been calculated only for a ten-days' trip; it would be in any case impossible to reach Sandy Point in time to catch the steamer on the 15th, while with every day there was a danger of the price of ostrich feathers falling. There was nothing for it but to camp upon the Gallegos until the river should have fallen. Of the weary and anxious weeks of waiting which ensued; of the alternate hopefulness and despondency caused by the changes in the level of the river; of the gradual disappearance of the provisions, and the compulsory regimen of guanaco and ostrich meat, and the curious and unpleasant consequent effects; of the gradual *ennui* and longing for a return to civilization produced in himself, and the craving for tobacco produced in Guillaume, Mr. Beerbohm gives a very graphic description. At length, on the 18th of October, rendered quite desperate, they determined to swim the river. Isidoro refused, not unnaturally, to take part in this attempt.

There were obviously two ways of crossing: one to swim over on horseback—no very easy feat; the other, to send over the horses with all their clothes and accoutrements, and follow themselves. The first plan seemed in advance the most feasible, but proved absolutely impracticable; the horses always turning on reaching the middle current, and refusing absolutely to attempt a landing except on the shore from which they started. There was nothing left but to try the other plan, in which failure involved a considerable risk of a miserable death from cold. The third attempt was made in a storm of hail and snow, with a high wind blowing. After immense trouble, with the help of sticks and stones, they succeeded in driving the horses into the middle current and forcing them to head for the other side. At last they reached the land, and their owners gave a shout of joy and relief. Their triumph, however, was only momentary. The horses had touched the bank at a place where they could get no footing. Instinctively they turned round and made straight for the shore from which they had started. By the time they landed, it is hardly necessary to say, their owners were in a most pitiable state. "For more than half an hour we had been splashing in and out of the icy-cold water, exposed to wind and weather, and we were now thoroughly exhausted, our teeth chattering, our bodies doubled up, and unable to speak to one another except by signs."

How they finally did cross the Gallegos, and at length reached Sandy Point, to find themselves involved in a mutiny of convicts, which very nearly cost them their lives; how Isidoro, waiting until the river became fordable, finally crossed it just in time to fall into the hands of a band of these same convicts, escaping across the plains, to lose his horses and other property, and very nearly his life—for an account of all these things we must refer the reader to the book itself, all of which he will find remarkably interesting.

English Actors from Shakespeare to Macready. By Henry Barton Baker. (Amateur Series.) Two volumes. (New York: Henry Holt & Co. 1879.)—Charles Nodier has said somewhere that he had sometimes read books in which really nothing belonged to the writer whose name was on the title-page except the table of contents. It would, perhaps, be scarcely fair to liken 'English Actors' to these books, but there is little enough originality to be detected in the two volumes. Mr. Baker seems to have read diligently the most of the many English books of theatrical biography and the various lives of English actors and actresses; from these he has copied out a variety of anecdotes more or less authentic, but generally lively and entertaining, which he has grouped together in a series of chapters devoted successively to the great names of English histrionic art, and he has thus made a sort of anecdote history of the English stage. This surely was an unnecessary task so long as Dr. Doran's admirable book on 'Their Majesties' Servants' is still to be had. Dr. Doran did very well indeed what Mr. Baker does not do well at all. Dr. Doran had a real love of the drama and a distinct understanding of the principles of the art of acting—qualities of which Mr. Baker is wholly destitute; he nowhere shows a genuine liking for the stage, and he again and again exhibits gross ignorance of the art of acting.

He does not like any of the Kembles, and to the author of the recent 'Records of a Girlhood' he fails wholly to be courteous. All readers of that delightful book can judge of the accuracy of the following criticism, whose taste it is needless to remark upon:

"But when the cause and the novelty of Miss Kemble's *début* had ceased a juster estimate was formed of her abilities, which, far from being phenomenal, were only commonplace; people began to perceive that she thought more of a pretty pose than of the words she was delivering, that drawling did not constitute pathos nor deep-toned passion. The lady has since revenged this reversal of public opinion by scornful diatribes against the profession which gave her and her family all their position. But for the stage, the Kembles might have been a generation of barbers instead of the honored associates of the highest in the land."

The greatest defect of the book in the eyes of an American is the absurd prejudice against this country shown in all incidental references to it, coupled with more or less wilful ignorance of the abundant American dramatic biographies. Now, it is impossible to tell the tale of Cooke or Kean or Macready without a consultation of American authorities. Even when Mr. Baker is forced to rely on an American book, his apparent spite leads him into what looks very like literary dishonesty. Dunlap, the author of the 'History of the American Theatre,' wrote also the life of George Frederick Cooke, in which he explained the circumstances of Cooke's sudden departure for America when engaged by Cooper. Mr. Baker takes nearly every point in his chapter on Cooke from Dunlap, but describes how Cooper, "after much manœuvring, contrived to carry him [Cooke] off out of some vile Liverpool slum while in a state of intoxication"—an accusation which Cooper indignantly repelled in a letter printed in Dun-

lap's biography and corroborated by Dunlap, Cooke's chosen biographer. The same ignorance of the American stage lets him say (i. p. 82) that Colley Cibber's "Richard III." held the stage until Mr. Irving restored the Shaksperian text; Mr. Edwin Booth had done it long before. If Mr. Baker had ever heard of Mr. William Warren, of Boston, or even seen Mr. Joseph Jefferson, he would never have ventured on the assertion that "there is not a low comedian on the stage who can excite a laugh by genuine humor or by anything save utter buffoonery."

It remains to be said that most of this book originally appeared in *Temple Bar*, whence some of it was taken last summer to form one of the Messrs. Appleton's Handy Volume Series, under the title 'Lights of the Old English Stage.' The American publishers, in accordance with a good habit of theirs, have added an index, an indispensable adjunct to volumes as full of anecdote as these.

Locusts and Wild Honey. By John Burroughs. (Boston: Houghton, Osgood & Co. 1879.)—There is a medicinal virtue in a book about natural sights and sounds, written by a keen observer and read in spring; it cleanses the mind and renews the senses, and makes men better fit to be lookers-on amid the resurrection of life. Thoreau is nearly unrivalled in this mental and physical hygienic value, but he has left a school behind him which, if more modest and destitute of his underlying philosophy and his poetic vision, is still charming and welcome. Mr. Burroughs has written of bees and strawberries, trout and wildernesses, and has gathered many interesting and original observations, curious facts, and amusing adventures of camping-out days. His garden, his books, his friends, his rambles in the retired valleys of the Catskills, and his sport in seldom-trodden Canadian woods all contribute something for instruction or pleasure; he pursues his quest for new natural facts with a devotion now more commonly seen in the pottery-hunters than anywhere else perhaps, and the ordinary aspects or products of nature are no less highly prized. This of the rain exhibits his many-sided pleasure in what is for most men a bore:

"But when the rain does come—the warm, sun-distilled rain; the far-travelling, vapor-born rain; the impartial, undiscriminating, unstinted, rain; equable, bounteous, myriad-eyed, searching out every plant and every spear of grass, finding every hidden thing that needs water, falling upon the just and upon the unjust, sponging off every leaf of every tree in the forest and every growth in the fields; music to the ear, a perfume to the smell, an enchantment to the eye; healing the earth, cleansing the air, renewing the fountains; honey to the bee, manna to the herds, and life to all creatures—what spectacle so fills the heart? Rain, rain, O dear Zeus! down on the ploughed fields of the Athenians, and on the plains."

This is a purple patch, for the author usually writes very simply and without rhetoric. He has many felicitous comparisons—"The strawberry is a kind of vegetable snow. How cool, how tonic, how melting, and how perishable!"—and others we could quote. But there is not only a graceful literary expression and the enthusiasm of a lover in his short essays, but much that is instructive and some things new to professed naturalists. The comparison of European and American birds is very striking. The foreigners he finds "a more hardy and pugnacious race," the singers having more vivacity and power, while ours have more melody and plaintiveness. He assigns something of this difference with English birds to their longer familiarity with men, plaintiveness belonging to all the cries of wilder creatures, "even to the bark of the fox, the cry of the panther, the voice of the 'coon," etc. The American cuckoo gains by comparison with the English in manners, but loses his literary glories. So we might go on, had we space. It is a book which every lover of the woods and birds and every angler will take to his heart at once.

A Selection from Pascal's Thoughts. Translated by H. L. Sidney Lear. (London: Rivingtons. 1878. 18mo, pp. v. 175.)—This selection from the 'Pensées' includes about one-seventh part of the text as given in the one literal edition, that of M. Prosper Faugère (1844)—a name, by the way, which Mr. Lear writes as "Prospère Fougères." Four errors in the spelling of one name form certainly an ominous conjunction for the first page of a preface, but happily the omen is not borne out in the pages that follow, which contain an unusually excellent specimen of translation. Mr. Lear has a delicate sense for style, both French and English; and he has the still rarer gift of perceiving and preserving in the latter the literary equivalents of the former language. His version is good enough to bear quoting from almost at random; its flexibility, for instance, appears in his rendition of the following passage. Pascal says (Faugère, i. 217): "D'où vient qu'un boiteux ne nous irrite pas, et qu'un esprit boiteux nous irrite? À cause qu'un boiteux reconnaît que nous allons droit, et qu'un esprit boiteux dit que c'est nous qui boitons"; thus translated by Mr. Lear: "Why are we irritated by an intellectual limp, and not by one that is physical? Because the lame man grants that *we* do not halt; but the lame intellect persists in affirming that it is his neighbor who limps." Mr. Lear performs a service, too, in accenting occasionally the connection of thought between some of Pascal's disjoined (and yet, by their correspondence in structure, subtly related) sentences, as in this case (Faugère, i. 259):

"Le docteur qui parle un quart d'heure après avoir tout dit, tant il est plein du désir de dire.

"Le bec du perroquet qu'il essuie, quoiqu'il soit net."

Mr. Lear says: "Some people talk for a quarter of an hour after they have said all there is to say, for the sheer love of talking. The parrot is for ever polishing his beak, however clean it may be."

These selections really put Pascal's thought before us. Were the translation completed in the same spirit it would, we think, displace the two English translations now in the field—the Rev. Edward Craig's (1825) quite certainly, as that was made from an imperfect text. The other, that of George Pearce (1850), follows the restored text from which Mr. Lear has made his selections.

Iphigenie auf Tauris. Ein Schauspiel von J. W. von Goethe. With an introduction and notes by Franklin Carter, Ph.D., Professor of the German Language and Literature in Yale College. Edited by W. D. Whitney, Professor of Sanskrit, etc., in Yale College. (New York: Henry Holt & Co. 1879.)—Whitney's series of German text-books has been so long and so widely known that the appearance of a new volume in it calls for notice only in regard to the selection and execution in that particular case. The "Iphigenie" has some special advantages as a school or college text-book. It is true, the play itself, though containing passages of great power, is rather a lifeless performance, as imitations or versions of the classical drama are apt to be, and it cannot be considered in any measure Greek in its spirit or form. But as a Greek story in modern form it gives opportunity for comparisons with the ancient style which fit it well to be read by those who are fresh from the Greek tragedies. On the other hand, for those who do not study Greek and Latin it offers a sort of approach to the classical in the comparative remoteness from the modern world which the story itself necessarily involves. A good teacher, acquainted himself with the Greek drama, could make this play interesting to either class of students by reason of its intermediate position between the ancient and the modern world. For the explanations and comments of such a teacher Professor Carter's notes leave plenty of room, while at the same time all his suggestions in that direction are, as might be expected, delicate, true, and helpful. The grammatical notes seem to give all needed aid to the student, and err, if at all, on the side of exceeding brevity. But that is in the plan of the series and ought not to be laid to the charge of this particular volume. On the whole, the book deserves to be widely used. We observe a puzzling omission of the number of a line on p. 101, l. 18, and again on p. 104, last line but two, and on p. 100 Ægistheus for Ægisthus. And we cannot help expressing the wish that the makers of this series could bring themselves to put the whole into Roman type, for the good of the eyes and tempers of the young men and maidens for whom they work.

Dante: An Essay. By R. W. Church, M.A., D.C.L. To which is added a translation of 'De Monarchia,' by F. J. Church. (London and New York: Macmillan & Co. 1878.)—This admirable essay has already been twice printed—first, in the *Christian Remembrancer* of January, 1850, and four years later in a volume of 'Essays and Reviews.' These works have become scarce, and it is a proof of the value of Dean Church's essay that it should be deemed worthy of a third publication, and a proof of the author's sound judgment that, after a lapse of over twenty-five years, he could republish it "unchanged, with the exception of a few trifling corrections." But for one or two oversights in revising the original article (as, for example, on p. 41, where the Bargello is spoken of as "now" a prison—it has been since 1865 a National Museum), and the absence of recent works in the authorities cited, the essay might have been written last year, and is practically as fresh and valuable as though it were. Much has been done in the past twenty-five years for the restoration of the text of Dante's works, an immense number of minor points have been elucidated, the poet's bones have been found and his skull accurately measured, and Rome has become the capital of Italy; but Dante, the man and poet, is still the same.

Of this man and poet Dean Church gives the most brilliant character-

ization with which we are acquainted ; and within the limits of a hundred and seventy-three pages presents a clear and vivid picture of the social conditions from which the immortal poem was evolved, and by which it was moulded into its present shape. He omits none of the factors in its composition, although he does not dwell, as Mr. Lowell does in his masterly essay on the same subject, on the philosophical and mystical side of the poem, nor is he carried away by the successors of Rossetti and Aroux, who degrade the 'Divine Comedy' into a political diatribe. Those who are already familiar with Dante will find this essay suggestive, while others cannot help being led by it to the study of the poet himself. The value of it is much enhanced by the excellent translation made by his son of Dante's treatise 'De Monarchia,' whose importance for an understanding of Dante's ethical system is too well known to be dwelt on here ; it was a happy thought to make it accessible to the general reader. It is the first English translation, and is made from the best text, that of Witte, 1874. We cordially commend Dean Church's book to all who know the great poet or wish to learn the secret of his greatness.

Fine Arts.

THE FIFTY-FOURTH EXHIBITION OF THE ACADEMY OF DESIGN.

THE reflecting part of the public have by this time pretty well measured the exhibition, and judgment resolves itself into a doubt, and doubt into a question. Whether the Academicians, who are a self-chosen élite, can be relied upon to furnish an exhibit of pictures that will prove a fair attraction, or whether they do not depend for their enterprise on the talent of men whom they keep out of their fellowship—this is the suspicion which deepens in the visitor's mind as he makes the tour of the galleries. It is curious in this view to notice what are the works of their own which the Academicians have arranged on the eye-line, and estimate how far they would go in tempting a remunerative public to come and see them. The spring exhibitions are speculative ventures, depending for their continuance on the attractiveness of the contents ; the Academicians, as is their right, place a selection of their own works on the range which first meets the eye. It is a curious and awkward state of things indeed if the attractiveness is not reconcilable with the members' right to the eye-line, and if they, the chosen men of merit, injure rather than help the display by assuming the focus of the view, deriving their profits from artists whom they invite and hustle aside The works of Academicians arranged on the line are as follows :

Mr. Sellstedt, of Buffalo, and Mr. J. G. Brown, the only members of the Exhibition Committee who paint the human figure, are represented by works which it is a melancholy unkindness to say are characteristic. We wish we could detect some unusual breath or spark in the "German Band" (363) of the latter, whose figures are exceeded in merit by many a painted wooden Indian ; or that the mild chinamaniac of the former, "Preparing her Paper for the Club" (208), with her bit of crackle in her hand and the page of her Chaffers turned down, were at all softer and more flexible than her wares. But the exposure of these efforts on the line, though involving for their authors a publicity that is only cruel, is merely the usual putting of Committee-members "in evidence," and but little space is usurped on account of the limited scale of the pictures. The strange jellied and deliquescent foliage of Mr. Bellows (160), the tinny "Moonrise" of Mr. M. De Haas (163), and the thin labored "Catskill Brook" of Mr. Whittredge (375) are the other works of the Committee on the eye-line, and they add nothing whatever to the drawing power of the exhibition, being honorable mediocrity confessed.

The Committee-members having thus fulfilled their annual mission of tickling each other, but with less boldness than common, the other National Academicians have been shown to their places on the coveted line. The selections for this honor which seem to be unobjectionable are Mr. La Farge's, N.A., pailful of camellias (28); Mr. Inness's, N.A., "Sunset" (131), though it is vulgarized by an impossible Bierstadt sky which blows hot and cold at once ; Mr. Colman's, N.A., view of Le Mans (161), tenderly but conventionally painted ; Mr. James Smillie's, N.A., "Up the Hill" (186), an unusually powerful study of shadow-pencilled snow ; Mr. Wordsworth Thompson's, N.A., "Departure" (320), a careful, Pasini-like military group which it would have been a wrong to hang anywhere but at the eye level ; Mr. Homer's, N.A., "Sundown," a painful paint-problem of vivisection, not pursued out of any sympathy with the heroine, but to show how the hot rays of sunset are cutting into the sclerotic coats of her eyes ; Mr. Magrath's, N.A., "On the Old Sod" (380)—his master-piece, thoughtful, whimsical, and tender ; Mr. Swain Gifford's "Salters Beach" (390), a genuine lesson from Nature, but festooned over the foreground with his besetting catenary curves of idle shadow, like the chains around a burial-lot; the same artist's exquisite "Gathering Hay" (422 and 439) ; and Mr. Homer's, N.A., "Upland Cotton" (393), a beauty and an original, with figures seen through a lattice of wayward plants, where the pods and flowers occur in the finest possible decorative arrangements. These selections all tend to the proper emphasis of the exhibition, and should have been placed where they are on any principle of choice, and whether their painters were members or not. But the alignment of some of the other Academicians shows official place-holding in a very ugly shape. The following works of Academy-members are set on the eye-line, besides those just favorably mentioned.

Mr. Addison Richards has his "Cottage Home" thus placed (46), a courtesy perhaps only due to his useful and honorable post in the Academy, where he fills a toilsome and weary office with unfailing assiduity and command of temper ; his "Lake Brientz" (495) is also put on the line. Then there are the thoroughly common "Cattle" of Mr. Stearns, N.A., (84) ; the "Emmaus" of Mr. R. W. Weir, N.A., (91), a work executed with such commanding ignorance of drapery that the figures seems suffocated in sponges ; Mr. J. Beard's, N.A., "Don't you Know me ?" (153), hard, wiry, and without atmosphere; Mr. Sanford Gifford's, N.A., chromo-like "Villa Malta" (154) ; Mr. Eastman Johnson's, N.A., "Pedler" (162), the insufficient repetition of a well-worn model ; Mr. Miller's, N.A., "Long Island," a picture that adds nothing to his reputation ; Mr. Wyant's, N.A., only creditable "Westport" (171) ; Mr. Eastman Johnson's incapable "Portrait" (179) with its badly-painted hands ; Mr. W. Hart's, N.A., Voltz-like "Cattle" (180) ; Mr. James Hart's, N.A., "Indian Summer" (187), threadbare and sere ; Mr. J. Beard's, N.A., fabulous cats and monkey (192), fabulously rich in poor qualities, without the least indication of a perception of what good fur-painting in an interior effect would be like ; Mr. Henry's, N.A., "Bathers," snuffbox painting of over-careful nicety (198) ; Mr. Wood's, N.A., "His First Pipe" (199), an insipid Von Schendel coruscation ; Mr. James D. Smillie's, N.A., "Adirondacks" (214), a machine with the fault of being faultless; Mr. Le Clear's, N.A., "Portrait" (216), an injustice to its painter ; Mr. Guy's, N.A., flat, conventional system of angles and circles, arranged as human figures and labelled a "Bed-time Story" (242) ; Mr. Bristol's, N.A., conventional "Housatonic" (247) ; Mr. Hicks's, N.A., feeble head of Mr. Godwin (248) ; Mr. Colman's, N.A., "Caravansary" (252), quite ruined by attempts, unaccompanied by the ability, to introduce the human figure ; Mr. William Beard's, N.A., "Rehearsal" (266), an effort without his native extravagance, and so merely bad Düsseldorf, with a landscape distance of marvellous vileness ; Mr. W. Thompson's, N.A., indifferent "Out in the Fields" (271) ; Mr. Magrath's, N.A., timid "First Proposal"; Mr. W. Hart's, N.A., "Sunset" (315), with its most singular custard presented as a sky ; Mr. Inness's, N.A., "Wind and Sunshine" (321), containing excellent passages badly harmonized, and a sealed book to the public ; Mr. Hall's, N.A., "Bazaar" (324), a big unnoticeable set-out of wooden images ; the large, technically lean kine of Mr. James Hart, N.A., in his "Through Dust-Clouds" (325); Mr. Huntington's, P.N.A., conventional curtain-and-pedestal portrait (328), with hardly a glimpse of the graces of his youth ; Mr. Wyant's, N.A., "Mount Mansfield" (329), with liquefying foliage in the manner of Mr. Bellows ; Mr. McEntee's, N.A., spiral of thunder-cloud, rolling around itself to canopy the sky (336), ambitious, uncertain of its own forms, and badly sustained by a gauzy foreground ; Mr. Casilear's, N.A., timid "Summer's Day" (354) ; Mr. Loop's, N.A., "Echo," which is to art what "Mild Arcadians ever blooming" is to literature ; Mr. Baker's, N.A., puffy and soft child's portrait (379) ; Mr. Wood's, N.A., "Quack Doctor" (394), every whit as bad as a Frith ; Mr. Sanford Gifford's, N.A., small and berouged "Claverack Creek" (398), valued by the contributor at one thousand dollars ; Mr. Sontag's, N.A., coach-panel landscape (400) ; Mr. Miller's, N.A., creditable but too obviously Constable-like "Cloudy Day" (408) ; Mr. Martin's, N.A., sensitive little landscape impression (410), a melodious aërial bit, but debased with strengthless and sexless vegetable forms ; Mr. Inness's, N.A., "Perugia," with its effort to catch the "silvery" glint of a shower, resulting only in pewter (411) ; Mr. Henry's, N.A., "Long Ago" (434), a Dresden-porcelain bit, not without merit but overwrought ; Mr. Pratt's, N.A., faint "Cottage Door" (442) ; Mr Tait's, N.A., Swiss work-box lid with stag-painting on

it (458); Mr. D. Johnson's, N.A., dull and heavy sheep-picture (466); Mr. Hicks's, N.A., indifferent, flimsy, dry, and heartless study of birches (484); Mr. Cropsey's, N.A., kaleidoscopic, glassy "Lake Nemi" (490); Mr. Ehninger's, N.A., "Thanksgiving," or grinning negro with a turkey (494), apparently gone astray out of the comic department of Mr. Leslie's pictorial publications; Mr. Pratt's, N.A., "Ambitious Student," small, and large enough to show its emptiness (504); and, finally, Mr. Hall's, N.A., "Cairo," a repetition of the meaningless conventionalism of his bazaar scene.

We have mentioned, we think, the whole succession of pictures by Academicians which occupy the line. It is almost incredible that out of the list of Academicians' paintings for which room can be made in that range—a range so contracted that all the occupants can be thus easily described together—we find but a dozen which seem to be of the degree of merit which attracts spectators. Taken for the effect it makes altogether, the selection presented by the Academy of members' work which deserves the line of honor and focus of attention is work which repels and not entices the public. The line of Academicians' pictures as it hangs, taken alone, would not attract a single visitor, the combing of better material we first set apart being by no means so grand as to cancel the deadening effect of the rest. This is a most unfortunate state of things for an Academy calling itself national.

Luckily the exhibition contains enough vital and powerful American work to make it a striking success. But this is the merit of the profane, not of the Levites within the temple. A few fine portraits, a selection of sincere and closely-studied genre, a range of landscapes filled with sympathy and feeling, have been provided by outside contributors, and compose the excellence which rewards popular attention. The remedy of the Academy for its infelicitous attitude, in its own house, would seem to be to absorb the worthy new material as sedulously as it can.

The principal publications of Charpentier, Didier, Didot, Hachette, Levy, etc., on hand; also, complete sets of Tauchnitz's collection of British Authors and Teubner's Greek and Roman Classics. Catalogues mailed on demand. European Periodicals received weekly.

DAVID G. FRANCIS, 17 *Astor Place, New* York, Dealer in Valuable Second-hand Books, has always on Sale 25,000 volumes or more of Ancient and Modern Books in various departments of Literature, for Public and Private Libraries. PRICED and DESCRIPTIVE CATALOGUES of portions of the Stock are issued from time to time, and will be forwarded to book-buyers *free of postage*.
Orders for any obtainable books, American or foreign, promptly filled at the lowest prices.

WANTED—Vol. I. of The Nation (first half-year), at $5. X., *Nation* office.

JUNE ATLANTIC.

(Ready Saturday, May 17.)

Contains, besides other Stories, Essays, Poems,

Study of a New England Factory Town.
By the author of "Certain Dangerous Tendencies in American Life."

Buying a Horse. W. D. Howells.

Art in Engraving on Wood. W. J. Linton.

Physical Future of the American People.
Dr. George M. Beard.

Dobson's Proverbs in Porcelain.
T. B. Aldrich.

The People for whom Shakespeare Wrote.
Charles Dudley Warner.

Recent American Novels.

Irene the Missionary. X.–XIII.

The Two New York Exhibitions.

A Sunday on the Thames. R. G. White.

Contributors' Club, etc.

☞ An unusually brilliant number.

Terms.—$4 a year, 35 cents a number.

NEW BOOKS.

THE STUDY OF PSYCHOLOGY: Its Object, Scope, and Method. Being the fourth volume of 'Problems of Life and Mind.' By the late Geo. H. Lewes. 1 vol. 8vo, $2.

This important part of Mr. Lewes's great work on 'Problems of Life and Mind' was left nearly finished at his death. It has been prepared for publication by Mrs. Lewes, better known as George Eliot.

HINTS FOR PUPILS IN DRAWING.
By Helen M. Knowlton. 16mo, illustrated with 20 Heliotypes, $2.

A thoroughly practical and helpful little book, by one who understands admirably both drawing and the giving of excellent hints.

POEMS OF PLACES. Vol. 30. British America, Mexico, and South America. Vol. 31. Oceanica. Edited by Henry W. Longfellow. $1 a volume.

These volumes complete this unique collection, which embraces a vast amount of good poetry relating to all the countries of the globe.

**** For sale by all booksellers. Sent, post-paid, on receipt of the price, by the publishers,

HOUGHTON, OSGOOD & CO., Boston.
21 Astor Place, New York.

Continued from page iii.

Pennsylvania, Germantown, West Chelten Avenue, below Wayne Street.

MISS MARY E. STEVENS'S, formerly Miss Mary E. Aertsen and Miss Mary E. Stevens's, School for Young Ladies, will reopen Sept. 19, 1878. Scholars prepared for the Harvard Examinations for Women.

Pennsylvania, Philadelphia.

MEDICAL DEPARTMENT OF THE University of Pennsylvania. One hundred and fourteenth Annual Session. The attention of students looking to the profession of Medicine is particularly called to this the oldest Medical School in the United States. Recent changes in the curriculum include a prolongation of the course, and the introduction of much laboratory teaching and practical instruction in all the branches of medical science. For an announcement containing full particulars address James Tyson, M.D., Secretary Faculty of Medicine.

Pennsylvania, Haverford College P. O.

HAVERFORD COLLEGE, under the care of the Society of Friends (Orthodox). Thos. Chase, LL.D., President. For catalogues apply to Prof. Allen C. Thomas, Prefect.

Pennsylvania, Philadelphia, 1527 and 1529 Spruce Street.

CHEGARAY INSTITUTE.—Boarding and Day School for Young Ladies and Children. French is the language of the family. Please send for Circulars.

Pennsylvania, Swarthmore, Del. Co. (10 m. from Phila.)

*SWARTHMORE COLLEGE, a Friends' In-*stitution, for the thorough collegiate education of boys and girls, young men and women. No distinction is made in studies pursued or degrees conferred.
For Catalogue containing full particulars apply to the President,
Edward H. Magill.

Vermont, Brattleboro.

SIMPLE Home School for Boys reopens May 1, 1879. School in session during the entire summer. For circulars address Mrs. Emma J. Ives, Principal.

Vermont, West Brattleboro.

GLENWOOD CLASSICAL SEMINARY.— Fits boys for our best colleges. Rooms heated by steam; grounds extensive. Send for calendar.
C. E. Blake, A.M., Principal.

Wisconsin, Racine (on the Lake Shore).

RACINE COLLEGE begins September 5. *The* College and Grammar School open the same day. For catalogues apply to the Rev. James De Koven, D.D.

Wants.

A FRENCH LADY, diplômée and musician, would like to make an engagement with a good family for the summer months. Highest references. Address E. K., care of F. B. Thurber, Esq., 49 West Twenty-fifth Street, New York.

A GERMAN-AMERICAN lady of twenty will accompany an agreeable lady or family through Germany. Speaks French only moderately well. Address Gesellschaft, *Nation* office.

A HARVARD mathematician will assist by letter. A. S. C., 20 Third Street, N. E., Washington, D.C.

A HARVARD STUDENT, who has taken classical honors, desires a pupil during the summer vacation. The best of references. Address G. E. H., Drawer 30, Boston P. O.

A LADY, a Hanoverian, ten years in this country, studying now for two years in France, desires a situation as travelling companion, governess, or teacher of French, German, and English branches in a private school. Enquire of
H. C. G. Brandt,
Johns Hopkins University, Baltimore.

A LADY, well known as author, reviewer, and paragrapher, desires position as assistant-editor or correspondent; country or city. Box 201, Charlestown, N. H.

ALPHONSE VANDAELL, Cand. Phil. and LL.D. (French native tongue), Professor of Ancient and Modern Languages, Kentucky College, Pewee Valley, Ky., desires congenial employment during the summer months. Terms very moderate. Would prepare one or several young men for college.

A RESIDENT GOVERNESS is wanted in an American family of young children. She must be a Hanoverian, and educated as a teacher; elementary instruction in music is also required. Address immediately R. S., office of this paper.

FRAULEIN REINCKE, native of North Germany (daughter of the late Rev. Dr. A. Reincke, from the University of Göttingen), a successful teacher in New York City, offers a pleasant, comfortable home, with social advantages, to a few young ladies for the purpose of studying German theoretically and practically, other languages, and Music, during the summer, at a country seat in Fort Washington-on-the-Hudson, half an hour from this city. Views and situation unsurpassed. Highest references. Address Fraulein Reincke, care of F. W. Christern, 180 Fifth Avenue, New York.

GERMAN.—An educated North-German family receives a few responsible persons wishing constant practice in German, with board. Instruction given in German, French, Italian, Piano, Singing, Harmony, if desired. Address Mrs. Antonie Schrader Place, Concord, Mass.

GRADUATE OF HARVARD will take a pupil to Europe for the summer. Four years' successful experience in preparing boys for college; has travelled in Europe, and is familiar with European languages. Highest references. Address N. K. F., care *Nation*.

SPANISH, ITALIAN CONVERSATION, Commercial Correspondence taught by rapid method. References. Prof. Manuel Revello, 122 East Tenth Street.

The Nation.

NEW YORK, THURSDAY, MAY 22, 1879.

The Week.

CONGRESS has spent the entire week over two measures neither of which, as they stand, ought to become law, or probably will, if passed, be signed by the President. The Senate has listened to long speeches on the Legislative Appropriation Bill, of which the sections on the jurors' test-oaths and the supervisors of elections were more or less nominally the subject. Mr. Kernan and Mr. Thurman grew warm over the fraudulent supervision of elections in this city under "Johnny" Davenport; Mr. Eaton undertook to show that Webster admitted this government to be a compact; and Mr. Blaine thought he had done a good day's "prodding" when he had convicted Mr. Eaton of having borrowed his Websterian citation from a book of Alexander Stephens's, Mr. Stephens of having garbled Webster, and "Ben" Hill of hypocrisy in pretending that he was a reluctant secessionist. The dangerous section ordering the arrears of pensions to be paid out of the reserve in the Treasury for the redemption of the fractional currency was retained.

The market for silver bullion in London has varied during the week from 49¾*d.* per oz. to 50¼*d.*, and the bullion value of the 412½-grain dollar here varied between $0.8372 and $0.8469. Strenuous efforts have been made in Congress to pass the bill authorizing free coinage and the issue of silver-bullion certificates. The enormity of this bill was well shown by Representative L. P. Morton, of this city, who pointed out that all the silver for sale in the world would seek our mints, there to be stamped as possessing about 20 per cent. more value than it really has, and who asked that if the Government is to issue certificates on silver bullion which shall be qualified legal tender for about 20 per cent. in excess of the value of the bullion, the same favor be shown to other products and property.

The Warner Bill has received what it is to be hoped is a finishing stroke, and the way in which it came illustrates well the difficulty there is in guessing what the average Congressman is likely to do on any important question. The bill, as we have explained, is really a plan for making the Government buy up all the silver bullion that is offered at par in gold. An amendment by Mr. Fort, giving the Government the profit on the coinage, was beaten by 118 to 104. Mr. Marsh then moved an amendment that the coinage charge should be the difference between the bullion price of silver in New York and the legal-tender value of the coin, which of course was precisely the same in effect as the Fort amendment. Now, if the Congressional mind were like the ordinary human mind, this would have been beaten also; but it was not. It passed by 117 to 105. Moreover, the motion to reconsider and lay on the table—the formal clincher—was also passed by 116 to 105. The chances of the bill are now thought to be very small.

This condition of the public credit is a striking illustration of the small amount of attention the people pay to the workings of the Congressional mind. There are now before the House six bills calculated, if passed, to ruin the finances of the country, not counting those which are too ungrammatical and absurd for discussion. One directs the issue of five hundred millions of legal-tender paper to be used "for such purposes as Congress may by law direct"; another proposes to give $1,000,000 greenbacks to certain corporations; another raises the volume of greenbacks to $500,000,000; another proposes to issue $500,000,000 greenbacks in addition to those already afloat, and use the specie reserve to redeem the bonds; another proposes to issue $50,000,000 of fractional currency; another proposes to redeem the bonds in greenbacks; another seeks to compel the Treasury to buy $4,000,000 of silver per month; and then there is the Warner bill, which substantially directs it to buy all the spare silver of the world. Besides these there are dozens of other financial bills still seething in the heads of plain men, as they toss on their boarding-house pillows, who have never found themselves equal to the finances of a moderate-sized grocery-store. Foreign investors think the United States a "great country," but they do not half know how great it is. The market price of their bonds is really no measure of the strength of their credit. With such a legislature behind the Treasury as that of France the bonds ought to stand at 150. It is not too much to calculate the depreciating strain of the Kelleys, Warners, and Buckners at 50; it would bring the Rentes or Consols certainly down to 50 or 45.

It appears that the Administration thinks the moment favorable for a renewal of the attempt to get the European countries to participate in another conference, with a view to fix a common relation of value between gold and silver and thus bring silver into circulation again. The main ground for this belief seems to be the perplexity England is in about the Indian silver-bills; we do not imagine there is really any other, and he must be a very sanguine person who supposes England will seek escape from this by abandoning the single standard, or that Germany will stop short in the process of demonetization which has cost her so much already, or that France will abandon her expectant attitude on the invitation of the country which, however deeply interested in the matter, appears abroad to have given it less patient study than any other. The best, and by far the most dignified, course for us is to stop the coinage of silver, and then wait for the Europeans to act.

It is melancholy to relate that the Republicans have made "a deal" with Kelly and Tammany by which some of the Mayor's nominations have been defeated, and the "Tilden move" thus measurably checked. The "deal" was consummated in the Board of Aldermen on Tuesday, when one speech was made against a nominee for the Police Commissionership on the ground that he lived in Sag Harbor, something which Alderman Houghton was sure the people of this city would never submit to, "home rule" being the object of their dearest affections. Jacob Hess, the remarkable person who has been fished out for the Commissionership of Charities and Corrections, was confirmed unanimously and without discussion under "the deal." The conditions of "the deal," doubtless, are that some Republicans are to have something which they now have not got. One powerful consideration is said to be the successorship of Roberts to the chairmanship of the Board of Aldermen, vice Mott. It looks as if there would have to be another final "rising" against Tammany next fall.

The Legislature will adjourn within a few days, and to the relief of everybody who has watched its proceedings. It has done one sensible thing in passing the constitutional amendment making its sessions biennial. This, however, will require the ratification of next year's Legislature before it can be submitted to the people. The session has been marked by a number of vetoes which have been made necessary by the large amount of hasty and preposterous legislation which has been sent to the Governor. Of all the acts of the present Legislature none was more reckless than the passage of what is known as the Field Code, which went through both houses with the additional chapters of what is called Throop's Code, apparently under the operation of a compromise between the opponents of both codes, by which each side withdrew its opposition to the other's code, and combined to put both through. There is no connection between the two, one being a code of procedure, the other a code of substantive law. It is no new thing for the attorneys of rival railroads

to enter into such agreements for the purpose of procuring favorable legislation, but it is a novelty in codification. The Legislature made no pretence of ascertaining what the Field Code actually contained, but passed it apparently because the Throop party said it was all right, and passed the Throop Code because the Field party said that was a nice code to pass. The Governor, on the matter coming before him, thought it better to look into the codes before signing them, and on looking into them thought it best to veto them. With regard to the Throop Code the public at large cannot be said to have much interest in the matter, as it relates to procedure and makes no very radical changes in that. With regard to the other, it is quite safe to say that no one knows at all what is in it; but it is known that it makes extensive and sweeping changes in the settled law of the State, and that no proper enquiry has ever been made as to whether the changes are needed or what they are.

Further rapid progress was made during the week in the sales of the U. S. 4 per cent. bonds. Of the $121,000,000 taken by the First National Bank Syndicate on the 17th day of April there remain unsold at the present writing less than $25,000,000, the sales since our last issue having exceeded $45,000,000. Of these $15,000,000 were taken by a London syndicate headed by J. S. Morgan & Co., who paid 102 and accrued interest. The price has since advanced to 102½ and accrued interest, or to about 103 to 103⅛ in the market. A good part of the sales have been to persons who were not the owners of called bonds, either 5-20s or 10-40s, and the result is that many institutions, trust-funds, etc., which must invest in U. S. bonds, have not yet replaced the called bonds which they must soon relinquish. The national banks alone have over $40,000,000 of 10-40s on deposit to secure their note circulation, and these must be replaced or the circulation be given up. The delay in making the exchange, together with the purchases of 4 per cents by those who had not called bonds, has practically "worked a corner" in the 4 per cents. The demand for the ten-dollar certificates continues at the rate of about $1,000,000 per day. These will for the most part be converted into 4 per cent. bonds after July, but even then the supply of 4 per cents will not nearly come up to the demand which the Government bond-dealers estimate as inevitable. Altogether, this whole 4 per cent. negotiation is one of the surprising financial events of the age. It comes at a time when business is unquestionably reviving. By lowering the rate of income on the standard investment of the market it has stimulated a great demand for other investments of known good quality, and 6 and 7 per cent. stocks and bonds are selling at unheard-of premiums.

Judge Dundy, of the United States District Court at Omaha, has rendered a decision with regard to the civil rights of Indians which has attracted some attention in connection with the threatened invasion of the Indian Territory. Standing Bear and a few others of his tribe had left the Indian Territory and taken refuge at the Omaha agency, which is under the care of the Quakers. The Government directed General Crook to arrest them and take them back. The Indians, however, sued out a writ of *habeas corpus*, and Judge Dundy has released them from custody. The decision is put upon the ground that these Poncas Indians are "persons" within the meaning of the laws of the United States, and have just as much right to *habeas corpus* as white men. The decision, as we understand it, does not apply to Indians on reservations under treaties. Of course, if their standing before the law were the same as that of white persons, there could be no reason for any of the machinery of treaties, military interference, reservations, agencies, and so on. All the Indian would have to do would be to select any lawful occupation and carry it on in the usual manner, without paying any attention to what General Crook or any other general may say to him. This would be out of the question for many reasons, the chief of which is that the Indian, even the civilized savage, has not reached that point at which he is capable of managing and owning land in severalty. His tribal condition is not an artificial but a natural and fundamental one; and, though it is undoubtedly the duty of the Government to do what can be done to improve it, there is little question that it can only be effected by dealing with tribes and not persons.

There is nothing specially new about the "exodus." The Chicago *Tribune* has a fair-minded correspondent who is travelling along the lower Mississippi, and whose reports confirm the view that the causes of dissatisfaction are physical rather than moral or political. A lull in the movement is expected, now that the new crop is planted and advances have been made on it; but a renewal is predicted in January on a larger scale than heretofore. Much, of course, will depend on the experience of those who have already found their way to Kansas. But while the migrations due to a real fever for change at this time may be temporarily suspended, the better organized, smaller, and less perceptible removals will go on as they have been doing for the past ten years, from States not notoriously unfriendly or cruel to the black population. Southwest of Topeka is a settlement called Singleton after a colored colonist of that name, who since 1869 has been constantly travelling between Kansas and Tennessee and Kentucky, arranging little parties to try their fortunes as land-owners in the former State. That he began his labors in the first year of General Grant's administration, and has not since ceased from them, is a sad commentary on that President's Southern policy, not to be overlooked by those who regard the present movement *en masse* as a result of Southern faithlessness towards Hayes, and who forget that it was under Grant also that the "Mississippi plan" succeeded.

The migration continues to be the theme of many communications to the daily press, with the result of putting the political motive more and more in the background. The intelligent correspondent of the Chicago *Tribune* in Mississippi sums up the chief causes of the exodus as follows: "1. A pernicious credit-system. 2. A land-monopoly. 3. Political oppression." But for the first two causes he thinks the bad crop of last year would have had no discouraging effect on the blacks. He points out that the planters themselves are now, as before the war, pecuniarily dependent on the cotton-brokers who make them advances, and whose interest, charges, and commissions, secured by a lien on the crop and the plantation, seldom fall below 15 per cent. of the whole crop. This drives the planter to get back as much as he can from his tenants by like charges, liens, and unsparing foreclosures. In fact, if the laws permitted them to prevent the negroes from leaving the State virtual re-enslavement would ensue. He concludes that "the credit-system has been injurious to all classes alike, but especially to the laborers." A shrewd black man confirmed this to another correspondent of the *Tribune* by saying that "the poor white man was in the same boat with them, and suffered equally with the negro from exorbitant rents and unreasonable prices for supplies." And a white member of the Committee on Resolutions at the late Vicksburg Convention calls our attention to the fact that "in Madison Parish, Miss., whence more emigrants have gone than perhaps from all the other parishes of the State, the public offices are held by negroes, and at present the parish is represented in the Constitutional Convention by two negroes; and, as further stated by the delegates from that parish, not a political riot has ever occurred there since the negroes have been voters and not a life lost at the polls. The freedom of the ballot has been maintained inviolate as to them."

The report of Prince Bismarck's speech in the Reichstag on the proposed changes in the tariff has come out. He began by calling the measure one of financial reform, intended to put the finances of the Empire on a proper footing through its own taxes without depending on the contributions of the various states, and the sole reason why he had not proposed it sooner was that he was too much occupied with his purely political duties and his health was not good. As to Prussia, he wished to lighten the burden of the land and house-tax. He maintained, moreover, that the tendency of modern legislation everywhere is to substitute indirect for direct tax-

ation, and that the drift of sentiment was also in favor of protection as against free-trade. From 1864 on Germany had drifted towards free-trade, but this was because the prevailing economical influence came from France, which was then the leading nation of Europe. Germany must now protect herself against being flooded with the cheap goods of other nations, and the dream of a great system of exportation must be given up because there are no new countries to discover or new markets to open. The protectionist countries, he maintained, were all prosperous, while the free-trade countries were in a bad way; and then Germany demanded, above all things, some certainty in her economical future, and must have it.

The speech was in many ways characteristic of the orator, above all in the absolute recklessness with which he made such statements on matters of fact as suited his purpose, and in this bore a curious resemblance to the oratory of Lord Beaconsfield. He acknowledges that he has never given any attention to economical matters until now, and there is little doubt that he takes but little interest in them. But he is determined to put the Empire in possession of a revenue and to secure the support of the small landholders against the National Liberals since he finds the Socialists cannot help him, and he accordingly produces large views as to the economical tendencies of the modern world. His facts and figures were severely assailed by Herr Delbrück and others, and there was before the close of the debate a violent scene, and Herr von Forckenberg, the President of the House, has resigned, ostensibly on account of ill-health, but really because his party have been beaten completely by the Conservative-Clerical combination, through whom Bismarck has carried his tariff legislation. The Clericals are, it is said, to be rewarded by a proclamation of amnesty for violations of the Falk laws on the Emperor's birthday.

Lord Salisbury has made a speech giving an account of the present condition of the Treaty of Berlin, which he says is at last being executed to the letter; but the effect of his remarks, if one may judge from the comments of the press, would be painful to a man more sensitive than he seems to be. They were received in the House of Lords in dead silence. In fact, the air of "humbug" which has hung round the quarrel with Russia from the beginning, and which gave the published despatches a buncombe sound, seems to hang round the Treaty. As before, the unpleasant features of the Treaty are got rid of by a private understanding like the Shuvaloff Memorandum. Russia was to evacuate Rumelia, by the words of the Treaty, on the 3d of May. But Russia did not want to go, and maintained there would be disturbances if she did go. Accordingly, Lord Salisbury now calmly declares that the true intent and meaning of the Treaty was that Russia was not to begin to evacuate until May 3. Then the great victory of Lord Beaconsfield at Berlin, for which indeed he got his Garter, was that the Turks were to have the Balkans, so as to give them an "impregnable frontier." It is now arranged, however, that though the Sultan possesses this invaluable right, he is not to exercise it. So also the Governor of Rumelia, Aleko Pasha, an able and cultivated Bulgarian, was to call in Ottoman troops in case the peace of his province was disturbed; but it is now arranged that though retaining this privilege he is not to use it. The London *Economist* observes, with bitter irony, "that it only remains to ascertain the opinion of the English people upon these magnificent achievements, but for enlightenment on this point we must wait for a general election."

The Afghan difficulty seems to be in a fair way of settlement, Yakub Khan having come into Gundamuck and, it is reported, agreed with Major Cavagnari on the basis of peace, in which he concedes everything that is asked in the way of frontier and the presence of British agents in Afghanistan. But then it appears that the Indian Government has determined not to ask nearly so much as was talked of in the early Jingo period of the war. A certain mystery hangs over the object of the war still, however. Before it broke out both Lords Beaconsfield and Salisbury ridiculed the idea of an invasion of India in any way, but Beaconsfield said if it came at all it could only come by way of the Euphrates. This left it difficult to account for the attack on Afghanistan, but he was equal to the occasion, for he said it was to acquire a "scientific" instead of a "hap-hazard frontier." The entrance into the Amir's territory has, in the Khyber Pass side, been acquired largely by the purchase of the mountain tribes; the fighting has consisted in the main of insignificant skirmishes, the Afghan resistance not proving one-tenth as formidable as that of the Zulus. Russia, too has shown no interest in the matter; the army is tired of the campaign, and people are naturally asking what is the use of the "scientific frontier" now that they have got it.

It has, however, cost about ten million dollars thus far, and this is the most serious part of the whole business, for the finances of India are in a condition that is rapidly becoming very alarming. The last limit of taxation has been reached, if indeed it has not been passed, for in the Bombay Presidency there has been a renewal of the old brigandage known as dacoity. Large bands are roving through the country attacking houses and villages, and headed by an ex-clerk of the civil service, who has issued a most impudent proclamation threatening the governor and other high officials with death. The evil has proved too strong for the ordinary police, and the troops are now in chase of the marauders. Incendiary fires and other forms of disorder, too, have begun to show themselves. What makes the situation really serious, however, is the prospect of another famine, covering a wider area than any which has gone before it. The rain-fall is short, apparently, over the whole of the peninsula, from the mountains to Cape Comorin, and if it does not come very soon the Government will be face to face with an appalling, and probably irresistible, calamity with the treasury empty. There is already talk in London of the absolute necessity of sending out a Governor-General skilled in finance in order to avert a total crash.

There have been no further operations in Zululand, but the Government acknowledges that Lord Chelmsford has called for further reinforcements preliminary to any advance, and that three fresh battalions will hardly suffice. The cavalry arrived from England is almost useless owing to disease among the horses, and Cetewayo is said to have retired to very inaccessible districts and to threaten to burn the grass in case he is pursued, thus making it impossible to follow him for want of subsistence for the transport animals. The Dutch Boers of the Transvaal, too, are intractable. The utmost they will promise Sir Bartle Frère is to keep quiet; assistance they will not render.

There is to be a conference of the Powers at last to force the Porte into settlement with Greece. The Greek Government has published a circular despatch giving an account of its attempts to negotiate with the Porte, and nothing can be more diverting than the picture it presents of Turkish character, the simplicity, loyalty, and transparent truthfulness of which were, even a year ago, a frequent Jingo theme in England. The Turkish Commission appointed a meeting with the Greek Commission in a village called Kukut, for which the poor Greeks searched in vain for eighteen days. On their giving it up it came out that there was no such village, and that the village the Turks meant was Anino. They then searched for this, but found it also was mythical, the only spot answering to the name being one in which there were the ruins of two barracks, and nothing else. Besides this, the Turkish man-of-war refused to let the steamer containing the Greeks enter the Gulf of Arta pending the receipt of instructions. In this way so many delays were secured that the Commission, having started on the 30th of January, did not succeed in finding the Turks till the 8th of February. It is needless to say that when they found them the Turks had not the slightest intention of coming to any agreement. They shuffled along, postponed, equivocated, and lied, hoping something would turn up, and now the protecting Powers have to take them in hand again.

THE BI-METALLISTS AND THE COMMERCIAL CRISIS.

THE prevailing depression in business from which this country has been suffering for six years, and from which nearly every country in Europe is suffering still, has probably furnished support to a greater number of conflicting economical theories than any other occurrence of ancient or modern times. The causes of it have undergone a remarkable amount of examination from writers of every school and of almost every calling, and nearly every writer has managed to extract from it support for some theory of which he had previously been the champion. In fact, it has been to economists and social philosophers of all shades of opinion a sort of quarry such as the Roman Coliseum furnished to the mediæval builders. Materials for every sort of structure have been drawn from it, and it still continues to be worked with almost undiminished industry. The variety of purposes it has been made to serve is of course due, as we pointed out some time ago in the *Nation* (No. 640), to the fact that the crisis has overtaken so many countries, each living under a political and economical régime differing in a greater or less degree from that of the others. It has overtaken the limited and absolute monarchies and the republics, the free-trade and protectionist countries, the lightly and heavily-taxed countries, the high and low-tariff countries, the countries with great standing armies and the countries with none, the Germanic and the Latin countries, the Catholic and Protestant countries, the countries of indissoluble marriage and those of easy divorce, the bi-metallic, monometallic, gold-standard and silver-standard, and irredeemable-paper countries with the impartiality of the rain or the sunshine. The result, we need hardly say, has not been to raise the reputation of political economy as a science. In fact, it has never seemed so little of a science as during the past five years, owing to the extraordinary array of proof and illustration which the holders of the most widely-divergent views have been able to produce. The most thorough and impartial examination of the matter which we have seen, and the only one which can be made to fit the facts everywhere, is that of M. Maurice Block, in the number of the *Revue des Deux Mondes* of March 15; but we need hardly say that his conclusions have but little polemical value.

Two sets of theorists have, however, thus far managed to extract more advantage from the crisis than any of the others—the protectionists and the bi-metallists. The depression has really, to all outward appearance, been as damaging to the protectionist theory as any other, for it has ravaged protectionist countries fully as much as the free-trade countries; but then protection offers what none of the other theories does—a prospect of instant relief to the sick trader. His suffering is due, as every one sees, to the presence of too much goods in the market; the obvious remedy is a diminution in the supply, and this can always be produced at once by excluding the foreign producers. The average man understands this treatment thoroughly, and he consequently, especially with bankruptcy impending over him, clamors for its instant trial. About its remoter results—that is, about the state of things it will produce five or ten years hence—he does not trouble himself. By that time he hopes he will have saved his credit and extricated his capital. Consequently a great wave of protectionist sentiment has flowed over Germany and France, and even England, on which the record of prosperity during the low-tariff period produces no impression. Even the robust faith of many of the English free-traders has been shaken. They have not got quite so despondent as yet as to clamor for absolute protection, but they demand "reciprocity," or protection against protectionists.

Next come the bi-metallists. There is nothing in the crisis to indicate that it was in any degree due to a scarcity of coin or to the use of either an exclusive gold standard or an exclusive silver standard. It has befallen countries under every kind of monetary régime, and, as M. Block shows, we think clearly, it had its roots in a period before the silver question began to attract any notice. Two years ago the bi-metallists had but feeble standing among economists. The tide of experience had been running steadily against them for a century. It is safe to say that nothing has been better established by experience than the impossibility of a double standard, and the inability of the legislature to provide the measure by which people fix prices, or do anything more than provide the instrument by which people pay their debts—or, in other words, the legal tender. The indiscriminate use of two metals for the purposes of trade, except in small change, has in fact never been witnessed anywhere. One is always exported and the business of the country carried on in the other, or its representative in paper. Moreover, it is well established as a law of economical history that as a people grows rich and increases the number of its transactions it gradually discards the clumsier instruments of exchange, and reaches out for that which does most work with least weight and bulk. In this way iron, copper, and silver were successively laid aside in the ancient world, and there is every reason to believe that we are witnessing the last stage of the process in our own day—that is, that the rich manufacturing and trading communities of modern times have reached the point at which they refuse any longer to do business with silver, and insist on having gold and paper for the adjustment of all but the smallest transactions. This is really the meaning of the steady drift of the Western world towards the gold standard, and the gradual demonetization of silver, accompanied by a growing reluctance of the people in every highly-civilized country to use or circulate it. They cannot be made to like it and live by it in any of the richer countries, no matter how abundantly it is coined. They will have gold or its representative, and by the great growth of international trade and the use of clearing-houses the transactions which are settled with very small amounts of gold are enormous.

The fact is, and it is a fact which bi-metallists seem often to forget, that the science of finance is the science of popular wants and wishes, and nothing else. Its laws are the laws of human nature, and the business of the legislator is not so much to control them as to provide for their free action. If all the world needed to make trade prosperous was plenty of money, copper, tin, and lead could be freely used to supply it. The reason they are not used is the very force against which the silver-men are all fighting—the unwillingness of the people to put up with them. Whatever inconvenience any present or prospective rise in gold may cause, the laws of human nature draw steadily towards any contrivance which will do much work with little machinery. However hard it might be on debtors, the civilized world would probably be enormously benefited if it were possible to settle a balance of a million dollars by the payment of ten gold eagles, and it is a dim but growing perception of this which causes the present drift towards the dear and scarce metal. There is no doubt that this fact is full of inconvenience. The change is going on in a world burdened with enormous public debts, and with huge amounts of capital sunk in buildings and machinery and railroads at very high prices; and if the general adoption of the gold standard causes considerable shrinkage in values, it will entail on all debtors a good deal of hardship.

Accordingly the bi-metallists come forward and maintain that this shrinkage has begun, that it is the disuse of silver which is lowering prices by causing a rise in the value of gold, and they even go so far as to declare the exact extent to which gold has risen—viz., twenty per cent. That this is a mere guess it is not difficult to see. The value of gold is measured not in any one other commodity, but in all other commodities. Consequently, to prove that it had risen we should have to show, at least with regard to the leading products of industry, that nothing but a rise in gold had occurred to reduce the demand for them, or lower the cost of their production. We need hardly say that there is not one of them the present low price of which cannot be accounted for in ways in nowise connected with the supply of gold. An examination of the history of even half-a-dozen of them during the last ten years would reduce the gold theory to the rank of a most shadowy speculation, on which it would be preposterous to base legislation. There has, too, it is quite certain, been but little if any falling off in the supply of gold during the past ten years, and

certainly none which has not been more than compensated by the improvement in the machinery of exchange.

That the world may be threatened with a scarcity of gold is very possible. The latest and most exhaustive examinations of the prospects of gold production, such as that of Suess, seem to show that we are approaching its limits in all the regions now known to us. But the fear excited after the discoveries in California and Australia that the world was going to be flooded with it, which led several states into demonetizing it, is a warning against hasty action in the other direction, and especially hasty action in the midst of the mental confusion produced by the prevailing commercial distress. This is emphatically a period in which the policy of sitting still, so much praised by the late Mr. Bagehot, is to be commended. Disregard of it last year has put the United States Government in a somewhat ridiculous position on the silver question, which may be aggravated by another fussy attempt, which we see is in contemplation, to get the European Powers to help us out of our trouble. There is a ready way out of our trouble, in which we need for the present no co-operation, and that is to stop coining silver, and then wait and see what will happen. If the silver problem is as serious as the bi-metallists say it is, this expedient would undoubtedly before long bring other nations to us and save us the labor, and we may add, after all that has occurred, the humiliation, of again going to them.

THE GRANT DILEMMA.

WE print on another page an appeal from a correspondent for an explanation of the means by which we look for an escape from what is called "the Grant movement," as a necessary addendum to the denunciation which we have so freely heaped on it. We answer, in the first place, that General Grant has not been nominated. The Convention will not meet for a year from this date. It seems to us that the sole duty of a journal opposed to his nomination is in the interval to do what it can to influence public opinion in such fashion that when the Convention does meet he will receive no strong or overwhelming support in it. What else can any one do whose business it is to address the public? In short, our remedy for the Grant movement is a very simple one—not to nominate Grant. A more complete and radical cure it would be hard to suggest. To secure resort to this cure, we point out as well as we can the dangers to the party and to the country which we think would result from giving him a third term. Should this fail—that is, should the Convention nominate him in spite of all opposition—a new state of facts will have arisen, calling for different treatment. We may say in advance, with regard to this, that we do not believe anything but an atrociously bad nomination on the part of the Democrats would secure his election. There is, we are sure, a very large body of Republicans in all parts of the country who do not care to speak out now, but who, if the Grant régime is again offered for their acceptance, will bolt or stay away from the polls, come what may. They can swallow a good deal, but they cannot swallow that. If the Democratic candidate is for them an impossible person, we believe there will then be some mode of escape provided for them either from a cowardly silence or from open acquiescence in what they believe to be ruinous policy. There are already signs, however, that the Grant movement is declining. Many shrewd Republicans, though not troubled with scruples, begin to see clearly that the support of Grant is in reality an acceptance of the very interpretation of the Republican opposition to the repeal of the Army Bill which the Democrats are anxious to have the country adopt—that is, that it really means that the Republicans desire to retain in their hands the power of military interference with the elections, and demand a military man of somewhat lawless temper to work the machine. Should the party be defeated on an issue of this sort, its enemies calculate with much plausibility it would share the fate of the Federalists, and disappear from the scene under a cloud of odium, as a party which had lost faith in American institutions, and came in its last days to think of nothing but the defence of capital by bayonets.

This view, too, is greatly strengthened by the fact that it is notorious that Grant failed as a political leader. In the middle of his second term the Republican party actually lost all the great States at the North by large majorities, and in losing them lost the hold on the Government which they had retained since 1861. That this disaster was due to the disgust excited by the scandals of the Administration, both in the Southern States and in the Northern, nobody denies. The offer of a third term to him, therefore, would be held to indicate that his supporters sought not a shrewd party chief to enable them to retain the confidence of the voters through the ordinary agencies of party strife, but a skilled soldier to enable them to carry out some scheme of violence. We do not believe the majority of those who are shouting for him really have any such plan distinctly formed in their minds; but it will be by no means difficult to use their wild talk and reckless action as proof that they mean to break up the Government or change its character, by introducing into it, and lodging in the popular habits, the Cæsarist idea, which is very simple, and consists in the single proposition that every great state ought to have "a strong man" to "mash" the persons who try to take the offices away from the good men. In other words, the Republicans may be reminded painfully that the war-feeling, powerful as it was, and powerful as it still is with large bodies of the people, will not bear indefinite wear. The generation which took part in the war may be able to stand it as long as they live, but new generations come forward rapidly who soon get tired of the drum. It is natural for a party which has succeeded in a great war to try to make the most out of it, and to believe that they are a providential party, whose duty it is to remain in power by hook or by crook. But if they overdo it in the least the reaction is apt to be terrible. The English Tories came out of the French war covered with glory, and in 1815 they and their Iron Duke seemed likely to govern England as long as they pleased. Within sixteen years the duke's windows were broken, and the Ministry had to surrender to a threat of armed revolution. That the plan of living on the war was deliberately adopted by the Republicans in 1875, on finding themselves in danger of being overwhelmed by "Grantism," no one who has watched the talk of the chiefs since Mr. Blaine in that year began to "prod" Mr. Hill and the other Southern members, can doubt. It is true that the Democrats have fallen readily into the snare set for them, and have helped the Republicans to carry out their policy, but this cannot make a permanent political situation. There will have to be a break before long, and it will be unfortunate for the Republicans if it catches them with the bugle in their hands and an American "saviour of society" at their head.

That the task before the more thoughtful Republicans, in case the Convention is swept away by the Grant movement, would be more difficult than it seemed seven years ago, or even four, there is no doubt. The result of the Convention which nominated Greeley, of course, made reform seem somewhat ridiculous, and might have killed all talk or expectation of it if Grant's second term had not proved so disreputable. It was this that made it possible to obtain recognition and condemnation of scandals and abuses, and formal promise of improvement in the platform of 1876 and in Mr. Hayes's letter. The success of the Stalwarts in reviving the war-issues, combined with Mr. Hayes's want of positiveness and aggressiveness, has in a measure renewed the difficulty and discouragement of 1872. But, on the other hand, his Administration has done a great deal of good which makes little show, but which we are confident is silently telling on opinion, and will in good time bear fruit. He has cleansed the administrative machinery of gross corruption. He has cleared the White House and the Departments of disreputable persons, and, what is better than all, he has familiarized the public mind once more with legal and peaceable methods. He has obeyed the law and respected the courts, and has, as far as Congress would let him, brought the country back to the paths of peace. He has, too, in spite of many difficulties, restored the

Government credit, and has staved off the attacks of Congress on it. The result is that, though he has not realized the expectations of those who were his most zealous supporters, his Administration, as time has gone on, has done much to revive their hopes, and, we believe, to prepare the way for another step forward in 1880.

THE NEWEST PHASES OF THE EASTERN QUESTION.

PARIS, May 2, 1879.

THE election of Prince Battenberg as Prince of Bulgaria has just taken place, and gives a sort of living proof of the reality of the provisions of the Treaty of Berlin. There can be no longer any question of the famous integrity of the Ottoman Empire ; one after the other the European parts of this Empire are torn from it or allowed to separate from it. The Crimean War, begun under the pretence of protecting the integrity of the Ottoman Empire, ended in the final separation of Wallachia and Moldavia ; the two principalities, first united under a native ruler, are now under the rule of a prince of the house of Hohenzollern. Prince Battenberg, who has just been elected ruler of Bulgaria, is the nephew of the Czar ; he belongs to the house of Hesse. German rulers are taking possession of the East, and accept the mission of introducing Western culture in the provinces which have so long been kept by the Turks in a state of barbarism. Meanwhile Austrian forces are quietly occupying most of Bosnia and Herzegovina, and a recent convention has allowed the Austrians to occupy conjointly with the Turks the Sanjak of Novi-Bazar, in the southeast of the former province. These provinces are now completely administered by Western officials ; and though their occupation is, so to speak, only temporary, there is little doubt that, under one pretext or another, it will become permanent.

Eastern Rumelia, or the part of Bulgaria extending on the southern side of the Balkans, was not allowed at Berlin to remain with Bulgaria proper, extending on the northern side. The Congress of Berlin did not accept the wide ethnological definition as given by Prince Ignatieff : Bulgaria was contracted so as to leave to the Turks the command of the passes of the Balkans ; it was thought that if the southern slopes of the Balkans were given to Bulgaria there would in reality be no permanent obstacles left between Russia and Constantinople. This so-called Eastern Rumelia, diplomatically baptized and created, has but an artificial existence ; it has been occupied, ever since the peace was signed, by Russian troops and administered by Russian authorities ; a native militia has been organized. Prince Dondukoff-Korsakoff, who accepted the mission of occupying Bulgaria and Eastern Rumelia, lost no time ; he did all he could to foment a Bulgarian feeling, even in the province which was destined to return under the sway of a Turkish governor. The situation is such now in Eastern Rumelia that the Russians dare not leave it, and the Turks dare not occupy it, for fear of a popular outbreak.

The retrocession of Eastern Rumelia to Turkey was chiefly the work of England, during the negotiations of the Treaty of Berlin. Lord Beaconsfield was quite intractable on this subject ; but he has since had his own part of the Turkish spoils. England is occupying the island of Cyprus, and who believes that this occupation will be temporary ? Turkey loses as much by her saviours as by her enemies. The truth is that the hand of the Commander of the Faithful can no longer keep the sceptre of the Caliphs; the knot which tied so many lands and peoples together is untied. I have always maintained that it would have been wiser and better to approach this great Eastern Question with large and comprehensive views, with a desire to make a new settlement in the East—to accomplish, in fact, a partition of the East. The partition will take place, it is taking place perforce; but each stage of this fatal work is now marked by terrible efforts, by expensive and destructive wars. Twice now in this century the Russian armies have had Constantinople in their grasp ; twice Europe has pronounced her "ne plus ultra." The disappointment of Russia has had already singular effects. It was not possible for her to make war as she did under the constant threat of an English intervention, without stirring profoundly all the feelings of the people. As she was condemned in advance not to make conquests, she was obliged to spread ideas of national independence among the Christian populations of the peninsula of the Balkans. During the last war Russia was in a perpetual ferment ; the Russian people was told that it had a great mission to accomplish, that it was the apostle of Christian liberty. A constitution was given to the new Bulgaria which is full of all the phraseology of our old French constitutions upon the rights of man, etc.; at the same time Russia, which has made huge sacrifices during the war, was obliged to renounce most of her material conquests; she only regained a portion of Bessarabia which had been torn from her in the Crimean war, and acquired a part of Armenia and the territory of Batum. Who can say that the movement which now agitates Russia under the name of Nihilism has nothing to do with the disappointments and resentments of many Russians ?

There are evidently two things in this Nihilism : there is first the spirit of revolution, which is the same all over the world, though it takes different forms in different places. The revolution which Donoso Cortés so eloquently compared to the ancient furies, with heads covered with serpents, the revolution whose destructive force is undermining all living societies, has at once found in Russia its true name : it is truly a nihilism —"ex nihilo nihil." It can only destroy ; it is like death—a return from the organized state to the inorganic, to the atomic state. But besides this revolutionary element Russian Nihilism probably covers also something quite different—a vague aspiration towards a better organization of the national forces. I will not here discuss the second element of Russian Nihilism ; I am only speaking of it in its connection with the settlement of the Eastern Question. It is clear that if you give to a great country a mission, if you mark out for it a "manifest destiny," you give an opening to the energies of the race, and you hinder it from using these energies for its own destruction. What would become of England if there were no more bonds between the "little island" and the whole universe ?

The election of Prince Battenberg as sovereign of Bulgaria may be considered as a triumph for the Russian policy, and may so far contribute to give some satisfaction to the disaffected members of the Russian community. Prince Battenberg is young ; he will be placed under the tutelage of Russia and surrounded with Russian advisers and officials, and the presence of the Bulgarian community will act on the populations of Rumelia as the presence of Piedmont once did on Lombardy, Venetia, and Tuscany. The policy vulgarly called of the artichoke has been successful in Italy ; leaf after leaf was taken by Piedmont, and there is but one people now from the Alps to Sicily. The same policy will be tried in Turkey with more difficulty, as there are several races in the Oriental peninsula. A partition will be necessary, and one of the difficulties of the question will be the necessity of giving to Greece its proper share of importance. It is well known that Prince Leopold, before he became king of Belgium, refused the crown of Greece, because he did not think that Greece could well live within the limits which had been assigned to it by the European powers.

For the time being it seems as if the difficulties of Russia in the East were on the decrease rather than on the increase. The panic of Nihilism will not last long ; Russia will wake up from her present nightmare, and when her position is calmly surveyed it will be seen that she has obtained by her last war even more than what Napoleon I. promised to Alexander at Tilsit. Meantime, the difficulties of England are increasing in the East. The recent events in the valley of the Nile have brought about a real crisis ; the policy of action adopted by Lord Beaconsfield is now on its trial. So far the policy of action has been successful. It succeeded at Berlin, since it procured for England the possession of Cyprus and the convention with Turkey, which amounts practically to the tutelage of the Asiatic provinces of the Ottoman Empire ; it has succeeded in Afghanistan, notwithstanding all the dark forebodings of those who remembered the disaster to the English arms in that province. It seemed at one moment as if the partisans of the non-intervention policy in England had nothing more to do than to write articles on the fine arts in the popular reviews. Beaconsfield's prestige was greater than the prestige of Palmerston ever had been, and he carried with him not only the people but the sovereign, which Palmerston had never done. England had reconquered by a bold stroke what she had lost during the Second French Empire ; she had proved to the world that the British lion could do something more than growl. She had again an imperial policy ; she was ready to defend by all means the road to India. Queen Victoria had boldly assumed the title of Empress of India, so as to show to the world that India was something more than a vulgar dependency and a market for British goods. And at the very moment when this new policy had marked itself in the strongest manner, a petty pasha, turned into a khedive (Khedive means nothing better than 'highness'), consciously or unconsciously upsets the whole fabric of this imperial policy. He dismisses the ministers which England and France had given to him, almost contemptuously ; he places himself at the head of a national party, and says, "Egypt for the Egyptians." The definition of Egypt by Lord Beaconsfield and his school was, "The road to India"; the defi-

nition of Ismaïl Pasha is altogether different—it is the land of the Pharaohs, the Valley of the Nile, leading to the Sudan, to an immense and almost unknown equatorial empire. England and France have been quite amazed by the boldness of the Khedive; they are both meditating upon the policy which they ought to follow in this critical affair. The Egyptian question has become a turning point not only for the Administration of Lord Beaconsfield but for the first Administration of M. Grévy and for the policy of the French Republic.

Correspondence.

THE CURE FOR GRANTISM.

To the Editor of The Nation:

Sir: Being a constant reader of your journal myself, and believing that you represent the feelings of a large majority of thinking Republicans in your criticisms on the Grant movement and the control that the "machine" politicians have over the party, allow me to ask if you cannot suggest some way out of the dilemma.

There are many good Republicans who agree with you that in the long run the election of General Grant will be very disadvantageous to the party, yet who will vote for him unless some better man be nominated. A physician who should do nothing but describe the alarming symptoms of his patients—no matter how truly—and foretell the fatal results of their disorders, would be very apt to lose his influence as a skilful practitioner from the fact that, though he were able to detect danger, he yet failed to point out the means to avoid, or, at least, mitigate, the evil.

It seems to me that the case of the *Nation* is in this respect a somewhat similar one, for while its criticisms on existing evils are very just, at the same time its readers would like to see (as they have reason to expect from a journal of its standing) some plan for correcting these evils suggested. Very respectfully, D. S. C.

New York, May 16, 1879.

"CONVICTION."

To the Editor of The Nation:

Sir: In your recent review of the Fitz-John Porter case the presentation of the testimony of Lieut.-Col. T. C. H. Smith and of Judge Holt's reference to it is calculated to leave certain erroneous impressions which I will thank you to allow me, for the benefit of your readers, to correct.

You begin by assuming that the witness was, at his interview with General Porter, prepossessed against him by a knowledge of his despatches to General Burnside. The record shows the contrary, and the witness testified that his prepossessions were favorable to General Porter.

You then go on to give by partial quotations some of the expressions of the witness in reporting to General Pope his interview with General Porter, and his consequent conviction as to what would result from the latter's disposition in regard to his commanding general and the pending operations; and you blend with these, as a part of the report, the heated expressions used by Colonel Smith in warning General Pope of the strength of his conviction, when the latter had scouted the conclusion at which his staff-officer had arrived as not deserving of attention. This distinction is of consequence when, as in your article, you undertake, without presenting the record, to give an idea of the temper and way of thinking of the witness as affecting the value of his testimony.

Your comments on the Judge Advocate-General's remarks upon the testimony of the witness need no better answer than to bring you face to face with another critic, and one who will probably be recognized generally as fair and exact. The following are Whately's views regarding the "foundation" of our judgment upon individuals:*

"Our judgment of the character of any individual is often not originally derived from such circumstances as we should assign, or *could* adequately set forth in language, in justification of our opinion. When we undertake to give our reasons for thinking that some individual, with whom we are personally acquainted, is or is not a gentleman, a man of taste, humane, public-spirited, etc., we, of course, appeal to his conduct or his distinct avowal of his own sentiments, and if these furnish sufficient proof of our assertions we are admitted to have given *good reasons* for our opinion; but it may be still doubted whether these were, in the first instance at least, *our* reasons which led us to form that opinion. If we carefully and candidly examine our own mind we shall generally find that our judgment was originally (if not absolutely decided), at least strongly influenced, by the person's looks, tones of voice, gestures, choice of expressions, and the like; which, if stated as reasons for forming a conclusion, would in general appear frivolous, merely because no language is competent adequately to describe them, but which are not necessarily insufficient grounds for beginning at least to form an opinion, since it is notorious that there are many acute persons who are seldom deceived in such indications of character.

"In all subjects, indeed, persons unaccustomed to writing or discussion, but possessing natural sagacity, and experience in particular departments, have been observed to be generally unable to give a satisfactory reason for their judgments, even on points on which they are actually very good judges. This is a defect which it is the business of education (especially the present branch of it) to surmount or diminish. After all, however, in some subjects no language can adequately convey (to the inexperienced, at least) all the indications which influence the judgment of an acute and practical observer; and hence it has been justly and happily remarked that 'he must be an indifferent physician who never takes any step for which he cannot assign a satisfactory reason.'"

Whately in a foot-note refers to Aristotle's 'Ethics,' Book 6, having reference probably to what is said there on the quality of apprehension.

It is seen that Whately recognizes it as a fact of ordinary experience that in reporting our judgment of individuals, even when we can cite "an avowal of sentiment" which will so far furnish to others reasons for our conviction, yet our judgment may have been originally and absolutely decided by reasons which we are unable to set forth in language. In this case the witness gave the substance of a conversation which showed that while others were thinking of battle, Porter was thinking of getting back to Alexandria, where McClellan lay in command; and that the only reference Porter could make to the successful battle of Hooker the evening before was, that it would "hurt Pope" because he had left the wounded behind; and that when Col. Smith informed him that Gen. Pope had given stringent orders to bring the wounded away, he expressed no satisfaction, uttered no word of relief that might show that his interest in the matter had been owing to anxiety for the wounded, but, on the contrary, replied only with silence and the look of disappointment. It is seen also that Whately affirms that similar observation and judgment, even when life is at stake, and by the most competent physicians, are used and acted upon.

In the argument presented by the accused the testimony we are considering was treated as "insane ravings." It was the duty of the Judge Advocate-General, if he regarded the witness and his testimony as deserving of consideration, to defend accordingly. He did so; and, in so doing, affirmed no other doctrine than that which Whately had affirmed: that such testimony cannot be regarded as invalid on the ground that it is unwarranted by ordinary human experience.

That a man who has rendered such public services as Judge Holt; who, when it was the object of those contriving the rebellion to take advantage of the weak vacillation of the then Executive and break up the lawful transmission of the Government, was able, hand-in-hand with Stanton, to conduct us safely over the bridge to the firm ground of legitimate succession; to whom we are mainly indebted for the exposition of the character, designs, and organization of the great secret conspiracy in the North in aid of the rebellion, and for its defeat; who throughout the long struggle was one of Lincoln's nearest and most trusted advisers—that such a man, one of the masters of American eloquence withal, should, when living in his old age in honorable retirement, have such comments as you have indulged in made upon utterances which are but the affirmation of the best Greek thought at the beginning of philosophy, and of the latest and most exact and careful observation and criticism of our own day—is a sign of the times which it is well for all to consider who have not wholly passed over into reactionary sentiment.

As in treating of the matter on which I here address you, you have, I think, passed from the region of argument and just criticism into that of personalities, I think it proper to ask you to insert this reply.

Your obedient servant,

T. C. H. Smith.

Washington, D. C., May 12, 1879.

[Colonel Smith appears to be laboring under a singular mistake as to the nature of the question between us. He quotes Whately, and even Aristotle, to show that as a matter of fact we do often form our judgment of the character of individuals from circumstances which we are unable to assign or set forth in adequate language. But nobody has ever doubted this. Nobody has denied, so far as we know, that Colonel Smith did form an unfavorable opinion of Porter's character and intentions from words and looks

* Whately's 'Rhetoric,' "Conviction."

which he was not able to describe accurately before the court-martial. Everybody does draw inferences of this kind from conversations with strangers, and even from silent observation of their looks and manner. But neither Whately nor Aristotle, nor any other philosopher, ancient or modern, has ever maintained that all such inferences have the same degree or even any degree of probative force. Indeed, we had supposed until now that everybody knew that their value depended on circumstances, and, above all, on the mental and moral constitution and social experience of the person drawing them. Such judgments, to use Bentham's language, "are made hasty, negligent, and erroneous by want of knowledge, general or particular, absolute or relative." That is to say, I must be a person of inordinate self-confidence if I allow mere manner in a brief interview with a person whom I have never before seen to determine my course in any serious matter in which he is concerned. I may be justified in allowing it to decide whether I shall ask him to dinner or go make a journey with him, or go into business with him, or give him a letter of introduction. In other words, manner often furnishes rational and conscientious men with a guide in social intercourse; but we can truly say that Colonel Smith's case is the first of which we have ever heard in which it enabled a man to make up his mind that he would be justified in murdering the person whose looks displeased him, and in offering his impressions to a court of law in corroborative proof of a capital charge. For it must be remembered that Colonel Smith had never seen General Porter before. He acknowledged in his cross-examination that he did not know what his ordinary manner was, and that his conclusion that Porter was guilty of using a sneering tone was derived from a comparison of Porter's manner on this occasion not with his manner on other occasions, but with an ideal standard of manners of Colonel Smith's own. For grave business, and, above all, for business affecting a fellow-man's life, or fortune, or honor, however, we have no right to judge him by our own standard of manners, or judge him at all except after prolonged observation. The extent to which manner is deceptive as to real qualities of head and heart is one of the commonplaces of social philosophy. There is no phenomenon with which we are more familiar than the concealment of a warm and generous disposition under a cold, or repelling, or mocking exterior; or of great gentleness under a rough and coarse exterior; or of indomitable pluck and audacity under an effeminate exterior. Great cutthroats, indeed, not unfrequently have a soft, low voice and winning smile. Moreover, a man's judgment about manners, as an indication of character, has little or no value for any purpose outside of the society to which he is accustomed, except the formation of personal like or dislike. A European who would undertake to read the character of the first Turk he saw from a five-minutes' talk would do a very presumptuous thing, and the opinion of a Texan ranchero as to the character of a French Legitimist would hardly be worth listening to. General Grant is said to have contracted a deadly antipathy to the late Mr. Motley from seeing his hair parted in the middle, and we have the authority of one Western writer of repute for the statement that throughout the West this mode of wearing the hair is looked on as an indication of serious mental and moral infirmity. It is very hard, also, to convince some of our temperance men that a German divine whom he sees drinking beer in a garden on Sundays, or tossing off hock at his dinner, is not a very loose fish in all the relations of life.

But this is not all. We can readily believe that there was a sneer in Porter's mind, and perhaps on his face, when discussing Pope's strategy with a member of Pope's staff. It was hard for any military man to have much confidence in it after seeing Pope's account of it in his first general order, and least of all for a corps commander of the force on whose past operations the general order was a kind of contemptuous criticism. Considering what human nature is, it was not wonderful, too, that Porter expressed no hopeful interest in Pope's proposed forward movement. But then the history of war shows very well that it does not follow from an officer's expression of want of confidence in his commander that he is ready to betray him on the battle-field or wilfully disobey his orders. The number of generals-in-chief who have secured the complete confidence of their troops is very small. When we think of the great captains who have done so, we have to remember that to each of them was opposed another captain whose army stood by him in spite of defeat and disaster. In fact, there is nothing so striking in the history of war as the extent to which military discipline has been efficacious in making obedience independent of confidence in the general. His incompetency generally destroys the hopefulness and enthusiasm of the soldier, which are so necessary to success in war, but there is an enormous interval between despondency and treachery. The cases in which it has led an officer of any rank within two thousand years to betray his leader may be counted on one's fingers. There was nothing in Porter's career previous to 1862 to upset this presumption in his favor. Moreover, Colonel Smith thought well of him and knew nothing against him; nevertheless, such is his confidence in his own powers as an interpreter of manner, that in a first interview of a few minutes, during which Porter was "gentlemanly and courteous," he not only made up his mind from Porter's tone and look that he was going to commit a monstrous crime of extraordinary rarity, but that he (Smith) would be morally justified in murdering him. Nothing would have shocked Whately more than the thought that his book was likely to produce physiognomists of this self-confident and sanguinary temper.

As regards Judge-Advocate Holt we have this to say: Courts-martial are bound, we believe, by the common-law rules of evidence. We speak as laymen and under correction when we affirm that Colonel Smith's account of the impression produced on him by Porter's manner, and what he said about it to Pope, would not have been allowed to go to a jury, and ought not to have been admitted by a court-martial. But granting that it was proper to let it in for what it was worth, even in a capital case, its flimsiness was so plain that it was indecent, we repeat, for an elderly lawyer, summing up the case afterwards in the calm of his library, for the President's guidance, to pick out this piece of testimony for special emphasis, and to compare, in the gaudy rhetoric of a dime novel, Smith's inferences from a stranger's manner to the working of a law of nature, like the emanation of the perfume from the flower. We say deliberately that the man who did this with the view of inflicting lifelong ruin and misery on a fellow-creature ought and deserves to have his retirement embittered by the recollection of it to his dying day, and the more active the part he has played in public affairs the deeper his remorse ought to be. What Colonel Smith means by "personalities" we do not well know. We have been commenting on the evidence of a witness on the trial of a man for a capital offence, and on the professional conduct of one of the counsel. We cannot do this by the aid of algebraic signs. We have to mention names. Besides, if these complaints of "personalities" are proper, ought not General Porter to be heard on the subject? What would he call the Smith testimony and the Holt summing-up? Was not Colonel Smith a little "personal" when he proposed to himself to shoot him for being "sneering and indifferent?"—Ed. Nation.]

THE NEW CALIFORNIA CONSTITUTION.

To the Editor of The Nation:

Sir: As you are already aware, the election last Wednesday in this State has resulted in the adoption of the new constitution by a majority the extent of which is not yet known, but which will probably reach 10,000. The result has taken everybody by surprise. So little was it looked for that on the afternoon of election day the *Evening Post*, of this city, came out with a triumphant rooster at the head of its columns in celebration of an assured defeat of the instrument; and until the actual figures began to come in bets, and even large odds, were freely offered that the city would give a majority of several thousand (instead of the actual 1,400) against, and that the new constitution would be defeated.

It is, perhaps, too soon for any one, either on the spot or at a distance, to take a comprehensive view of the situation. The business community of San Francisco, who have fought well and been beaten, are

naturally a little downhearted in the hour of defeat, but they have had hard rubs ere now, and are not the men to give way to despair. This constitutional experiment has excited so much interest at the East that I offer no apology for making a few remarks. Persons at a distance are liable to make the mistake of considering the adoption of the new constitution simply as a victory of Kearney and his sand-lot followers. If it were so it would be a matter of national importance. Some few figures based on the returns of the election (which are yet incomplete) may help to modify this impression. The Workingmen's party has always had its chief strength in the cities and larger towns. The returns from 33 cities and towns, including San Francisco, giving a vote of 400 or over, show a total of about 76,000, giving a majority of 1,900 against the constitution. Selecting the ten cities and towns in the State giving over 1,000 votes, the total vote is 61,000, with a majority of 4,400 against. The vote of the State is in the neighborhood of 140,000. A comparison of the returns with the map shows that the outlying agricultural counties have uniformly gone for the new constitution, and that the principal centres of population and the mining counties have opposed it. It therefore follows that the people of the cities are quite competent to deal with the hoodlum and sand-lot elements, and that the strength of the new constitution has lain in the agricultural districts.

The fact is that the new constitution has been framed and carried through by a system of log-rolling, under which the farmers have been bribed by the exemption of their growing crops from taxation and by a fiscal system which, apparently at least, transfers much of their burdens to capitalists and traders. There seems no reason to suppose that the designs of the farmers are communistic or revolutionary. They have united with the sand-lot faction to gain certain ends, some practicable and some impracticable, but there is no enduring bond of union between the two classes.

What with a crushing railroad monopoly, managed with consummate skill but with no attempt to conciliate public opinion, the temptation of mining speculation, a climate which makes agriculture as generally conducted akin to gambling, and the Chinese disturbing element, the circumstances of California are peculiar. In my opinion it is by no means a fair conclusion that the adoption of the new constitution is the point of an entering wedge destined to shake the country. With all its absurdities the new constitution embodies some useful reforms, and it is capable of amendment without much delay, and it is the interest of every one who has anything to lose that it should be interpreted speedily and in a liberal spirit. Some of its more objectionable faults are the result of blundering, and will be amended by common consent as soon as their effect is understood ; others are in conflict with the Constitution of the United States, and as such will be inoperative ; whilst others will probably be found to be impracticable and be explained away by the courts. Though many public and private interests may suffer, there seems every reason to hope that the industry and business of a State with such resources as California will speedily adapt themselves to the new order of things.

RICHARD WEBB.

SAN FRANCISCO, May 9, 1879.

TO THE EDITOR OF THE NATION :

SIR : A recent article in the *Nation* on the constitution lately submitted to, and now adopted by, the people of California has been very generally read, and has attracted attention here in many circles. As an evidence of this, and as a somewhat noticeable fact, it may be stated that in the pulpit of our leading Presbyterian church, on last Sunday evening, it was read by the minister when speaking on the subject and against the new constitution. The criticism contained in that article, while in the main fair and intelligent, seems severe ; and in view of the fact that the constitution has now been adopted, not by a very large majority, but by a majority that leaves no doubt as to the decided will of the people, it is due to us as a community, and to those who may be interested in our industrial and political progress, to have stated more precisely the real significance of this event. The great danger is that many in other States may misinterpret this event and draw unjust and erroneous inferences, as unfair to a large and intelligent class who have steadily advocated its adoption as to that other class who have as steadily and persistently opposed it.

In the first place, the constitution itself is by no means the dreadful instrument it is claimed to be, nor quite such a novelty in American politics as it is represented. The two latest State constitutions adopted before this are those of Missouri and Texas—the former in 1875, the latter in 1876—and in each are clauses similar to those which have been so severely criticised in the constitution now adopted in this State. The subjects placed beyond the power of special legislation in the California constitution are almost identical with those similarly proscribed in Texas. Our most thoughtful statesmen and publicists have strenuously for a long time advocated this limitation on the power of the legislature, and in some measure a clause against special legislation is a distinguishing feature of our late American constitutions.

Another "novelty" which has been pointed out is the provision that private property taken or "damaged" by the right of eminent domain shall be first paid for. Now, this word "damaged" is found in both the Texas and Missouri constitutions, and was there inserted on the highest authority. Chancellor Kent, in one of his decisions on this point, the doctrine of which has been highly endorsed, lays it down that it is a principle of equity to allow compensation *before* private property is taken for a public use, and this compensation should be given to one suffering a consequential damage. (See Gardner *v.* Newburgh, 2 Johns, ch. 161.)

Again, the clause empowering the legislature to "regulate or prohibit" the buying and selling of certain stock-certificates has been much condemned, and its effect dreaded ; but it should be remembered that while the constitution says the legislature "may" or "shall" do a certain act, that it is still *discretionary* with the legislature to carry out the provision. It has lately been determined, under a similar provision in Missouri, that the legislature cannot be compelled to make laws, as where taxation is authorized for a certain purpose. (See St. Joseph *v.* Patten, 62 Missouri Rep. 444.) It is true that where a provision requires no law to execute it, there it becomes a law by virtue of the adoption of the constitution—the constitution becomes self-executing. There are many provisions in the new constitution which are of the class above mentioned—those left *discretionary*. I am far from approving such provisions, but I mention this to show that the effects will be by no means so disastrous as they are believed. I cannot further take space to point out other provisions that will be found, after examination, to be as little open to serious objection. The article on taxation, I admit, may occasion some perplexity, but it certainly will not be so dreadful in its operation as it is claimed, nor will it harass persons in the way it is imagined. Already there is preparation being made to adjust ourselves to the new order of things, and before long it will be seen that California progress and enterprise will be little impaired or thwarted by this "new departure," as it is termed.

But a word as to the agency or the factors that have produced all this. There can be no greater or more egregious mistake than to assert that this constitution is the offspring and the legitimate effect of a spirit of communism. It does a large class a serious injustice to have this impression go abroad. It is true that many of those affected with this spirit have favored and voted for its adoption, but its adoption has come from other causes that have been working silently but strongly for some time, and are now fully known and felt. I may classify those supporting the constitution in this manner : 1. There is the thriftless, impoverished element, who are always willing to have a change ; 2. Another class, who are suffering from grievances, such as over-taxation and the like ; 3. A class well-known in American politics in every State, who aspire to hold office, and take advantage of a new movement ; 4. Another class, who simply want a change ; and, lastly, an intelligent, industrious element, who have carefully studied the needs and defects of the present situation, and conscientiously desire to remedy and supply them by a new organic law. Now, there is a larger proportion of the latter supporting the new constitution than has been suspected. These will be sufficient to take control of the organization under the new system, and prevent the influence or domination of elements that have identified themselves with the movement in support of the constitution.

It is very certain that no great disaster, no lasting check, will be suffered from the adoption of this constitution. American, and especially Californian, enterprise and intelligence can be very readily adapted to new circumstances and exigencies.—Respectfully,

JOHN PROFFATT.

SAN FRANCISCO, May 8, 1879.

TO THE EDITOR OF THE NATION :

SIR : The article in No. 718 of the *Nation* on "The New Constitution of California," which has since been adopted, has suggested some considerations from another point of view, which are perhaps no less important than those there presented.

The all-important question now is, What has led to the weakening of

the power of the classes that usually dominate in civilized communities —the classes embodying the wealth, intelligence, and cultivation of the community—to the extent made manifest by the present state of affairs in that State ? Theoretical or imported socialism and communism have not obtained the footing in California that they have secured in the cities of St. Louis and Chicago, and another solution of the question must be offered. Briefly stated, I think this solution must be found in an unprecedented accumulation of money-power by a moneyed class of exceptionally low standard.

The organization of society, the subordination of its various strata, is only apparently maintained by the forces of law and the difficulty attending the institution of a change. Underlying these more or less obvious restraints there are moral sanctions which are not less essential to the maintenance of the submission of the lower classes to the established order of things ; and, however harsh the differences of condition between the dominating and dominated classes may at times appear, the disposition to revolt is in most cases effectually restrained if these moral sanctions are not violated or essentially weakened. First, there must exist a moral sanction to the title to wealth—*i.e.*, it must have been acquired by means which the ordinary moral sense of the community deems honest ; and, second, there should be such a use made of wealth that it shall compel from the same ordinary sense a decent degree of respect for its possessors ; and it is to the loosening of these ordinary sanctions to wealth and power in the popular mind that the present singular insurrection against civilization owes, for the most part, its success. Of the moneyed class in San Francisco it may be safely asserted that there is no city of equal importance in which that class embodies so many great fortunes acquired by means which are dishonest *to the common understanding*. It is notorious that the rapid growth of California in material wealth has led to the acquisition of colossal fortunes by a low order of men. The newspapers have long familiarized us with the unprincipled combinations which they have employed in their operations. The speculations and peculations of the mining, timber, water, and land rings have been all but open. The politics of the State have been controlled, and every branch of the government—the judiciary included—has become implicated in a widespread charge of general corruption or submission to a coarse and unscrupulous money-power.

Again, the existence of this class has given birth to an ostentatious extravagance and luxury which of necessity display themselves in coarse forms. San Francisco is well known for its flaunting and undisguised immorality in respect to the relation of the sexes. The effects are seen in the great frequency of divorces and the large number of female adventuresses to be found there. Hence the charge of immorality so repeatedly and offensively made against the rich by Kearney.

These things have given rise to the sand-lot orator, and point to his denunciations of the "money kings of Nob Hill." They have encouraged the lower classes to feel and believe that they are better than "their betters," and better fitted and equipped to fill their places in the community. We must recollect that the people of California have known and read of little else concerning the classes above them except what is vicious and demoralizing : corrupt judges, bribed legislatures, purchased officials ; corrupt and, in their results, cruel combinations and manipulations by the mining corporations; "land-grabs," and "jumping" of mines. The discontent of the lower classes has received strength and encouragement from a large portion of the business community and of the tradespeople under the influence of the depression in trade and industry, which is popularly ascribed to the merciless fleecing of the community by the mine magnates.

This unsoundness in the organization of the community is of long standing, and has now borne bitter fruit. There is, of course, no evidence to support the notion that the lower classes in California are the moral superiors of the upper. It is sufficient that the former believe this. Indeed, there is no lack of evidence to show that the possession of wealth there as elsewhere is being followed by the cultivation of the arts and sciences and the spread of refinement and cultivation; but the people have gauged the wealthy classes by their most conspicuous and influential types, men like Flood, Mackey, O'Brien, and Ralston. The corruption of wealth in such hands, and its abuse by men of this stamp, have given a degree of moral force to the demagogues of the sand-lots, and enabled an agitation of the lowest kind, led by men of the most brutal type, to succeed in changing the fundamental law of the State.

The conditions which obtained in California are exceptional. The success of this movement there may encourage similar ones elsewhere, but they are not likely to succeed in the older communities, for where civilization has not fallen into disrepute its weapons can scarcely prove ineffectual. The misfortune which has befallen California may serve to impress upon the minds of the wealthy class that there is a moral responsibility in the possession of wealth and power, and in its use and exercise, which cannot be utterly neglected. S. B. L.

New York, 132 Nassau Street, May 14, 1879.

Notes.

B. WESTERMANN & CO. send us Parts 2 and 3 of the new edition of Stieler's Atlas, containing maps of Belgium and Holland, Southwestern Germany and Switzerland (northern part), Great Britain (southern part), Polynesia, etc., with Strassburg and Metz and Antwerp among the side-maps. Two plates are given of a relatively small-scale map of the United States (four plates instead of six as in the previous edition), but curiously enough they are both inscribed "West Indies."——G. P. Putnam's Sons have begun the publication of a quarterly journal called *Neurological Contributions*, of which Drs. Wm. A. Hammond and Wm. J. Morton are the editors, if not the sole contributors. The first number is full of topics possessing a painful interest, and is by way of compensation even elegantly printed.——Mr. George E. Davenport, Medford, Mass., has published a pamphlet catalogue of his herbarium of North American ferns north of Mexico, with notes of locality, collectors' and donors' names, and critical remarks, and partaking "more of the character of a hand-book than of a mere catalogue." A special object to be promoted by the sale is the improvement and completion of the collection as originally planned.——From Lindsay & Baker, Philadelphia, we have received a reduced steel engraving of the head of Washington after the well-known portrait by Stuart. It has been well and tastefully executed in line and stipple, by Mr. H. Wright Smith, and appears to us a successful reproduction of the original likeness. A portrait of another Revolutionary worthy, Governor George Clinton, after the bust of Ceracchi, in possession of the New York Historical Society, comes to us from A. S. Barnes & Co., who have had it engraved on steel, by H. B. Hall & Sons, for the June number of their *Magazine of American History*.—— The subject of wood engraving is being sensibly treated, with excellent illustrations, in the current issues of the *Magazine of Art* (Cassell, Petter & Galpin). The third paper, by Mr. Henry Holiday, appeared in the May number.——At the last meeting of the Maine Historical Society, in Portland, on the 15th, papers were read from Judge Godfrey, of Bangor, on Claude la Tour and Judge Edward Kent, by Hon. I. Washburn on the Northeastern Boundary, and by Hon. Wm. Goold on Sir Wm. Phips. Mr. Washburn's paper will perhaps be published as a third volume of the Documentary History of Maine.——The Haydn Society of Portland produced on the 15th inst., for the first time in America, McFarren's oratorio "John the Baptist," with Mr. Hermann Kotzschmar as director. The parts were taken by Mr. John B. Coyle, jr., *John the Baptist;* Mr. A. E. Pennell, *Herod Antipas;* Miss Nettie A. Milliken, *Salome;* and Mrs. A. E. Goudy, *Narrator*. This society, which has a very honorable rank among the musical organizations of the country, has produced under the same leader a number of other works for the first time in America—*e.g.*, Mr. Paine's "St. Peter," in 1873 ; Randegger's "Fridolin," Handel's "Theodora," in 1876.——Parts 2–4 of Fink's 'Musikalischer Hausschatz der Deutschen' (New York : L. W. Schmidt) completes the ninth edition of this ample collection of popular songs, which, first published in 1842, and held in uninterrupted favor ever since, has now undergone its second revision to keep it abreast of the times. More than a tenth part has been removed to make room for substitutions ; and by way of heaping the measure the present editor, Dr. Langer, appends as Nos. 1001–1004 Robert Franz's Op. 40, No. 1, a newly-printed song by Constantin Schubart, Op. 3 of Brahms, and Op. 173, viii., of Raff. For a frontispiece there is a steel portrait of C. M. von Weber, who of all the great masters figures oftenest, we think, in this collection. The classification is into Folk-songs, songs of youth, songs of home and native land, student songs, soldier and huntsman songs, convivial songs, romances and ballads, *Minnelieder*, songs in praise of nature, devotional songs, songs of mourning, and miscellaneous. The notes are partly historical, but mostly indicate how the several pieces should be sung.—— Parts 7 and 8 of Koolman's 'Wörterbuch der Ostfriesischen Sprache' (A —— Gütjen) complete the first volume of this interesting and thoroughgoing dictionary. In a brief and modest preface the author explains that the fulness of the etymological discussions, which is open to the

objection of unnecessarily swelling the size of the work, is due to an irresistible desire to satisfy himself as to the origin of every word. He adds a goodly list of "sources," and promises to sum up in an "afterword" his latest conclusions on moot points of derivation. His publisher is H. Braams, Norden.

—Persons having letters from the late William Cullen Bryant in their possession or under their control will oblige his family by sending them addressed to Miss Julia Bryant, office of the *Evening Post*, 208 Broadway, New York. We are authorized to state that such letters will be received under whatever restrictions the proprietors may choose to impose, and the originals will be returned so soon as they can be conveniently copied.

—Mr. John Fiske sails this week for England, and, by invitation of Professor Huxley, will deliver next month in London his six lectures on "America's Place in History," which gave so much satisfaction when delivered last winter in Boston in the Old South Church. Englishmen of varying degrees of eminence long ago discovered America as a profitable field for an occasional lecture-tour, and it is high time that a return should be made in kind—that our authors, for example, should, like Dickens, or Thackeray, or Froude, follow their works across the Atlantic. Mr. Fiske's adventure is not wholly unprecedented, but it is almost as much of an incident as if it were quite original. We say this partly from the nature of his theme, for after the five heads—the Discovery of America, Spanish and French Explorers, the Struggle between France and England, the Thirteen English Colonies, Causes of the Revolution—comes the sixth, the English Race; and here Mr. Fiske indulges in some speculations as to "manifest destiny" which even exceed the Jingo conception of a Pan-britannic Confederacy, for they include the universal Yankee nation in the race-leadership of the world. Mr. Fiske's hearers, we believe, will be both pleased and instructed by what he has to say. As his stay in England will be short, we may expect to have the opportunity of hearing him in this city next fall. We may say of him, as we said last week of Mr. Kirk, that his appearance on the platform is of good omen for our lyceum system, for whose regeneration all cultivated men should labor.

—The June *Harper's* begins the fifty-ninth volume of this Nestor of the monthly magazines, and introduces also some changes in the internal appearance to which the veteran reader must accustom himself by degrees. The pleasurable effect of a rightly proportioned page is not capable of analysis—is at least for most of us entirely subtle; and before the judgment can freely pronounce between old and new the eye must recover from the spell with which long use has bound it. The new page retains the length of the old, but is considerably wider, and the type is enlarged throughout the several departments, so that ease of reading is greatly increased. The loss of a hundred words or so to the page will not trouble the right-minded, and there is an obvious gain on the pictorial side from the greater breadth for illustrations. These last are as abundant as ever, while some are of uncommon beauty of design, and in the best manner of the new school of engraving. Two portraits, never before engraved, of Peter Stuyvesant and wife, after Vandyke, are especially noteworthy. Mr. H. M. Robinson gives a very lucid account of "The Honorable Hudson's Bay Company," in the easy literary style which has made his articles on the same subject in other magazines so attractive. Here he deals with the organization and management of the corporation on which depend the aborigines of the northern half of this continent, and gives an insight into the modes of promotion in the service, the subdivision of the enormous territory by forts and trading-posts, the annual exchange of goods and peltries, the stated mail and supply system, etc., etc. We are told that while "the list of goods ordered from England this year has exactly the same items as that of 1779," and while trade is still carried on by barter, with the beaver skin for the unit, money values have latterly become known, "and the almighty dollar is rapidly asserting its supremacy in savagedom." In his current paper on "Berg und Thal" Col. Waring graphically describes the ascent of Monte Tofana, the remembrance of which he would not surrender for the price of a first-rate hunter, and which he would not make over again for the hunter itself. Mr. E. P. Whipple's "Recollections of Agassiz" are interesting if rather diffuse; but there is nothing new in them, and they are, as Agassiz himself said of Dr. Hitchcock's book on the Connecticut Valley "bird"-tracks, "dees-creep-*teeve*, and not com-par-a-*teeve*." Mr. Pyle, who, we observe, is being soundly berated by the Virginian "Peninsular-Canaanites" for his unflattering account of their progress towards civilization, has happily made good his escape across the Maryland border, into the oyster and strawberry region, which also is not without its interesting monuments of a patriarchal aristocracy now extinct. Miss Logan's article on the "Grand Days of Histrionics"—a period as mythical as the "good old days" which college sophomores get enthusiastic over—is avowedly made out of Mr. Baker's unworthy volumes on "English Actors," which we reviewed recently. But where Mr. Baker merely hazards an erroneous impression—as, for instance, his suggestion that possibly the "drunken scene" of Robertson's play of "David Garrick" might be founded on fact—Miss Logan makes a bold misstatement. The article is inaccurate and inadequate, especially in its treatment of Garrick and Mrs. Jordan, and has no unity of purpose; it seems, indeed, to have been written solely to justify the engravings—a danger to which the illustrated magazines are constantly exposed.

—*Scribner's* puts its best foot foremost when it gives the first place to Mr. Russell Sturgis's "Fine Arts at the Paris Exposition," a retrospective paper giving a clear idea of the lay of the grounds, an admiring description of the palace of the Trocadéro, and some account, with fine illustrations, of a few striking pictures and statues. Mr. Vedder's "Young Marsyas," engraved after a drawing by the artist himself, cries out for him against the contemptuous treatment of his French critics. Chapu's "Gratitude," Dubois's "Charity," and Albert-Lefeuvre's "Jeanne d'Arc" are reproduced in a manner for which we cannot but be grateful. Mr. Herbert Smith, pursuing his Brazilian narrative, begins the ascent of the Amazons, which he styles "the Mediterranean of America" by what we must consider a rather forced analogy. He takes us into the rubber-producing wilderness along its banks, and shows the *seringueiros* who gather the crude gum to be the victims of exactly the same oppression on the part of the small traders as the negro cotton-growers of the lower Mississippi. Prof. Boyesen discourses of the University of Berlin, its origin, its government, the recruitment of the faculty, etc., and sketches the characteristics of the leading professors, including those whose portraits, engraved with great spirit, accompany the article, viz.: Lepsius, Curtius, Hermann Grimm, R. Virchow, Helmholtz, Th. Mommsen. Mr. Allen C. Redwood adds another to his list of clever papers based on his experience in the Confederate service, his theme being this time "With Stonewall Jackson" in the second Bull Run campaign. We can only mention Mr. C. C. Buel's historic review of the attempts to pierce the American Isthmus with an international ship-canal, and the first of a series of papers on Edison and his inventions. Mr. George S. Merriam, who discusses "Some Aspects of Matthew Arnold's Poetry," endeavors to show by copious citations how this poet "represents the doubts and sadness and unsatisfied aspiration of his time," and also to point out the changed spirit and temper of his later creed, as revealed in "Obermann Once More," with its doctrine of service instead of isolation, and its "sense that joy and peace are not a lost treasure of the ancient world."

—The annual meeting of the Metropolitan Museum of Art was held this month in a room of the new building in Central Park. The annual report of the trustees was read, but we defer comment upon the state of the Museum and its new situation and new circumstances until that report shall appear in print. It is to be hoped that the mere possession of a much larger and presumably less combustible building will aid the efforts of the trustees, and that private collections and separate works of art owned by private collectors will begin to gravitate toward the Museum: first as loans and for safe keeping, and by and by as gifts and as bequests. It appears by the daily papers that an important step has been taken toward more complete organization by the creation of the office of "Director-General." For eight years, and ever since the first hiring of the Dodworth house in Fifth Avenue, much of the work of the custodian and compiler of catalogues has been performed by members of the Executive Committee. Mr. Hutchins has been a devoted and valuable officer, and since Mr. Bland's appointment as Assistant Secretary he and Mr. Hutchins have done all that they could do; but obviously the staff was insufficient, and the voluntary labor of the trustees could not always be continued. General di Cesnola is appointed to the office of Director-General, and at first this appointment seems a strange one, as that well-known discoverer of ancient art-treasures has not been known as a student of art in general. But the circumstances of our American museums and galleries of art are so different from those of the great institutions of Europe that the same rules do not apply to them, nor can the same customs always hold. Our New York Museum lacks money; without money it can do nothing; without a great deal of money it can do but little. It is now dependent for its annual running expenses, for salaries and for fuel, on the capricious favor of city and State officials,

and the rather grudged appropriations of the Legislature. It has no fund from which an income is received; it has no surplus for the purchase of works of art; the community has not been very friendly to the enterprise so far; and, to the discredit of the rich men of the community, few of them have been willing to help it to any considerable extent. The peculiar need of the moment is, therefore, popularity, repute, public favor. How this need is to be answered is the special business of the trustees; and General di Cesnola's well-known energy and executive power, his popularity and large acquaintance at home and abroad, seem to show that the immediate requirements of the directorship have not been overlooked.

—Mr. Rummel's second recital, on Thursday last, was fully as interesting as the first. The chronologically-arranged programme opened again with Bach—Prelude and Fugue in C from the "Wohltemperirtes Clavier"—and terminated with compositions of the masters of our own times. Bach's Prelude and Fugue were again admirably played. We feel inclined to think that fugue-playing is one of Mr. Rummel's strongest points. In Beethoven's C sharp minor sonata—the "Moonlight"—the artist surprised us. He played the first movement, the andante, with a tenderness and delicacy of expression which we have not known in him before, whilst the stormy, passionate finale—Presto agitato—was entirely wanting in that fire and vigor which we have always recognized as Mr. Rummel's strongest characteristic. Comparisons, we are told, are odious; but whoever has had the privilege of hearing Rubinstein's rendering of this movement, one of the finest efforts of the greatest living pianist, will not easily forget the impression produced by it. Mr. Rummel was most successful with Schumann's "Études symphoniques," which were played with splendid spirit. One of the remaining numbers deserves particular mention, viz., the "Étude" by Paganini-Liszt. It is one of twenty-four studies originally written for violin solo by Paganini, and dedicated "agli artisti." This inscription indicates the character of the composition, and rightly warns off the amateur performer. In the original form it is the most difficult music ever written for the violin, and in Liszt's arrangement it is certainly the most difficult music for the piano. "Whoever can master these variations," says Schumann, "may comfortably travel through the world, and he will certainly return home with the combined golden laurels of Paganini-Liszt." The number chosen by Mr. Rummel was not one of the most elaborate of the collection, yet it contains passages of enormous difficulties, and was so excellently played that this performance alone would ensure him a high rank among the piano-forte players of our times.

—The ninth volume of the 'Encyclopædia Britannica,' ninth edition (Boston: Little, Brown & Co.), is rich in articles for students of science, art, or economy, prepared by specialists. Such are "Finance," by Prof. Thorold Rogers; "Fine Arts," by Prof. Colvin; "Fisheries," by Mr. Holdsworth; "Flight," by Prof. Pettigrew; "Foraminifera," by Dr. Carpenter; "Forests," by Dr. Cleghorn; "Fortification," by Col. Nugent; and "Function," by Prof. Cayley. "Flight," "Foraminifera," and "Fortification" are richly illustrated. Among the more interesting biographies are those of Faraday (by Prof. Maxwell), Fénelon, Fichte, Fielding, Fox, Franklin (by Mr. John Bigelow), and Froissart. The chief historical article is the history of France, which has the dimensions of a book. This is, however, not only far inferior in value to the similarly extensive productions in the preceding volumes of the 'Encyclopædia'—Poole's portions of "Egypt" and Freeman's of "England"—but marred by glaring blunders and omissions, which render the entirely new part of the history, properly falling within the sphere of the ninth edition, unworthy of so excellent a publication. The eighth edition may be primarily responsible for the statement that Sebastopol "fell on the 10th of September" (it fell on the 8th), but it is the new article which tells us that the treaty of Zürich (1859) was "ratified in October" (it was concluded in November); that "on that same day" (August 2, 1870) on which "the emperor's reconnaissance drove the Germans out of Sarrebruck" "General Douay was attacked and defeated at Wissembourg" (he was attacked two days later); that in the same month the murderous fighting took place on "the 16th at Gravelotte" (the battle of the 18th is known as the battle of Gravelotte); that Thiers was a member of the Government of National Defence (which we hear for the first time); that "in December, 1870, at Versailles, the King of Prussia was proclaimed head of a new empire of Germany" (he was proclaimed on January 18, 1871); that "the new Republican Government of France" established at Bordeaux in February, 1871, "had M. Grévy as President, and Thiers as chief of the executive power" (Grévy was president *of the Assembly*); and that "M. Thiers, with infinite toils, and with journeys from court to court, . . . succeeded in getting terms of peace agreed to" (for that purpose he travelled only from Bordeaux to Versailles). The omissions in this portion of the history are equally striking. After Sedan we hear only of Paris and Metz, and that when both these cities had surrendered "the war elsewhere died out almost at once"; but there is not a mention of the battles fought near Orleans, Amiens, Bapaume, Le Mans, St. Quentin, Belfort, etc., etc., or any allusion to the advance of the Germans beyond Paris; nor is a single German commander in all that war mentioned by name. Ten lines are devoted to the Commune and the second siege of Paris, and the only names occurring in these lines are Paris, Versailles, and MacMahon. Worse than all this, and, in fact, one of the falsest statements we have ever read in a respectable book, is the reference (p. 624) to the "Quadrilateral . . . formed by the great fortresses of Peschiera," etc., of which "Legnano stands on the Lago di Garda, which runs up into Switzerland." Now, the truth is that the name of the latter fortress is not Legnano, but Legnago; that, like Peschiera, it never was a great fortress; that it does not stand on the Lago di Garda, nor near it; and that this lake does not run into Switzerland, if it runs at all, but into Tyrol.

—The English Dialect Society has begun its publications for the present year with a valuable supplement to the Glossary of the Cumberland Dialect reprinted last year, also edited by Mr. William Dickinson; and a batch of reprints of minor glossaries—general, Wiltshire, East-Anglian, Suffolk, and East Yorkshire—edited with a sure hand by Professor Skeat. Of these last the gem is Mr. Spurdens's East-Anglian supplement, but both volumes are full of curious reading, especially for Americans. In the Cumbrian *ampassy, and*, we have the analogue of the Suffolk *abisselfa* (A, by itself, A); the former word denoting the character *&*, by corruption from *et per se* (that is, *et* as distinguished from *etc.*). The following are likewise Cumbrian: *fadderless stew*, potatoes stewed without meat; and *joop*, a short upper garment or jacket worn by females, whence *joop't*, to be domineered over by a woman. "The wife, instead of saying 'my husband,' calls him *ours*." From the larger volume we select: "*coffin*, a basket, which preceded the use of boarded coffins," thus anticipating Mr. Seymour Haden; "'to throw the *helve* after the hatchet'—having adventured in a losing speculation, to engage further in it"; "*mealer*, a moth that covers with meal: but commonly pron. (but wrong) *miller*." On p. 61 there is an admirable description of a horn-book, whose alphabet (*criss-cross-row*) was "in the shape of Christ's cross; the consonants in the vertical, and the vowels in the horizontal, part." Mr. Skeat's terse notes and comments are always instructive. Thus, apropos of Akerman's remark concerning the Southern dialects that "the *w* is often sounded before a vowel, as *stwone* for stone," we are reminded that the "standard English *wun* for one" is a survival in polite speech of this dialectal peculiarity. Under *cat's-cradle* (*scratch-cradle*) we learn that "*cat's*, like *scratch*, is a corruption of *scratch*, F. *crèche*, a crib." And the learned editor's pricking of fanciful and fraudulent etymologies is as amusing as it is faithful.

—The Society has now been in existence six years, and with reasonable diligence expects to finish its task in four or five years more. It has deposited all its collection of books, as the nucleus of an English Dialect Library, with the Central Public Library in Manchester. Though its membership is large—300, besides 44 public libraries—it would be greatly aided by a moderate increase, say to 400; and it seems as if the difference could easily be made up in this country, where at present only six libraries and two individuals (including a bookseller) are subscribers. The annual fee is one pound, or to Americans twenty-two shillings, which covers the postage; and the printed return is a very liberal equivalent. We are promised this year the second part of the valuable collection of Plant-names already noticed by us, and a List of the Local Names of British Fishes, Marine Animals, and Fishing Appliances, by Mr. Thomas Satchell, derived from more than a hundred places on the coast of the United Kingdom, and numbering some 800 terms. A complete glossary of the dialectal words and forms in the Paston Letters is among the future performances, of which a gratifyingly long list is given in the Sixth Annual Report prefixed to Mr. Skeat's reprints. The treasurer of the society is Mr. George Milner, Moston, Manchester; the publishers are Trübner & Co.

—One of the heaviest and most honorable enterprises ever attempted by a publishing house is the series of "Grands Écrivains de la France," now in course of publication by MM. Hachette & Cie. It is their intention to issue in uniform volumes of an ample octavo size, at a reasonable price (seven francs and a half a volume), the complete works of all the great writers of France. Each author is edited separately by a compe-

tent hand, who, however, works under the general direction of M. Adolphe Regnier, the editor of the whole series. A biographic notice is prefixed to the first volume of each writer's works ; a special introduction precedes each work ; the text is compared with the original manuscripts if they exist, and with all the important editions ; ample variorum notes are at the bottom of each page ; all other notes are relegated to the end of the production they elucidate. All existing correspondence of the author and all fragments are included. Ample indexes and a lexicon of the writer's vocabulary are appended. Corneille (12 vols.), edited by M. Marty-Laveaux ; Malherbe (5 vols), edited by M. Ludovic Lalanne ; Racine (8 vols.), edited by M. P. Mesnard ; and Mme. de Sévigné (14 vols.), edited by M. Monmerqué, are now complete. The works of La Bruyère, La Rochefoucauld, De Retz, and Molière are in course of publication. La Fontaine, Pascal, Boileau, and Saint-Simon are in preparation. The Molière will probably be completed in about ten volumes, of which the fourth is just out. The first three volumes were edited by the late Eugène Despois, who has now been replaced by M. Paul Mesnard, the editor of Racine in the same series, and not as well known as a Moliérist as was M. Despois. But this fourth volume shows no falling off in the even excellence of the whole series ; it is the most important thus far issued, as it contains "Tartuffe," to which masterpiece three hundred of its five hundred and sixty-eight pages are given up. When completed, this edition of Molière will rival as a working edition, if it does not entirely supersede, the fine edition of M. Louis Moland. But of new editions of Molière there is no end, and of books of all sorts about Molière there is an infinite abundance. One of the most curious is a translation of a medical treatise, 'De Clysteribus,' published by Regnier de Graaf in 1668, which now appears as 'L'Instrument de Molière,' because it discusses the great comic dramatist's favorite weapon of assault against the quackery of medical science in his time. Molière's hatred of medicine did not prevent, it is pleasant to know, his having a doctor for one of his best friends ; and when he asked the king for a post for his physician, his majesty jestingly asked what the doctor did for Molière. "He orders me remedies," replied the grave humorist ; "I do not take them, and I get well." The new edition of this curious treatise is illustrated in a manner better fitted for the professional library than for general circulation. While the French admirers of Molière have never organized themselves into a Molière society akin to the English Shakspere societies, they have at last a special organ. Of *Le Moliériste*, a monthly review, edited by M. Georges Monval, the archivist of the Comédie-Française, and devoted wholly to Moliériana, two numbers have appeared.

—In view of the wide-spread belief that two intra-mercurial planets were observed by Professor Watson during the total eclipse of last July, astronomers will no doubt read with great interest a very elaborate discussion of the subject by Professor C. H. F. Peters, in numbers 2,253 and 2,254 of the *Astronomische Nachrichten*. We call to mind that Professor Watson's plan of observation was to point his telescope on an object, and then mark the direction of the pointing by making pencil-marks on two paper circles attached to the axes of the instrument. The places where the marks were to be made were indicated by a pair of wire pointers. Professor Peters first considers the probable errors of the observations as given by Professor Watson. Instead of five minutes, as Watson estimates, he is sure that from the elasticity of the pointers and the difficulty of making a pencil-mark to nearer than one seventieth of an inch, the probable error must be twenty minutes of arc on his circles. This corresponds to one-seventieth of an inch in the position of the pencil-mark. He then shows that the differences between the positions of the two planets correspond to that between the two stars, ϑ Cancri and ξ Cancri, in their neighborhood when allowance is made for this probable error. Therefore, if Professor Watson had not pointed on the sun and marked its position on his circles, there would have been no doubt whatever that the two objects that he saw were those two stars and not planets. But, on comparing his pointings on the sun, there is a discrepancy of three-quarters of a degree with the positions of the stars—a discrepancy, it will be seen, more than twice as great as the probable error which Professsor Peters himself estimates. The latter thinks that a plausible cause for this error is found in the different circumstances under which the markings were made for the stars and for the sun. "For the latter the pencil-marks could be made with full daylight and with leisure, for the former, on the contrary, there was haste and semi-darkness." "Is there to be wondered at a little bending of the wire, a little parallax amounting to only one-thirtieth of an inch ? for that is the equivalent of three-fourths of a degree upon the circle used." He regards Mr. Swift's observations as absolutely valueless, and directly contradictory to those of Professor Watson. There is no occasion to insist on this point, as Swift himself has since shown that the two planets he saw could not have been identical with either of Watson's, and has, therefore, maintained that there must be at least four Vulcans. The writer then goes on to an equally critical examination of the supposed observation of unknown planets in transit over the sun, and shows them to be utterly without foundation. He lays great stress upon the fact, already noted by others, that "with few exceptions only persons otherwise wholly unknown as astronomical workers have been favored with a view of the mythical planet. Since the time of Carrington all the spots have been counted, measured, photographed, but never a trace of Vulcan has been found by the astronomers engaged in that work." One of his most interesting conclusions in this direction is his comparison of the supposed observations of Mr. Lummis on March 19, 1862, with observations made by himself on the same day. He seems to show beyond all doubt that what Mr. Lummis saw was an ordinary solar spot, and that its supposed motion resulted from a mistake very easily made in recording his second observation.

THIERS.*

M. JULES SIMON gives us upward of a thousand pages on the history of his country during less than two years and four months, and we can say without hesitation that there is in all his narrative not a page too much. This judgment is not based on any brilliant literary merits of the book, nor on its originality of view or keenness of philosophical analysis--for it consists of unadorned and very plain recitals—but on the unusual importance of its subject, which deserves to be studied in all its fulness, and the calm and straightforward way in which the writer narrates the events of the period—events in which he was himself no mean actor. The history of the period is complex, and yet strikingly marked by a kind of epic unity. The hero, who undertakes to lift up prostrate France, and ransom her from the invader, encounters internal foes and perils ; he has to combat a monstrous insurrection and the spirit of reaction which it envenoms ; he stifles the former and succumbs to the latter—but not before achieving his task. Few books of history will so forcibly as this teach how far popular passion and the desire to rule or ruin can go in their madness, and how great a redemption political wisdom, matured and purified by bitter experience, may achieve under the most adverse circumstances.

"The 8th of February"—the reader will excuse our not copying the translator's Gallic form—is, strictly speaking, not the beginning of M. Thiers's government, but the day of the elections which led to its establishment on the 17th of that month. To these elections the first chapter is devoted, and mainly to the contest between the Paris branch of the Government of National Defence, represented by M. Simon himself, and M. Gambetta, the dictatorial chief of the delegation at Bordeaux, who had decreed the ineligibility of entire classes of Bonapartists. The author vindicates, of course, his own action, but he carefully avoids speaking harshly of M. Gambetta, writing at a time when the ex-dictator, the *enragé* of 1871, has become a main pillar of stability to the new edifice of French republicanism. Nor does he in any part of the work betray an undue inclination to make himself prominent, especially at the expense of his colleagues in the Government of Defence or in the Cabinet of M. Thiers. He warmly praises or defends Jules Favre, Jules Ferry, Ernest Picard, Trochu, and chiefly Rémusat ; and, after telling of Gambetta that while fighting for the deliverance of Paris, *extra muros*, he "created armies and generals, won battles, repaired defeats," etc., he may be pardoned for producing, near the close of the book, a letter of M. Thiers which almost equally—and, we believe, more deservedly—eulogizes "M. Jules Simon." The latter is always spoken of in the third person.

When M. Simon speaks of Gambetta's creating generals and winning battles, it is, apparently, not a desire to conciliate an opponent or to flatter a popular favorite that inspires his words, but a patriotic inclination to discover a little French glory amid the disasters of 1870-71. He also speaks of "victories" of Chanzy, of the "glorious struggle" carried on by Paris and the provinces, and of the "admirable courage" evinced

* 'The Government of M. Thiers, from 8th February, 1871, to 24th May, 1873. From the French of M. Jules Simon.' In two volumes. New York : Charles Scribner's Sons. 1879. 8vo, pp. 533 and 506.

'The Life of Louis Adolphe Thiers. By François Le Goff, docteur-ès-lettres. Translated from the unpublished manuscript by Theodore Stanton, A.M.' New York : G. P. Putnam's Sons. 1879. 12mo, pp. 353.

by Jules Favre as a negotiator. His patriotically-charitable way of judging men conspicuous in recent French politics extends even to the very actors in the tragic and tragi-comical scenes which the Commune of Paris enacted before the eyes and the yawning cannon of the conquerors of France. Delescluze, Vermorel, Dombrowski, La Cecilia, Vallès, Félix Pyat, Rossel, and even that most meanly-selfish and unscrupulous of revolutionists, Cluseret, are treated in a manner which shows that the writer is more inclined to recognize any kind of merit than to brand infamy; Courbet, Grousset, Rochefort, and similar political fools almost entirely escape mention; Urbain and other wretches are forgotten. Yet, if M. Simon does not endeavor to emulate Sallust or Tacitus, or even a Louis Blanc or Delord, in sketching contemporary characters, he does not recoil from fully unfolding the picture of woe and shame which mob-ruled and madness-stricken Paris presented between the 18th of March and the 28th of May, 1871. The horrors of those days were not exaggerated in the telegrams of the press, which few will have forgotten. "One's heart sickens at such recollections; but if these catastrophes are to be the last, there must be no shrinking from the terrible task of relating them." He shrinks, however, from relating the horrors of retribution—the summary executions by the military at the capture of Paris, the tragedies of the plain of Satory, the wholesale deportations—which accompanied or followed the hellish orgies of the hostage-killers and palace-burners. He completely ignores them, barring an incidental allusion. Were they not excessive? Are they not "to be the last"? What was M. Thiers's share in the implacable rigor which dictated them? Was he only the instrument, or the grieved spectator, of the vengeance of the reactionary Assembly? Or was he, too, convinced that the salvation of France demanded such hecatcombs? There is nothing in the book to dispel our doubt, the shadow on the memory of its hero.

M. Simon writes no panegyric on M. Thiers, only a political history of his presidency. But this history, as far as it goes, is, in all its plainness, a panegyric. The actions, the attitude, the words of M. Thiers during this period—and we see only the septuagenarian statesman completely detached from his varied past—breathe wisdom, patriotism, almost antique grandeur. When he assumed power he asked the Assembly at Bordeaux what they had to do. To free the land from the enemy; to recall the army from their foreign prisons and reconstitute a military power; to create order, reconstruct the disorganized administration, check ruinous expenditure and re-establish credit; to send back the mobiles to their fields and workshops; to reopen the intercepted highways and rebuild the demolished bridges; to revive labor. This was the only policy conceivable at that moment. As to the form of government, monarchy or republic? "When we shall have raised up bleeding France, now lying low; when we shall have healed her wounds and renovated her strength; then we shall restore her to her own guidance." The Assembly, he acknowledged, was sovereign and could make a constitution, but he expected it to be wise enough to forego the exercise of its power for the sake of union. His own duty, though named Chief of the Executive of the French Republic, was "loyal dealing towards all the parties which divide France and divide the Assembly." "If we succeed in effecting reorganization it will be done under the republican form and to its profit"; but "I give you the word of an honest man, not in one of the reserved questions shall any resolution be taken; no solution shall be effected by a breach of faith on our part." This was his share in the "pact of Bordeaux."

The first act of the new Government was to be the purchase of peace at the price of French provinces. The representatives of Alsace and Lorraine protested against the cession even before the constitution of the Government, and the Assembly heard their declaration with deep emotion. It was suggested to delay the discussion, but M. Thiers insisted upon an immediate decision: "One thing alone is worthy of you, worthy of France, worthy of true patriotism: it is that you declare yourselves at once, so that your will may be made known. To put this off to-morrow would be puerile. Be assured of this, you cannot screen yourselves behind any government which you may institute. Have the courage of your opinion; either war or peace." The Assembly referred the declaration "to the wisdom and patriotism of the negotiators."

The negotiators, Thiers and Jules Favre, immediately departed for Versailles to meet Bismarck. The terms dictated by the conquerors were crushing. Thiers exerted all his powers to save Belfort. The Chancellor seemed inexorable.

"Well then!" cried Thiers, "let it be as you will it, Count! These negotiations are nothing but a sham. We appear to be discussing, but we are merely to pass under your yoke. We ask of you a city which is altogether French; you refuse: this is to admit that you have determined upon a war of extermination. Make that war then! Ravage our provinces, burn our houses, slaughter the inoffensive inhabitants; in a word, complete your work. We will fight you until our last breath. We may be defeated, but at least we shall not be dishonored."

Bismarck seemed moved—the loose talk published by Dr. Busch does not show this, but Bismarck's heart may be much more humane than his talk; he referred the question to his master, and the final decision was: We enter Paris or keep Belfort. "Nothing," replied Thiers, "can equal the grief which Paris must feel in opening the gates of its unconquered walls . . . Nevertheless it is ready to drink the cup to the dregs, so that one bit of its soil and a heroic city may be preserved to the country. We thank you, Count, for having afforded Paris the opportunity of ennobling its sacrifice. The mourning of Paris shall be the ransom of Belfort . . ." Jules Favre is responsible for the authenticity of these fine utterances. Bismarck has ridiculed the scene, but even when the ransom money was to be weighed he proved to be somewhat better than a Brennus.

Alsace and part of Lorraine to be ceded, Paris to be entered, five milliards to be paid—was it not a disgraceful treaty? "Let him who speaks of shame stand up!" exclaimed Thiers in the Assembly, on his return. Of the 120 regiments with which the Empire began the war 117 were made prisoners at Sedan and Metz. New armies were created by the Republic. "Where are they, these armies that sprang from the earth? In Germany. We have left only 200,000 recruits under arms. The *levée en masse*, supposing it possible, would not give us an officer or a sergeant. . . . It is not the feebleness of France that I come to plead; I would die rather than plead that . . . I only want to tell you that your organization has been shattered, and that you cannot put it together again in a few days." The treaty was accepted.

The Germans entered Paris and retired, but held the forts on the right bank of the Seine. On the conclusion of the armistice some of the best elements of the population had left the city—to breathe the air of the country, to restore their health, to see their friends, or to renew their business relations; the turbulent elements, banded together under the Central Committee of the federated National Guards, made the insurrection of the 18th of March. Generals were massacred, troops deserted their flag, the Government and the remnants of the army withdrew to Versailles. Thus Paris, scarcely provisioned after a five months' siege by invaders, was again to be besieged by the French Government. Within her walls she was a prey to the wildest excesses of popular frenzy, a frenzy bred of fear of reaction and chimeric dreams, of disgust and despair, of ignorance and want of faith, of *ennui* and hunger. The same disease infected and disturbed the large cities in the provinces. France was threatened with dissolution. To reorganize the army, to keep down Lyons, Marseilles, St. Étienne, and Bordeaux, to preserve the neutrality of the Germans, to win credit amid chaos, to provide for the ransom and the daily needs, to reconquer Paris; to do all this without wrecking the Republic on the shoals of reaction: this was the task of M. Thiers in those days of unutterable anguish. Yet the old man—he just then completed his seventy-fourth year—was equal to the task. He remained calm, courageous, firm, active, and energetic. His prudence and patience equalled his skill and versatility, and thus he conquered. The army was reorganized and its future laid on a solid foundation, Paris was reduced, the ransom paid without a crisis and the territory liberated, order restored, the national credit saved, the Republic preserved. As to the last point, the following is a clear statement:

"It was plain enough that if he succeeded in reconstituting the army, the administration, and the finances under a republican government, these great results would confirm and consolidate the Republic. He did not work with a view to this result, and he said so; but this result did not alarm him, and so he said also. This position was at the same time so well defined and so well justified that he advanced in the confidence of the Left with giant strides. It might have been believed during the first few weeks that the Right would never throw him over. But those who saw beneath the surface, and who followed closely the movement of parliamentary opinion, did not fail to perceive before long that the battle would come from that side. . . ."

Parliamentary opinion—that is, the opinion of the majority of the Assembly—and M. Thiers, and with him the opinion of the country as manifested in partial elections, were moving in opposite directions. He knew from the start that there was no room on the imaginary throne of France for three claimants to its possession, and no means of making Legitimists, Orleanists, and Bonapartists agree on a plan of seating one and unitedly keeping him there against the Republicans. His own achievements, as he predicted it, redounded to the advantage of the latter, whom he taught to be moderate and conservative. The antagonism

of the Assembly, which became daily more pronounced, wrung from him concessions as to the *personnel* of his administration, but personally alienated him more and more from his former monarchical associations; and he quietly proceeded in virtually "founding the Republic without Republicans." M. Jules Simon wondered that he could so long remain at his side, and Thiers, who had saved his independence only by repeated threats of resignation, foresaw that his own overthrow by a hostile vote was only delayed until the liberation of the territory should be effected, none else being able to effect it. When the last convention with the Germans was signed, and he had declared in the Assembly, "The Republic is a fact, it is the legal Government of the country; to wish anything else is to wish and ask for a new revolution, the most formidable of all"—he had to make room for Marshal MacMahon. A few days before he had been forced to accept the resignation of Jules Simon.

The latter, in writing this history, meant to teach politics; he did the one thing with candor, and the other with moderation. Both as a history and a political work his book is an indictment of the Empire, the Commune, and the monarchical majority of the Assembly; but its tone is far from being harsh. The English translation is obviously the product of hasty labor, such as publishers afraid of competition are apt to demand. The proof-reader gave himself little trouble about names. But, whether in the original or in the translation, the two volumes deserve to be read through by every friend of contemporary history.

Le Goff's 'Life of Thiers' is a work of love and admiration, written expressly for the American public, and eminently well executed for its purpose, which was to place clearly before the reader the political character of the statesman and the unity of his life. It is written in a very vigorous style, is attractive throughout, and, in spite of a good deal of partiality for its subject, abounds in sound and lucid information on the history of France within the last fifty years. Mr. Stanton's part in the preparation of the volume was "more than that of translator." He selected and arranged his three hundred and fifty pages from a large mass of manuscript, added explanatory clauses and notes, chiefly of a biographical character, and, "in a few instances, inserted an anecdote or letter, or added a paragraph or two," while closely clinging to the opinions of the author. These additions, on the whole, are valuable enough, and leave no doubt as to the translator's familiarity with French history; but, unmarked as they partly are, they deprive the text of some of its genuineness, and consequently of some of its importance as a production by a French writer of great powers, intimately acquainted with the events and men of his time. The slips committed by the translator, whether in diction or in statements of fact, are few and not of the graver kind. His first biographical note shows such a slip, for Robespierre was not "guillotined," but only arrested "on July 27, 1794—the 9th Thermidor," his execution taking place on the following day. Odilon Barrot was not living in 1878, as the note on page 80 makes him appear to have been; he died in 1873. "Bégère" stands repeatedly for Régère (pp. 135-137), and "January 2, 1869" (p. 184) for January 2, 1870. Want of space forbids us from discussing the soundness of the author's leading view of Thiers, as well as from detailing the many interesting features of his biography, but we can say that the book, unpretentious as it appears, deserves a place among works of a high order of merit.

Some Early Notices of the Indians of Ohio. To what Race did the Mound-Builders belong? By M. F. Force. (Cincinnati: Robert Clarke & Co. 1879.)—The author has gathered together many statements, correct, false, and dubious, and quotations from writers of some and no authority, in generally undigested and sometimes indigestible masses. His essay upon the mound-builders concludes that "they were flourishing about a thousand years ago, and earlier and later," which, though by no means incredible, is a rather vague result to reach after pages of patient reading. Neither is it unlikely that they were, as he asserts, of the same race as the tribes now living. But there are so many errors in the premises for all his deductions that any opponent of his proposition is furnished with a full arsenal for successfully assaulting it.

The title is somewhat misleading, as of "the Indians of Ohio" attention is confined to the Eries and Shawnees. The few pages devoted to the Eries, who were nearly, if not wholly, destroyed by the Iroquois about 1656, suggests the possibility of some of them having escaped, and being identical with the Tongorias on the Ohio and Tennessee in 1720, and with the Tuckabatchies, who, according to tradition, were adopted into the Muskoki confederacy at a time corresponding with the Iroquois victories. This discovery of survivors under changed names of a tribe long reputed as utterly extinct is in accordance with other results of late research; but the theory that the tribe distinctively and historically known as the Shawnees is also to be traced from the Eries, Rigues, or Erigas, which is mentioned by the author, although he does not give it his approval, should be strongly reprobated. The pristine home and migrations of the Shawnees have given much trouble to American ethnologists. Bodies of Indians known by that name, or one *idem sonans*, spelled Chaouanons, Shawanos, Sawanahaac, etc., etc., were noticed as on the Delaware in 1640, in the Valley of the Cumberland in 1680, on the Ohio in 1673, "near Carolina" in 1665, and near Mobile in 1714. The French considered their original seat to have been on the southern shore of Lake Erie, and there is some evidence of their appearance in Florida. In fact there are few of our present States south of the great lakes and east of the Mississippi where there has not appeared notice of a tribe with substantially the same name and at nearly the same time. But that name, not only in the vocabulary of the Shawnees now in the Indian Territory, but with the same root in several of the Algonkin dialects, means "Men of or from the South." It is probable that the term was applied at one time to a variety of tribes by their northern neighbors, and that most of those tribes afterwards became known by other titles than those referring merely to their habitat and migrations. A large number of tribes might thus have been called "Southerners," as the Scotch named the English Southrons, while, again, the English and French would speak of the Spanish and Italians as southern nations. In a corresponding manner, some of the Scandinavian immigrants into sunnier climes obtained and preserved the name of Northmen or Normans, as one of the several tribes called Shawnees or Southerners maintained and adopted that title. This attribution of a common epithet would account for the apparent ubiquity of a tribe which, as actually and distinctively known, was never very numerous, and it would be more natural that any of the Eries who had fled from the lakes into Tennessee or Alabama should have been called Northerners rather than Shawnees.

The linguistic evidence, however, settles the question against the identity of those tribes. It is admitted that the Eries spoke the Huron-Iroquois language, while the body of Indians who have during historic times preserved the name of Shawnees, and whose successive homes in Pennsylvania, Ohio, at Cape Girardeau, and in the Indian Territory, are well known, were clearly Algonkin, and their present speech corresponds with a copious vocabulary taken in 1796. The fugitive Tuckabatchies, however, if a remnant of the Eries, adopted and partly absorbed into the Creeks or Muskokis more than two centuries ago, might readily have lost their native language before any white explorers met them.

Die Culturländer des alten Amerika. Von Dr. Adolf Bastian. 2 vols. (New York: B. Westermann & Co.)—We have here two ponderous tomes filled with an uncouth conglomerate of ethnological ideas, historical facts, personal views, and quotations, and purporting to be American archæology and ancient history. It is preceded by a diary of the great traveller's tour along the western coast of South America, into New Granada and portions of Central America. This diary is remarkably barren of facts concerning the countries visited, whereas, on the other hand, it bristles with distasteful attacks on the Catholic Church, whole pages almost being devoted to the mediæval and other scandals of the papal court—*à propos de bottes.* Still there are some noble pages in this first volume. The description of the Straits of Magellan is one of the finest ever written, but the tableau of the first view of Chimborazo is, on the other hand, an unlucky caricature of Humboldt's "First View of the South Sea" ('Aspects of Nature').

The scientific part of the work proper is very hard to read. Not content with pretending, in a rather undisguised manner, to have founded the ethnology of the future, Dr. Bastian has also a language of his own, which, besides having hardly any grammar, presents such a mixture of human tongues, spoken or unspoken, as to remind one forcibly of the "Spraka International" which a Swiss comic paper once suggested. Bastian "does" successively Peru, New Granada, Central America, and Mexico. He throws together a huge mass of material, but in a strikingly careless manner; quotes largely, though not always aright, and always omits to specify title, volume, chapter, page, etc., etc., limiting himself to the simple name of the author alone. That this is of no earthly use to the student is self-evident. Besides, it gives the whole book an air of conceited negligence which is extremely disagreeable.

Dr. Bastian has always rather vehemently contended that ethnological students should carefully restrict themselves to the collection of ma-

terial and not venture any conclusions as yet. True to these principles, he blindly follows the lead of authors preceding him, in whatever he deems worthy of notice. But not every important feature of the ancient history of Spanish America or of its archæology finds grace with Dr. Bastian. Some of these are omitted in the most unaccountable manner. Thus, while in Peru he mentions the custom which made marriage a matter of the community or kindred, he passes over the "ayllu," which was the kin itself or unit of organization, and which plays such a conspicuous part in Peruvian society with utter disregard. The highly important fact of descent in the female line is casually mentioned in a transition to the question of intoxicating beverages and general drunkenness among the Peruvians. The history of Peru itself is treated in the second volume with the same disregard of common order. He jumps from the traditions of origin to the chiefs, from them to the Chiriguanos, to the legends of the "Orejones," of "Parime," and of the Dorado, inverting the natural order of the last three subjects, and so on, bringing together in the most arbitrary manner things sometimes but remotely connected or having no connection. Besides, he has a faculty of presenting the statements of others in such a manner as to give them undue prominence, thus misleading such of his readers as are not themselves prepared for critical investigation.

To review even superficially the long chapters devoted to other parts of Spanish America would be impossible here. The hurried nature of their composition is shown by such very odd statements as that (in the case of Mexico) the pueblo of Tenuchtitlan was *founded* by *seven families;* that the territory of Tlaxcallan was *surrounded* by a stone wall; that Durán places the home of the Mexicans near Florida (without reflecting how Florida was regarded in Mexico at that time), and a host of similar rather distorted references to other authorities. On the whole, the work is of no value whatever except to such as have access to a large number of original sources. For those Dr. Bastian's ethnological comparisons will always be important, for as far as the eastern continents are concerned he is acknowledged to be high authority.

Soldier and Pioneer: A Biographical Sketch of Lt.-Col. Richard C. Anderson, of the Continental Army. By E. L. Anderson. (New York: G. P. Putnam's Sons. 1879. 12mo, pp. 63.)—The Lt.-Col. Anderson whose life is told in this little book was father of Major Anderson, of Fort Sumter, and himself served with credit through the war of the Revolution. He spent the remainder of his life in Kentucky, and died in 1826, at the age of seventy-six. He appears to have been an honorable and soldierly man, well worthy of a tribute which will be acceptable to the students of our early history. So small a book cannot, of course, give many details. It contains, nevertheless, at least two anecdotes of historical value—one relating to a reconnoissance made by Captain Anderson, under the orders of Gen. Stephen, the night before Washington crossed the Delaware. Washington was very much incensed at this interference with his plan; it turned out, however, that it was really a help to him, inasmuch as "Colonel Rahl, who had been warned of the projected movement, relaxed his vigilance when he learned that his dragoons had driven off the attacking party, and the soldiery gave themselves up to the festivities of the season." The historian Gordon, we are told, confuses Capt. Anderson with Col. Washington upon this occasion. The other story has reference to Gen. Wayne, whose nickname of "Mad Anthony" was due, it is said, to his "furious outbursts of temper, and not his well-known rashness in battle." He had been ordered to support Lafayette in his campaign in Virginia, but took it in great dudgeon that he was put under the command of a "d—— foreigner, and a boy too." Major Anderson (as he was now) succeeded in pacifying him and bringing him to a sense of his responsibility; "he was, though jealous and excitable, a true patriot and a real soldier, and with almost that heat with which he had lately refused to obey, he cried out, 'Tell him I'll jine him! Tell him I'll jine him! By G—! tell him I'll jine him to-morrow!'"

The Secret of Success; or, How to Get On in the World. By W. H. Davenport Adams. (New York: G. P. Putnam's Sons. 1879.)—The 'Secret of Success' has a handsome cover, is attractive in both of its titles, and will no doubt sell. When bought it will be fairly worth the money, but, like other books that profess to disclose important secrets, it will not fail to disappoint some buyers. They will have known—anybody knows—that success is to be attained that way: by economy, sobriety, unflagging industry, the three Ps—punctuality, prudence, and perseverance; but where is the patented "knack"? Is there, then, no nimble stratagem for turning all these tedious positions and arriving in the citadel immediately? Come! this is taking our money under false pretences. Mr. Adams has presented all the standard methods, and they are unexceptionable. This is to be said of them on every successive reappearance. A belief in the possibility of impressing them and making them more efficacious in a community which, though it knows them well, has the chronic habit of neglecting them shamefully, is a sufficient excuse for their reissue at any time. Besides, there are always young people coming up who must learn them somewhere for the first time, and to these there is no reason why 'The Secret of Success' should not be a useful gift-book as well as another. The author distinguishes himself from Smiles, Craik, and others of the sort by drawing his illustrations as much as possible from the departments of "business" and "commerce," which he thinks have not been fully utilized heretofore for this purpose. They range over a wide compass, from Thales the philosopher to Thurlow Weed, but are chiefly modern. They include among the rest Mr. W. H. Smith, the present First Lord of the British Admiralty, and we hear gravely and no longer flippantly the details of the polishing up of handles for the attorneys' firm and the rest which resulted in so happy a connection with Her Majesty's navy. Here and there is an anecdote which might well enough be omitted; not that the proper qualifications are not appended to it, but the wicked side is as likely as not to be preponderatingly seductive. Meyer Rothschild was at Waterloo watching the fight as keenly as Wellington. When he saw how it was coming out, he put spurs to his horse, paid eighty pounds to a fishing-boat to take him across the Channel, went up to London, and, relating only the first events, before the arrival of Blücher, "beared" the stock market for his own benefit and made a million pounds.

Elements of Comparative Anatomy. By Carl Gegenbaur. Translated by F. Jeffrey Bell; the translation revised and a preface written by E. Ray Lankester. 8vo, pp. xxvii., 645; 356 figures. (London and New York: Macmillan & Co. 1878.)—Professor Gegenbaur has long been the leading German comparative anatomist. Leuckart and Haeckel occupy somewhat different portions of the zoölogical field, and have not produced comprehensive manuals for the use of students. Until his recent removal to Heidelberg, Gegenbaur was for years intimately associated at Jena with Haeckel, whose 'Generelle Morphologie' he emphatically "recommends as a scientific guide to the whole of morphology." As might be inferred from this, our author, like nearly all German naturalists, accepts the doctrine of evolution as proved; and, as compared with the systematic works of the elder Agassiz, Huxley, Owen, and Rolleston, this is the principal advantage of the present work. A good example of the way in which the "doctrine of evolution appears as the living, moving investment of the dry bones of anatomical fact" is given by the following words concerning the fissures at the side of the neck of the embryo bird, reptile, and mammal:

"Regarded alone, they are inexplicable, but since in a large division of the lower vertebrata they are important organs of respiration, we are able to comprehend the branchial clefts of the exclusively air-breathing forms as arrangements obtained by transmission from lower stages, which have lost their primitive function and remain for a short time only—during fœtal life."

Gegenbaur recognizes the difficulty of finding a distinct boundary line between the lowest animals and the lowest plants, but suggests (p. 68) that "the characteristic of the animal organism may be taken to be that differentiation affects the whole organism." He divides the animal kingdom into the Protozoa—usually consisting of but a single cell—and the Metazoa, including all the rest. These form eight "phyla," among the names of which are the names of only two of the four Cuvierian "branches," and of these "Vertebrata" alone has the Cuvierian signification. With even this subdivision the groups are so comprehensive that many of the statements are unsatisfactorily vague, and, as is unavoidable in a work of such wide scope, lack the weight of personal authority. Notwithstanding the space (more than one-third of the volume) assigned to vertebrates, the author assumes upon the part of the reader a considerable knowledge of human anatomy; this knowledge is not easily gained excepting in medical schools, and it is to be hoped that the work so well begun by Rolleston and Huxley may be carried on until there is a complete account of some accessible form as the type of each class of animals.

Our author frankly admits the existence of almost insuperable difficulties in the preparation of his work; "every question solved leads again to fresh problems, and renders unstable even what seemed to have taken definite form." The editor has done well in calling attention to

some investigations made since the preparation of the work itself, and to some differences of opinion between others and the author. This was especially needed in respect to the nomenclature of the parts of the brain in the vertebrate series; for Gegenbaur, by adopting in one edition and rejecting in another, without giving sufficient reasons, the peculiar views of his pupil, Maclay, has rather impeded than aided the solution of one of the most difficult problems in comparative anatomy. If naturalists would make periodical statements as to previously expressed opinions respecting mooted points of fact or doctrine, in the form of reaffirmation or renunciation, or qualification, or admission of difficulties to be overcome, the work of others would be aided and unprofitable controversies might sometimes be avoided.

The usefulness of the present work to English-speaking students is impaired by the insufficiency of reference to English, French, and American authors. Parker, Wyman, and Rolleston are wholly ignored, even in the editor's additions, and the author's list for Vertebrates includes no American publication; the lists for Acalephs, Echinoderms, Brachiopods, and Limulus, however, include works or papers by the elder and the younger Agassiz, Morse, and Packard respectively. The translation has been well done. The figures are mostly diagrammatic, but clear, and chiefly original. A glossary is needed, and the index should embrace the names of principles and organs as well as of groups. Upon the whole, while the work is indispensable to the working zoölogist, and is adapted to the use of the author's own students, we are not sure that the English translation was called for. The editor, however, evidently has no doubt as to the desirability of the translation or his own ability to superintend it. The opening paragraphs of his Preface contain the personal or possessive pronoun twelve times in as many lines, and his unqualified inclusion of the Tunicata among the Vertebrata (p. xvi.) appears like rushing into a region where Huxley and Gegenbaur have, as yet, feared to tread.

Fine Arts.

EXHIBITION OF THE ACADEMY OF DESIGN.—II.

THE common complaint of lack of originality on the part of those pupils who have had the best technical education offered by the Continental schools of the day may be answered in a way that brings home to us in our incompetency the defect of their development. If our plutocrats would show a little of the faith in national talent so freely exhibited by those of their class in England, in Austria, in Russia, or in France, the blank hopelessness which besets the returning student would not deaden his powers as we see it deadening them now at the instant of their expansion. Half-a-dozen of the youthful exhibitors of this season have given proof of the ability to produce extended historical or imaginative works. In any country of Europe these promising adolescents would be set either to paint the ceilings of rich men's villas, or to carve the tympans of their doorways, or to decorate the walls of town-halls and seats of justice, or to fresco church-interiors, or to fill ambitious orders for serious easel-pictures.

The exhibition reveals these young men at the moment when their powers are most highly stimulated, and most ardently enterprising, seated at the sulky manufacture of pot-boilers. Mr. Low, who has proved by his commanding portrait of an American prima-donna how he could revel and exult in the interpretation of social distinction or style, comes forth with a little decorative figure on a gilt panel (585). Mr. Millet, who has been crowned with laurel in a Munich students' procession, shows a degraded likeness (364) of a commonplace burgher. Mr. Chase, who has sent from Europe to a rich American club-house an impressive study of retrospective imagination, exhibits a simple model-copy, infelicitous and empty (471). Mr. Hovenden, besides his *académies*, gives us as earnest of his fancy and his invention only the stupid "Challenge" (509), resembling an insipid Düsseldorf ballad. Mr. Sargent, whose clever brush has before now been exerted on palace ceilings, sends but the Neapolitan sketch (431), like a torn leaf from his album. Mr. Sartain, whose "Narcissus" and lovely heads of contadina and pifferaro have proved to us in former years a power over the figure at once realistic and classic, has since fallen back on little irreproachable Algerian street-views. As for the sculptors, the war has dictated the way in which they are to be deformed. Be a carver of talent, be ambitious to model the graces and the hours and the nymphs, and there comes along a committee of army veterans to tell you that if you can undertake contracts for soldiers' monuments and represent brigadiers in buckram, on that condition you can be an American sculptor and live. The new ambition to decorate city churches and State capitols, and that not by the hands of Italian flower-painters but by cultured thinkers who represent the civilization of the United States, is a movement full of life and hope, and one to be encouraged to the utmost. But it has as yet utilized but two persons. The good faith in which these artists have toiled, giving time and conscience to conceptions which they executed for little pay and with many obstacles, proves the anxiety of our talent to be set at work. There is nothing like the present state of things in any other civilized country, nor has there ever been. In every former renaissance the power of painting was evoked by contemporaneous patronage, and the support accompanied every branch and fibre in the growth. America, in all the inconvenience of an era of cheap education, presents a crowd of capable graduates, offering themselves to a market which believes only in imported talent.

The best imaginative picture in the Exhibition which so sadly demonstrates this unnatural state of things is Mr. Fuller's "And She was a Witch" (421). In a forest red with sunset the priest and the town-clerk drag away a protesting beldame, while another crone jealously denounces the culprit, and a girl flies to her cabin, wild with terror. The posture of the hunted maiden forms a complete, original, and striking statuette, while the melting landscape is pathetic in its drain of evening light. Mr. Homer's best contribution is the "Upland Cotton" (393), thoroughly individual and unborrowed in its effect of dusky figures seen through a tracery of intricate plants which quite enlace the canvas. Mr. Sargent's "Neapolitans" (431)—"too much like Michetti," as he says himself—is a very lovely study, the effect of strong daylight with its blue shadows being quite deceptively dazzling, and the easy modelling of the bathers' naked flesh superbly soft and suggestive. It is not a literal rendering of a natural effect, but it is a highly poetical and inspiring one. Mr. Shirlaw and Mr. Mulvawney contribute heads painted exactly alike (122, 159) of Munich male models in Van der Helst costumes, in which every flesh-surface, whether of bone, cartilage, or pendent muscle, is of exactly the same degree of firmness. It is an insidious kind of stencil-work, finished with all neatness, and nobody not inspired could tell that different artists had done the different heads. The former, however, is by a painter, who has almost approached Munkacsy in his "Bavarian Sheep-shearers," and the latter by an artist whose work executed since is wild, Western, and slangy. Mr. Beckwith's portraits (152, 346) are genuine and direct in execution, if a little empty. The lady's full-length figure is particularly imposing, and has made a hit; but her painter cultivates a peculiar spreading breadth of style which verges on platitude, and in avoiding his master Duran's horror of "trop de choses," is in danger of thinness and Thomas Sully. Eakins's "Dr. Brinton" and his "Pair-oared Shell" (463) show the solid advance made by one of the very few French students who have developed an independent American style since their return. The portrait is as solid as a statue of iron, and full of grim character; the racing subject, though set in too low a key to give the illusion of daylight, is broad, pure, and inexorably true. Miss Moss's likeness of Mrs. Dr. Deems (174) is very graphic, vital, and energetic. Mr. Boggs gives a "Street of Paris" (158) which succeeds in conveying the metallic glint of buildings and pavements just washed by the rain and set out broadly to dry in the sun. Mr. Dana's "Dinant Beach" (164) shows a soft and tender group of lazy seaweed-gatherers in a poetic landscape where it seems always afternoon, and where the light will never emerge from the cloud of melancholy. The "Droit de Bris" (168), or salvage-right of coast-side wreckers, is interpreted by Mr. Swift in a sinister and creepy tableau of men of prey watching for shipwreck. The little haying-scenes of Mr. Swain Gifford are quite equal in quality to Théodore Rousseau; Mr. Inness's "Study" (445) is a lovely upright picture where a climbing tree unrolls its draperies of foliage with all the richness of a darkened tapestry; and Messrs. George and James Smillie both exceed their former efforts in their respective "Goat Pasture" (389) and "Up the Hill" (186).

Money in its Relations to Trade and Industry.

By Francis A. Walker,

Professor in Yale College. 12mo, $1 25.

HENRY HOLT & CO., New York.

Heliotype.

Permanent Photographic Book Illustrations.

THE HELIOTYPE PRINTING COMPANY are producers of Book Illustrations by the Heliotype, Photo-lithographic, and Photo-engraving processes. Employed by the United States Government in illustrating Scientific and Medical Reports, by Scientific, Historical, and other learned Societies, by the leading publishers, and for illustrating Town and Family Histories, etc., etc.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings and Sketches, Views and Portraits from Nature, Medical and Scientific objects, Antiquities, etc., etc.

For terms and specimens apply to the

HELIOTYPE PRINTING COMPANY,

220 Devonshire Street, Boston, Mass.

FOR HOME AND OFFICE LIBRARIES.

THE PORTABLE BOOKCASE.

Eastlake Design. Prices Reduced.

These cases, made of various woods, with le ther fringe to match other furniture, are of exceptional value, and give the greatest satisfaction to all who use them. Two sizes, in walnut and pine, always on hand, and special cases of any size or wood promptly supplied. Send for descriptive circular and price-list. Address the sole makers,

LOCKWOOD, BROOKS & CO., 381 Washington Street, Boston.

Continued from page iii.

New York, Poughkeepsie.

RIVERVIEW ACADEMY.—Fits for college and for business; is thoroughgoing; requires order, encourages and provides recreation, and treats the boys with fairness. Reopens Sept. 11. Circular sent to every applicant.

New York, Poughkeepsie.

VASSAR COLLEGE, for the Higher Education of Women.

Examinations for admission to the Freshman Class of Vassar College will be held in Boston and Cincinnati on the 12th and 13th of June, 1879, and in Chicago on the 16th and 17th of June, 1879. For further information apply to W. L. Dean, Registrar, Vassar College.

New York, Rye, Westchester Co.

PARK INSTITUTE.—Wholly devoted to preparing boys for college. Henry Tatlock, A.M., Principal.

New York, Suspension Bridge.

DE VEAUX COLLEGE.—Prepares for the Universities, etc. Terms $400 per annum. 20 Foundation scholarships. Rev. Geo. Herbert Patterson, President.

New York, Troy.

*RENSSELAER POLYTECHNIC INSTI-*tute. A School of Civil Engineering.

New York, Utica.

MRS. PIATT'S SCHOOL for Young Ladies. —Winter term begins January 6, 1879.

Ohio, Cincinnati.

WESLEYAN FEMALE COLLEGE.— Best advantages in Literature, Science, Languages, Painting, Wood-Carving, and Music.

Rev. David H. Moore, D.D., President.

Pennsylvania, Germantown, West Chelten Avenue, below Wayne Street.

MISS MARY E. STEVENS'S, formerly Miss Mary E. Aertsen and Miss Mary E. Stevens's, School for Young Ladies, will reopen Sept. 19, 1878. Scholars prepared for the Harvard Examinations for Women.

Pennsylvania, Haverford College P. O.

HAVERFORD COLLEGE, under the care of the Society of Friends (Orthodox). Thos. Chase, LL.D., President. For catalogues apply to Prof. Allen C. Thomas, Prefect.

Pennsylvania, Philadelphia.

MEDICAL DEPARTMENT OF THE University of Pennsylvania. One hundred and fourteenth Annual Session. The attention of students looking to the profession of Medicine is particularly called to this the oldest Medical School in the United States. Recent changes in the curriculum include a prolongation of the course, and the introduction of much laboratory teaching and practical instruction in all the branches of medical science. For an announcement containing full particulars address James Tyson, M.D., Secretary Faculty of Medicine.

Pennsylvania, Philadelphia, 1527 and 1529 Spruce Street.

CHEGARAY INSTITUTE.—Boarding and Day School for Young Ladies and Children. French is the language of the family. Please send for Circulars.

Pennsylvania, Swarthmore, Del. Co. (10 m. from Phila.)

*SWARTHMORE COLLEGE, a Friends' In-*stitution, for the thorough collegiate education of boys and girls, young men and women. No distinction is made in studies pursued or degrees conferred.

For Catalogue containing full particulars apply to the President, Edward H. Magill.

Vermont, Brattleboro.

SIMPLE Home School for Boys reopens May 1, 1879. School in session during the entire summer. For circulars address Mrs. Emma J. Ives, Principal.

Vermont, West Brattleboro.

GLENWOOD CLASSICAL SEMINARY.— Fits boys for our best colleges; a thorough English course. Rooms heated by steam; grounds extensive, and adorned with a fountain and shrubbery. Send for calendar to C. E. Blake, A.M.

Wisconsin, Racine (on the Lake Shore).

RACINE COLLEGE begins September 5. *The* College and Grammar School open the same day. For catalogues apply to the Rev. James De Koven, D.D.

Wants.

A BOSTON LADY, passed first half Harvard examinations for women at Cambridge, and expects to try second half next June, wants employment as teacher. Educated at the best schools in Boston. Studied two years in Paris and London. References in Boston and Cambridge. Miss B. K. E., Pepperell, Mass.

A GERMAN-AMERICAN lady of twenty will accompany an agreeable lady or family through Germany. Speaks French only moderately well. Address Gesellschaft, *Nation* office.

A HARVARD STUDENT, who has taken classical honors, desires a pupil during the summer vacation. The best of references. Address G. E. H., Drawer 30, Boston P. O.

A LADY, a Hanoverian, ten years in this country, studying now for two years in France, desires a situation as travelling companion, governess, or teacher of French, German, and English branches in a private school. Enquire of

H. C. G. Brandt,
Johns Hopkins University, Baltimore.

A LADY, well known as author, reviewer, and paragrapher, desires position as assistant-editor or correspondent; country or city. Box 201, Charlestown, N. H.

ALPHONSE VANDAELL, Cand. Phil. and LL.D. (French native tongue), Professor of Ancient and Modern Languages, Kentucky College, Pewee Valley, Ky., desires congenial employment during the summer months. Terms very moderate. Would prepare one or several young men for college.

FRAULEIN REINCKE, native of North Germany (daughter of the late Rev. Dr. A. Reincke, from the University of Gottingen), a successful teacher in New York City, offers a pleasant, comfortable home, with social advantages, to a few young ladies for the purpose of studying German theoretically and practically, other languages, and Music, during the summer, at a country seat in Fort Washington-on-the-Hudson, half an hour from this city. The views and situation are very attractive and healthy, the house standing on a hill four hundred feet over the water level, the highest on Manhattan Island. Highest references. Address Fraulein Reincke, care of F. W. Christern, 180 Fifth Avenue, New York.

GERMAN.—An educated North-German family receives a few responsible persons wishing constant practice in German, with board. Instruction given in German, French, Italian, Piano, Singing, Harmony, if desired. Address Mrs. Antonie Schrader Place, Concord, Mass.

GRADUATE OF HARVARD will take a pupil to Europe for the summer. Four years' successful experience in preparing boys for college; has travelled in Europe, and is familiar with European languages. Highest references. Address N. K. F., care *Nation*.

SUMMER HOME FOR CHILDREN.—In a healthy and pleasant location, six miles from Boston, a lady would like six children under twelve years old for the summer, to whom she would give best of care and the comforts of a home. If desired, music or other lessons can be given. Refer by permission to W. P. Garrison, Esq., *Nation* office, N. Y. Address Box 20, Belmont, Mass.

THE

Meriden Britannia Co.

THE LARGEST MANUFACTORY OF ELECTRO-PLATED WARE IN THE WORLD.

Salesrooms, No. 46 East Fourteenth Street,

UNION SQUARE,

NEW YORK.

We take much pleasure in referring to the repu[tation] we have for many years maintained for manufacturing [SPOONS] AND FORKS BEARING THE TRADE-MARK "[1847] ROGERS BROS."

Particular attention is invited to our *Pat[ented] Process of Electro-Plating Spoons and Forks*, by which [the parts] most exposed to wear receive an EXTRA COAT OF SI[LVER]. This feature renders these goods more economical and d[urable] than those of any other manufacture, while the increased [cost] is relatively small. This method of plating we apply to the 4[-oz.] and 12 oz. plate, as required.

To protect the purchaser against imitations, it should be observed that the Improved Spoons and Forks bear our Trade-Mark, "1847, *ROGERS BROS., XII.*"

FIRST PREMIUMS awarded at all Fairs where exhibited, from the World's Fair, 1853, to American Institute Fairs, 1873, 1874, and 1875, inclusive, and at the Philadelphia Exhibition, 1876.

Extract from the American Institute Report:

"Their Porcelain-lined, Double-walled Ice Pitchers are A1, and possess *all* the qualities the company claim." . . . "We consider the goods made by this company to be by far *the best* made in this country, and we believe in the world."

NEW YORK, THURSDAY, MAY 29, 1879.

The Week.

THE Legislative Appropriation Bill, as passed by the Senate, was, in spite of sundry objectionable amendments, accepted by the House on Friday, and has gone to the President for his action upon it. On the same day the Senate by 34 to 12 passed the measure popularly known as the Yellow Fever Bill, but strictly to be designated as "a bill to prevent the introduction of contagious or infectious diseases into the United States," which was the occasion of a very interesting debate. The bill practically supersedes State quarantine, internal and external, and invests the National Board of Health, subject to the President's approval, with extraordinary powers of supervision and regulation for the sanitary defence of the country. The curiosity of the situation was that the ultra defenders of State-rights on all political issues were here, for sectional and party reasons (the South being in mortal dread of a recurrence of the fever), stanch upholders of the Government's right to protect the Union against the sanitary neglect of any State; while Mr. Edmunds and Mr. Conkling and Mr. Hoar denied the constitutionality of the bill even as an inference from the power to regulate commerce. Mr. Edmunds, who lately demonstrated that there was such a thing as "United States peace," denies that the "health of the United States" has any recognition in the Constitution. This matter he considers relegated to the States, along with other details of personal conduct, such as, we may suggest, the regulation of marriage. The noes were mainly Republican, and this gives point to what is really a fresh illustration of the irresistible tendency of the country towards centralization, one party assisting in it (however illogically) whether the other will or not. The Senate has also discussed a bill providing for the redemption of the subsidiary silver coins in multiples of $10 or $20 at the Treasury, Mr. Thurman acutely objecting to it as an unlimited means of procuring gold in exchange for a limited legal-tender of much inferior value. Mr. Edmunds also made the point that the redemption of coin was no part of a Government's business, and that if the bill passed in due time there would be a clamor for the redemption of the depreciated silver dollar.

After a good deal of filibustering the majority in the House succeeded on Saturday morning in passing the Warner Silver Bill, amended but still left in a highly mischievous condition, by a vote of 114 to 97. It is in itself an amendment of seven specified sections of the Revised Statutes, fixing the gold and silver coins of the United States, and providing that the owners of silver bullion may deposit it at any mint for coinage into standard silver dollars, at charges equal to the difference between the market value of the bullion in New York City and the legal-tender value of the coin—said market value to be the value of bullion in coin of the same metal at its legal-tender value in New York and San Francisco for the week preceding the deposit; providing also for the paying out of subsidiary coins in exchange for silver dollars or greenbacks; requiring the Secretary of the Treasury to pay out silver without discrimination (except to Congressmen; Mr. Warner would not allow a vote on this proposition) "in liquidation of all kinds of money obligations against the Government"; making the subsidiary coins legal-tender up to $20; requiring the Secretary to issue certificates for gold or silver bullion deposits in sums of not less than $20, and in convenient denominations of not less than $5, corresponding with the denominations of U. S. notes, these certificates to be receivable "at par in payment for all dues to the United States, including duties on imports," and when returned to be the signal for coining the bullion deposited against them, as the then property of the Government.

It has been a week of rapid changes in the financial markets. A large amount of money was drawn into the Treasury from the banks in settlement of 4 per cent. bond contracts made early in the year, and in payment for ten-dollar certificates. The result was a depletion of the New York bank reserve from a surplus of about $11,000,000 to $5,500,000. This made the rates for money loans irregular; on several days the Stock Exchange rate having been as high as 7 and as low as 3 per cent. The sales of ten-dollar certificates were stopped in the leading cities on Tuesday because it was found that large amounts were taken there by brokers' agents for conversion after July into 4 per cent. bonds, and that the certificates were not going into the hands they were designed for. All the bond issues of the Government were strong early in the week, but in the latter part they declined ¼ to ½, led by the 4 per cents. The passage by the House of the Warner Silver Bill had something to do with the decline, but it was mainly owing to the sales of 4 per cents by speculators. Silver bullion in London advanced to 51*d.* per ounce, and here the bullion value of the 412½-grain dollar advanced to $0.8623. At the Stock Exchange the spirit of speculation ran high, and, although there is no prospect that the Warner Bill will become a law, the inflation which the silver-certificate part of it authorizes gave a stimulus to speculators.

Ohio will soon be the scene of a most exciting political conflict which will have nothing to do with Ohio politics, but will derive its importance from its relation to the Presidential campaign of next year. The two chief candidates for the Democratic nomination for Governor are Mr. Richard Bishop and Mr. Thurman, the former representing the "Tilden wing" of the party, the latter being, of course, a candidate for the Presidency. There seems to be great doubt, however, whether at the last moment he may not decline again, as he has once already, to run, and throw the nomination into the hands of one of his friends. Those who have made a close study of Mr. Tilden's purposes think that his plan is to have Thurman nominated and then overwhelmingly defeated through the aid of Bishop, thus demonstrating that Ohio, like New York, cannot be carried without assistance from him. In the Republican camp Judge Taft and Mr. Charles Foster are the prominent candidates for the governorship, Judge Taft representing the "Stalwarts" and Mr. Charles Foster the "Liberals." Here too the whole aspect of affairs may be changed at the last moment by the appearance on the scene of Mr. Sherman, who has written a letter saying that he is not a candidate for the Governorship and suggesting what kind of a platform he would put forward if he were a candidate for the Presidency. This, it is needless to say, embraces as one of its planks "an honest dollar," a kind of dollar that ought to be popular with everybody, and would probably be found to consist of four honest quarters, ten honest dimes, and so on. The dime and the quarter may be humble, but ought they not to be honest too? Judge Taft is violently attacked by Mr. Foster's friends on account of his share in the "Bible in the Public Schools" decision of some years ago, and it is being conclusively proved by means of interviews with clergymen that "Taft's nomination would cost the party thousands of votes."

We trust Mr. McCulloch is not doing mischief by the hopes he is exciting in the breasts of the silver-men by his conversations about the probability of a remonetization of silver by France, England, and Germany. He had a talk the other day with the reporter of the Boston *Herald*, in which he declared that "the leading business men of England" and "the leading commercial interests of Great Britain all favor the measure." No change so great as the remonetization of silver is likely to be made in England without much enquiry and discussion and agitation, and we must call Mr. McCulloch's attention to the fact that nothing of the kind is yet

visible. There have been articles by two business men of prominence in one of the monthlies in favor of the measure, but we do not know of a single newspaper or periodical which advocates it, or, if in favor of it, gives much notice to it. It has not been debated in Parliament or recommended by any Parliamentary committee, and, in fact, has assumed no prominence whatever in public among the remedies recommended for the prevailing distress, while a change in the tariff is loudly called for by a considerable body of persons not without influence. Moreover, we cannot think it quite safe even for a gentleman of Mr. McCulloch's wide experience to lay it down that the immense yield of the silver-mines with which we are now threatened "would be counterbalanced by the wide diffusion of the metal in the shape of currency," for he knows as well as any one that the greatest difficulty of the silver question is to secure this "wide diffusion." In fact, there never was a question in which it was less safe at this moment to trace out any plan of action.

The death of Mr. William Lloyd Garrison on Saturday night, at the ripe age of seventy-four, was not simply the close of a life of extraordinary completeness, but may be said to mark also the final triumph of an idea which began to fight more than two thousand years ago, and which, though it found strongest and most marked expression in the anti-slavery agitation within the present century, has in reality revolutionized politics and created the modern State. We mean the idea that nobody exists for anybody else's benefit, and that every man is entitled to a fair opportunity of making the most of himself; in short:

> "That not a worm is cloven in vain,
> That not a moth with vain desire
> Is shrivelled in a fruitless fire,
> Or but subserves another's gain."

The idea has had no more uncompromising and tenacious champion than Mr. Garrison, and he has had the rare good fortune to see all opposition to it die out before he himself had to rest from his labors. We must reserve until next week a fuller appreciation of those labors and of him.

The report of the Assembly committee on the Brooklyn Bridge is a rather inconclusive document. They report that the bridge when finished will obstruct vessels with masts more than one hundred and thirty feet in height; or, in other words, that many sailing vessels will have to lower their topmasts in order to pass it. The question of the navigability of the East River, however, is a national and not a local matter; and, if there is any truth in the stories about the damage the bridge is going to do to navigation, the whole matter ought to be investigated by the United States through a competent committee of engineers. Such an examination was made some years ago, and if the plan of the bridge has been since changed so as to make the favorable report then obtained inapplicable to the present structure, the same authority should be appealed to again. The idea that the report of an Albany Assembly committee on the subject should carry any weight would probably have never occurred to anybody but political "workers" who were anxious to use the bridge for their own purposes. Anywhere except in New York the construction of a great public work of this kind would have been placed from the first in the hands of competent and disinterested men, with authority to build it and pay for it. Under our system it was begun twelve years ago and is not finished yet. It was to have cost $3,000,000, and it will probably cost $15,000,000. It was started as a stock company, and then "unloaded" on the two cities; it is still the foot-ball of the politicians and the courts, the Comptroller of this city having within the past year endeavored to make a little cheap popularity out of a refusal to advance the money due from the treasury for its construction. It is a curious illustration, too, of the barbarous condition of the public mind on economical questions that the bridge is from time to time bitterly denounced by New York newspapers as built wholly in the interest of Brooklyn, as if an additional highway between two cities containing each a million or so of people could possibly benefit one without benefiting the other.

There have been during the past fortnight one or two pleasant and hopeful signs of returning—we do not like to say what, lest we should give offence—on the part of the Republican press. The New York *Times* on the 20th acknowledged that the tone of the "reputable and influential newspapers" of the South on political questions is "temperate and conciliatory," and that it is not fair or honest to quote the "three or four trumpery sheets," like the Okolona *Southern States*, as fair expressions of Southern opinion. The practice of quoting these "trumpery sheets," both by members of Congress and by the Republican press, and representing them as fair exponents of the kind of feeling we have to deal with at the South, for the purpose of firing the Northern heart, has been much followed of late, and the sheets in question have, of course, profited by it as an advertisement, and made their "treasonable utterances" hotter and stronger than ever. If this sort of thing were done by an editor in social or commercial life—that is, if he were to produce and commend to the confidence of his friends, as a representative and trustworthy man whose word might be relied on, a rascally adventurer, living by his wits and despised at the place of his residence—it would be considered a disgraceful performance. As the world goes just now it is pleasant to see such practices repudiated by a leading Stalwart paper. Conscience is, doubtless, asserting its sway even under the "bloody shirt." Many an editor and orator is, perhaps, beginning to beat his breast and cry in the watches of the night, "Who is the colored man that I should tell lies for him! What is the party that I should play scavenger to it!"

The troubles arising out of the Iowa Central foreclosure case, in which imputations were cast on Judge Dillon, are not yet over. Judge C. C. Cole, formerly of the Supreme Bench of Iowa, like some other eminent lawyers, wrote private letters making charges against Judge Dillon in the case, which he was not willing to make publicly, but his correspondent published extracts from the letters, and this brought Mr. Cole's conduct under the notice of the Iowa bar. An attempt has been made to disbar him by an application to the U. S. Circuit Court. He demurred on the ground that his letters were privileged communications, but Judge Miller ruled that there was no demurrer or law in the matter; that if the court thought he had behaved improperly, privilege or no privilege, he would have to go. He has, however, got a postponement until October, when he expects Judge Dillon will not be sitting, as this gentleman has been offered a professorship by Columbia College, which he has accepted.

Considerable amazement was excited a few weeks ago by the appearance of a volume on Spiritualism from the pen of Mr. Kiddle, who has filled the office of Superintendent of the City Schools, and filled it most efficiently, for a great many years. The belief avowed in the volume that he was in constant communication with the other world would probably not have injured him, but he was so incautious as to publish the communications in prose and verse received by him from various illustrious dead persons, and these were of so silly a character and so unlike anything that can be found in their works that the public was forced to the conclusion either that the Spirits despised Mr. Kiddle and amused themselves at his expense, or that he was mistaken in supposing that he was in communication with them. The former theory naturally touched the pride of the citizens. That Socrates and Shakspere and Edmund Burke should talk such infernal nonsense to a municipal officer of Mr. Kiddle's position was more than they could stand, because it seemed as if these famous men thought lightly of our educational machinery. On the other hand, if Mr. Kiddle supposed himself to be in communication with eminent Spirits when he was nothing of the kind, did it not argue, they asked themselves, that he was what is called "out of his mind"? The latter hypothesis, as the less wounding to the public self-love, found most acceptance, and the newspapers had begun to teem with strong medical arguments in favor of his dismissal when he relieved the Board from all embarrassment by resigning. His book, however, has had a great sale as a curiosity. Few persons will want to keep it, and the best thing

we can wish him is that his Spirits will let him alone. If the specimens of their conversation he has furnished are correct, they are the greatest bores that ever infested a respectable man's house.

The Freeman case in Massachusetts, in which a man murdered his little daughter, with the idea that he was imitating Abraham in showing his faith, and in the expectation that God being satisfied would stop him before he struck the final blow, is not unnaturally connected in the public mind with Mr. Kiddle's communications from the Spirits, and both are treated by many as indications of the same form of insanity. Freeman's delusion, however, seems to be shared by the sect to which he belongs, "the Second Adventists," the chiefs of which are said to be astounded by the Lord's failure to restore the child to life, and he himself remains firm in his conviction that he did the right thing, and feels keenly the blow that will be dealt to his creed in case he is acquitted on the ground of insanity. The provision the Catholic Church makes, in the form of self-mortification, for unsoundness of this sort, is a safe if not healthy vent for it. The Catholic fanatic too always acts under sacerdotal guidance, which makes him a less dangerous person than the Protestant devotee of "the right of private judgment."

An article by Mrs. H. B. Stowe, who spends half her year at the South, in the last number of the *North American Review* seems to indicate, on the Stalwart theory, that she has been the victim of very brutal treatment at the hands of "the brigadiers" and "red shirts." How little regard these men have for sex, any more than for color or age, may be inferred from the account she gives of the progress made by the negroes within fourteen years in education, in self-respect, in the accumulation of property, and even in the exercise of political rights. Mrs. Stowe's prominence in the movement which led to emancipation and her continued interest in the colored race may serve to give some idea of the barbarities by which these stories must have been wrung from her. What Dr. Cooke underwent doubtless compared but feebly with the ruffianism by which this unfortunate lady has been compelled to publish such an article on the eve of a very important election in Ohio.

Preparations for the second invasion of Zululand have nearly been completed in South Africa by Lord Chelmsford, and the plan in its main features resembles the former one—an advance in three or four separate columns, leaving fortified depots behind them as they go, but with gaps between through which an enemy like the Zulus will have but little difficulty in passing. Mr. Forbes, the *Daily News* correspondent, telegraphs that it is condemned by the best heads in the Colony, and it now seems as if the Home Government was afraid to let Lord Chelmsford try to carry it out. Sir Garnet Wolseley has been appointed both civil commissioner and military commander of Natal, Zululand, and Transvaal, Sir Bartle Frère being relegated to the province of Cape Colony, and Lord Chelmsford passing into a subordinate position in the field. This, of course, is simply a mild way of letting the two authors of the war down easy. The Ministry incurred a serious risk in retaining Lord Chelmsford in command after the disaster at Isandula, because had he failed to relieve Ekowe it would have fallen before popular indignation. The chance of retrieving himself was due to the fact that he is a great favorite of the Court set, and especially of the Duke of Cambridge; but this opportunity having been afforded him he goes out. The general belief in the colony seems to be that the war will run into a second campaign. John Dunn, an Englishman who lived long enough among the Zulus to become a sort of chief, and has now a tribe of his own which he has carried over to the British side, thinks they will attempt no more pitched battles, but confine themselves to raids on the colonists, a sort of operation against which it will be difficult to guard without a very large force.

The public in England are naturally a little mortified to find that the attacking force at Gingelova, which put the British on the defensive behind their wagons and entrenchments, was not larger than their own, and that Lord Chelmsford was not willing to let them come to close quarters before opening fire, by which the execution done might have been vastly greater. He was evidently afraid of the Zulu rush, and if they had once got over the line the young lads who now compose the bulk of the English rank and file would certainly have had no chance against them, hand to hand. In fact, there is general lamentation over the lack of old soldiers under the new system of short service, and there does not seem to be much compensation in the increase of numbers, for the regiments sent on active service have to be raised to their full complement by reducing others to skeletons. The Afghan and Zulu wars will do good service, however, by bringing home to the English people the folly of attempting the sort of rôle which the Beaconsfield Ministry traced out for the country last year without a complete change in the military system—without, in short, resorting to the conscription. The Zulus, in fact, have given the finishing touch to the exposure of the Jingo folly by compelling Lord Salisbury to let Russia have things her own way in Rumelia and Bulgaria, and showing the silliness of bringing 7,000 Sepoys to Malta as a threat.

The most interesting piece of recent news from France is the programme of the extreme Radicals as produced by Dr. Clemenceau, who is universally looked on now as the ablest man of that faction, and the man most rapidly rising into power and prominence, and the one most likely to take Gambetta's place, in case the latter as he grows older should become too conservative. In a speech to a large meeting of his constituents of the eighteenth arrondissement, in Paris, he denounced the Senate as a fifth wheel to the coach; demanded more liberty for the press; advocated the conscription of theological students for service in the army; direct instead of indirect taxation; free-trade; a change in the officials of the Ministries of Justice, Finance, and Foreign Affairs; complete amnesty; the pardon of Blanqui. He further reprobated the Ferry bills about education on the ground that the existing laws, if properly enforced, would do the work more efficaciously. He also demanded fair play between the clergy and the infidels, for, said he, "The Catholics have the right of insulting you in their pulpits, their congresses, and their newspapers, while any one who attempts to reply to them comes into collision with the law for the protection of religious morality."

An International Congress is sitting in Paris under the presidency of M. Lesseps to discuss the ways and means of carrying out the greatest engineering enterprise yet projected—the piercing of the isthmus between the Atlantic and Pacific Oceans by a ship canal. The scheme has occupied men's minds in a greater or less degree ever since the Spanish conquest, and the first survey for it was made as long ago as 1829, and all that is necessary for comparison of the merits of the seven or eight rival lines has now been done, and the result is before the Commission. All of them involve either a system of gigantic locks or of gigantic tunnels, but the choice of the Commission seems now to be confined to the Nicaragua route and the Panama-Aspinwall route, one to cost $180,000,000 and the other $240,000,000; and the last is said to be the favorite, and would take twelve years for completion. It is the French scheme.

News has been received this week of the arrival in Behring Straits of Prof. Nordenskiold, the intrepid Swedish navigator, who left Gothenburg early in the summer in the steamship *Vega*, and when last heard from, after doubling Cape Tcheliuskin, and reaching the mouth of the Lena on August 27, was ice-bound not far from Wrangell Land. The first part of this achievement was something unprecedented in Arctic voyaging, but the entire circumnavigation of the north coast of Asia, ending, as is Professor Nordenskiold's intention, in a return to Sweden *via* the Suez Canal, may justly be ranked among the wonderful performances of our age. The geographical and scientific results of this expedition must certainly outweigh its commercial importance, and full reports of the winter experience of the *Vega* will be awaited with interest. What effect this success will have on Mr. James Gordon Bennett's expedition to Behring Straits we cannot judge.

THE PRESENT ASPECT OF THE LEGAL-TENDER QUESTION.

MESSRS. BUTLER and Chittenden have undertaken to bring before the Supreme Court, by means of a test case, the power of Congress to issue or keep afloat legal-tender paper money in time of peace.

Whatever of fallacy, when tested by the rules of constitutional construction, may lurk in the doctrine that Congress has any power to make paper a legal-tender in time of war which does not belong to it equally in time of peace, that doctrine certainly furnishes the only possible point of departure from the decision in the legal-tender cases, and its assumption is, to a certain extent, justified by the course of the argument in the opinions delivered in those cases. That assumption is, of course, the ground upon which the test case is brought. The court decided in the legal-tender cases that in time of war Congress has power to make paper a legal-tender. Whether it possesses that power at all times whenever it may see fit to exercise it, was expressly left undecided. It is asserted that in consequence of recent acts of Congress the legal-tender quality of Government paper now rests on legislation had since the close of the war. In the revision of the statutes in 1874 the original legal-tender acts of 1862 and 1863 were repealed and the legal-tender provision re-enacted. Moreover, in 1875 Congress passed the Resumption Act by which the volume of the legal-tender currency was to be contracted to three hundred millions before January 1, 1879, and on and after that date the Government notes were to be redeemed on presentation in coin. By force of that act legal-tender paper would have passed out of existence. To forestall that result Congress, in 1878, under the stress of the inflation mania, passed an act prohibiting the Secretary of the Treasury from retiring or cancelling legal-tender notes, whenever they might be received into the Treasury under any law, and directing that they should be reissued, paid out again and kept in circulation. The contention is that the act of 1878 is unconstitutional. Thus, after the lapse of ten years, this great question again presents itself, this time in a form to render its determination of much greater consequence in its bearing on constitutional law and the public well-being, though of far less importance, for the moment at least, in its relation to private contracts. The importance of the case as one of constitutional law consists not so much in the particular decision to be rendered upon the power of Congress over the matter of legal-tender, as in the fact that if that power is sustained at all it must apparently be upon principles of construction never before recognized by the Supreme Court, and which if logically carried out would result in the practical surrender of most of those limitations upon legislative power which the Constitution has thus far been supposed to secure.

Moreover, a perusal of what may be called the documentary history of the unprecedented events which led to the reversal of the judgment in Hepburn *v.* Griswold serves to recall the fact that the legal-tender question has been the occasion of political events affecting even more vitally, if possible, the public welfare than the constitutional question to which that matter has given rise. For such acts as are there recalled to mind there is no constitutional remedy, and no security against a repetition except through a vigilant public opinion.

The judgment of Hepburn *v.* Griswold was reversed and set aside on the application of the Administration by the following process, described fully in a recent article of Mr. Brooks Adams in the *International Review:* The Supreme Court, at the time the case was decided, was about to be enlarged. In 1863 an act of Congress had increased the number of the Court from nine to ten. In 1866, three years later, when it was notorious that the judges were overworked and the business of the court in arrears and increasing, Congress enacted that no vacancy on the bench should be filled until the number of associate justices should be reduced to six. This apparently inexplicable proceeding is very easy of explanation. Congress was then engaged in the contest with President Johnson. A vacancy had occurred on the Supreme bench, and Johnson had sent in a nomination to the Senate. To avoid the odium of refusing to confirm a respectable appointment, the Senate procured the passage of this bill. In the House the proposition was to reduce the number by one, thus exactly covering the existing emergency; but the Senate insisted on discounting the contingencies of death and resignation to the extent of three. In 1869, as soon as General Grant had become President, Congress enacted that the number of judges should be increased to nine, the act to take effect from the first Monday of December of that year. When Hepburn *v.* Griswold was argued the court consisted of eight members, being a full court under the act of 1866. As is stated in the opinion, the case was decided in conference November 27, 1869, by a majority of five to three, the court being still full. Judgment was read and agreed to January 29, 1870, and was to have been delivered in court and entered January 31, but was postponed until February 7, to give time for the preparation of a dissenting opinion. February 1 Judge Grier resigned, February 18 Judge Strong was appointed, and March 21 Judge Bradley was appointed. March 31 Attorney-General Hoar, representing the Government, moved the Court to reopen the question decided in Hepburn *v.* Griswold. It will be remembered as a singular distinction of the late Chief-Justice that, while as Secretary of the Treasury he had given his assent to the legal-tender provision, when the question subsequently came before him in his judicial capacity he did not hesitate to hold it unconstitutional, though at the expense of his own consistency. Laudable as such an act is, it is only what every upright judge is repeatedly called upon to perform in the discharge of his ordinary judicial duties. The books are full of instances where a judge concurs with his brethren in overruling a decision rendered by himself when sitting in the lower court. In allusion to this circumstance, and by way of a statement of the facts given above, as to the composition of the Court which decided the case sought to be reopened, the Attorney-General addressed the Court as follows:

"A statute upon the constitutionality of which this Court at a time when by law it consisted of nine judges, did, by a majority of only four to three, enter its judgment, with two vacancies upon the bench; and it stands, therefore (reducing it to its essence), that upon the judicial opinion of a single man, whose voice turned the majority, the great question is adjudicated. And if—which is a supposable case—it turned out that it was an opinion about which even the deciding judge of the Court had entertained a different opinion at some other time, it would come down to the point that on the differing opinions at different times of his life of a single man the whole constitutional power of Congress and the Executive . . . was for ever to be subverted and set aside, and expunged from the practical powers of this nation by the judgment of this Court; and upon the question whether it was necessary for the exercise of admitted constitutional powers, deciding that necessity is a judicial question and not a political one."

The opinions of the new members of the Court were necessarily perfectly well known, and unless technical considerations intervened the issue could not be doubtful. The question decided in Hepburn *v.* Griswold was allowed to be reargued in the cases of Knox *v.* Lee and Parker *v.* Davis, commonly called the Legal-tender Cases, when the constitutionality of the legal-tender laws was affirmed, and Hepburn *v.* Griswold expressly overruled. The two new members of the Court united with the former minority of three, so that the Court stood five to four. Thus five justices concurred in the first opinion, and five overruled it. From his place on the bench the Chief-Justice said that the circumstances of the reversal were "unprecedented in the history of the Court."

The argument of the Attorney-General in the legal-tender cases was, in effect, that Congress had discretion not only as to the choice of the means among those authorized, but also as to whether its proposed measure was a means at all in the sense of the rule. Of course, on this theory, the fact that Congress has adopted a particular measure for the execution of a granted power amounts to an opinion on its part that that measure is a proper and necessary means. On this theory there would be nothing for the Court to de-

cide, and its occupation would be gone. The doctrine of the Attorney-General was not anywhere endorsed in the opinion of the Court; but in repudiating for the Court any pretension to the exercise of "legislative discretion" some expressions occur which seem to indicate a tendency to ignore the force of the vital distinction pointed out above. The novelty of the doctrines thus advanced was recognized by the Chief-Justice in his dissenting opinion, and the doctrines themselves expressly repudiated. "It is unnecessary to say that we reject wholly the doctrine advanced, for the first time, we believe, in this Court, by the present majority, that the legislature has any 'powers under the Constitution' which grow out of the aggregate of powers conferred upon the Government, or out of the sovereignty instituted by it. If this proposition be admitted, and it be also admitted that the legislature is the sole judge of the necessity for the exercise of such powers, the Government becomes practically absolute and unlimited."

It is the tendency towards such new theories of constitutional construction indicated in the legal-tender cases which renders the pending case of such interest. It seems probable that in that case these theories will be expanded and applied. Such would be the natural course. If these theories, now for the first time suggested from high places, become the settled doctrines of the Court, the system of constitutional limitations upon the power of Congress will be practically transformed into that of parliamentary omnipotence, since the number of express prohibitions in the Constitution is very small, and except as to those the Supreme Court would have abdicated its powers. In the times of the earlier onslaught by the other departments upon the judiciary, the judges held such theories of the character of the constitutional limitations and of the true function of the Supreme Court as caused them to perform that first duty of a judicial tribunal—the maintenance and definition of its own jurisdiction—with vigor and effect.

The circumstances connected with the reversal of the judgment in Hepburn *v.* Griswold serve to show that the method by impeachment is not the only one by which the other departments may, under exceptional circumstances, seek to overthrow the established judgments of the Court, when those judgments are not in accordance with their wishes. The judiciary is now the depositary of substantial powers as a co-ordinate branch of the Government. But if the principles of constitutional limitation on the powers of Congress, foreshadowed in the legal-tender cases, become the settled doctrines of the Court, encroachments by the other departments, however unscrupulous the majority or imbecile the opposition, will be no longer to be feared. The antagonism of the legislative to the judiciary department, which culminates in violent times and under intolerant leaders, results from the efforts of the judiciary in the discharge of its duty to maintain the constitutional provisions in restraint of legislative omnipotence. If the Supreme Court comes to the conclusion in effect that no such restraints exist, or that Congress shall be the judge of the constitutionality of its own acts, Congress will have no further cause for complaint, and the judiciary will withdraw into secure insignificance. The legislative lion will have escaped from the meshes of the logical net woven for him by the framers of the Republic.

THE "NEW DEAL"—A STUDY IN CITY POLITICS.

THERE is no duty which the press owes to the public more important than that of explaining from week to week and from day to day the real meaning of the political events which in the history of New York crowd so thickly upon one another's heels. There is hardly any which it fulfils with more painstaking and conscientious assiduity. Not even its hortatory office—the function of insisting every fall upon a popular rising against the "One-man power"—is more faithfully discharged than is the duty which arises from time to time, between the days of elections, of explaining to the people what the servants clothed by them with the various municipal trusts created by the interesting collection of laws known among politicians as "the Charter' are about. This explanation is by no means a simple task, for it involves not only a familiarity with the principles of ethics which the habitual practice of journalism is apt to weaken in some minds, but also a complete conversance with the facts of the case, which usually involves much "reportorial" investigation, and sometimes the endurance of harsh language and even blows from those who are invited to furnish the information the public need. Still the work is done, and well done; and seldom has it been more thoroughly done than in the case of the "deal" in the Board of Aldermen last week by which Mayor Cooper's Republican nominations were confirmed, and his anti-Tammany nominations were rejected by means of a union between the Republican and Tammany aldermen.

According to the *Times*, the immediate cause of this combination was the utter failure of "the meeting of delegates from the several Assembly districts composing the Fifth Senatorial District," a meeting which at the time it was held does not appear to have attracted an amount of public attention commensurate with its importance. It was the "Ninth District people," however, who were at the bottom of the whole thing. "Hunter or no one" was the ultimatum of the Ninth District people, "Hunter" being Mr. Gilbert J. Hunter, a man, as we understand it, of great prominence in the Ninth District, though less known elsewhere. With the Hon. Mr. Jacobus, who is a Republican member of the Board of Aldermen, representing the interests of Mr. Hunter, and the Hon. Messrs. Hyatt and Hall (anti-Tammany) acting with him, it was impossible that any of the Mayor's nominees should be confirmed "unless help could be obtained from outside." Meanwhile Comptroller Kelly had not been an inattentive observer of the dead-lock between the Mayor and the Aldermen, produced by the obstinacy of the "Hunter or no one" party, and what he desired above all things was to "save Tax-Commissioner Wheeler." There is said to be little doubt that Kelly, before the "deal," had pledged to him in the Board "enough votes to prevent the confirmation of any one who should be nominated for the office" held by Mr. Wheeler, so that with Kelly it was "Wheeler or no one," just as with Jacobus it was "Hunter or no one." Matters being in this position, the *Times* rather obscurely says that "things worked into such shape," apparently without the intervention of any human agency, that Kelly, "quietly sitting and waiting in his office, and holding in his hand the nine Tammany Aldermanic votes, saw the Republican Party leaders come to him offering proposals." What they said when they came in, or what Kelly said in reply, has not yet been made public; but it was at this interview that the "deal" was settled, and the arrangements for it were completed by Monday of last week. It does not, however, seem to have been communicated to Mr. Jacobus or the anti-Tammany aldermen.

It was not until the Board met on Tuesday that the "deal" was made known, and the excitement which followed, according to the *Herald*, was intense. If strong men did not weep, it was only because this is not a Presidential year. The Anti-Tammany members looked "dejected and unhappy"; the Republicans were "noticeably nervous"; the Tammany members, on the contrary, were in high spirits. A "new deal" is apt to affect the spirits in this way. Alderman Stewart was made chairman, and as he took the chair he too looked "pale and nervous." The session which followed is declared by the *Times* to have been one calculated to astonish any respectable taxpayer who was present "for the first time," though, as no such citizen seems to have been among the audience, this does not appear to be of much consequence; and the facts which the *Times* puts forward as the grounds for its remark—a gross want of familiarity with the rules of grammar and of parliamentary law, and a tendency to refer to each other in debate as "he" and "him"—were hardly calculated to excite surprise among any citizens who were there.

The first move in the "deal" was calling up the nomination of Mr. French as Police Commissioner. On the subject of this nomination Mr. Haughton made an address of considerable length. He pointed out that the Police Board ought to be kept non-partisan under all circumstances; but he felt obliged to denounce the nomi-

nation of Mr. French as an attempt to "foist a non-resident into one of the best offices of the city government," and as an "insult" "to the one million and more inhabitants of this city." He thought that if some leaders of the Republican organization saw fit to "make bargains and deals, it is the business of the people to know it," and, what is more, "the people will be very likely to pass a swift and sure judgment upon their action." He then called upon his colleagues to "think well before taking final decisive action," adding that "the men who vote for Mr. French will be marked men." An "outburst of applause" greeted Mr. Haughton's remarks, and "the crowd in the chamber became almost wild with excitement." Mr. Strack then remarked that he desired to call the attention "of his colleagues and of the citizens present" to the most "infamous and unparalleled" job "ever conceived in any Board of Aldermen." He pointed out that in the last campaign, when Mr. Cooper was elected, we fought for "home rule"; and now "all that we fought for is to be lost" by the appointment as Police Commissioner of a man from Sag Harbor, Long Island, a town which he somewhat vaguely described as "a little place almost at the east end of nothing, with a board nailed across it." He deplored the selfishness of "the element in the Board that was at the bottom of this latest deal." These persons, he said, "were actuated by greed of patronage and power," and cared nothing whatever for "home rule"; a fact curiously illustrated, according to Mr. Strack, by the employment in a certain city department of persons who live in "New Hampshire and other States" and "bring their lunches with them." He also told a story of a policeman whom he had met who had been here so short a time that he did not know the names of the streets on his own beat; on which Mr. Burns suggested that he must have come from Germany, of which country Mr. Strack is believed among the aldermen to be a native. After this Mr. Jacobus spoke very strongly against the nomination, and darkly declared that "when a king and another potentate joined hands the city would surely be at their mercy," having in mind apparently a "deal" of a somewhat monarchical character. Mr. French was then confirmed. Mr. Van Cott's nomination as Fire Commissioner was next taken up, and caused some discussion between Mr. Jacobus and Mr. Morris, Mr. Morris maintaining that Mr. Jacobus was "run by a few men on the other side of the house," and Mr. Jacobus insisting in reply that Mr. Morris was habitually elected by the aid of Tammany Hall police captains. This debate does not seem to have changed any votes, and Mr. Van Cott's nomination was confirmed. The remainder of the nominations included in the "deal" were confirmed or rejected without discussion.

The morals drawn by the press from the "deal" are not altogether the same. The *Evening Post* thinks that the combination between the Tammany and Republican aldermen was wrong, but it does not agree with Mr. Strack that the object of the election last fall was to secure "home rule"; it considers "the emancipation of the city government from the gross abuses which were the fruit of Tammany misrule" to have been the object of that election. It intimates the opinion that an alliance with "the very body that was defeated" upon that issue must cast a doubt upon the good faith of the Republicans, but it does not think that the reputation of Tammany can be made any blacker than it was before. The *World* thinks the deal the result of a not wholly unnatural alliance between "Mr. Arthur's aldermen" and "Mr. Kelly's aldermen" against "Mr. Cooper's aldermen." It recalls the fact that Mayor Cooper and an anti-Tammany majority of the Board of Aldermen were elected last year by an alliance of Democrats and Republicans who believed that the vital condition "of reform in the conduct of our municipal affairs was to purge our city politics of the influence of Tammany Hall," and declares that Mr. Cooper has not done this. It adds that the "most interesting question" of "practical politics" connected with the deal is "what consideration" the Republicans gave for the votes of the Tammany aldermen, and declares that, according to "common rumor," it was "the retention in office, through a refusal to confirm any appointment of a successor, of a certain Tammany officeholder who annually receives from the taxpayers of this city at least ten times as much in the way of emoluments as his services can possibly be imagined to be worth to them"—an identification of the person referred to by no means as specific as we could wish. The *Herald* treats the subject with levity, and says that there is some connection between the "deal" and an after-dinner speech made by Kelly a few months since at the Lotus Club. The *Times* says that the "deal" shows the "utterly untrustworthy character of most of the Anti-Tammany aldermen," and says that "it presumably involves a repetition of the corrupt bargains under which the influence of the Republican party has been used in the past to subserve the lowest partisan and personal ends." The same idea is expressed more tersely by the *Commercial Advertiser*, which declares that "the Republicans on all occasions have suffered dishonor and disgrace by cuddling with blear-eyed Democracy." The *Tribune* and *Express* take a different view of the matter. The *Express* says that the "deal" was "not the result of a bargain, but a determination to break up the bargaining which a set of unprincipled Anti-Tammanyites have been engaged in for weeks, obstructing the work of the municipal government, and sacrificing the public interest to further their own personal ends." The Tammany aldermen "sacrificed their own feelings, and their party interests, perhaps, to the public welfare, and they deserve commendation for their course." The *Tribune* says that the "Tilden-Robinson organs" may now be expected to raise a hue and cry "that the Republicans of the city have made a new alliance with Tammany Hall," when "there has in fact been no alliance of Tammany and the Republicans" at all. "The simple truth is, that the Republican combination with the Anti-Tammany factions last fall to elect Mr. Cooper mayor has not resulted in such reforms in the city government as were expected, and has given little reasonable ground for continuing to expect them"; while "it *has* resulted in greatly strengthening Mr. Tilden's chances."

There is another lesson of great importance in this crisis which our esteemed brethren have strangely overlooked, and that is the necessity the "new deal" shows of our citizens attending more closely to their political duties. It is of no use for our leading merchants and lawyers and railroad men and ministers of the Gospel to think that they have discharged their duty by voting their party ticket. The members of the Board of Aldermen are nominated in party primaries, and unless the respectable classes of the community take part in these what hope is there of securing a good Board of Aldermen? The recent deadlock in city affairs which was got over, as it always is, by a "deal" was clearly produced by a want of harmony between the Mayor and Aldermen. The better classes of our voters, in their anxiety to save the city from Tammany Hall, and to preserve "home rule" last fall, overlooked the necessity of securing good aldermen, and omitted to take any part in the meetings at which they were nominated. This supine neglect of their duties ought not to be passed over in silence by the press, and we trust that before next fall some means will be taken to arouse the public to a sense of the importance in municipal government of a minute attention by each citizen to the duty of securing the nomination of good men.

The "deal," too, we regret to say, is calculated to shake in many minds the old time-honored doctrine that a Republican city politician was sure to be a better man than a Democratic city politician, and that whatever offices you could give to the former you saved from Satan. It really begins to seem as if the notion we have long fought against, that one was about as good as the other, was correct. This is an awful thought, which we wish we could conceal from the young.

THE ROYAL ACADEMY AND THE GROSVENOR GALLERY.

London, May 15, 1879.

I FIND by counting the advertisements on the first page of the *Times* that more than a dozen exhibitions of pictures contend at the present moment for the patronage of the London public, but in the small space of this letter I can only speak—and that very briefly—of the two prin-

cipal houses. The Academy and the Grosvenor have been open since the beginning of the month. The absence of what the French call "grande peinture"—painting in which style plays a part—is as striking as ever at the former institution, where anecdotical art and little pictures addressed directly to the pocket of purchasers who demand a great deal of familiar point hold undisputed sway. I can recall only two or three things at the Academy that have any pretension whatever to nobleness. One of these is a large canvas by the new President, Sir Frederick Leighton, an "Elijah in the Wilderness," representing the brawny prophet asleep on a rock and visited by the angel who brings him a jug of water and a loaf. This picture was one of the ornaments of the English department at the Paris Exhibition of last year; but in spite of this fact, of its ambitious intention, and of an execution as brilliant in many ways as Sir Frederick Leighton has accustomed us to look for, it cannot be called a success or commended as an example of the author's best skill. With Mr. Poynter's "Nausicaa and her Maidens," however, it does solitary duty at the Academy as an appeal to interest on simple grounds of beauty of design. Mr. Poynter's picture, which was much talked about in advance, has proved, I believe, a general disappointment. It was known that some of the most beautiful women of the London world—in which so many beautiful women are to be found—had stood to the artist for the figures (by which I mean the faces) of Nausicaa's companions, so that on the day of the private view people flocked to the picture with the interesting hope of recognizing beneath the desultory drapery of the Homeric period the aristocratic heroines of the photograph shops. These ladies, however, are not thought to have been favorably represented, and indeed the picture strikes me as having a good deal of almost inexplicable awkwardness and ugliness. It is a very different affair from the same artist's charming representation of the "Race of Atalanta," which was exhibited a few years since—a work with which it challenges comparison by its shape and style. The painting seems dry and dull, the color harsh and displeasing, the composition by no means happy. Of course, when young ladies are playing at ball they are obliged to stand at a considerable distance from each other, and this fact has introduced into Mr. Poynter's picture a series of empty spaces, blank intervals, to which he has not always succeeded in imparting interest. In the case of the most considerable of these *lacunæ* he has resorted to the expedient of representing a little naked boy, bounding across the field of vision with as wide a stride as possible. But in point of fact this little naked boy is the principal object in the picture; he jumps, as the French say, at the eyes, and there is something almost ludicrous in his exaggerated gambol. The redeeming point in Mr. Poynter's canvas is a certain elevation of intention, a search for nobleness and suggestiveness of line and form, a care for style.

Two pictures for which it would perhaps be claimed that they rank themselves under the head of "peinture de style" are the "Esther" and the "Vashti" of Mr. Long, who at several successive exhibitions has attracted attention by clever archæological representations of oriental subjects. The two works I have just mentioned ought to have been hung in juxtaposition; but, for reasons not obvious to the casual visitor, they are separated by the space of several rooms. They are imaginary dramatic portraits of the two Biblical ladies whose names they bear; but in spite of a certain sort of skilful elaboration of touch they strike me as capital—indeed, as quite inimitable—examples of the trivial tendency of contemporary English art. Mr. Long has, I believe, a great reputation; he makes a great figure in the London picture-market, and this fact, in the presence of his light, thin, small, undeveloped manner of painting, with its lack of breadth and boldness, of light and shade, is a measure of the standard and the taste that prevail here. Neither in France nor in Germany would Mr. Long pass as an important or even as a particularly competent painter.

There is usually at the Academy a so-called "picture of the year"—a picture that has a thicker crowd in front of it than any other. If I say that this distinction has not this year fallen very obviously upon any particular work it will, perhaps, seem but another way of saying that the crowd at Burlington House has been everywhere so dense that it is hard to say that the spectator is more tightly squeezed in one place than in another. But I suppose it would be a fairer statement to recognize the rather evenly balanced claims to conspicuity of two very clever productions of Mr. Fildes and Mr. Pettie, who may be said to divide between them the distinction of which I just spoke. Mr. Fildes's "Return of the Penitent" has the honors of a crowd, and it very well deserves them, being a very strong and brilliant example of that relish of a human interest which is the most marked characteristic of the British school. It represents a group of country people in a village street—an old farmer leading his big cart-horse back from the plough, three or four old and young women, a couple of children—who have stopped to stare at a young girl who has prostrated herself at the door of a rustic dwelling, and who, as it stands sternly closed against her, lies there huddled together with her head buried in a passion of grief and shame. We are left to perceive that she has lost her maiden innocence, and that, having been deserted by her lover, she has made her way back to her father's house only to find herself treated as an outcast, or left at least to do public penance on the doorstep. The penance is very public indeed, and the incidents it brings with it are indicated by Mr. Fildes with that moral ingenuity, as I may call it for want of a better name, which English painters have so largely at their command in the treatment of such subjects, and which, as a general thing, fills their public with a kind of comfortable sympathy. Mr. Fildes's picture, which is large and abounds in detail, contains some very charming painting—it is indeed charmingly painted throughout, and the different figures with their various gossiping, pitying, criticising attitudes, are excellently studied and full of significant touches. The thing possesses in a word, in a high degree, the story-telling quality which marks the maximum of so much of the English art of the day. But, at the risk of seeming very dry and cynical, I must say that I find it hard to express my sense of the latent bad taste of such a performance—of a certain quality in it which would make it a misery to possess the picture and have it hanging constantly before one's eyes. The vulgarity of feeling which has prompted the painter to twist into a pictorial effect a subject altogether moral and dramatic, and seeming bruised and injured by the violence done it—this vulgarity is not flagrant or visible on the face of the work; but after one has looked at the picture for three minutes it becomes quite confounding, and one turns away from so much misapplied cleverness with something of the annoyance produced by the sight of a serious social blunder.

Mr. Pettie in his "Death Warrant" has less of a story to tell, and his picture is more of a picture. A young king (who may be Edward VI. of England) is seated at the council-table with his old ministers, one of whom offers him a parchment and pen; which he, looking away and with the tears rising to his blue eyes, neglects to take. Mr. Pettie is a colorist, and a warm and powerful one. He inclines rather to the abuse of reds and yellowish browns, but he has done nothing so fine as this important work, in which the heads of the old men, bald, bearded, and sagacious, are treated in a thoroughly painter-like way. Mr. Millais, who is usually first spoken of in connection with any exhibition of the Royal Academy, may almost be said on this occasion to be conspicuous by his absence. He has no composition this year, and of his several portraits only one is of striking interest. It is true that this one—a remarkable rendering of the at once strange and familiar physiognomy of Mr. Gladstone—is a brilliant success. The resemblance is extreme, although the expression of the face is singular and a little pushed in the direction of parody. I have heard the thing cleverly described as "Mr. Gladstone repenting that he had not become after all a Bishop." He stands with his features rather rigid and his eyes uplifted and filled with a sort of visionary glow; but it must be remembered that light animation is at no time the characteristic of his countenance, and that his eyes are always extraordinary. Mr. Millais has apparently wished to offer an image of his mystical, theological, episcopal side; but at any rate he has produced a very manly, masterly, simple piece of portraiture. There is no detail save in the head; the body is scarcely treated at all. But the thing has the great quality—it lives, it looks, it expresses something. It is true that what it expresses will perhaps gratify Mr. Gladstone's enemies as much as his friends.

At the Grosvenor (which, with its beautiful rooms, its thinner attendance, and its interspaced, low-hung pictures, is a very agreeable change from the material conditions of the Academy) Mr. Burne Jones is, as usual, the chief "actuality." He makes a less striking appearance this year than the two preceding ones; but his contributions are important and highly characteristic. I have no space to describe either the "Annunciation" or the four smaller pictures, in which the painter has told, with the accompaniment of a running motto ("The heart desires, The hand refrains, The Godhead fires, The Soul attains"), the story of Pygmalion and Galatea. These things are open to all of the same criticism which has been lavishly bestowed at any time upon their author, and which, in spite of his reputation for having established what is called in London a "craze," strikes me as being much in excess of any adulation that he has received. At the same time they have, to my mind, as much as ever the great merit—the merit of having a great charm.

The weak side of Burne Jones, his limitations, his defects, are perfectly admissible. I should never hesitate to grant that, according to the principal count in the indictment of his critics, he is "morbid and unnatural." But I should maintain that somehow he yields a high quality of pleasure from out of the midst of these perversities, and that as things go just now in England I prefer an artist with interesting faults to an artist with vulgar ones. Burne Jones is a painter to take or to leave, and it is very easy to understand the state of mind of the people who dislike him. To many people he will always seem essentially dreary. I confess, however, I have but a limited sympathy with the critics who are perpetually asking why he is not half a dozen things that do not in the least belong to his genius. "He *ought* to be so and so—he ought to be joyous and healthy and amusing." This is a very common dictum, but it is a very meaningless one. I should be very sorry to pretend to say what Mr. Burne Jones "ought" to be; and for the present I content myself with noting that his "Annunciation" is full of admirable work and beautiful expression. For the mystic Pygmalion I care rather less.

I can do no more than mention three or four other of the best things at the Grosvenor. There are half a dozen excellent portraits and two remarkable ones. The first of these is a quite superb head of Mr. Watts, by himself, executed some years since. This is perhaps the most distinguished picture of the year. It lacks the relief and reality of Millais's Gladstone (of whom Mr. Watts has also a portrait, executed some years ago, and very inferior to each of the works I mention), but it is finer and more exquisite, and it covers the multitude of sins embodied in the artist's two misguided compositions, "Orpheus and Eurydice" and "Paolo and Francesca." The other portrait I speak of is a representation on a large scale of a City magnate (Mr. Thomas Chapman, chairman of the Committee of Lloyd's) by Mr. Gregory, who won himself such honor last year. Mr. Gregory's present work is a most vigorous and delectable piece of painting—full of reality, animation, expression, and all sorts of strong points of execution. It is an example of an "official" portrait (it was painted for the Committee) made thoroughly interesting. Mr. Whistler is, of course, present at the Grosvenor; he has three characteristic examples. One of these, a large portrait of a young girl (a dancer at one of the theatres) skipping a rope, is in no sense a pleasing or a successful work. The second, also a full-length portrait of a lady (an "arrangement in brown and black"), has a great deal of solid merit, but very little charm. The third (a "harmony in green and gold—the Pacific") is a small sea-scene—a wide harbor or bay, with a number of ships at anchor. It is in its way a little masterpiece, with an enchanting tone and a wonderfully light and airy rendering of what the poets call the "watery floor." I am sorry to add that this remarkable picture, the most valuable and interesting that I have seen from Mr. Whistler's hand, was painted many years ago. If he had never done worse than this he would have been at present an accepted, and not a contested, genius. XX.

THE CLERICAL FORCES IN FRANCE.

PARIS, May 9, 1879.

THE Parliamentary recess has been spent in getting up the steam power which will enable the Legislature and the Government to advance or its opponents to pull it down. In the Councils-General the clerical party gathered all their forces to battle against the Jules Ferry Bill on Public Instruction. I am sorry to be obliged to record that their success has been very much underrated by the Havas Agency. They have brought into the field an imposing army, which is better disciplined and more systematically trained and led and homogeneous than the one on which M. Jules Ferry leans for support. In 33 departments, the law forbidding the Councils-General to pass political resolutions, or *vœux*, has been broken through. 1,143 cantons are represented in this opposing force. Now, each canton sends a delegate to vote at the senatorial elections of every department, as well as at the Council-General, and he represents a majority of the communes which go to form a cantonal region, and which are also electors in the second degree. Gambetta, in a speech at Belleville, once spoke of the Senate as the Grand Council of the Communes. It will thus be seen what danger there is of the majority in the Senate being shifted at the next partial renewal of that body from Left to Right, if this opposing force remains up to that time unbroken.

The Councils-General which refused to weigh upon the Government or Legislature amounted to 28. Quite erroneously they have been set down as hostile to the Ferry measure. They merely remained within the bounds of legality in expressing no opinion upon it. No doubt, among the representatives of the 829 staid cantons into which the 28 departments are divisible there were some scores of priest-led members; but they were swamped by those whose silence may be interpreted as an approval of the bill.

Of Councils-General which in their anti-clerical zeal expressed a hope that M. Jules Ferry would carry his measure in every article through the Assembly there were 13, representing a total of 390 cantons, a respectable quantum of motive power, and showing in four districts an accession to the Republican party. One of the 13 is Bouches-du-Rhône, of which Marseilles is the political centre, though Aix is the chief town and the seat of a law faculty. Another is Var, the reddest department in all France, and the one which offered most resistance to the *Coup d'État*. What is remarkable there is the extreme Radicalism of the small towns and villages, which are more fervid than Toulon itself. The third is Doubs, by which a De Merode was returned eighteen months ago to the Senate. The population there has many points of contact with Switzerland and Neufchâtel, and the men, who are in the urban districts largely engaged in the watch-making trade, are ruggedly sturdy and hard-headed. Since the Duc d'Aumale went to command the garrison at Besançon, the chief town of Doubs, the Republic has gained in strength there. The Protestants were alienated from the cause of Orleanist monarchy by the aggressive attitude the clericals assumed, and the population generally was disgusted at the servile manifestations the duke's presence called forth in official circles. Meurthe-et-Moselle, one of the 13, has been rendered intensely Republican by the immigration from Alsace and Metz of trading Jews, manufacturers, and working people. Fair Nancy, its capital, was captured in the last days of the Empire by four Uhlans. In Gard, which is also comprised in the baker's dozen, the Protestant suffrage has got the upper hand of the Catholic, as is shown in the warm support given by the Council-General to the Ferry bill. The Bonapartist influence is nearly extinct in Saône-et-Loire, where the great iron-master of Creuzot, Eugène Schneider, used to lead the population agglomerated round the mines and forges to the ballot-box previous to the Franco-German war. In Loir-et-Cher Republicanism and anti-clericalism become more accentuated. M. Fousset, the new Protestant deputy, took the lead in the Council-General sitting at Orleans. In Vosges there was a sweeping majority for M. Ferry, who is a representative of that department. The vote of the Council-General is to some extent due to the influx of Alsatians. In 1871 this department sent M. Buffet, a Clerical Reactionist, with, however, at that time a veneer of parliamentary liberalism, to the Assembly at Bordeaux.

In four departments the majority showed itself favorable to a pruning of the bill. They were Haute-Loire, Oise, Puy-de-Dôme, and Somme. In the first of these departments, the chief town of which, St. Étienne, provides ladies all the world over with fancy cravats and ribbons, Bonapartist and Orleanist interests are as well looked after by mill-owners and mine-directors as they are in Le Nord and Pas-de-Calais. But great voting power is disposed of by Democratic committees which, however, for reasons I shall further on explain, are weaker than they were a few years back. In Puy-de-Dôme the race is homogeneous, honest, sober, hard-working, slow, and sincerely Catholic without fanaticism. It is the part of France in which tourists have least reason to complain of sharp practices in the lodging-house and mercantile classes. M. Bardoux, late Minister of Public Instruction, and the immediate predecessor of M. Jules Ferry, presides over the Council-General of Puy-de-Dôme. He rather pressed a resolution tending to show confidence in the Government, which was passed on his giving an assurance that at Versailles it would not be interpreted as showing approval of the Ferry bill. In Somme, where the ancient fiefs of Aumale and Eu are situated, and where the Comte de Paris now resides, twenty against seventeen were disposed to support the Government. However, three of the majority voted under protest, and merely to give proof of a desire to conciliate. The resolution would have been only carried by a single voice had not a sudden death prevented two clerical members from attending.

I have touched upon the fact, brought out, I am assured, in prefectorial reports addressed to M. Lepère, that in some of the industrial centres of France Democratic committees do not wield as much political power as they did a short time ago. What data the prefects have to go upon I do not know. There have not been municipal elections in the provinces nor caucus meetings, which are unknown in France. Lyons,

Creuzot, Marseilles, Toulon, and the forges and factories of Lorraine are up to the level of M. Gambetta's Romans programme. A retrograde movement is noted at St. Étienne, in Le Nord, Pas-de-Calais, and some parts of Normandy where Republicanism was gaining ground two years ago. The populations in those places are not enlightened or ardent in their political faith, and they are now suffering from the collapse of trade which manifests itself all the world over. Distress draws them to the Church, which in hard times likes to be the great alms-distributor, and to appear as if seeking to reconcile general and particular interests. The orders which devote themselves to works of benevolence and to primary instruction acquire a fast hold in such a manufacturing crisis as the present, when there is not a burning faith in the institutions and the principles of which the Church of Rome has been since the first Revolution the arch-enemy. There can be no doubt that in populous places, where the eyes of militant free-thinkers are upon them, the orders, and more especially female communities, well discharge the duties they have vowed to accomplish. It is also no less true that while the artisan is on the side of radical reform or sweeping change, his wife clings to the sisterhood which takes charge of her children while she is engaged at the mill or the pit's mouth. The lay schoolmistress has neither the leisure nor the charity to wash and comb dirty pupils. She takes for granted that the wretched mother has time and strength to cleanse her children, so the unwashed girl, brought up in a grimy atmosphere, is sent home in disgrace or punished, which does not mend her habits, until she is old enough to make herself tidy; and poverty does not ripen fast the intellectual faculties or the sense of personal dignity. When primary instruction in a manufacturing centre is confided to religious orders the nuns are directed, as an exercise in humility, to cleanse the little unfortunates who come to them to be taught. Nuns also distribute bread and soup at the Bureaux de Bienfaisance. They direct the crèches where babes are kept during the hours their mothers are in the factory. Orphanages are founded under charitable auspices. Spiritual directors extract large sums of money for them from rich and frivolous penitents. The industrial, no less than mental, training to which children reared in these asylums are subjected is of an inferior kind to that given them, say, in Belgium, in municipal schools; still, it is an immense advance on the prison to which, according to French law, the young vagrant, who has nobody to answer for him or to protect him, must go until the age of twenty-one. To combat victoriously the Church of Rome in her struggle for political supremacy Republicans must borrow her best weapons. Pity must be given a place, and a large one, in their institutions. Justice must be coupled with mercy, and both based upon a wide pedestal. In these days of universal trade collapses, when the most solid fortunes are liable to disappear in an hour, and, to use a forcible American image, there is only a sheet of brown paper between the workingman's family and the bottomless pit, charity is not only a social bond but a political necessity. The "fraternity" inscribed on the public buildings must be no vain word if the Republic is to come victorious out of the battles which she will soon have to fight with her enemies.

Opposition to the return of the Chambers to Paris is more feeble in the Senate than it was before the recess. The Bonapartists, who were with the Royalists, are falling from them. MM. Paul de Cassagnac, Robert Mitchell, and other soldiers of fortune, who have not much to live upon beyond their deputies' salary, agitate for the translation of the Parliament from Versailles to the French capital. M. Rouher, who dislikes the railway journey, harks in with them, and the fishers in troubled waters look forward to the return of the Legislature being a source of feverish agitation and of *émeutes*. The Left Centre, which made a show of dogged opposition, is beginning to yield. M. Laboulaye has no store of loaves and fishes at Glatigny to distribute among this group, which has a very "lively sense of favors to come," and thinks it the duty of the moderate and honest legislator to be on fairly good terms with every *de facto* government, whether it be headed by a Cæsar or the incarnation of Demos. As a guarantee against the predominance in Paris of the Municipal Council a project is being quietly elaborated for making the Chambers the paymaster of the Prefecture of Police, the budget of which has been heretofore voted by the civic representatives of Paris. As to the local habitation of the Legislature, it is proposed to enlarge for the Deputies the Palais Bourbon, and give the Luxembourg to the Senate until a new house is built for it on the site of the Palace of the Council of State. Nobody bites at the scheme to run up a lodging for the representatives of universal and restricted suffrage on the place where the ruins of the Tuileries now stand. Gambetta, when consulted on this point, shrewdly observed: "Do you not think it better to avoid storing up political combustibles so near the Louvre?"

The overplus of more than 30,000,000 francs in the revenue derived within the last four months from indirect taxes is a fact which will enhance the good name of the Republic, and add to its strength at home and abroad. It is also susceptible of being used as a telling argument against the mill-owners and great land-holders who agitate for a return to the protectionist régime in force under Louis Philippe. In support of this agitation the Agricultural Society of France has published a report on the maleficent effect of free-trade on real estate in France. The value of land has gone down six years' purchase in Champagne, the chalky plains of which only feed sheep. To the importation of South American wool this fall is attributed. The squires of the fat, arable Beauce and Brie clamor for a resumption of the sliding scale to release them from the competition of the wheat-growers in the valley of the Mississippi. In the report I speak of it is shown that, while wheat is cheaper than it was twenty years ago, bread is dearer and the workingman not so well off; *ergo*, American cereals ought to be kept out of the market. The truth is that, what with the rise in house-rents and the increase of municipal taxes in France under the showy and extravagant administration of Imperial prefects, the loaf would be quoted at a famine price in the market returns if it were not for Russian and American grains.

Gambetta is in Italy. He went there to ask the Marquis de Noailles if he would be ready to exchange his diplomatic post at Rome for the Ministry of Foreign Affairs, in the event of M. Waddington falling on the Blanqui question, or any other which might be raised by the majority in the Chamber in order to secure a more Republican premier. What answer was given by M. de Noailles I know not; but I learn that since the Speaker crossed the Alps he has written to his lieutenants in the Chamber to say that he thinks it would be impolitic to take issue with the Government, if it can possibly be helped, on the validation of Blanqui. The excitement caused by the election of Bordeaux is, I am glad to note, subsiding. Should his election be ratified, the Bonapartists talk of putting Bazaine forward as their candidate in Corsica. If returned, I am sure the ex-marshal would never be admitted to sit in the Legislature. He was degraded; Blanqui never was. On the score of unworthiness (*indignité*), apart from legal technicalities, the Chamber would have the admitted right to say to Bazaine: "You shall never be suffered to enter this House." C.

Correspondence.

THE DREADFUL BRIGADIERS.

To the Editor of The Nation:

Sir: In your article on "Sham Political Warfare," in No. 723 of the *Nation*, you say: "Nevertheless it is strictly and literally true that the object of the war . . . was to bring these 'brigadiers' back to Congress and compel them to participate in the working of the Government under the Constitution. That is what the restoration of the Union meant."

True it is; (1) but did we bring them back to work under the Constitution as it was when they left us, or as it *now* is, clarified, as the victors believe, by the blood of two hundred thousand men? (2) Are we to be so magnanimous as to forget and forgive, and restore by repeals the old, old laws? (3) Did we believe for a moment when we brought them back to this work that they would dare to question what we have foolishly imagined to be the settled issues of that bloody contest; (4) Pray what was settled by that expenditure of blood and treasure? Was it State sovereignty? A Congressional majority says not. Was it emancipation?

I am neither an alarmist, a Stalwart, nor a supporter of Grant or of Tilden. No "gloom" at the prospect of approaching revolution has been cast over my household. But when such dangerously feasible plans are announced for the restoration of the old régime as the majority now openly publish, when it is boasted that with a favorable Executive the Supreme Court can be increased and packed "to decide the reconstruction acts as well as the two fraudulent amendments unconstitutional, and thus restore the Constitution of the fathers," I must confess, Mr. Editor, that this line of conduct does not seem to be a participation "in the working of the Government under the Constitution."

5. Shall I believe that all these threats by the "brigadiers" will end in smoke? But what came of similar talk in the years before '60? Did it end in smoke? Did we not then call it "Sham Political Warfare"?

Is it safe to trust in the sincerity of the "brigadiers"? Pray answer me these sincere enquiries. H. G. L.

CHICAGO, ILL., May 15, 1879.

[1. As it now is. 2. You are to be as magnanimous as you please, but you are to be governed under the Constitution by the acts and resolutions of the majority of the legislature, whether they repeal "old, old laws" or make new ones. 3. We do not know what you believed; everybody's beliefs differ, but unless you were a very simple-minded person you must have expected that in a free country, especially after a civil war, plenty of bad men and good would "dare to question" all sorts of things. 4. You will find what was settled for political purposes in the Constitution and the Revised Statutes and in several decisions of the Supreme Court. You must not trust to your own feelings on these points. A Congressional majority has said nothing about "State sovereignty." It has repealed some laws about the regulation of elections which were passed by another Congressional majority. This is the way free government is carried on. The best thing for you to do, if you do not like the conduct of the present Congressional majority, is to argue with those who voted for it in such fashion that they will vote next time for a majority of the other party. You will thus prevent all the dismal things foreshadowed in the last part of your letter from ever coming to pass. 5. The "similar talk" before 1860 ended in a bloody civil war. This, however, is a strong reason for thinking it will not end in the same way again. When you see a man walking towards a big hole into which he once fell and broke his thigh, you do not conclude, do you, that his design is to fall in again and break the other thigh? Great wars settle things among rational beings, even if they be naked savages.—ED. NATION.]

SOME ASPECTS OF THE NEGRO CONTROVERSY.

TO THE EDITOR OF THE NATION:

SIR: As the public seems so much interested in the negro question, your readers would perhaps like to hear something from a credible witness living in the central county of South Carolina. As to the *Times's* story about "shooting negroes on Christmas," etc., I depone that I have been a resident of "the Falk" of Richland, sometimes by its enemies called "the dark corner," where there is a very large colored population, for nearly seven years, and have not known a single instance of a white man's killing a negro. In a paper called the *Christian Statesman*, which one would think ought to be sure of its facts, the recent emigration is declared to have been *purely spontaneous* and *solely due* to the white man's *greed and oppression*. Such a statement in a paper professedly seeking moral and political reform, and circulated, I presume, mainly among the educated classes of the North and West, would seem to imply a very dense ignorance in regard to this whole question on the part of its supporters.

What may be the facts in regard to the relations of the negro laborer and his white employers in the Southwest I cannot say from actual observation, but in this part of the country I aver that the negro is as well treated and as little imposed upon as could be expected, human nature hereabouts being of the normal type. Everywhere, alas! men are tempted to abuse power and to practise extortion, and the negroes, being poor and ignorant, would suffer more or less from covetous greed whenever they came in juxtaposition with a superior race; but that they are more imposed upon by Southern people than they would be by Northern people or Europeans, or that there is any peculiar feeling of *hatred* to them felt by Southerners, I emphatically deny. We naturally don't wish to be ruled by them, and when by our enemies a race issue (politically) was forced upon us we were obliged to accept it; but apart from that, so far as I know, the feeling towards the negroes generally entertained is kindly. When laborers all over the civilized world are discontented and continually at war with their employers, is it to be wondered at that the negro laborer should in some instances (as in the Southwest) evince similar symptoms?

One principal cause of the negro's slow progress is his own *want of thrift*. They are, generally speaking, like children as regards the use of money. A child in a toy-shop will give his only five-dollar bill for a penny whistle if it strikes his fancy, and so the surplus money of the negroes is ordinarily all squandered about Christmas for what they fancy, whiskey being largely consumed. When their cotton money is expended they bring their corn, then their peas and fodder, then their cotton-seed, and consequently must begin the next year on credit and buy back the very corn which they sold in trade at 50 cents for $1 50 per bushel; and on an average, I believe, this surplus, representing the earnings of a year, would be squandered in the same way if it was thrice as large. Some of them have by industry and exceptional thrift gotten on and accumulated property. This proves for the mass that it is not in their circumstances, but in "themselves that they are underlings."

Believing that you aim at the truth in this and all other questions, and that the value of this testimony will be enhanced by confessing the authorship, I make bold to send it, appending my name and title.

J. H. TILLINGHAST,
Pastor Zion Church, etc.

EASTOVER, S. C., May 9, 1879.

P. S.—The writer does not, be it understood, deny that the poor negroes are victimized to some extent by Southern greed and craft. Nor does he seek to *condone* it for an instant, but would rebuke that prejudiced or hypocritical denunciation of Southerners as "sinners above other men." What else was to have been expected but that such a population, naturally indolent and self-indulgent, endowed with intellectual capacity about on a level with Anglo-Saxon children in their teens, when turned loose suddenly upon the world would come to grief? As well expect "Moses" not to meet a sharper "at the fair."

THE LATE COLONEL ALSTON.

TO THE EDITOR OF THE NATION:

SIR: Montaigne closes one of his essays by saying: "In the judgment I make of another man's life I always observe how he carried himself at its close; and the principal concern I have for my own is, that I may die handsomely—that is, patiently and without noise." Measured by this standard your language in a March number in respect to Col. Alston, slain under the roof of the State-house of Georgia, though at the moment apparently justified by facts, is an estimate of him which those who knew him best regret should be accepted, and which the evidence adduced at the recent trial of his assailant has proved to be unjust.

Robert A. Alston, though reared in Charleston, came of the "Halifax Alstons," men of standing who had attained reputation in the Carolinas before the days of the Republic. It is true that they were "sudden and quick in quarrel," but I am not aware that they were charged with the errors and vices for which we must seek an apology when we discuss the character of too many public men that we know; they seemed to have kept to the spirit of the legend of the Fairfaxes as a rule of action, "*Say and do.*" "Men's evil manners live in brass," and pending a great criminal trial it is not difficult to see that there were many motives for giving wide publicity to the alleged reputation of the family for violence—to the story of the *Herald* that "all the Alstons died with their boots on." Yet I would not say that the "correspondents" were advised of the use that might be made of such stories. It must not be forgotten that the traditions of agricultural districts savor of the permanence of the soil, and are but slowly uprooted; that the South owes its virtues as well as its follies to its position and its pursuits, that its interests are land interests, and have been continuously since the days of Raleigh and Albemarle, of Fairfax or Oglethorpe. It is not a century since private differences among the better classes of England were often enough settled with the straight sword or pistol, and we know that neither Hamilton nor Clay, Jackson nor Houston was superior to the tyranny of this tradition of the middle ages.

That the subject of these remarks was of a better mind and would have escaped the fate of too many of his family, the writer of this communication is personally advised. I know him as men only know each other who have shared the same bivouac, slept often under the same tree, in weary marches in the changing seasons together made friends with the summer and winter constellations, endured the heat of the one season and the slant rains of the other, soberly watched the dawn break of days either of which might be determined "*ultima dies*" to either or both. His purposes, like those of most of us, failed sometimes of worthy execution, but he had the better traits of his race in a marked degree. He said: "I shall teach my son the primitive virtues—to ride, shoot, and speak the truth." As a soldier he used his position in such a manner that *sans reproche* might not be separated from *sans peur* in any discussion of his conduct, as many who wore the uniform of blue might testify to as well as I.

In the Sherman march his residence shared the fate of war: doors and shutters unshipped, furniture plundered; his mother, advancing in years, left by the retiring army with an enemy at the open door heretofore unknown to the Alstons—want; nevertheless, during the summer of 1865 he addressed a letter to the *Tribune*—commented on editorially by Mr. Greeley—suggestive of ideas far in advance of the current opinion of the South at that day, admitting the conclusiveness of the settlement made by the arbitrament of arms, and seeking for his section every advantage, under such admission, which under a republican theory of government must be extended to the common citizens of a common country. Since then he has followed civil pursuits creditably, doing no violence, as I am aware, in practice to the theory of civil conduct he had suggested. I trust you will agree with me that in the discussion of an evil wide-spread in the South, perpetuated by family traditions and enforced by arguments every well-wisher to society would challenge, such a man as Alston, slain by an adjudged assassin, should not for the errors of his family or the last fault of his career be selected "to point the moral."

ARTHUR W. ANDREWS.

GALVESTON, TEXAS, May 17, 1879.

Notes.

HOUGHTON, OSGOOD & CO. publish immediately 'Detmold,' a story, by W. H. Bishop, which appeared last year in the *Atlantic;* and 'Mono-metallism and Bi-metallism,' by J. B. Howe.——G. P. Putnam's Sons have nearly ready 'The Great Fur Land,' by H. M. Robinson, of which the magazine-reading public have already had an agreeable foretaste.——A select volume of sonnets, called 'Afternoons with the Poets,' is in the press of Harper & Bros.——R. Worthington announces 'The Souvenirs of Madame le Brun.'——A translation of Emanuel Geibel's 'Brunhild,' preceded by a brief account of the Nibelung Saga, by Prof. G. Theo. Dippold, of Boston University, is announced by Ginn & Heath, Boston; also a school edition of the 'Agricola' of Tacitus, edited by Prof. W. F. Allen, of the University of Wisconsin.——The third part of Mr. Leypoldt's 'American Catalogue' (Lenoir to Ri) is nearly ready, and will be published by A. C. Armstrong & Son, who hereafter will assume the business management of this admirable work. The fourth part, completing volume i., will probably not be delayed beyond September 1.——The Clarendon Press, Oxford, says the *Academy*, has engaged to publish the Philological Society's English Dictionary, of which Dr. J. A. H. Murray, now president of the society, is to be the editor. It will include all English words since 1100, and will illustrate each word, sense, and century with a complete quotation. In bulk it will be four times the size of Webster, and will be completed, it is hoped, in ten years, Part I. being set down for 1882. All who desire to help as "readers" will obtain hints and printed slips by applying to Dr. Murray, Mill Hill, Middlesex, N. W.——At the further sale of George Cruikshank's drawings and prints in London, on May 1, a pencil-drawing of Dickens as a young man, seated, brought $102 50.——Williams & Norgate, London, have put forth the prospectus of a Theological Translation Fund intended to cover the expense of translating into English and publishing "the best results of recent theological investigations on the Continent, conducted without reference to doctrinal considerations, and with the sole purpose of arriving at the truth." Principal Tulloch, Prof. Jowett, Dean Stanley, James Martineau, H. Sidgwick, C. Kegan Paul, and T. K. Cheyne are among the sponsors of this enterprise. With the help of free donations to the Fund it is calculated that subscribers of one guinea annually can be supplied with three octavo volumes annually. The works of Keim, Baur, Kuenen, Bleek, Zeller, Hausrath, Nöldeke, Schrade, Scholten, Pfleiderer, etc., are among those specially contemplated. B. Westermann & Co. are the American agents.——We lately noticed the forthcoming *Art Amateur*, and now we have before us the prospectus of the *American Art Review*, "a journal devoted to the practice, theory, history, and archæology of art." The managing editor will be S. R. Koehler, assisted by Dr. Wm. C. Prime and Charles C. Perkins; and the publishers will be Estes & Lauriat, Boston. The magazine is to appear monthly, and will resemble the *Portfolio* in giving with every number forty pages of letter-press and three full-page plates, one at least of these being an etching by a celebrated European artist. A series of original "painter-etchings" by American artists is also contemplated, besides reproductive etchings from the works of early American artists. Altogether the *Review* has a very promising outlook, and we have no doubt will be well worth its twelve dollars.——Mr. Arthur Gilman, Cambridge, Mass., has now ready Circular No. 3 in relation to Private Collegiate Instruction for Women at Harvard, giving the courses of study for the year 1879–80. Details for chemistry are yet wanting. The Harvard Examinations for Women in this city, in twelve sessions, conducted by Prof. Child, began on the 28th instant and will close on the 4th of June.——The telegraph announced some time since that Ivan Turgeneff had been expelled from Russia, but the St. Petersburg correspondence of the Vienna papers gives a more detailed account of the affair. It appears that the Government was offended at the enthusiasm with which Turgeneff's lectures were greeted. Accordingly, the St. Petersburg superintendent of police called upon him and gave him plainly to understand that the Government had learned with displeasure that his person was made the object of "exciting manifestations," and that it would consider it a favor if he would put an end to such manifestations by going abroad. After Turgeneff's departure he was formally proscribed—*i.e.*, banished for life.

—The Cincinnati Public Library published last year a monthly, or nearly monthly, Bulletin of recent accessions, which were bound together afterwards with classified and authors' indexes to the whole. This formed, with the exception of the catalogues to all the fiction published in 1876, the only catalogue accessible to the public since 1871, when Mr. Poole's of the 30,000 volumes then in the library was issued. The Library contained at the end of January 114,311 volumes and pamphlets, of which 11,603 were pamphlets. Since the beginning of this year, previous to which a broadside of titles (like that formerly used by the Boston Public Library for the use of the intended card-catalogue) was also printed, the Bulletin has been issued in a modified form with larger type, which will serve in different forms of printing as a monthly Bulletin, and as title-slips to be pasted for the card-catalogue. In their present form of cataloguing the pages of each volume are given with, we should judge, nearly bibliographical fulness. Some indication of the number of pages seems to be of some use, and the precision of the Cincinnati method, though it is doubtfully ever useful, is yet good and easily justified on the principle of doing a piece of work thoroughly. These Bulletins publish no notes excepting as indicating contents, or number of editions, etc.; and, as a matter between a librarian and his board of managers, we are not aware that he can be expected to do anything more. If he stores the books properly, and publishes a finding-list, in whatever form may seem best, anything further, as a bibliographical or comparative account of his books for the benefit of the public, is altogether supererogatory. A public may be grateful enough, and should be, for such work as Mr. Winsor did in Boston, but we do not understand how it can be supposed that a board of managers pays for such work in its librarian's regular salary. A class of literary experts and general and special students might well be attached to a library to instruct the public as to the merits of books, and their labors might be published with the Bulletins, but their functions would not differ from a critic's. No one supposes, probably, that the meritorious works of persons specially fitted for the task are to serve as a rule for all librarians.

—Mr. Cutter, at the Boston Athenæum, continues his very agreeable lists of additions, with selections from the best critical notices, which have the merit of being very interesting without committing the librarian himself to the views expressed. In case of a marked difference in the criticisms opposite opinions are sometimes given. With the number for April 1 Mr. Cutter begins to follow the altered spelling of "ten" words recommended by the American Philological Association, which are enumerated as ar, catalog, definit, gard, giv, hav, infinit, liv, tho, thru, wisht. In the number for April 22 a phonetic character for *ng* was used throughout, but it appears to have been set up in this instance by a misunderstanding, and does not occur in the last list. The Young Men's Association of Buffalo, by the way, is added to the number of the libraries for whom the Athenæum prints a special edition of its annotated list.

—The June *Atlantic* opens with a study of the condition of the operatives in Fall River by the anonymous contributor whose articles upon the laboring classes have attracted such wide attention. His report is, on the whole, more favorable than would be expected; he finds the source of the troubles of the operatives not in low wages or the grasping tyranny of the mill-owners, but in unhealthy sanitary conditions, bad and wasteful cooking, ill-ventilated and crowded tenements, sensational and socialistic reading, lack of healthful amusement, and the like. The operatives were generally contented, and were not in want; they were not individually much interested in labor reform; discontent and want were found among the unemployed, who were mainly not men who had

been discharged but new-comers in search of work. The female operatives he finds a more moral class than is usually supposed. The article deserves a careful reading for the uncolored information it contains and for the closing suggestions, which seem to us more practical than those which this writer at first put forth. This article is followed by a piece of plain-spoken and vigorous criticism, such as is rarely printed in this country, upon "Art in Engraving on Wood," by one of the best of Anglo-American engravers, Mr. W. J. Linton. He gives an excellent sketch of the early history of cutting on wood, but he warms up to his subject as he comes to what is called the "new departure," to illustrate which he takes up for detailed criticism the recent portraits of Emerson and Longfellow in *Scribner's*, and other minor cuts in the same magazine. He does not spare condemnation and ridicule; he writes vigorously, but it is clear that the source of his feeling is respect for his art and no other motive. He reserves his bitterest word for those who use "the fine-tooth comb"—*i.e.*, a multiple graver by which several white lines are engraved at once; he points out the faults which result from its use so plainly that the most unskilled tyro can see his meaning. To read his article and refer to the illustrations in *Scribner's* and *Harper's* that he mentions will be an excellent lesson to any who wish to learn what makes the merit of a wood-cut. At the same time, if we except the multiple graver, Mr. Linton's strictures are really aimed less at those who cut the blocks on which Mr. Wyatt Eaton's and Mr. Kelly's coarse cartoons are photographed than at the artists themselves. The question, therefore, is one of draughtsmanship, at least primarily, and we should like to have another chapter from Mr. Linton on the proper mode of drawing on wood. The detail and definition of Bewick and his school, particularly in their backgrounds, seem opposed to the practice of tint-drawing which Mr. Linton recommends as the "more effective and painter-like method." Among the other articles Mr. Howells's story, "Buying a Horse," is entertaining and realistic, and "Irene the Missionary" goes on with more sprightliness; Mr. Aldrich makes a short plea for Dobson's poetic merits, and Mr. Warner extracts freely from Harrison's "England," under the title of "The People for whom Shakspeare wrote." The article by Mr. Beard upon the "Physical Future of the American People" is also deserving of mention. He prophesies a vigorous and healthy race in the thirtieth century.

—The question of the legality of State laws forbidding the marriage of blacks and whites has recently come up in Richmond before Judge Hughes. The laws of Virginia make such a marriage a penal offence, punishable with imprisonment. In violation of this law, Edward Kinney, a Virginia negro, had gone into the District of Columbia with a white woman, also a resident of Virginia, and there contracted a marriage with her, perfectly valid according to the laws of the District. On his return he was sentenced to the penitentiary, and applied for a writ of *habeas corpus*, on the ground that he was in custody in violation of the Constitution and laws of the United States. It was contended, first, that the imprisonment was in violation of the Fourteenth Amendment, making all natives of the United States citizens of the United States and of the State where they reside, and prohibiting any State from making or enforcing any law abridging the privileges of citizens of the United States, and from denying to any person within its jurisdiction "the equal protection of the laws." Judge Hughes decides that this does not prevent a State from abridging the privileges of its own citizens, and that its powers in this respect are those of sovereign governments, which of course may regulate the domestic relations of their inhabitants as they see fit. He cites the Slaughter-House and a number of other cases to show that the privilege of marrying belongs to the class of rights which a person has as a member of society, and is not in any way derived from his right as a citizen of the Union. Further, a statute prohibiting marriages between blacks and whites, which operates upon both races alike and equally, cannot be said to deny to any one "the equal protection of the laws." Section 1977 of the Revised Statutes provides that all persons shall have the same rights as to the making and enforcing "contracts" that are enjoyed by white persons. This has no application to the case, because it only refers to legal contracts. What are legal contracts must be determined by other considerations. Besides this, the section does not embrace contracts of marriage, any more than does the clause of the Constitution forbidding States from passing laws impairing the "obligations of contracts." As to the departure of the parties from Virginia for the express purpose of marrying in the District of Columbia, it appears that this also was made a penal offence by the Virginia statutes. It was maintained that the provision of the Constitution requiring each State to give "full faith and credit" to the public "acts, records, and judicial proceedings" of the other States had an important bearing on the case; but Judge Hughes decides that this could have no further effect than to render indisputable the fact of the marriage and its legality under the laws of the District.

—The case is to be reheard, we believe, when Chief-Justice Waite is next in Richmond; but it is hardly possible, whatever disposition may be made of the *habeas-corpus* application, that the decision as to the effect of the Amendments upon the law of marriage can be shaken. In fact, it is a remarkable illustration of the confusion as to legal rights produced by the war that any one should have dreamt of attempting to upset such a law on the ground of unconstitutionality. It may be very unfortunate that the subject of marriage is not regulated by a national law, and many inconveniences and abuses may be pointed out which spring in great measure from the absence of such a law; but inconvenient or not, the notion that the States are prohibited from regulating the whole matter, or that the United States can intervene and ratify or annul marriages invalid or valid according to State law, is an idea which we should *à priori* have supposed could only obtain lodgment in the mind of a disciple of Justus Schwab or Citizen Maddox. It is noticeable, by the way, that the decision points to a means of making fraudulent divorces difficult to obtain which seems worthy of the attention of reformers. If laws affixing to marriages made outside of the State for the purpose of evading State laws the same penalties that would attach to them if contracted within the State are valid, there would seem to be no reason for not punishing persons obtaining fraudulent divorces in the same way. If, for instance, it were made a penal offence for any citizen of New York to procure a divorce outside the State for any cause which would not be a good cause within the State, it would at least have this effect, that persons who went to Illinois or Connecticut to procure such divorces would not return to New York; and the general adoption of such measures would make the few States which retained a lax divorce system a sort of matrimonial Botany Bay; and this is exactly what all States ought to be which attempt to break down the barriers thrown by society around marriage. All this we say without any reference to the Virginia law as to marriages of whites and negroes, which we regard as quite needless. The marriage of whites and negroes on any considerable scale is prevented by the natural aversion to such marriages on the part of the whites, and hence there is no need of any law on the subject. "Miscegenation" is an old bugbear which would never have attracted any one's serious consideration had it not been for the excitement and passion which any question connected with slavery aroused before the war. Southerners succeeded in persuading themselves at one time that there was a "hellish radical plot" on foot in the North to corrupt the blood of the white race by a system of promiscuous intermarriage; and many a conservative white parent in the old days before the war reasoned himself into the belief that it was necessary for him to vote the Democratic ticket in order that he might escape the danger of having his daughter "marry a nigger."

—The hottest summer of the decade was approximately predicted to occur the present season by Piazzi Smyth, "Astronomer-Royal for Scotland," as he signed himself in *Nature*. His argument was: "Between 1837 and 1876 three great heat-waves struck this part of the earth [Great Britain], in 1846½, 1858, and 1868$\frac{1}{10}$. The next such visitation may be looked for in 1879½, within limits of half a year each way." Our acceptance of this forecast, published in September, 1877, is weakened by the failure of his simultaneous prediction of severely cold weather a year and a half before and after said heat-wave—*i.e.*, during the winters of 1877–8, and of 1880–1 if we may judge of Scotland from the neutral nature of the winter of '77–8 in this country.

—Breitkopf & Haertel, in Leipzig, have commenced the issue of a series of pamphlets, at a mark apiece, on musical biography, analysis of compositions of note, æsthetic questions, etc. They are to appear at irregular intervals, like the several series of brochures on scientific subjects. The four numbers which have so far appeared are on J. S. Bach, Wagner's "Siegfried," Schumann's "Faust," and the history of pianoforte music. From Leipzig also comes the news of the death of Richter, the distinguished musical theorist and cantor of the Thomaskirche. In him the Conservatory loses a man who has done more than any one else to establish its world-wide reputation. He has published a considerable number of compositions, embracing the departments of chamber-music, opera, oratorio, and pure vocal music. His settings of several psalms are regarded as his best efforts. His reputation, however, rests chiefly on his theoretical works. Of his admirable treatise on harmony eleven editions have been published in Germany, and it has

been translated into several languages. Equally valuable are his text-books of counterpoint and fugue, whose weakest point is their bad literary style. As a man he is said to have been cold and reserved, except to his intimate friends. Nothing definite as yet is known in regard to the successor to his post, which was once held by the great Bach himself.

—In Italy two events have taken place which deserve to be recorded. Beethoven's glorious Ninth Symphony has received its first performance in Rome, and Mendelssohn's "Elijah" in Milan. According to German correspondents both the execution and reception were all that could be desired, although, of course, the ultra-Italians could not see the trees on account of the forest. They wanted to know what had become of the "melody." They kept quiet, however, and what that means those know best who have been in Italy. A Frankfort paper not long ago gave an amusing account of the behavior of which the Italians are still guilty in their opera-houses. Not only does everybody talk as much and as loudly as he pleases, but when, after an interval of dreary recitative, a fine melody arrives, several of your neighbors are sure to take it up and hum it along, and not *pianissimo* either. Besides this, ladies bring their squalling babies with them, and in the intervals between acts the members of the orchestra practise their solos.

—In some respects even this state of affairs appears to be preferable to the conditions to which composers are subjected at the other extremity of Europe, at St. Petersburg. Absolute despotism there extends not only to social, political, and literary affairs, but also to the publication of church music. The publishers of a new mass by Tchaikoffsky were recently visited by a deputation of the police, who confiscated all the copies issued, and forced a promise out of all the publishers not to print the composition again. Of this affair the *N. Berliner Musikzeitung* gives the following explanation: There is in St. Petersburg a great dignitary, the director of the Imperial Chapel, without whose permission no new sacred music whatsoever can be printed. Bribery and favoritism are the only motives by which his dictum can be controlled, and thus it has happened that while many an unknown composerling has been given an opportunity to afflict the world, men of real talent, like Glinka and Tchaikoffsky, are compelled to lock up their manuscripts in their desk or send them to Germany. This state of affairs is all the more surprising, since, in other respects, a good deal is done in the Russian capital to promote the interests of good music. Rubinstein, for instance, has been honored with various offices and functions, the title of hereditary nobility having, among other things, been bestowed on him. New works, also, are commonly received without the traditional prejudices so prevalent in other regions. Berlioz in his day was nowhere received with so much enthusiasm as in St. Petersburg, and Wagner has long since been introduced there. In less than two years he will also, without doubt, effect his entrance into the city which professes to be the brain of the universe. The Parisians are getting to be heartily ashamed of their irrational method of mixing up artistic with political affairs, as was shown the other day when the first act of "Lohengrin" was for the first time performed in their city with great success, not on the stage but by the courageous Pasdeloup in one of his popular concerts. The Parisians may console themselves with the knowledge that they are not the only mortals who have condemned what they had never heard, and they now endeavor to whitewash their conduct by pretending that their opposition was entirely based on political motives. But surely it would be too great a compliment to Wagner's rather commonplace, sarcastic comedy on the French to attribute to it the demonstrative enmity of a whole nation during almost ten years. One cannot help suspecting that a little want of musical culture also had something to do with the matter when one reads in the *Journal des Débats* that at a recent concert by the pupils of the Conservatoire the name of Schumann also, for the first time, figured on the programme.

THE COLOR-SENSE IN MAN AND ANIMALS.*

THE teleological and anthropocentric view of nature, which regards every marvellous contrivance and every object of beauty as having been specially so created for the delight and gratification of man, never received a ruder shock than when the careful observations and experiments of Darwin, Lubbock, and H. Müller put into a clear light the wonderful relations between the vegetable and the animal world—between flowers, insects, and birds, and the peculiar manner in which they react on one another. The varied and grotesque forms of the orchids and many other plants, instead of having been devised for the amusement of the botanist or the lover of nature, were shown to be developments of originally simpler forms, gradually modified by natural selection for the purpose of enabling particular winged insects or birds to visit them and deposit, in return for some nectar or honey, a few grains of pollen brought along from another flower just visited, thus enabling the former plant to secure the benefits of cross-fertilization and thereby gain an advantage over its rivals in the struggle for life. The same reasoning likewise applies to the colors and perfumes of flowers and fruits. Darwin showed that color is absent in flowers which are fertilized by the wind, and occurs only in those which are fertilized by the agency of insects; whence the inference that there must be some causal connection between the color-sense of insects, birds, and mammals and the origin of colored petals and fruits, whose function must be to attract guests for the purpose of fertilization or the dispersal of seeds, by guiding them to the nectar or the sweet juices of the plants.

The clear establishment of this principle and some of its consequences, by an accumulation of all the evidence bearing on it, is the chief task which Mr. Grant Allen has imposed on himself in his new volume, which, to a certain extent, may be regarded as a continuation of his former work on "Physiological Æsthetics." The color-sense of birds and butterflies, he thinks, has metamorphosed the world. Certain large masses of color in the inorganic world, such as the blue sky, the green sea, rocks, minerals, and precious stones of various hues, sunsets and the rainbow, as well as the green leaves of the forest and the diverse tints assumed by them in autumn, are due simply to conditions of molecular structure which it is the business of physical science to explain. But the countless hues of flowers, fruits, birds, and insects—these, he maintains, owe their existence in these places entirely to the color-sense of bees, butterflies, humming-birds, and other animals. To establish this theory it is necessary to prove two things: first, that the lower animals really share with man the power of discriminating between the various spectral colors; and, secondly, that there is in the vegetable world a natural tendency toward the production of colors other than green, thus affording natural selection an opportunity to bring about the changes in question through the agency of the brute color-sense. The first point is put beyond all doubt by the anatomical structure of the eyes of the lower animals (the presence of cones in most of them), by the careful experiments of Lubbock and Darwin on ants and bees, and by the existence of protective, warning, and imitative colors in so many species of animals, which prove that the enemies from which they are thus concealed must have a sense of color, for otherwise all these devices would be utterly useless. The second point Mr. Allen succeeds in putting on an equally secure basis in a long chapter on insects and flowers, which on the whole is the most original and valuable part of the book, although some of the details are open to doubt.

The author shows in an ingenious manner how all the active parts of plants which *accumulate* energy with the assistance of the solar rays are usually rendered green by the presence of the pigment known as chlorophyll; while, whenever any part begins to *expend* energy, as in buds or in the young sprouts of various bulbs, it tends to assume tints of red, blue, or violet. Now, plants are selfish enough not to expend energy unless, either directly or indirectly, there is something to be gained by it. In early geological epochs, when all flowering plants were as yet fertilized by the "unconscious wind," energy had to be thus expended in the production of vast quantities of pollen, in order to make sure that so unreliable an agent would actually accomplish its duty. This necessary over-production of pollen in wind-fertilized plants may still be seen nowadays in a pine forest, where the floor is often thickly covered with the precious yellow dust. At a later epoch, however, when insects had made their appearance on the face of the earth, a convenient method offered itself to plants by which to secure much more favorable chances of fertilization at less cost to their vital energies at that time.

"The stray flowering species which grew at rare intervals in the midst of the calamites and lepidodendra must have offered special attractions to insects (or their undifferentiated ancestors) in the shape of soft, edible, nutritious pollen. And as the insects travelled from one flower to another, carrying on their legs or heads the fertilizing powder, they would supply the plant with a cheaper and more certain means of impregnation than that afforded by the wasteful wind. Accordingly, any plants which offered special advantages to insects, in the shape of pollen, sweet juices, or soft edible matter, would thus obtain an extra chance in the general competition for a share of the earth's surface, and hand down the peculiarity to an ever-increasing brood of descendants."

* 'The Color-Sense: its Origin and Development. An Essay in Comparative Psychology. By Grant Allen, B.A.' Boston: Houghton, Osgood & Co.

In connection with these various baits would be developed, in course of time, petals and other attractive structures; and as these belong to the expenders of energy, they would tend to be of other hues than green, and would thus serve the insects as guides to their food. While in this manner the visits of insects gradually developed the colored petals of flowers, these, by way of reaction, continually improved and refined the color-sense of the insects, thus explaining the two oracular sentences in which Mr. Allen sums up this part of his work: "Insects produce flowers. Flowers produce the color-sense in insects."

So far, passing over a few details, we are in entire accord with the author, who, in truth, has only been working out some of the corollaries which necessarily follow from Darwin's fruitful theory of cross-fertilization. In fact, it would hardly be too much to say that the essence of all Mr. Allen has to say on the colors of flowers and fruits is contained in the 'Origin of Species' in the paragraph on Beauty, which is one of the most suggestive and wonderful pages in all scientific literature. But when we come to the question of colors in *animals* we no longer follow the author. He accepts and defends Darwin's theory of sexual selection, which attributes the fine colors and other ornaments of male animals to the deliberate and conscious (æsthetic) choice by the females of the more beautiful males. This doctrine has never received the approval of many even among those who in natural selection went full length with Darwin; and in 'Tropical Nature' Mr. Wallace has advanced a series of arguments against it which to us seem unanswerable. Mr. Wallace insists that in organic nature it is not so much the presence as the absence, and the peculiar variations, of color which need accounting for. He points out that color is a normal product in the surface-structures of animals, and is proportionate to integumentary development, being, therefore, most apt to occur in such delicate structures as the wings of butterflies and the feathers of humming-birds and peacocks. Brightness and intensity of color are, moreover, correlated with the greater vigor and activity and the higher vitality of the male. Now, as it is the strongest and healthiest males which will have the most complex and highly-developed dermal appendages, they will also be the most brightly colored; and, since they will have an advantage over weaker rivals in securing desirable females, they will also leave an equally vigorous and attractive offspring. *Natural* selection, therefore, accounts for all the phenomena in question, and, such being the case, the laws of scientific reasoning forbid the introduction of a new and superfluous principle of explanation. Mr. Allen, however, thinks he can save sexual selection by limiting its scope and contending that "only those animals display beautiful colors, due to sexual selection, in whom a taste for color has already been aroused by the influence of flowers, fruits, or brilliant insects, their habitual food." This, indeed, narrows down the problem, but does not remove any of the objections. For we may grant that in general those animals which live amidst flowers and fruits have a finer color-sense than others of different habits—a theory which is also supported by revelations of microscopic anatomy of which Mr. Allen does not appear to be aware—and yet it does not at all follow that these birds and insects are therefore competent to receive æsthetic pleasure from color intense enough to induce them to base their choice of mates on the slight variations in the brilliancy and harmony of tints in them. If we adopt the suggestion of Mr. Wallace, that the coloration in many cases is determined by the necessity of recognition at a distance, we have all that is here needed to account for the development of colors which do not come under the head of protective, warning, and imitative. Mr. Allen forgets that though evidence exists that in some cases females do exercise a choice of males, yet in no case has it been shown that this choice is determined by any peculiarity of coloring in the male. Add to this that in the vast majority of cases it is the bright-colored male, and not the dull female, that makes the selection, and that in the case of gaudy butterflies and caterpillars the exercise of an æsthetic taste in selecting a mate is altogether out of the question, and we must come to the conclusion that Mr. Allen has failed in his attempt to restore Sexual Selection to its lost position. Such, at any rate, is our conviction, after repeatedly perusing all the literature on this question, which is as yet not very extensive, though rapidly growing in extent. The senses of taste and smell are so directly connected with the vegetative system of animals that we may assume perfumes and sweet juices to be distinctly pleasurable to animals. But the ear and eye are so thoroughly intellectual in function that it seems most probable that the specialized colors and songs of birds are developed for purposes of discrimination and distinction of species, like the colors of flowers, rather than as means of æsthetic attraction to individuals of the opposite sex.

After thus differing with the author of the 'Color-Sense,' it is with all the more pleasure that we wish to record his complete success in demolishing in subsequent chapters the so-called historic-development theory of Gladstone, Geiger, and Magnus, which asserts that the color-sense of man is of recent origin—so recent, indeed, that Homer and his contemporaries had only vague ideas of red and yellow, while the more refrangible rays which constitute green, blue, and violet light seemed not to exist for them at all; and that even yellow and red gradually disappear from literary records as we go back a few centuries more, so that about three thousand years ago all men must have been totally color-blind. Almost as strange as this amazing theory is the fact that at first even some leading men of science, like Wallace and Haeckel, seemed disposed to accept it, although a careful examination of facts has now led to the conclusion that it is one of the most unsubstantial theoretical soap-bubbles ever blown by a scientific amateur. Mr. Allen adopts two methods of refutation. From archæological records he gains evidence that among the ancient inhabitants of Egypt, India, China, Mexico, etc., all the principal colors were discriminated and employed for decorative purposes at a period long antecedent to that in which Geiger would place the beginning of the color-sense in man. Secondly, he prepared a number of circulars, which were forwarded to missionaries and government officials in all parts of the world, for the purpose of ascertaining the present condition of the color-sense among savages and semi-civilized tribes. The replies received "bore out *in every case* the supposition that the color-sense is, as a whole, absolutely identical throughout all branches of the human race." And, as he adds humorously, he has his opponents here by the horns of a dilemma from which they cannot escape. If they assert that the development of the color-sense is a question of relative culture, not of chronological order, he confronts them with the case of the modern savage; and if they assert that it is a question of chronological order, not of relative culture, they are silenced by the case of Egypt. It is to be hoped, accordingly, that we shall hear no more of these speculative fancies of philologists on matters psychological.

By the present volume, which, we may add, is written for the "general reader," and thoroughly intelligible and even fascinating throughout, Mr. Allen has not only made a valuable contribution to the youthful science of comparative psychology, but, in connection with his former work, he has done much in the way of relieving æsthetics from the opprobrium which the vicious methods of German metaphysicians had cast on it, as on all philosophy in general. 'Physiological Æsthetics' and the 'Color-Sense' may be regarded as the forerunners of a rich literature, which will utilize and develop the scientific theories of beauty given to the world by Darwin and Helmholtz.

The Vicar of Morwenstow. A Life of Robert Stephen Hawker, M.A. By S. Baring-Gould, M.A. (New York: Thomas Whittaker.)—This eccentric vicar was born in the south of England, in 1804. His wits were first shown in boyish pranks which made him the terror of the village, and were put to their first practical use at the age of twenty, when, on hearing that his father could no longer afford to pay his expenses at Oxford, he immediately started off and proposed marriage to his godmother, then forty-one years old and possessor of a comfortable annuity. By this manœuvre he got his degree. Soon after he became a priest of the Anglican Church, and in 1834 was made vicar of Morwenstow, a hamlet on the coast of Cornwall, near the ruins of Tyntagel Castle, opposite Wales, and formerly the haunt of wreckers and smugglers. Here he spent forty uneventful years in the discharge of his duties and the display of his oddities. So far as we can make out, he was "the show" of the place, and many came every year to see the venerable church and its extraordinary vicar. He must have made a picturesque figure as he welcomed them; he was clad in a claret-colored coat with long tails, blue fisherman's-jersey with a red cross woven in where the Lord's side was pierced, fishing-boots above the knee, a flesh-colored beaver hat without a brim, and crimson gloves. He was for a time accompanied in his walks by a tame pet black pig, which followed him into ladies' drawing-rooms. He was fond of animals. We are told that "he was usually followed to church by nine or ten cats, which entered the chancel with him and careered about it during service. Whilst saying his prayers Mr. Hawker would pat his cats or scratch them under their chins." We find him writing to a friend for a lamb: "All my pets are dead, and I cannot endure my lonely lawn. I want some ewe-lamb 'to be unto me a daughter.' . . . I want soft-eyed, well-bred sheep, the animal that was moulded in the mind of God the Trinity, to typify the Lamb of Calvary." But his devotion to animals did not interfere with his kindness to men. He was a

liberal distributor of bottles of brandy and whiskey, it seems, in his parish; but of spiritual consolation, though we believe there was no lack of it, there is little record in this book. One of his principal occupations was the burial of the bodies of sailors wrecked on that dangerous coast, and the care of the saved, should there be any so fortunate. There is more than one vigorous account of storm and wreck or pathetic tale of distress told in the vicar's own words. He was superstitious and mystical—"mediæval" and "oriental," the author says; he believed in witches, and could point out an old woman who had bewitched his pigs. If he made an error, however, he was witty enough to clear himself. Once, for example, he built a barn on an exposed position against advice, because, as he said, "I have placed the sign of the cross on it, and so the devil cannot touch it." Soon a gale tore the roof off. "The devil was so enraged," he said, "at seeing the sign of the cross on my barn that he rent it and wrecked it." He believed that "there was an atmosphere which surrounded men, imperceptible to the senses, which was the vehicle of spirit in which angels and devils moved, and which vibrated with spiritual influences affecting the soul." So he believed in signs, in the danger of plucking one of a circle of toadstools for fear of death in the family, in the death of the absent being announced by a crack of the table, and the like.

Besides this superstition and foolish eccentricity, he had a better endowment—a patient endurance of humble duties, a sympathetic and charitable heart, the courage and practical working power of an athletic man, a readiness and perseverance in serving the poor, and, what is most surprising, a spark of poetic fire. He wrote a Cornish ballad which deceived Macaulay and Sir Walter Scott, and several of his poems are full of rough strength and simple feeling. We cannot quote his best work, but here is a squib on Gladstone, with whom he was enraged for the disestablishment of the Irish Church, and on Disraeli, who sinned in the matter of the Public Worship Bill:

"An English boy was born a Jew, and then,
On the eighth day, received the name of Ben.
Another boy was born, baptized, but still
In common pariance called the People's Will!
Both lived impenitent, and so they died;
And between both the Church was crucified.
Which bore the brand, I pray thee, tell me true,
The wavering Christian or the doubtful Jew?"

But his verse could descend very far, as in this stanza on original sin:

"Ah! woe is me! for I have no grace
Nor goodness as I ought;
I never shall go to the happy place,
And 'tis all my parents' fault."

Thus, with his verses and superstitions, his friends and pets, storm and wreck, he lived his own life in his own way. His opinions he kept to himself, and would not talk of his dreams and visions. When he was sixty his wife died and he married again. It was apparently an unfortunate step, for he was worried by anxiety over the future of the three daughters his second wife bore him, and she was responsible for his admittance to the Roman Catholic communion in which he died. He seems to have been paralyzed and incapable at the time, but the affair created a scandal and a gossipy report that he had been a Catholic at heart for years. Mr. Baring-Gould makes a very plausible defence, and such long-continued deception from base motives seems wholly inconsistent with the character his acts show he possessed. He published several books in his lifetime, of which the Cornish ballads and the 'Vision of the Sangreal' are the most valuable. Woven in with his biography is a considerable amount of instructive and entertaining knowledge of manners and customs in Cornwall, historic reminiscences and records, as well as legend; those of the Granville letters here printed show how valuable an illustration of life in the seventeenth and eighteenth centuries the large number which were negligently lost in our own day must have been.

Young Folks' History of Germany. By Charlotte M. Yonge, author of 'The Heir of Redclyffe,' etc. (Boston: D. Lothrop & Co. 12mo, pp. 474.)—We are afraid that Miss Yonge is writing children's histories too fast for her reputation. As long as she worked in the field of English and French mediæval history, which she has at her fingers' ends, nothing could be better; when she leaves this familiar field and undertakes to do a similar work for other nations, she shows a lack of adequate preparation. This was seen in her 'Christians and Moors of Spain,' which we reviewed a few months ago; it is still more apparent in this 'History of Germany.' To choose a few examples out of many: Tacitus is said (p. 36) to have got his knowledge of the Germans during the campaign of Germanicus—at least thirty years before he was born; on the next page the German invasions are placed in the sixth century, while in the series of events is mentioned the crossing of the Danube by the Goths, which took place in 375. On page 47 the battle of Châlons is called Soissons. We have regular fiefs in the seventh century (p. 55), and bishops invested with the dignity of count by Charles the Great (p. 64), which did not take place until the tenth century; while Brandenburg and Austria, as well as Carinthia, are mentioned (p. 66) as "marks" organized by this monarch. On page 239 the apocryphal story of Huss's attempt to escape from Constance in a wagon of hay is told as an undoubted fact.

The book is written in the author's animated and generally correct style, and is illustrated with a large number of spirited although rather coarsely engraved cuts.

Money in its Relations to Trade and Industry.

Professor in Yale College. 12mo, $1 25.

HENRY HOLT & CO., New York.

THE

Vicar of Morwenstow.

A Life of ROBERT STEPHEN HAWKER, M.A.

By S. BARING-GOULD, M.A.

12mo, cloth, gilt top, price $1 75.

EXTRACTS FROM REVIEWS.

"It is one of the most charming and characteristic biographies which have been written since Isaak Walton sharpened his pen to tell the story of Richard Hooker, George Herbert, and the other worthies of the tempestuous age which preceded him. . . . A book which contains more good stories than any other ecclesiastical biography that has been written within our memory. . . . Every bilious person ought to have a copy. It is a most enjoyable book."—*The Standard of the Cross.*

"It contains nothing namby-pamby or goodish. It is a history. It opens chapters of life on the Cornish coast that are seldom rendered with due strength and fidelity, and presents picturesque and almost startling views of events like those still transpiring in secluded corners of the world. The result is a book of profound interest alike to the theologian, the scholar, and the general reader."—*The Episcopal Register.*

☞ Copies mailed, postage prepaid, on receipt of price.

WISCONSIN, Racine (on the Lake Shore).

RACINE COLLEGE begins September 5. *The* College and Grammar School open the same day. For catalogues apply to the Rev. JAMES DE KOVEN, D.D.

Wants.

A BOSTON LADY, passed first half Harvard Examinations for women at Cambridge, and expects to try second half next June, wants employment as teacher. Educated at the best schools in Boston. Studied two years in Paris and London. References in Boston and Cambridge. Miss B. K. E., Pepperell, Mass.

*A BOSTON LAWYER, of experience in Eng-*lish, French, and German law and practice, will go to Europe in June to settle a trust estate, and will attend to other business for a reasonable compensation. The best references furnished. Address L. G. B, 50 Bromfield Street, Boston, Mass.

A GERMAN-AMERICAN lady of twenty will accompany an agreeable lady or family through Germany. Speaks French only moderately well. Address GESELLSCHAFT, *Nation* office.

A HARVARD STUDENT, who has taken classical honors, desires a pupil during the summer vacation. The best of references. Address G. E. H., Drawer 30, Boston P. O.

A LADY, well known as author, reviewer, and paragrapher, desires position as assistant-editor or correspondent; country or city. Box 201, Charlestown, N. H.

AN unmarried man, twenty-eight years old, five years a successful teacher in the United States, three years a student in Europe, promoted March 15 by the Philosophical Faculty of Georg-Augusta University, Goettingen, with the highest honors, to the degree of Doctor of Philosophy, seeks a chair of Mathematics or Physics. Address WILLIAM B. SMITH, Ph.D., care of Prof. John Henry Neville, Lexington, Kentucky.

*A RECENT Princeton graduate desires a posi-*tion as private tutor. Full qualifications; references undoubted. Address EXPERIENCE, 623 N. Broad St., Elizabeth, N. J.

GERMAN.—An educated North-German family receives a few responsible persons wishing constant practice in German, with board. Instruction given in German, French, Italian, Piano, Singing, Harmony, if desired. Address Mrs. ANTONIE SCHRADER PLACE, Concord, Mass.

SUMMER HOME FOR CHILDREN.—In a healthy and pleasant location, six miles from Boston, a lady would like six children under twelve years old for the summer, to whom she would give best of care and the comforts of a home. If desired, music or other lessons can be given. Refer by permission to W. P. Garrison, Esq., *Nation* office, N. Y. Address Box 20, Belmont, Mass.

WANTED—An intelligent young man, who has had experience in the business, to do canvassing among teachers for a list of standard [illegible] and reference books. Travelling expenses and a liberal con[illegible]on on orders will be paid. Address J. B., care *Publishers'* [illegible].

ALLAN LINE

ROYAL MAIL STEAMSHIPS

FROM BALTIMORE TO HALIFAX, and vice versâ.

The A 1 British Iron Screw Steamships
HIBERNIAN, 3,200 tons, Capt., Lieut. Archer, R.N.R.,
NOVA SCOTIAN, 3,200 tons, Capt. Richardson,
CASPIAN, 3,100 tons, Capt. Trocks,
Leave Baltimore every other Wednesday for

HALIFAX, NOVA SCOTIA.

Cabin Passage to Halifax, $20 gold; Round-Trip ticket, $35 gold, including everything except wines, etc.

This is an excellent opportunity to enjoy a brief ocean trip on *First-class Transatlantic Steamships* and the charming summer climate of Nova Scotia.

First Cabin to St. John's, Newfoundland, $35 gold; First Cabin to Liverpool, $75 gold.

For further information apply to

A. SCHUMACHER & CO.,
5 South Gay Street, Baltimore, Md.;
Or to
LEVE & ALDEN,
271 Broadway, New York.

CUNARD LINE.

ESTABLISHED 1840.

FOR QUEENSTOWN AND LIVERPOOL.

Sailing from New York every Wednesday. From Boston once a week.

RATES OF PASSAGE:

CABIN—$80, $100, and $130, gold, according to accommodation. Return tickets on favorable terms.

STEERAGE—$28 currency. For freight or passage apply to

C. G. FRANCKLYN,
Bowling Green, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 5, 1879.

The Week.

THE President has vetoed the Legislative, Executive, and Judicial Appropriation Bill. The bill had a rider attached, which repealed the provisions of the Enforcement Act giving United States supervisors appointed by the courts authority to "formally scrutinize, count, and canvass each ballot cast at Congressional elections," and authority to United States marshals and deputy-marshals to challenge and arrest and preserve order at the polls, and prescribing penalties for interfering with them in the discharge of their duties. The message again asserts the right of the Federal Government to regulate Congressional elections, by the usual citations from the Constitution; points out that the act which it is sought to repeal has been in operation eight years, and its constitutionality has not been impugned by any United States court; shows its utility in preventing fraud by reference to the elections in this city and State in 1868, and the report of a committee of Congress composed in the main of Democrats thereon; and closes by dwelling on the necessity of making elections safe and orderly for all classes of voters.

The net outcome of the extra session during the week has been the passage by Congress of the bill providing for the redemption of the subsidiary currency, with a limitation of its legal-tender quality to ten dollars—one more measure in the disastrous series at the head of which stands the Bland Bill. The House failed, 112 to 91, to overcome the veto of the Legislative Bill, and the Democratic caucusing has begun again, with greater vigor and secrecy than ever. In the Senate much time has been unprofitably spent in considering some oddly-expressed but respectably-signed memorials of ex-soldiers and sailors from Rhode Island, alleging violation of the rules of civil-service reform in the Providence custom-house, and Federal interference at the polls in local elections. The debate ran off into the comparative number of votes cast in Congressional districts entitled to equal representation, and Mr. Blaine subjected "Ben" Hill to a severe statistical catechism as to the Georgia districts in which Democratic representatives were chosen "without opposition." The special committee to report on Mr. Pendleton's bill giving Cabinet officers a seat and a voice in Congress, was named on Thursday. It consists of Messrs. Pendleton, Voorhees, Bayard, Butler, Farley, Conkling, Allison, Blaine, Ingalls, and Platt.

The contest in the Ohio Republican Convention is generally admitted to have been a contest between the Grant interest, represented by Judge Taft, the last Grant Attorney-General, and the Sherman interest, represented by Mr. Charles Foster, well known for his hostility to Grantism and carpet-baggery at the South. The ease with which the latter obtained the nomination has excited general surprise, as it seems to indicate that the Grant movement has either greatly declined in strength or never had so much strength in Ohio as people thought it had, and Mr. Sherman has accordingly become more prominent as a Presidential candidate than he has hitherto been. The conduct of the Sherman "boom," which will probably henceforward be very marked, we may be sure will be a very striking example of shrewdness and dexterity. The platform and Mr. Foster's speech of acceptance both show that the essential features of the Grant "boom" are to be carefully incorporated in the Sherman "boom," and especially the idea that everything amiss that has been done in Congress during the present session is the work of the "brigadiers" of the South rather than of the Democratic party as a whole, and must therefore be met by a renewal of the passions of the Civil War—a view which, we need hardly say, nothing in the facts will warrant. In support of it both Mr. Foster and General Garfield paraded themselves before the Convention as converted Liberals, and declared they were as good "Stalwarts" as could be found anywhere, which was anything but a dignified or cheerful spectacle.

The platform pledges the party to free suffrage, equal rights, and the unity of the nation; appeals to the people to arrest the mad career of the party now controlling both branches of Congress; denounces the attempts to coerce the President by withholding the appropriations; castigates the Democratic conspirators for uncalled-for agitation of financial questions, for hostility to the resumption of specie payments, for tampering with an unsurpassed currency system, for reopening sectional controversy by threatening to repeal all war legislation and inaugurate a reactionary revolution; praises the Republican party for the resumption of specie payments, for the refunding of the public debt, and for raising the national credit; condemns the perpetual disturbance of the country; sends greeting to the President and the Republicans in Congress for their resistance to the designs of the majority of the present Congress; castigates the Democratic Legislature of Ohio for fraud and jobbery; protests against the removal of Union soldiers from Congressional offices, and 'cutely keeps dead silence on the silver question, or, in other words, the most important financial question of the day.

The New York *Times* continues to make steady progress in truthfulness and sincerity in its mode of looking at public affairs, so much so that we begin to have hopes even of the *Tribune*. It recognizes in Mr. Foster's late talk an example of how readily "a sagacious and on the whole fair-minded man may yield to the unfavorable influence exerted by partisan managers," and charges him with "espousing the tactics of those who imagine that the revival of sectional animosities will atone for the want of sincerity on other subjects." This is good. A few words now from the same pulpit on the most ponderous falsehood of recent years, and perhaps, considering the numbers and character of the people who circulate it, the most discreditable—viz., that it is the Southern "brigadiers" in Congress who revived the sectional controversy—would do much good. The revival took place in 1876, and was begun by Republican orators, in Congress and on the stump, apparently as part of a prepared plan for saving the Republican party from the natural consequences of the Grant scandals and the carpet-bag scandals, and for avoiding the currency issue. Mr. Blaine opened it in Congress by "prodding," and Vice-President Wheeler announced it as "the key-note of the campaign" in the first speech of the canvass of 1876. We do not say the "brigadiers" would not have behaved in Congress just as they have behaved, even if the Republicans had abstained from provocation; but the Republican responsibility for the first renewal of sectional animosity is an historical fact which admits of no question.

We print on another page a letter from a correspondent in Mississippi who protests against the stories in circulation at the North, where they find ready credence, concerning the violence offered to intending emigrants from that State. What a mischievous use may be made of them was well illustrated last week, when an adventurer by the name of Conway, who had been conspicuous in reconstruction times in Louisiana, and who has lately attached himself to the negro movement westward, called upon the President and represented that boats were not allowed to land and take off the refugees on the lower Mississippi. The President unsuspectingly told him that the navigation of that river was free and the right of locomotion established by law, and that the blacks would be protected in their going if necessary. Conway then intimated that he wanted no other assurance to charter steamboats himself

and rescue the unfortunates who were prevented from leaving the South, and immediately reported the interview to a Washington paper, with the anticipated effect of getting it circulated by the Associated Press. The Louisiana and Mississippi Congressional delegations at once went to expostulate with Mr. Hayes, showing him that he would be represented to the blacks as desiring the emigration to go on, and the Government as preparing to send boats to fetch them. The President saw the false position into which he had been led, and was willing to be taken out of it if there was any way. But his excuse that the answers he had given Conway were based on an alleged condition of affairs was defective in this, that he did not guard against the worthlessness of his informant as he ought to have done.

The majority of the committee on the State debt, appointed by the Constitutional Convention of Louisiana, have presented a report recommending that only $4,000,000 be paid, and that the interest be reduced from seven to four per cent. The consolidated debt at present amounts to about $12,000,000, to which sum it was reduced by a scaling process about four years ago. The bondholders agreed to the reduction because at the same time an amendment was added to the Constitution which secured to them the full payment of their principal and interest as then determined. Now an attempt is made to repudiate most of what was then acknowledged to be the legal debt of the State, on the flimsy pretext that the constitutional amendment was not promulgated according to law, and that the Legislature which passed the Funding Act was an illegal one supported by the Federal military power and not elected by the people. The constitutional amendment was adopted, however, in regular and legal form, and its validity and binding force have been repeatedly acknowledged by the State in paying the interest on the bonds affected by it. The legality of the Legislature which passed the Funding Act was decided when Kellogg was recognized by the general Government, and up to this time the validity of the act has not been disputed. The interest on the debt has not been paid for several months, and cannot be paid without an increase of taxation or an honest assessment, to neither of which the people will consent. The shameful part of the business is that while the Constitutional Convention is looking for excuses to shuffle off a debt incurred lawfully and recognized in the most solemn manner, taxation remains ridiculously low.

The Catholic archbishops and bishops assembled in New York for the consecration of the new Cathedral have signed an address to the Catholics of the United States asking for subscriptions to enable Archbishop Purcell, of Cincinnati, to discharge his liabilities. The address carefully avoids all defence and extenuation of the archbishop's management of the funds, and expressly disavows all intention of making the proposed relief a precedent in other cases in which ecclesiastics may get into pecuniary difficulties. The prelates distinctly point out that the movement is simply one of charity towards the archbishop, and the tone of the appeal might be called excellent if it were not that it seems to impose on the "honor and charity of the creditors" some sort of obligation to meet the promoters of the subscription half way, "especially as so very large a proportion of the entire debt consists of accumulated compound interest." But then the accumulation of compound interest is an essential feature of the business of savings-banks which the archbishop undertook. All interest not drawn is in law and morals a new loan, and to use the creditor's frugality and forbearance in letting it lie as an argument for his surrendering a part of his whole debt is to put a very unfortunate construction on the prudence of the poor. The assets amount to $1,181,569, from which must be deducted $404,798 of "doubtful" and "worthless" notes. The liabilities, after a surrender by some creditors of one-half their claims, amount to $2,490,881.

If the report in the Boston *Advertiser* be correct, some very striking things were said the other day at the twelfth annual meeting of the Free Religious Association. It will surprise most people to hear from Professor Felix Adler that so convenient a thing as "free religion" was first thought of by Mr. O. B. Frothingham. This is a great mistake. Mr. Frothingham may have been the first to invite others to share his free religion with him, but the plan of making a religion for one's self has been secretly followed from the earliest ages. Then we can hardly believe that Mr. Abbott called for "intellectual unity" among the Free Religionists. We had supposed that there was nothing they would find so disagreeable as a man who entirely agreed with them. Mr. James Parton enlivened the occasion by using his "religion" as a club, armed with which he "went for" such diverse persons as the Czar, Bismarck, Joseph Cook, Anthony Comstock, Noah Porter, Moody and Sankey, Turner the painter, and others, and he even so far forgot himself as to speak disrespectfully of the daily press. In fact, anybody who establishes "intellectual unity" with him will find himself in need of prolonged intellectual rest and recreation after the job is done.

There was during the week a sharp advance in the London price of silver bullion—from 51¼*d.* per ounce to 52⅛*d.* This rise brings the bullion value of the 412½-grain standard dollar up to $0.8817; it is but a few weeks since it was only $0.8314. It is not improbable that efforts will be made to enact the Warner free-coinage silver bill at this session of Congress, but it is considered certain that the bill cannot become a law. The money market has been more or less disturbed during the week by the settlements at the Treasury for ten-dollar certificates, and the rate for demand loans has been as high as 6 per cent., although in the latter part of the week it was down to 3 to 4 per cent., since money was freely coming out of the Treasury in payment for called 5-20 bonds. In London money continues extremely easy. Exchange on London has ruled somewhat below the point which takes gold abroad. The activity in the money market here has interfered with the sales of U. S. bonds, and the 4 per cents have sold at 102⅝ to 102¾ to 103¼ to 102¾ to 102⅞. At the Stock Exchange the week has been dull. Mercantile business is going on satisfactorily and encouragingly in every department. The outlook for the cereal crops now promises fine harvests.

A fortnight ago the Bank of France presented the extraordinary spectacle of having more coin in its vaults than paper in circulation, and the disproportion goes on increasing. That is to say, the notes in circulation amounted to $435,000,000, while the metallic reserve amounted to $436,000,000. On the 1st of January, 1877, the reserve amounted to $433,800,000, of which $306,100,000 was gold and only $127,700,000 silver. On the same day of 1878 it amounted to $465,400,000, of which $232,700,000 was gold, while the amount of silver had risen to $172,700,000. On the 1st of January, 1879, the reserve was $408,300,000, of which only $196,700,000 was gold, while the silver had risen to $211,600,000. This state of things has arisen, too, in spite of all the efforts of the bank to keep the silver afloat, both by refusing small bills and in other ways. It continues to lose its gold; and at the same time the silver, instead of being sought by a suffering people, is piled up in the bank-vaults as soon as received. In fact, a most uncomfortable suspicion has begun to pervade the French mind that the result of keeping up the double standard, even nominally, is that other nations are "unloading" their spare silver on France, and the people, who have greatly changed their commercial habits within a few years owing to the establishment of provincial banks, or *Sociétés de Dépôts*, and the use of checks, will not carry or keep their Fathers' Dollar; they prefer paper.

The tricky procrastination of the Porte in dealing with the Greek question, and the almost equally tricky attitude of the Beaconsfield Ministry towards it, have at last thoroughly irritated France, which has, since the Berlin Congress, constituted herself the special patron of the Greeks, and M. Waddington has accordingly issued a very energetic circular-note, calling on the Powers to accede to the Greek request for mediation, and urge on the Porte to reopen negotiations with the Greeks in Constantinople, and, if the parties cannot agree there, to call another European Conference.

This note has been followed up by an almost acrimonious article against England in the *République Française*, Gambetta's organ, which is the more remarkable as Gambetta was an admirer of Lord Beaconsfield's policy in the early Jingo period. It is not in Greece alone that England is charged with refusing loyal co-operation, but in Syria and Egypt.

The Austrian convention with Turkey relating to the occupation of Bosnia and Novi-Bazar has been published, and to the great surprise of the public the preamble declares that "the fact of the occupation in no way prejudices the sovereign rights of the Sultan." This is a most dexterous and useful stroke on the part of Count Andrássy. It relieves the Porte of the heavy burden of confessing to the Mussulmans of the empire that it has ceded territory to a Power which had not assailed it in arms, which, to a good Mussulman, would have the air of sacrilege; it shuts the mouths of the Hungarians who have been declaring that the occupation would end in annexation, and the Magyars would be swamped by the Slavs; and it gives Austria the air of scrupulous moderation in carrying out the provisions of the Treaty of Berlin. On the other hand, however, nobody —or next to nobody—believes that the sovereign rights of the Sultan have the smallest prospective value, or that he will ever be able to exercise them. Long before the question of terminating the occupation can arise the Porte will probably have disappeared from the list of European Powers, and its claim on Bosnia have become as unsubstantial as that which the kings of Sardinia, down to our own day, used to put forward on their coins to the sovereignty of Cyprus and Jerusalem.

The condition of the Ministry in England does not improve, in spite of the acquisition of the "scientific frontier" from Yakub Khan. The Duke of Argyll made an attack on them in the House of Lords a fortnight ago, in a speech which has not been matched in power and brilliance in that body within the present generation, and Lords Beaconsfield and Salisbury had nothing to say in reply except that it was indiscreet to assail them at such a critical period, and that they were doing as well as they could. It has come out distinctly in an address of General Obrutsheff, confidential representative of the Czar in Eastern Rumelia, that the Sultan has positively promised Russia that he will not occupy the Balkans—or, in other words, that he surrenders "the impregnable frontier" for securing which at Berlin the English plenipotentiaries got their Garters. Worse than all, this is believed to point to a secret understanding between Russia and Turkey which promises ill for the British protectorate of Asia Minor, and which the progress of the war in South Africa is likely to strengthen. The old indifference to the Christian populations which was from the beginning Lord Beaconsfield's hobby, seems to survive, however. The Ministry is ostentatious in its reluctance to do anything for the Greeks, and Sir Henry Layard the other day, on his return to Constantinople, actually abused the Bulgarian nationality in a public speech which seems to indicate that Philo-turkism is a veritable mania.

Nothing can be worse than the news from Zululand. Over 26,000 British regulars are now in the field, or on their way to it, a larger force than fought at the Alma; the sickness is very great; the difficulties of transportation look as if they were insurmountable; the cost of the war is $2,500,000 a week, which is rolling up a great floating debt not set down in the estimates, and the Duke of Cambridge has acknowledged that the strain on the army organization is even now severe. Twenty-five hundred men have already perished in action or through disease, and Cetewayo has taken up a very difficult position in the northeastern corner of his territory, and is resolved, it is said, to fight to the last. In fact, the only feature in the whole situation which has anything hopeful about it is that the enemy is a savage, and may therefore collapse at any moment. But the chances are that he will not collapse until he has ruined the Jingo policy from top to bottom, and until the Ministry has had to face its angry dupes at the polls in a general election.

Cardinal Newman, in replying to an address of congratulation from his English friends in Rome the other day, devoted himself to a reiteration of the reprobation of "liberalism" in religion which he expressed so freely in the *Apologia*—meaning "the doctrine that there is no positive truth in religion, but that one creed is as good as another," and theology is a mere "collection of opinions." The only refuge from the confusion of "liberalism" he, of course, finds in the Catholic Church; but he failed, as usual, to account for the fact that "liberalism" began in the Church itself, which, if we are to judge from ecclesiastical history, keeps out of "liberalism" only those who are themselves resolved to stay out of it. Almost on the day on which he was speaking, a fresh and striking illustration of the inability of Churches to give stability to doctrine was afforded by the action of the United Presbyterian Synod of the Scotch Church, which has just been holding its annual session in Edinburgh. It ordered the reference to a committee for revision of the Westminster Confession and other "subordinate standards" of the Church. The result has been a new declaratory act, which, while reciting the old articles of faith in the old terms, declares them not inconsistent with newer and often contradictory views of the same thing. Moreover, a minister, Mr. Macrae, who in debate in the Synod repudiated the doctrine of eternal damnation, was then and there tried for heresy, and convicted by the committee appointed for the purpose; but the Synod refused to excommunicate him, and handed him over to another commission. During the discussion on his case most of the leading divines of the Church repudiated the doctrine of eternal punishment as set forth in the Westminster Confession, declaring that hell-fire was not in their opinion material fire, but simply remorse or consciousness of sin, and "the darkness of separation." There is no Church in which the doctrine of eternal torment by burning has been so firmly held or is so plainly laid down in the standards as in the Scotch Church.

The selection of the nine Cardinals who have been appointed along with Dr. Newman has excited almost as much surprise as the appointment of Newman himself, so completely has the Pope travelled out of the old field. In the first place, of the ten only three are Italians, a very unusual proportion; in the second, all are men of considerable distinction; and, in the third, they have no connection with the old set who ruled the Vatican in Pio Nono's day, and who look on them very much as Simon Cameron and "Zach" Chandler look on "dam literary fellers" in politics. In fact, the "Stalwarts" of the Curia do not like the new policy of conciliation at all, think it "mushy," and want to make it "hot under the old flag," instead of welcoming the anti-infallibilist "theorists" and "brigadiers," and sharing the offices with them. The Pope has, however, not made his selection from any new school of theology, but from a new kind of men. Cardinal Haynald, for instance, the Hungarian, is an out-and-out Liberal, while Cardinal Fürstenberg, the German, is an Ultramontane. All, or nearly all, are men whom the old Pope could not abide. Overtures, it is said, have been made by Leo XIII. to Dr. Döllinger for a reconciliation; but the sturdy old theologian will have nothing to do with the Vatican, and has no more confidence in the present Pope than in his predecessor. He says in a published letter that Dr. Newman, who "in genius and knowledge stands so high above the Roman clergy," "would never have been made a cardinal if his real opinions had been known at Rome. Had Newman written in French, Italian, or Latin, many of his books would have been placed on the Index."

The *Culturkampf* may be fairly said to have opened in France by the consent of the Council of State to the prosecution of the Archbishop of Aix for having prescribed the reading in all the churches of his diocese of a pastoral denouncing the proposed school laws of the Ministry, which is a violation both of the Concordat and of the statute, by which the use of the churches for any purpose but religious worship or sermons on strictly religious subjects is prohibited. One of our Paris correspondents presents elsewhere the Conservative as distinguished from the clerical view of the subject.

THE SIGNIFICANCE OF MR. FOSTER'S NOMINATION.

THE nomination of Mr. Foster by the Republicans for the governorship in Ohio, in preference to Judge Taft, seems to be generally taken as an indication that the more rational and moderate wing of the Republican party is again acquiring weight and ascendancy. Judge Taft was a prominent figure in the last Presidential canvass as General Grant's Attorney-General, and supplied very freely whatever legal opinions were necessary to justify the various instrumentalities, ordinary and extraordinary, which were used to secure the Republican triumph, and we presume is still very "stalwart" in his opinions. Mr. Foster, on the other hand, was an intimate friend and adviser of Mr. Hayes in the trying times before and after the election, and fully approved of what has been called the President's "policy" towards the South. That he is not so reflective a man as that seemed to indicate, however, has been proved by the fact that within a year, if we remember rightly, the Stalwarts so frightened him by "prodding" that he abandoned his first position, and confessed that the President's policy was a mistake and that the South had broken its pledges to him. Nor is his position on the silver question by any means what is to be desired in a gentleman who undertakes to represent the Republican party in an important State election. He not only voted for the Stanley Matthews resolution, but for the Bland Bill; and as the Ohio platform dexterously omits all reference whatever to silver, he will, if he pleases, be able to conceal from all mortal eyes during the canvass the precise position he now occupies on that important subject. If we are to infer what it is from his votes in Congress, he cannot occupy a worse one.

As he probably would not have obtained the nomination, however, if he had not admitted that the President's "policy" was a mistake, and will take his stand on this idea during the campaign, it seems to be very desirable to try and find out what is meant by saying that the President's treatment of the South has been a mistake, and that the South has broken its pledges to him. This enquiry, let us say, has a very important bearing on the controversy now pending between the Democrats and Republicans over the use of the army by the Executive. If the Stalwart view of the President's duty towards the South, as expressed in their criticisms of the course pursued by Mr. Hayes and in their longings for General Grant, be accepted by the party, it will be very difficult to deny the reasonableness of the Democratic apprehensions. In fact, we will go so far as to say that, if there be any danger of any President's using the powers which the irreconcilable wing of the Republican party claimed for President Grant and denounce President Hayes for not exercising, the Democrats would not only be excusable for abolishing the army, but it would probably be their duty to do so, even at the cost of any amount of temporary derangement of the Government.

It is to be observed, in the first place, that the notion that the President has made a mistake in his treatment of the South, and that the South has broken its pledges to him, could not have obtained a lodgment in anybody's mind who had not looked on General Grant as in some sense a dictator, and Mr. Hayes, therefore, as succeeding to dictatorial powers, which he unwisely laid aside. The whole theory that the latter could have made or did make a bargain with "the South," or with certain persons on behalf of the South, as to what was to happen after the troops were withdrawn, rested on the assumption that the South was, in spite of the working of the machinery of State government, living under martial law, and that the President was able to keep the troops in any place he pleased, or make whatever use of them he pleased, without reference to the wishes of the State authorities or the decisions of the State courts. That General Grant held some such view was plainly shown by his informing Mr. Randolph, of New Jersey, that Governor Hampton's notice to him that the Supreme Court of South Carolina had decided that he was the lawful governor was an "impertinence," and that he cared nothing for the Supreme Court. To those who thought President Grant's idea of his position the correct one there was, of course, no reason why Mr. Hayes should not have taken it up, and sent and kept troops not where the law empowered him to send and keep them, but wherever he thought they would be most useful in repressing violence and preventing the "rebels" from becoming too prominent in politics. It is only in this character of a dictator, or of a man raised above the law, like the Emperor of Russia in Poland or the Emperor of Austria in Bosnia, that he could use troops for any purpose but the execution of the United States laws, or the repression of disorder on the request of the State governor or legislature, or keep them in any place or building to the occupation of which the State authorities were lawfully entitled. It is only in this character, too, that Mr. Hayes would have been justified in withdrawing the troops on receiving a pledge from anybody not engaged in the commission of crime. As President of the United States he is bound to use the troops in certain contingencies defined by law, and he has no right to make any agreement with indeterminate bodies of politicians that he will not use them. If he made any bargain with "the South," or any set or class of Southerners, about the use of them, he therefore violated his oath of office, or, in other words, committed an impeachable offence, and the Democrats would be justified now in seeking to impose the sternest restrictions on his command of the army. We hold, however, that he did not do so; that he desisted from armed interference in South Carolina and Louisiana because the needful constitutional contingency did not present itself, and because he had the assurance of the constituted authorities that they were able to repress insurrection and domestic violence without the aid of the Federal force. Any other construction of his conduct would, we repeat, justify the Democrats in taking extraordinary precautions against his having a disciplined force ready for the execution of his orders.

When we come to enquire who at the South gave the pledges to Mr. Hayes we find ourselves treading on ground still more delicate. The pledges must have consisted either in promises on the part of intending criminals that they would not engage in insurrection or commit acts of violence, or in promises on the part of certain prominent men that they would not, if elected to Congress, initiate or support certain legislative measures. We need hardly argue against the first of these hypotheses. Nobody believes Mr. Hayes got guaranties from intending criminals that they would not break the laws, or that if they had refused to give them he would have been justified in occupying the States which they inhabit with a military force. What most people at the North mean when they say "the South has violated its pledges to Mr. Hayes," if they attempt to define their thoughts at all, is apparently that the Southern whites agreed that they would not send "brigadiers" or men prominently engaged in the Rebellion to Congress, or that if they did these "brigadiers" would not originate legislation or support any legislation disapproved of by the Republican members, or, in fact, in any way make themselves obnoxious to loyal people at the North. But here, again, we need hardly say that supposing this pledge to have been possible and to have been given and received, it puts the Republican President in a position which not only would fully justify his being deprived of the army, but would seem to call for his impeachment. An agreement between the President and any American constituency restricting their choice of representatives in the House or Senate would, if imposed by a threat of military coercion, be a revolutionary act calling for the promptest and sternest punishment of every one engaged in it. It would be, indeed, the sum of every species of electioneering fraud, and would make the forms of free government a mockery. If, on the other hand, the leading Southerners elected to Congress promised the President not to introduce or support certain acts or resolutions, and not to make themselves prominent in the business of either House, in order to induce him to withdraw the United States forces from their State, the contract would also have been highly criminal, and would have exposed both parties to impeachment. It would have been a fraud on the Government of the United States and on each constituency whose representative entered into it, and would have deservedly consigned all concerned in it to infamy.

In short, the "pledge" story is, we need hardly say, not only an invention, but a very mischievous one. It puts the President in a false light, and if accepted would completely disable the Republicans in their present fight with the Democrats over the army, by showing clearly that a Republican Administration was not fit to be trusted with the army, and was actually already engaged in a scheme for changing the form of government. It has some value, however, as an illustration of the extent to which the war blurred men's ideas of the nature and conditions of constitutional government.

There is one other perilous notion which Mr. Foster has taken up, apparently on the recommendation of Mr. Conkling, but we would respectfully advise him to drop it with precipitation, or at all events not try to burden the Republican party with it. We mean the assertion which he made with much solemnity in Ohio the other day, in his speech of acceptance, that we are

"menaced with the startling proposition that the 18,000,000 of Northern people who pay 89 per cent. of the taxes, import 96 per cent. of the foreign goods, and conduct 92 per cent. of the internal commerce of the country, are to have the constitutional amendments and the results of the war interpreted, the policy of finance and taxation, internal and external commerce, determined upon, and ruled by a portion of the country that pays but 11 per cent. of the taxes, imports only 4 per cent. of the foreign goods, conducts but 8 per cent. of our internal commerce."

Without dwelling on the inaccuracy and unfairness involved in crediting the part of the country in which taxes are first levied with the final payment of the amount levied, we would ask Mr. Foster whether he really means that political power ought to be distributed on the basis of taxation, and that the men who pay most custom and excise duties ought to rule the country? This is a much more "startling proposition" than any that has emanated from "the brigadiers." "The brigadiers" have been very foolish, but the Republican majority is not yet large enough to warrant the party in loading itself with theories which would make the President a kind of black-coated fatherly Kaiser, assisted by a congress of prominent importers and manufacturers.

REACTION IN GERMANY.

IN a trial of strength which took place in the Reichstag last month a motion proposed by Dr. Loewe, seconded by Herr Windthorst, supported by Von Varnbüler and Kleist-Retzow, and accepted by the Government was carried by a large majority. This combination of allies is characteristic of the present situation. It is hardly a year since every one of these men was in more or less pronounced opposition—an opposition which in some cases was both political and personal, and in at least two had an infusion of religious rancor. Dr. Loewe, an old Frankfort parliamentary leader and a free-trader, did not at once forget, when he returned from exile, the claims of civil and commercial freedom; Von Varnbüler, a Würtemberg Separatist, is at heart as hostile to unity as he was on the day of Sadowa; Kleist-Retzow is a Prussian High-Church Tory, and has bitterly opposed every measure of Liberal reform; while as for Windthorst, he will be recognized even in this country as the adroit, able, unscrupulous, and uncompromising agent of the fallen Hanoverian dynasty and the militant force of Ultramontanism. It will be seen that Prince Bismarck has chosen his friends without too nice discrimination, as becomes a master of realistic statesmanship. But if he is catholic in his tastes he is no less frank in the explanation of them. He does not plead, like the young lady in Beaumarchais's play, that he cannot prevent people from admiring him, or from voting for his tariff schemes. Probably the only scruples he has are about the Social Democrats. He does not court their support, which he is sure to have, and would prefer to see them with Lasker, Stauffenberg, Richter, and the other remaining defenders of the old economical traditions of Germany; but with this exception the new Protectionist majority is one which he hopes to hold permanently together for a general campaign against all forms of liberalism.

The outlook, therefore, is gloomy enough. While two-thirds of the protectionists are already Conservatives at heart, the other third will easily become such by association; and before the country awakes to the fact that it has "relieved home industry" only at the cost of reform and progress, the Chancellor will have welded his forces into a compact mass, obedient to every demand made upon it. Then he will begin to undo the work which has been so slowly and painfully accomplished since 1870. It is but too probable that Dr. Falk's days are already numbered. The fall of the Minister of Public Worship would be gratifying both to the Ultramontanes and the extreme Protestants; but each of these parties would demand other concessions, the former in the ecclesiastical laws, the latter in the system of local government. The provisions of the penal code would be sharpened and the powers of the police largely increased; and any general policy of reaction, if energetically undertaken, would not halt until the privilege of the press and of the platform was restored to the prudent and impressive limits which it had in the old pre-constitutional days. But perhaps the first achievement of the new majority will be to carry out their economical and financial "reforms" to a logical conclusion. One error easily breeds others. If a rational person were asked what are the three great truths which political economy, not to say the practice of enlightened governments, has most positively established, it seems to us the answer would necessarily be: free-trade, mono-metallism, and the folly of usury laws. The first has already been discarded in Germany both by the Government and the country, the semi-official press is beginning cautiously to attack the second, and the third enters commandingly into the programme of the Catholics and the Conservatives.

Against this desperate folly there is little organized resistance. The Party of Progress, to which the country has long been accustomed to look for the most consistent support of liberal politics and sound finance, was reduced at the last election to a mere handful, and under similar pressure a second time would be nearly crushed out of existence. The National Liberal party is going to pieces from internal decay. Half of its members, headed by Bennigsen, Gneist, and Treitschke, will follow Bismarck around toward the Right, and the rest will gravitate in the opposite direction, but the party as such will practically cease to exist. The National Liberal party has been for many years the most numerous, as it certainly is the ablest, in Parliament. It is typical of the German middle class—the learned, the respectable, and the moderate—but it is also typical in its timidity and indolence; and its history since 1866 is only the history of compromise and capitulation. Hardly a measure which has been adopted through its aid has had its unqualified approval. It has seldom taken up a bold position which it has not finally abandoned in deference to Prince Bismarck, and for the sake of peace. Such a party may be used for a time by a man like the Chancellor, but an obedience which has to be coaxed and persuaded as often as it is needed is not the thing for permanent work; and hence the relations between the two have always been merely experimental. In the course of his career Prince Bismarck has tried two characteristic methods of government: he has been a Cromwell and a Guizot. The four years preceding Sadowa, when he systematically defied parliament, the laws, and the constitution, may fairly be called the era of major-generals. From that time until the present he has essayed—and we believe sincerely, though under all the disadvantages of his temper and prejudices—to govern, like the ministers of Louis Philippe, with the aid of the bourgeoisie. And it is equally certain that he has failed in this also.

The Prince is now entering upon an experiment more momentous than either of these—the trial of the Napoleonic system, or government with the aid of the peasantry. The tariff enterprise is practically this and nothing else; for although protection is dear also to the manufacturers, and although the public advocates of it among the agriculturists are necessarily the educated nobility, his final, indispensable supporters are the peasantry. Not the artisans, not the nobles, but the peasants determine the complexion of the Diet under the operation of universal suffrage. Now, so long as

the Chancellor was involved in the ecclesiastical quarrel the country districts were permitted to send a good many National Liberals to Parliament, sometimes even Progressists, and the Conservative candidates were opposed by the influence of Bismarck and of the Government; the city members were sure to be Liberal, so that the balance of power remained with the middle class. But at the last general election the Liberals, being in opposition, lost nearly all the rural elections, and it was clearly shown that the Chancellor and the landed gentry acting together can practically control the peasant vote. Germany even offers such a man as Bismarck advantages superior in some respects to those of France. The peasants, on the one hand, have less natural wit, and the Liberals, on the other, are too much wedded to pedantic forms and distinctions —or, in other words, the "Cæsar" is sure of a more compact following and a less compact opposition. The bureaucracy, too, is efficient when its heart is in the work, as in the present case it certainly is. It has lent Prince Bismarck only a grumbling co-operation during the past few years, but no other class rejoiced more loudly and sincerely at his rupture with the Liberals than the clerks and accountants and tax-gatherers and gendarmes of the civil service.

Under these circumstances there can be but one issue of the enterprise. Disagreeable as the statement may seem, it is still true that government with the bourgeoisie—that is to say, with the brains of the country—has for the present failed, and is to be followed by the government of one man of commanding talent, aided by an ignorant, superstitious, and docile majority of ploughmen. Of this the Liberals themselves seem to be convinced. They dread a dissolution with the correct instinct of men who prize their seats, and many of them, as was said above, have hastened to join the new majority. The Prince is confident, and with reason. He commands the situation, and, on the principle of Lord Beaconsfield's heraldic motto, deserves to command it; but the introduction of the Napoleonic system in Germany is nevertheless a spectacle which makes one enquire whether the country was quite ripe for universal suffrage. For after the system has been once tried subsequent trials will be much easier. The fastidious scruples of the aristocracy, which in Bismarck's favor are only suspended, will with time practically disappear, and from opponents of universal suffrage they will become its warmest friends. They have only to hold together themselves and the future is theirs. But a person unacquainted with Germany might enquire, Why may it not come about in the vicissitudes of politics that a great Liberal leader may arise and utilize the peasant vote to wise ends? The answer is easy. A Liberal statesman could control the peasant vote only if he were at the head of affairs, but such a contingency implies also a Liberal cabinet. Now, under a correct parliamentary system Herr von Bennigsen might well enough be the man. He has other than intellectual and political qualifications; he is of noble blood and orthodox belief. But he could hardly build a parliamentary cabinet in which Bamberger was not Minister of Finance and Lasker of Justice. These two are, however, literally impossible. They are Jews, and, as one of the speakers in the debate observed, the protectionist agitation is an uprising against Semitic theories. It will be long before an Israelite can be minister in Germany, and therefore (unless the race ceases to have talent, or is disqualified by law from public office) long before a homogeneous Liberal Ministry can be expected. And yet Germany is one of the most strenuous defenders of the rights of the Jews—in Rumania.

Let us not, however, be unjust to Prince Bismarck; he stands absolutely alone. There are good jurists in Germany, good financiers, good debaters, but he is the only statesman. The fact is, of course, lamentable, and nobody laments it more keenly than the Chancellor himself, who, if not too fond of rivals, has often as a patriot expressed fear lest he should leave no successor. Mischievous as are many of his views, exasperating as is sometimes his manner, one cannot leave the Chamber when he has taken a share in the debate without a renewed conviction of his boundless superiority to all other politicians, whether on the ministerial bench or among the deputies, without feeling more strongly than ever before the really isolated position in which he stands. To such a man one can pardon many eccentricities both of opinion and of policy. Great statesmen are always costly treasures; but Prince Bismarck cannot live for ever, and after his death Germany will probably be able to gratify her taste for an indefinite time in the enjoyment of mediocrities.

WILLIAM LLOYD GARRISON.

THE most obvious result of the life of the late William Lloyd Garrison, and the one most comprehensible to the present generation, is the abolition of negro slavery in 1863 instead of at some indefinitely later period. This, and the assurance, as Mr. Phillips remarked in his funeral discourse, that slavery will never be re-established on this continent, his countrymen feel that they owe specially to Mr. Garrison, and it forms, of course, the basis of all the grateful and honorable tributes with which the press and the pulpit have teemed during the past fortnight. That the service, however great we may esteem it, was no more confined to his native land than his fame has been or memory is likely to be, must be admitted by all who are capable of perceiving its political as well as its moral bearings. Mr. Garrison was not only the first Abolitionist of his time, he was also the most Republican of Republicans. He could not rest or be silent when once his attention had been drawn to the shocking contradiction involved in "the Union as it was" in his early manhood. He saw a government professedly founded on the brotherhood of man—on the idea, as we said last week, "that nobody exists for anybody else's benefit, and that every man is entitled to a fair opportunity of making the most of himself"—and yet tolerating and providing for a system which expressly denied these postulates. The irrepressible conflict that thereupon arose was between the modern idea for which Mr. Garrison spoke and the mediæval and pagan idea to which the slaveholders held. If government of the people, by the people, and for the people, as, thanks to this conflict, we can now call our own, is the missionary form of government, destined ultimately to prevail wherever civilization has obtained, it is not easy to overrate the influence of a great Republic reforming itself; and so far as this reformation began with Mr. Garrison, he will have had a share in political changes not yet consummated, even in countries where his name has never been heard.

The indirect consequences of his anti-slavery agitation are most readily overlooked now. In imagination the colored race is pictured weeping at the grave of its benefactor (hardly known, in fact, to the mass of them in comparison with Grant or Lincoln), whereas Mr. Garrison was as truly the liberator of the whites as of the blacks. The very success of his endeavors is an obstacle to the appreciation of his merits in this particular. It is almost impossible to realize the condition of American society fifty years ago, when Benjamin Lundy's zealous assistant began to arouse the complacent readers of the *Genius of Universal Emancipation*. We no longer know what it is to live in a community in which one subject, touching the foundations of the government not less than the rights of man, is tabooed, cannot be talked about without causing uneasiness, without incurring reproach, loss of position, and bodily risk, without liability to arrest and prosecution; cannot, if discussed in the press, have the freedom of the mails. We must fancy the Governor of Vermont entreating the Mayor of Okolona to suppress the *Southern States*, or the Legislature of Massachusetts offering $5,000 for its editor, dead or alive, before we can understand the full significance of Mr. Garrison's "I will be heard." That voice, crying in the wilderness of immoral apathy and cowardly submission, unloosed the tongues and the consciences of thousands; and the freedom of speech thus asserted, and maintained through all manner of perils, has become the heritage of every unpopular movement, of every variety of reform, of every shade of opinion, political or theological—a privilege so common that we forget its novelty, and cannot believe what price was paid for it. Those who look back to the early days of the *Liberator* will be convinced that the harsh language so much complained of was never more in place; the gag on Northern lips had been torn away, and to prove it something more was needed than a whisper.

Mr. Garrison's deeply religious nature being conceded, no feature of his career is more curious than the disrepute into which he fell among professing Christians of all denominations. His early training had been evangelical and sectarian, his study of the Scriptures both ardent and unremitting, and all his life long he freely drew from the Bible the texts which supported his denunciation of the sin of slavery. For some years

after he began to edit his paper he gave the usual outward signs of being a Christian in the conventional acceptation of the term. How he came to be regarded otherwise is easily explained. The moral code imposed on the whole country by slavery was upside down, and had Mr. Garrison been generally assisted in his attempts to right it by the clergy and the churches, his character would not have suffered. Since, however, they were all interested in retaining the code as it was, in calling light darkness and darkness light, they, equally with the avowed apologists of slavery—nay, still more, as recreant to their professions—merited his sternest censure, and they received it. The charge of infidelity was the natural retort of the times, and was attached to all his associates, so that the mere joining of the Abolitionists, without formal renunciation of doctrine, was deplored by sincere and humane church-members as a first step towards irreligion, and as a diversion from the prime duty of saving one's soul. Had Mr. Garrison adopted this view, it is questionable whether he would have saved a soul whose nobler instincts had been smothered, but it may be presumed that he would have lived in the odor of sanctity; by disregarding it he was enabled to substitute the ethics of Christianity for those of slavery in the allegiance of his countrymen, and to rescue from brutish promiscuity and hand over to Christian influences and Christian instruction four millions of human beings, to teach whom to read the Bible had been a felony. That in the midst of such a task, with the end almost in sight, the question (we believe in their first interview) of the friendly author of 'Uncle Tom's Cabin,' "Are you a Christian, Mr. Garrison?" seemed almost quizzical, is highly credible.

A judicious writer in the *Evening Post*, while observing that, unlike some of his distinguished colleagues, Mr. Garrison can hardly be thought of except as an Abolitionist, leaves undecided the question, whether he would have attained eminence otherwise than as a reformer. However this may appear to his future biographer, for whom alone it will be worth while to discuss it, there is plenty of evidence that he was not a professional philanthropist. Of agitation for agitation's sake, as a means of living or of notoriety, he was wholly innocent. He was not only glad to stop, but he knew when to stop; and having advocated the dissolution of the American Anti-slavery Society at the close of the war, he resisted even the temptation to continue the *Liberator* for other objects than the main one. The welfare of the freedmen, however, continued to occupy his thoughts, and from the beginning of reconstruction down almost to his latest hour he wrote frequently for the press on national topics, and may be said to have died in harness. He held, and was in some measure responsible for, the Stalwart view of the total depravity of Southerners, and his reliance upon the general powers of the Government to protect the negro was apparently as vague and unlimited as that of any of Grant's adherents. He was a strict constructionist of the ante-bellum Constitution: he always denied that freedom was national and slavery sectional, because he could not juggle away the fugitive clause, the slave-trade clause, and the slave-representation clause; he never pretended that Congress could abolish slavery in the States, notwithstanding the clause guaranteeing a republican form of government. When freedom truly became national, however, he did not require chapter and verse for authority to defend and perfect the work begun by Mr. Lincoln's proclamation; nor, with Grant's two administrations before him, did he distrust the ability of Congress by law, and the President by force, to shield the freedmen from harm and to keep the governments at the South out of the hands of the white minority. Mr. Hayes's action in South Carolina and Louisiana seemed to him a surrender of the blacks to their oppressors, instead of the simple performance of a constitutional duty.

These sentiments, to the extent that they were not peculiar to himself, found favor with the ruling party, and were made use of by the leading politicians to divert attention from the real issues of the day. In this there was something retributive, where retribution was not to be looked for. The thirty years' war which Mr. Garrison had waged with slavery had unfitted him for the consideration of questions that cannot be settled by a simple appeal to elementary principles of right and wrong; and this led him to take a pessimistic view of the situation, the clews to which were, so to speak, no longer in his hands. When the slave power was everywhere dominant, when outrage followed outrage, and mob followed mob, through all the weary years of imperceptible progress, in the darkest hours of the rebellion, his cheerfulness never forsook him; his faith in God sustained his spirits and comforted him with the inevitable overthrow of slavery. When the time for statesmanship came, and the adaptation of means to ends in the restoration of shattered social and political fabrics, the fear that somehow this revolution might go backward—a fear so generally shared during Andrew Johnson's Administration—appears to have overcome the hopeful temper of Mr. Garrison. Perhaps he found it easier to lay aside the rôle of agitator than of prophet. Certain it is that he regarded with suspicion the reports of white good behavior at the South, and accepted with à priori alacrity the tales of violence and injustice which suited the character of the man-stealers of old. It cannot be said that the South was at much pains to disabuse him, and his attitude towards it was the jealousy of a guardian whose wards have passed from him into unfriendly hands.

Of the personal qualities of Mr. Garrison, whether public or private, there is no occasion to speak here. His sincerity, courage, single-mindedness, purity, simplicity, modesty, were never called in question; time will fix his place as a writer and speaker, and pass the proper judgment on his methods. He has gone to his rest at a good old age, with his faculties undimmed, his sympathies as tender as in his youth, his conscience void of reproach, and leaving a name which owed as little to circumstances outside of himself as that of any self-made American of any period in our history.

THE FRENCH EDUCATIONAL LAW OF 1849.

PARIS, May 16, 1879.

THE "Ferry laws" concerning the schools of France threaten to be as troublesome as the "Falk laws" were at one time in Germany. The *Kulturkampf* has not done much good across the Rhine, and Prince Bismarck has shown lately an evident desire to come to an understanding with the Papal Court, or at any rate to find a better *modus vivendi* with the bishops. It is very surprising to me that the Republican Cabinet who came to power with M. Grévy should have started a clerical question; there was absolutely no necessity for it. It is impossible to live a month in France without being struck by the absolute religious tolerance which reigns in it. Thanks to M. Ferry, the parties will, perhaps, now permanently be obliged to style themselves as they do in Belgium, where there are no Whigs or Tories, but Catholics and Liberals.

The law which established free teaching in France dates from the time of the second Republic. It was discussed in 1849, and curiously enough, if its chief promoters were ardent Catholics, like M. de Montalembert, M. de Falloux, and Bishop Dupanloup, the law was carried in reality through Parliament by M. Thiers. Education, either primary or secondary (as we call it in France), had been intended by Napoleon I. to be a monopoly of the state; the University of France was destined to mould the very mind of the country, and even during the tolerant reign of Louis Philippe this tradition was still kept. Such men as Guizot, Villemain, Cousin, who had been professors at the University, did not encourage the efforts of the Church when the Church tried to have its own part in the education of French youth. The revolution of 1848 gave a great shock to their ideas; they had thought themselves safe under the veil of constitutionalism, with a *pays légal* (a legal country), composed of chosen electors, and a legal university, composed of picked professors. They suddenly saw that the whole fabric of French society could be overthrown with a blow; that constitutionalism had no real vitality; that it was a mere figment; that the people had been left, so to speak, at the mercy of obscure and ignoble teachers, who dreamt only of revolutions. The leaders of the Chamber of 1848, elected after the terrible downfall of the July monarchy, felt that they had something more to make than a political constitution, a new distribution of power between the executive and the legislature. France had had already too many constitutions; what was wanted was the spirit which teaches a people to respect its constitution. It was felt instinctively that the University had not well fulfilled its mission, that it had been too destructive of the past, too revolutionary, too servile at the same time towards the state.

The revolution of 1848 had taken France by surprise; the Chamber was elected as a protest of the departments against Paris. The election of Prince Louis Napoleon as President was another and more marked protest. The Comte de Falloux was chosen by the new President as Minister of Public Instruction in his first cabinet, and this choice was an event in itself; it marked a profound change in the temper of Parliament and of the country. Lacordaire, the famous Dominican preacher, wrote to M. de Falloux from Dijon on the 23d of December, 1848, when he heard that M. de Falloux had accepted the post of Minister of Public Education in the cabinet of Odilon Barrot, Drouyn de Lhuys, Léon Faucher, and Buffet:

"You will be in the cabinet the first *Catholic* minister that France has seen in it for sixty years; you will take your part in trying to settle an inconsistent epoch; you will give your name to liberties all the more

precious as they are born on the verge of anarchy; you will not re-establish the monarchy of Clovis, nor of Charlemagne, nor of Louis XIV., nor of Louis XVIII., but the monarchy of right and of justice."

You see here in this extract that the Catholics, the conservatives of 1848, cared little in reality for the monarchical form of government; they wanted only a conservative government; the spirit which inspired Lacordaire in 1848 is the same as the spirit which inspired the Duc de Broglie from 1870 to 1879.

On the 4th of January, 1849, the Comte de Falloux named two committees, and asked them to prepare two laws, one on primary education, the other on secondary education. In the list of the members of these committees I find the names of Cousin, Saint-Marc-Girardin, Montalembert, Dupanloup, Thiers. Thiers entered into the work with much spirit. He used to say to M. de Falloux: "Condé alone can sleep on the eve of Rocroi." He once developed the same thought in these terms: "You can go to sleep when the weather is fine, the air calm, and the sea tranquil; when the captain is a good captain, when the crew is not mutinous. But can we sleep now, when the sea is up, the tempest in full force? We have been for thirty years on an agitated sea; alas! we had gone to sleep, and now we have been nearly wrecked." The *procès-verbaux* of the sittings of the great committee named by the Comte de Falloux have been recently published. Montalembert took, of course, a very eminent part in the discussions; he had been during the eighteen years of the Government of July the champion of what we call "liberté d'enseignement" (liberty of teaching). He was the great Catholic agitator; he made newspapers, wrote pamphlets; he opened a school himself and was tried; he had correspondents in Poland, in Germany, in Belgium, in England. He was an admirable orator, and he had a faith in him which moved even his enemies. M. de Falloux, who presided over the committee of 1849, is still alive. Hardly anybody knew him in 1848. He was a Legitimist of the provinces, led a provincial life, and had written but little. He showed much calm and courage during the bloody insurrection of June; he was one of those men who can conduct other men by mere strength of character. The two committees he named soon merged into one; and the law which was discussed by this committee has been called by Lacordaire the Edict of Nantes of the nineteenth century. It is essentially a law of tolerance; it put an end to the absolute monopoly of state education, and gave a share in the education of the country to the Church as well as to the laity.

Bishop Dupanloup took a very prominent part in the deliberations of the committee on education; but I would particularly insist on the rôle of M. Thiers, as M. Thiers has become almost an idol for the Republicans of the day. M. Thiers is said to have walked on the quays of the Seine, smiling and playing with a little stick in his hands, looking on the various objects which were coming down the river, while a Parisian mob was sacking the archbishopric near Notre Dame. This happened some time after the revolution of 1848. Thiers was then a pure Voltairian. After the revolution of 1848 a great reaction took place in his mind. He wrote on the 7th of May, 1848, to his friend Madier de Montjau, the father of the present deputy:

"As for the liberty of teaching, I am changed. I am so not by a revolution in my convictions, but by a revolution in the social state. When the University represented the good and wise French bourgeoisie, taught our children after the methods of Rollin, preferred the healthy and old classical studies to the physical and materialistic studies of the promoters of professional teaching, oh! then I was willing to sacrifice to it the educational liberties. Now I am no longer in the same place—and why? Because nothing is in the same place. If the University, falling into the hands of phalansterians, intends to teach our children a little of mathematics, of physical and natural sciences, and much of demagogy, I see no hope, if there is hope, but in the liberty of teaching. I do not say that this liberty ought to be complete and without any guarantee for public authority; for, after all, if there was a teaching of Carnot and a teaching of Blanqui, I should like to be able to stop at least the last one! At any rate, I repeat that the teaching of the clergy, which I did not like for many reasons, seems to me better than what is preparing for us. I was as I used to be; but I carry my hatred and my force of resistance where I see the enemy. The enemy is now demagogy, and I will not abandon to it the last remainder of social order—that is, the Catholic establishment."

This letter was published at the time in all the newspapers. A few months afterwards M. Thiers published a theoretical treatise on 'Property,' in which he thought it necessary, in the face of French socialism, to demonstrate the legitimacy of property, and placed the principle of property "under the wing of religion." The ideal view which M. Thiers had of religion and of liberty was always a low one. Liberty of thought and of teaching, religious teaching, were never more in his eyes than the agents, the gendarmes, of a certain social and political order. When M. de Falloux accepted the Ministry of Public Instruction offered by Prince Napoleon he called on M. Thiers and asked him for his support. M. Thiers promised it, and he became very active in the preparation of the new laws on education. "What do I see," said he once, "in each commune? The schoolmaster, a laic, who will always be dissatisfied with his position; with a smaller salary than the curé; having no resignation because he has no faith; thinking himself ill-treated, and nursing in his heart the hatred of a society which he considers egotistical and unjust." He is afraid he sees in the thirty-seven thousand French communes thirty-seven communists, thirty-seven thousand *anti-curés:*

"I ask formally for something better" (sitting of the 8th of January, 1849) "than these detestable small lay instructors; I want the *Frères* [the Frères of the Christian Doctrine are the ecclesiastical primary schoolmasters; they are placed at the same time under the supervision of the bishops and are inspected by the state inspectors of the French University], though I may have in old times been adverse to them. I wish to increase there the influence of the clergy; I want the action of the *curé* to be powerful, more than it is now, because I count much upon him for the propagation of the philosophy which teaches man that he is placed here to suffer, and will not propagate this other philosophy which says to man: 'Enjoy yourself; for, as M. Marrast has said, you are here to find *ton petit bonheur;* and if you don't find it in the actual situation, strike without fear the rich whose egotism refuses to you your part of happiness.' . . . Yes, I cannot say it enough, primary education can only produce good effects if the clergy get a large share of influence in its teaching."

This improvisation of M. Thiers produced a very great effect on the committee. I have only cited the most important parts; Thiers declared himself also against the principle of gratuity in primary education as well as against any compulsory clause.

The committee called for depositions; one of the first depositions was that of Father Philippe, the superior of all the Brothers of the Christian Schools. We learn from it that in 1849 his order had 3,300 members in France and instructed 200,000 children; it had also evening schools for apprentices. He spoke very strongly in behalf of the schools for adults: "The dangerous workingmen are not those who frequent the schools; the common workingman is good and honest, accessible to religious sentiments; the thirteen thousand adults who now attend our schools in Paris are very docile." Thiers asked Father Philippe if the superior of his order always resided in France. Father Philippe answered that the centre of his Institute was France; "the Brothers, wherever they are, even in Rome, depend on the Superior-General in Paris. In foreign countries the great establishments of the community are conducted by Frenchmen." "Then," said Thiers, "it is the French influence that you establish." "No," said Father Philippe, "we have nothing in view in the choice of the superiors except the religious interest."

This first direct contact of the leaders of the political parties and of the leaders of the religious movement was extremely curious; the politicians discovered, so to speak, a world unknown to them. It is perhaps a pity that the law of 1849 was made under the pressure of strong political passions; but, on the whole, it was inspired by generous sentiments. It gave to the Church a degree of toleration which had been unknown since the bloody days of the Revolution. Its clauses may be slightly amended in some points; it would be a great pity if for the spirit of the law of 1849 was substituted a spirit of exclusion against the Church and of proscription of all religious teaching.

AN EGYPTIAN *COUP D'ÉTAT.*

CAIRO, May 10, 1879.

THE result of the *émeute* of which I sent you an account has been a *coup d'état*, the consequences of which are still the subject of much diplomatic controversy. By one dash of the pen we Egyptians have become endowed with an avowed constitutional government—"a nation governed by the people, and the Khedive reigning without governing." How this precious conquest, which other nations have only obtained by centuries of internal strife and discord, has been brought about may not be without interest to your readers.

It is a matter of common notoriety that the Egyptian finances for the last three years have been in a state of the most deplorable confusion, due to a reaction from the inflated values caused by the high price of cotton during the American war; the great outlay of capital in improvements in the irrigation system; the establishment of free schools throughout Middle and Lower Egypt; the numerous sugar-factories; the annexation and reconnoissance of vast tracts of adjacent territory such as

Darfur, Kordofan, Harrar, and the Provinces of the Equator; the attempted suppression of the slave trade; the opening of the Suez Canal, whereby the large profits of the railway traffic between Suez and Alexandria were lost to Egypt; the enormous sums stolen by Sadyk Pasha, the former Minister of Finance; the Turkish tribute and "backsheesh"; the extended and much-abused "protection" of the richest Egyptian subjects by the European consulates, by means of which the former were exempted from paying taxes; and the lavish and reckless generosity of an Oriental sovereign. Most of the Khedive's expenditures were in themselves praiseworthy, but in face of the actual revenue of the land they were premature, and the money for them was obtained by loans at usurious rates. The inevitable "crash" came in 1875, when the Khedive applied to the Consuls-General of England, France, Austria, and Italy for financial experts to try and put matters to rights. France, Austria, and Italy sent respectively Messrs. de Blignières, Cremer, and Baravelli, who became purely Egyptian officials and went quietly to work. But England acted differently. The notes addressed to the Consuls-General were identical in their terms. It was clearly understood both by the Egyptian Government and by General Stanton, the then British Consul-General, that simply a financial expert was wanted, who was to have in his Egyptian position no official connection with the British Government. Mr. Disraeli's Government, intent upon a brilliant imperial policy, seemed at that time determined to make the English creditors of the Khedive a lever to obtain political supremacy in Egypt. Mr. Cave was sent out in a semi-official capacity by the British Government. He made his report but declined to accept the position of an Egyptian employé, which was all that had been asked for. A misunderstanding then ensued between General Stanton and his Government, which resulted in the replacement of General Stanton by Mr. Vivian. Then came Messrs. Joubert and Göschen, who represented the French and English creditors. They were deceived as to many essential facts by the able and cunning Sadyk Pasha, then Minister of Finance, who naturally wished to conceal his enormous defalcations. Messrs. Joubert and Göschen made an elaborate report and went away.

In the meantime Sadyk Pasha had entered into a conspiracy to depose the Khedive, whom he represented as about to sell Egypt to the Christians. The plan was discovered and Sadyk Pasha "committed suicide." After his fall the Khedive put himself almost entirely into European hands and the High Commission of Enquiry was created, which became practically the Egyptian Government, and no money could be spent without its consent. M. de Lesseps, the President of the Commission, being desirous to go back to France, the principal work devolved upon Messrs. Rivers Wilson, De Blignières, Cremer, Baravelli, and Riaz Pasha, and in August last Nubar Pasha was recalled from his banishment and the "responsible" ministry was formed—Nubar, President; Mr. Wilson, Minister of Finance; M. de Blignières, Minister of Public Works, and Riaz, Minister of the Interior. When these gentlemen entered upon their functions it was firmly believed that Egypt would slowly but surely recover, and that all would go smoothly and well. "Egypt belonged no longer to Africa, but to Europe, and would henceforth be governed by a responsible ministry." The coupons were all punctually paid, but the majority of the native employés, including the army, navy, and public instruction, were left entirely out of the budget. The discontent was aggravated by the importation of numerous scandalously-overpaid English and French employés. Several young gentlemen of scarcely two-and-twenty years of age were engaged at the rate of £130 per month, while natives and Europeans, long resident in the country, competent and experienced, who received £20 or £30, were discharged. An expensive cadastral survey was instituted to create offices for Europeans, and all the military schools—one of the most important elements of instruction in the country—were abolished.

In September the annual rise of the Nile proved to be exceptionally high. The High Commission of Enquiry had not appropriated any money for the usual precautions. The dykes were broken, and more than one hundred villages were destroyed in Lower and Middle Egypt, and the immense loss of life and property will never probably be accurately known. In February the misery of the officers being intensified by their summary discharge, they peremptorily demanded their arrears of pay. This was refused them, and an *émeute* followed which resulted in the fall of Nubar Pasha, who was replaced by Tewfik Pasha, the heir to the throne. Murmurs of the universal discontent began to be heard in the Chamber of Notables (a sort of incipient Egyptian Parliament). Riaz Pasha and Mr. Rivers Wilson then announced the dissolution of the Chambers. They refused to be dissolved, and issued manifestoes to their "constituents," protesting against the maladministration of the Ministry. Matters began to look a little squally, and early in April Mr. Rivers Wilson, without consulting Tewfik Pasha, the President of the Council, presented a new scheme for the rearrangement of the finances to the Khedive, and at the same time expressed the wish that the Khedive would not interfere at all in public affairs. The Khedive replied that the Ministry had caused the native feeling to be so excited that he could, unfortunately, only assure the personal safety of the European residents by his interference, and that another financial plan had been decided upon which was much more to the advantage of the creditors. On the 7th of April (the next day) Sherif Pasha, whose resignation as Minister of Foreign Affairs was accepted last summer for having refused to appear before the High Commission of Enquiry, was called upon to form a new ministry, whereupon Riaz Pasha was excommunicated from the Moslem religion by the Sheik-ul-islam and sentenced to spiritual death (he left by the first boat for France), and the other ministers were dismissed together with all their numerous protégés. The present Ministry is termed a "National" Ministry. It is responsible to the Chamber of Notables in all matters relating to internal affairs and is responsible to the Khedive in all matters relating to foreign affairs, and the action of all executive functionaries is to be subject to the approval of a "Conseil d'État" composed of Egyptians and foreigners, with the foreign element preponderating. All the members of the present Ministry are Egyptians.

Whether all this is for the advantage of the country remains to be seen, but it should be borne in mind that the majority of the European residents here, including Mr. Vivian, the British Consul-General, have been strongly opposed to the Nubar-Wilson-de Blignières Ministry, who, by their vanity, want of tact, and nepotism, have produced a reaction by which every European here has lost more or less prestige. At one time Mr. Rivers Wilson virtually ruled Egypt, but not only did he act unwisely in various important matters, such as summarily discharging the unpaid officers, but he also seemed to make a point of disregarding all the customs of the country; and the feelings of many good Mussulmans were shocked by the ostentatious wearing of hats on all occasions of ceremony, and by the introduction of a brace of English pointers in the divan of the Ministry of Finance. Of course it is impossible to forecast the result, but it is probable that the Powers will let the Khedive try his new administration for a year, and if his foreign obligations are not fulfilled steps may then be taken to ensure a better government. The only encouraging fact is that the crops will be better this year than they have been for many years past.

Correspondence.

LALOR'S TRANSLATION OF ROSCHER.

To the Editor of The Nation:

Sir: In the number of the *Nation* of Feb. 20, 1879, there is a communication, signed "Economist," criticising the rendering of a sentence in Section VII. of Roscher's 'Political Economy,' translated by me. As I did not answer "Economist's" communication shortly after it appeared, I would let it rest now were it not that I have met a great many people who know nothing of my translation of the eminent professor's work but the strictures on it in "Economist's" note to the *Nation*.

The sentence referred to, as it appears in my translation, is as follows:

"In estimating the resources of a whole people it is, of course, necessary to make deduction of the debts due by the individual members of the nation to their fellow-countrymen."

The word "deduction" in the above is a misprint. By an oversight in the reading of the proof it slipped into my translation instead of the word "abstraction" in my manuscript. When "abstraction" is substituted for "deduction" the translation is correct—"to make abstraction" being equivalent, as I suppose, to "leaving out of consideration," or "considering apart" from the main subject.

The translation of "Economist's" friend is as follows:

"Who would sum up the national wealth must naturally deduct the debts owing to foreigners; those of the inhabitants between each other (he must), on the other hand, leave out of consideration."

This differs in substance from my translation. "Economist's" translation is made from the tenth or from a yet earlier edition of the original. Mine is from the thirteenth, which says nothing of "debts owing to foreigners."

I am under obligations to "Economist" for calling my attention and that of the readers of my translation to the oversight admitted above. Of the correctness of my translation of Professor Roscher's work I feel entirely confident. It was carefully compared with the original by myself, by a distinguished American scholar long familiar with the work in German, and by Professor Roscher himself, to whose acquaintance with the English language every page of his book bears witness. No pains have been spared to make the translation faithful, and the best judges have pronounced it correct.

JOHN J. LALOR.

MILWAUKEE, WIS., May 28, 1879.

WHITES AND BLACKS IN MISSISSIPPI.

TO THE EDITOR OF THE NATION:

SIR: I enclosed you a few days ago some extracts from our journals to show the spirit manifested here in regard to the "Kansas exodus," and also stated some facts within my personal knowledge in regard to the late labor convention, hoping they might be of use in any comments you might make on that subject. A late article (in the last number) of *Harper's Weekly* only evinces too plainly the necessity of correct information in enlightened circles when discussing this question of the negroes. The statement is made in that article, "Armed bands have assembled on the shores of the river to prevent the emigrants from embarking, and not less than twenty cases of deliberate murder have been reported." And from such loose general *assertions* the following fallacious conclusion is drawn: "The movement, therefore, toward the North is simply an effort of this suffering people to escape from the grossest wrong and oppression."

Living here on the river in the midst of these "armed bands" and of "grossest wrong and oppression," the only fact I can learn to justify even a shadow of ground for such assertion is that while a number of emigrants were assembled on the bank at Leota, Washington County, the sheriff with a posse of fifteen men went, at the summons of the citizens there, to prevent lawlessness and protect the property of the town from pillage by an armed band of the most notorious negroes in that neighborhood, who were drinking, parading the streets, and insulting the white people. As an evidence of the forbearance of the whites, only one arrest was made and there was no bloodshed; some of the negroes got off on the boats—those having means to pay their fare—and the rest went back to the plantations. To rebut the statement further I send you the testimony, as recorded in the St. Louis *Times-Journal*, of the officers of the boats that ply on the river, passing up and down from New Orleans to St. Louis at intervals of only about two days of each other, as well as of the officers of the Anchor Line Packet Association, whose president is a prominent Republican of St. Louis.

It is much to be desired that the enlightened writers of the North direct their investigations and discussions to the "social and economical condition" of the Southern negroes, and give greater credence and publicity to the information collected by such men as Mr. Edward Atkinson, of Boston, and others who speak from personal and careful observation on the spot. I know there is a great deal of lawlessness in the South, but surely not confined to assaults upon negroes; and there can never be any settled, contented prosperity for the negroes until their Northern friends cease to regard them as a horde, or clan, for political purposes, to be banded against their white neighbors. They must be allowed to intermingle and find their social and industrial position in the community naturally, as those of other races, dependent upon habits of frugality and usefulness.

Allow me to correct one misconception in your criticism of the Labor Convention as to the treatment by that convention of the resolutions of ex-Governor Henry S. Foote. Governor Foote was in attendance at the first day's session, when all resolutions were freely offered and referred to a committee, selected equally of both negroes and whites. Why did not Governor Foote offer his resolutions then? I have no doubt they would have been properly considered and perhaps favorably reported on. Contrary, however, to the course of every other member who had resolutions or propositions to offer, Governor Foote came in at the last hour and moved his resolutions as a substitute for the carefully-considered work of the committee, accompanying them with a political speech. This was a business meeting between planters and laborers to come to some terms of understanding—something similar to the strikes of your laborers in the North—and the firebrand of past partisan criminations and recriminations was wholly malapropos. Governor Foote represented nothing material to the meeting; an alien to both interests, he did not receive the endorsement of the prominent representatives of either side in the convention.

G. CLAY.

BOLIVAR, MISS., May 16, 1879.

[Our correspondent encloses also the following schedule of labor contracts in vogue.]

Wages are almost unknown in making a cotton crop; laborers either work for a share in the crop, or rent land for a specified quantity of cotton per acre, or money equivalent secured by the cotton. The *share* system is confined usually to two forms of contract: 1. The landlord furnishes the land, implements, and mules, and feed for mules, for which as rent he receives one-half of the crop made. 2. The landlord furnishes the land—fenced, ditched, etc.—and receives one-fourth of the crop as rent, but generally has to provide mules, feed, etc., and take all the risks of outfit and crop, for which he charges at fixed rates as agreed upon. Now, when we take into consideration the quality of the labor and amount of intelligence and economic science used in the cultivation of crops, as well as the outlay, in addition, for food, clothing, etc., to be advanced the laborer from the very start, and the waste and repairs of such a system, the dissatisfaction engendered and the final overthrow of any basis of mutual prosperity are not a matter of astonishment. Let your political economists and statesmen take these problems in hand, inculcate in their "wards" the lessons of successful husbandry, and give a rest from high-sounding phrases about freedom and oppression in the diagnosis of their ills.

There is little or no disturbance in the sugar parishes, where the wages system obtains; the trouble is confined to the cotton districts, and I attribute this, in a great degree, to the vicious share system, and consequent large advances, requiring a credit which perforce must be at usurious rates, and becomes in the end a burden which crushes labor. Out of the present commotion must come a change in the system of agricultural contracts or an entirely new tenantry. At this stage of civilization the Mississippi bottoms will never be abandoned—a soil above all rich and inviting to the hand of toil.

G. C.

CO-OPERATIVE STUDY OF POLITICAL SCIENCE.

TO THE EDITOR OF THE NATION:

SIR: Mr. Andrew D. White, as stated in No. 721 of the *Nation*, has recently called "attention to the need of a larger supply of men properly equipped by education for the work of legislation and administration," and has proposed "the establishment of schools or departments of political science by our leading colleges, in which such young men as choose to make politics their occupation or their leading object of attention might get an education in political economy, in the use of statistics, in finance, in general jurisprudence, and comparative legislation." But of the large numbers of young men whose ambition it is to be, and some of whom in time will be, our political leaders how many could take advantage of such schools if established? How many of our distinguished statesmen could have availed themselves of such advantages in their youth? Those who expect eventually to make politics their occupation are compelled first to follow some other pursuit which will ensure them an income, generally low, to which they must give nearly all of their time for many years, in the meanwhile devoting their odd moments to political science and political economy. This has been the preparatory course of the great body of our present and former politicians, and undoubtedly will be that of our future leaders for many years to come.

This fact being recognized, our eminent students of politics, of whom Mr. White is an example, who are really interested in the improvement of our legislation and administration, should not only aim to provide the best means of study for the few who have abundance of time and money, but, adapting themselves to circumstances, they should devise some plan, imperfect though it may be, by which they may reach the many whose situation is described above, and lend their efforts to train them in the best manner possible.

Is not the following plan practicable? Let a number of prominent professors of political science, under the leadership of some practical educator, form an association to encourage the study of the branches enumerated by Mr. White, and lay out courses which might be pursued by young men engaged at the same time in other callings. The students who might join the association should be required to return written reports of their progress from time to time, with essays on subjects assigned, and examination papers could easily be devised, to be filled out by the student at home, which would test his knowledge. Many methods of

assistance would suggest themselves to the directors. Local clubs might be organized to form libraries and facilitate study by means of lectures by members or others, and by mutual assistance. The plan should be supplemented by summer courses of lectures, not compulsory, at various colleges.

This is exactly the plan of the Chautauqua Literary and Scientific Circle, a society for the promotion of home study in the ordinary branches, organized last summer and now in successful operation under the supervision of Rev. Dr. Vincent, of Plainfield, N. J., with several thousand students on its roll.

The advantages of such an association are apparent. Many students now studying unsystematically would be assisted ; a still larger number would come under its influence to whom the knowledge gained would at some time be very useful, but who otherwise would not study at all ; the instructors would discover great ability in many of the students, who could be encouraged to make a specialty of politics. And is it not probable that the impulse thus given to the study of political subjects would benefit the colleges by encouraging students to attend the schools proposed by Mr. White and the summer lectures spoken of above ?

AQUIRIVULENSIS.

Notes.

G. P. PUTNAM'S SONS will publish immediately 'Is Life Worth Living ?' by W. H. Mallock, and a New England novel, 'The Breton Mills,' by Charles J. Bellamy, author of 'A Nantucket Idyl.'——A new edition of the works of Victor Hugo, uniform in size with the Cogswell edition of 'Les Misérables,' is announced by Geo. Routledge & Sons. The same house have issued new editions of the Duke of Argyll's 'Reign of Law' and 'Primeval Man.'——Macmillan & Co. have in press a new volume of 'Historical Essays,' by Edward A. Freeman, and in preparation a work in four volumes 8vo, edited by T. H. Ward, called 'The English Poets : Selections with Critical Introductions.'——We learn from the *Academy* that a Life of the late Dr. Livingstone is in progress, under the supervision of his family, with primary reference to his personal and domestic character and missionary labors.——The latest of those special gazetteers whose compilation is designed to meet the wants of advertisers is 'The Right-hand Record and Ready Reference' (New Haven: H. P. Hubbard). Its distinguishing features are the geographical arrangement of the newspapers of the United States in the smallest compass, with indications of their politics and circulation and time of issue, and the population of the places where they are published. Adjoining these columns are blank spaces for memoranda, etc.——The third part of Oncken's 'Allgemeine Geschichte' (B. Westermann & Co.) is devoted to the Grecian section of Prof. Dr. Hertzberg's joint province of Hellas and Rome ; and extends from the Pelasgic antiquity to the beginning of the Persian wars. The illustrations embrace the architectural remains of the Acropolis and the Lion Gate of Mycenæ, some of the more famous statuary of gods and demi-gods, and carved and pictorial representations of the gymnasium. These, if not always adequate, are always admirably engraved. The next instalment will take the reader to the battle of Mantineia.——Tennyson's hitherto unpublished poem, 'The Lover's Tale,' of which the first and second parts have been in private circulation for some years, is announced for early publication, with the third part, hitherto wholly unknown, and the sequel, "The Golden Supper." — Turgeneff has given through the Paris *Soleil* a *démenti* to the reports of his expulsion from Russia and subsequent proscription. This incident may well renew the caution with which news about Russia from non-Russian sources should be regarded.

—The Chicago *Tribune* of May 24 exposes the manner in which Mr. W. H. Davenport Adams composed the book called 'The Secret of Success,' which we noticed a fortnight ago. Mr. Adams had fallen in with Prof. Wm. Mathews's 'Getting on in the World,' and, deeming himself safe with the ocean between, appropriated some twenty pages of the American work, disguised by verbal alterations and interpolations, and credited, if at all, to an anonymous "acute writer" or "sensible moralist," and only once to Prof. Mathews. "Four-fifths of Mr. Adams's 'Key-Notes,' the larger and best part of the mottoes of his chapters, and scores of his most striking quotations from other authors, have been taken from the same source." This shameless proceeding, for which international copyright would furnish a remedy and redress, is all the more curious because Prof. Mathews (we believe in the case of another of his published works) was lately accused of plagiarizing from the writings of a well-known Ohio writer on educational subjects, and was obliged to fall back on his very absorbent memory as an apology for reproducing the words and order of the original text without acknowledgment.

—*Lippincott's* for June opens with an interesting glimpse of "State and Society in Ottawa," by a writer new to us, Mr. Frederic G. Mather. The paper is prettily illustrated. Speaking of Lord Dufferin's unbounded hospitality in 1872–78, Mr. Mather says :

"A sort of democratic jollity pervaded Ottawa society. Every one who called in due form at Rideau Hall was sure to be invited, sooner or later, to some of the numerous festivities—skating, tobogganing, dancing, private theatricals, and the like. Society went crazy over this state of things, to the extent that some families in good circumstances were nearly ruined by their efforts to shine 'at the Hall.' At the same time there was no end to the number of purveyors, tailors, and other specialists 'by appointment to his Excellency.' A number of the more sober-minded in this community hold Lord Dufferin responsible for an era of extravagance which Ottawa could ill afford."

Mrs. Wister concludes her series of papers on Paris, in which the topics have apparently been selected to match the electrotype cuts ; Mrs. Rebecca Harding Davis tells a new Jersey ghost-story, part of which she was ; Annie Porter's 'My Village in the South,' Part IV., is enlivened by some new character-sketches and a genuine romance. The paper on "American Fiction," its material and opportunities, does not go far to explain why our school of novelists hold neither the first nor the second place among their contemporaries. In the Monthly Gossip a contributor makes Lady Anne Blunt's journal among the Bedouins a text for some amusing comments on English husbands, apropos of the "Wilfrid" of her narrative.

—It appears that the propositions formulated by the International Literary Congress, which assembled at Paris during the Exposition last summer, are not to be allowed to rest there. A second session of the same body has been called to meet at the rooms of the Royal Institution of Great Britain, London, from the 9th to the 16th inst. The invitations show that it is under the auspices of a society of rather slender membership as yet, an offshoot of the first Congress, the International Literary Association. The progress made in the meantime will be reviewed, and further steps taken towards carrying the approved measures into execution. Special attention, by the programme, is to be given to questions of translation and adaptation both of books and plays. The official language of the Congress is still to be French, away from home though it be, but permission is liberally accorded the orators to take the parole in their own tongues. With this condition and on British soil it is possible that American as well as British authors may attend in greater force than before, and that the Anglo-American aspect of literary matters may come in for something of the important place it occupies in a general view of the field. There cannot be many new items in any report of progress to be made by American delegates since the last meeting. The principal is perhaps the willingness shown, in a late manifesto, by a large publishing house, once supposed to be the chief obstacle in the way of an adjustment, to negotiate ; and the manifesto itself may come before the Congress. It seems an opportunity to get the assistance of moderately disinterested foreign delegates in arranging a basis of accommodation which ought to be utilized.

—The formal propositions of the Congress, whose present condition and prospects will come up for review, were :

I. The author's right to his work is not a legal grant or sufferance but a form of absolute property, which the laws should protect.

II. The right of the author, his heirs and assigns, is perpetual.

III. On the expiration of the term fixed for the duration of the author's rights by existing laws of the different countries his works may be freely reproduced by whoever will, on condition of payment of a consideration to his heirs or assigns.

The peculiar rights recognized as belonging to the heirs of the author shall not be construed to prevent the publication of a new edition, provided it be faithful. Such new editions shall be preceded by actual tender of indemnity, and by two unopposed notifications at an interval of six months.

IV. Every literary, scientific, or artistic work shall be accorded, in countries other than that of its origin, the same privileges as works of national origin. Dramatic and musical works are intended to be included in this provision.

V. It shall be sufficient for the author, in order to secure such protection, to have complied with the ordinary formalities in use in the country where the work is published for the first time.

VI. The Congress holds that the moral and material well-being of the literary class is intimately connected with the foundation and development of associations having for their object the defence of the author's rights, and the formation of funds for assistance and for retiring pensions.

Besides these the Congress emitted, less formally, the expressions of opinion :

1. That international treaties should reserve to the author the exclusive right to permit translations or adaptations of his work.
2. That conventions affecting literature should in future be entirely independent of treaties of commerce.
3. That the French Government should take the initiative towards an international conference in which the delegates of the respective Powers should elaborate a uniform ordinance for the management of literary property, in accordance with the sense of the resolutions adopted by this Congress.

It went on further to desire that the question of *crédit littéraire*—that is, the provision of funds for pecuniary assistance, as in lawsuits for infringements, to make loans on manuscripts accepted but not yet paid for, etc.—should be carefully studied and inscribed on the programme of the next Congress, and adopted the proposition to found an international literary society, open to the literary societies and writers of the world.

—The International Literary Association thus formed has charged itself with establishing permanent relations among the writers of the diverse countries, facilitating the general diffusion of the various literatures, and defending the principles above named. Victor Hugo continues honorary president, as he was of the Congress. An honorary committee is composed of Edmond About, Auerbach, Castelar, Turgeneff, Blanchard Jerrold, Edward Jenkins, M.P.; Mauro Macchi, Italian deputy; José da Silva Mendes Léal, minister plenipotentiary of Portugal at Paris ; Torres Caïcedo, minister of San Salvador at Paris ; Johannes Nordman, president of the *Société des Gens de Lettres* of Austria ; Jules Simon, and Gonzales, honorary president of the *Société des Gens de Lettres* of France. Blanchard Jerrold and Torres Caïcedo of these, and Pierre Zaccone, a minor French novelist of the sensational school, are the organizing committee of the London conference. The association has for other objects, and has already decreed in its printed prospectus, the establishment of a library open to the works of writers of all nations, a permanent central club at Paris for the reunion of affiliated writers of all nations, the reception of communications relative to questions of literary property, the organization of lectures, and the publication of a monthly bulletin for the diffusion of a better acquaintance of the literatures among themselves. A diploma is promised to members, and a mention of such works as they may publish from time to time in the Bulletin. M. Lermina, the very active secretary, is the author, under the pseudonym of William Cobb, of various lively feuilletons in the cheap republican papers of a large circulation, like the *Petit Parisien* and the *Petit Lyonnais*.

—M. Jacques Bertillon has read before the Paris Société d'Anthropologie a curious statistical discussion of the comparative "nuptiality" of unmarried, divorced, and widowed persons. Using the returns of France (1856–65), Switzerland (1876), and the Netherlands (1856–65), he shows that the chances of marriage, as insurance writers might say, are three or four times as great for widowers as for unmarried men of the same age. Of course this is to the credit of marriage : those who have tried it like it. But one would suppose that men who had been divorced would have had enough of it, and, moreover, that women might avoid a man who had been unable to make his first marriage happy. Not so, in either case. After thirty the nuptiality of the divorced exceeds that of the single by a rapidly-increasing ratio, till at forty-five it is *six* times as great—greater even than that of widowers. The results for women are similar but less in amount, on which M. Bertillon makes the remark that women can get along better without us than we can without women. He also indulges himself in a little praise of his favorite statistics. No moralist or novel-writer has ever even suspected this enormous difference between the nuptiality of the widowed and the single. The knowledge of the human heart, which is the main object of half our conversation and all our literature, is after all to be found only in exact science. *Vive la Statistique!* He then goes on to show why a first marriage renders a second likely. One cause assigned is an interesting fact discovered some years ago by his father, that there is a greater mortality among celibates than among the married, and that the death-rate of widowers is still greater. Also the tendency to crime, to insanity, and to suicide is greater, as the figures show, among the single and the widowed than among the married. There are then, evidently, certain advantages in the married life, certain attractions to those who have once tried it, certain dangers and discomforts in its opposite, which suffice to explain why the chance of a man making a second marriage, if he becomes a widower, are three or four times as great as of his marrying at all. And yet the humorists are full of scoffs at marriage, the sentimentalists are shocked at second nuptials, and the law, following an old prejudice, perhaps monastic and ecclesiastical, "looks," as the French code says, "with an evil eye upon women who remarry." Again, *vive la Statistique*, which shows how useful to society are marriage and second marriage.

—Among the more—perhaps we ought to say the most—important historical publications of the last year is the fifth edition of the first volume of Max Duncker's 'Geschichte des Alterthums' (Leipzig : Duncker & Humblot). Though the new edition is designated only as "verbessert," the volume is largely rewritten. A careful comparison with the fourth edition, published in 1874, makes it apparent that the author has not only diligently exerted himself to enrich his work with the best results of critical research matured during the last few years, in reference to the early history of Egypt, Babylonia, Arabia, Phœnicia, Palestine, Armenia, and Asia Minor—to which this volume is devoted—but has also striven to enhance the value of what he has essentially left as formerly presented, by greater precision, greater fulness, and more perfect symmetry. Whether the following three volumes, of which the concluding one—ending with the reign of Darius Hystaspis—appeared in 1877, are to undergo a similarly incisive and equally speedy revision, we are not told in the new preface. The main object of the latter is briefly to justify the author's course in extensively incorporating in his history facts based on decipherments of Assyrian cuneiform inscriptions, and in some instances conflicting with the fragments of Berosus, statements of Herodotus, and the Biblical books of Kings and Chronicles, for which he was called to account in an otherwise very friendly review of the fourth edition. Those statements, however, which were criticised on account of disagreement with the authorities mentioned, belong to the second volume, and it is still to be seen whether they will not ultimately appear in a slightly modified, less positively Assyriological form.

—The writer against whose objections to his excessive faith in Assyriology Duncker finds it necessary to defend himself in the preface to his work is Alfred von Gutschmid, an eminent authority in ancient history, though not an adept in the mysteries of decipherment. His review of the first two volumes of the 'Geschichte des Alterthums,' fourth edition, appeared in the *Jahrbücher für classische Philologie* for 1875. An earlier attack on the eagerness of Assyriologists to discover in the inscriptions points of contact with Biblical history, and on their readiness in case of discrepancy to place the discoveries, or rather conjectures, of decipherers above plain Scriptural texts, was made by the same writer in the *Literarisches Centralblatt*, in October, 1870. Eberhard Schrader, who was then preparing his work, 'Die Assyrisch-Babylonischen Keilinschriften' (Leipzig, 1872), which, together with 'Die Keilinschriften und das Alte Testament' (Giessen, 1872), has given him a leading position among German Assyriologists, devoted a number of pages in the former work to the defence, against Gutschmid, of the high claims of his science, politely referring to the assailant as "one of the most distinguished students of the history of the ancient Orient." Subsequently, in a review of Duncker's 'Geschichte,' in the *Jenaer Literaturzeitung*, he gave vent to his satisfaction on seeing universal history adopting the conclusions of the decipherers without hesitation. Gutschmid, on his part, in criticising Duncker in 1875, directed his objections to the methods and overconfidence of the Assyriologists mainly against Schrader. The latter hastened to write a lengthy reply, which he published in the Jena *Literaturzeitung*, October 30, 1875. This provoked Gutschmid more broadly to state his doubts as to the historical value of Assyriology in its present stage of development, which he did in a book entitled 'Neue Beiträge zur Geschichte des Alten Orients—Die Assyriologie in Deutschland' (Leipzig, 1876). He this time treated Schrader rather severely, exhibiting him as one of the most unguarded representatives of his school. The attack was heavy in every way. Schrader immediately prepared for a new and more decisive defence of the assailed positions, and the result of his efforts is his third great publication, 'Keilinschriften und Geschichtsforschung' (Giessen, 1878), which we have already noticed (*Nation*, No. 713).

—Aimée and her troupe closed a six weeks' season at Booth's and the Park on Saturday last with "Les Brigands." Very few operas have been sung, the chief novelties brought out being Lecocq's "Le Petit Duc" and Offenbach's "Madame Favart." The first of these was performed at two or three theatres in English before Aimée made her appearance in it, and it is needless to say that in French it is incomparably superior. The libretto, however, is too long for the plot, and the opera labors under the difficulty of being neither quite opéra bouffe nor quite opéra comique.

"Madame Favart" is almost as much a comedy as an opera, and was chiefly noticeable for the very remarkable acting of Mezières in the part of *Pontsablé*. The rôle of a half-imbecile and half-paralyzed old debauchee may not be the finest in the world, and we are continually surprised that such an accomplished actor as Mezières should be content to act in bouffe parts; but, inasmuch as legitimate French comedy has never flourished in this city, it is perhaps fortunate for New York audiences that he is. The music of "Madame Favart" is not Offenbach's best, nor are the airs, with two or three exceptions, marked. The voices of the Aimée Company, too, are few in number, and though good acting will carry off a great many defects in the way of singing, the absence of a respectable tenor created a serious deficiency. Mlle. Raphael, a new accession to the company, a young woman who, owing to her extraordinary height, appears better in men's than women's parts, supplied this defect to a certain extent, but her voice is not remarkable. The pretty and childish Mlle. Beaudet, who took the part of the *Duchesse* in "Le Petit Duc," was an accession to the troupe in the way of acting, but not of singing. Indeed, on the whole there was very little good singing, except by Aimée, whose voice seems to improve, as her acting certainly does. The new operatic importations from Paris show that the tendency among composers away from strictly *bouffe* opera still continues in force, and it is probably owing to this that so many of the best-known operas of that school, "Barbe-Bleu," "La Belle Hélène," "La Grande Duchesse," the "Cent Vierges," are now seldom sung. These were the first operas of the school ever heard in the United States, and it will be remembered that the excitement created by them was rather moral than operatic, the respectable press uniting in condemnation of them, and the mayors of self-respecting cities going to the theatre to see for themselves whether such performances ought to go on. It must now be ten years since, and for some reason or other the school is already supplanted by another which seems to be regarded as above reproach by those to whom the antics of "Prince Paul" and "Madame l'Archiduc" were anathema. Morally "Madame Favart" is as much to be deplored as many of the old school, but it is, we believe, considered to be an opera to which a young lady "may take her mother." Indeed, the French opera season here is getting to be such an established "institution" that scruples as to the enjoyment of it are decidedly inconvenient, and inasmuch as some of the new operas are morally unexceptionable, the fashionable world appears inclined to draw a veil over the past and to pardon whatever needs forgiveness in the present. Meanwhile the line between legitimate opera and opéra bouffe is being made less clear in another way by the appearance in the latter of regular operatic singers, particularly Capoul, who is to make his appearance here in his new profession next fall in a bouffe company which will include a sister of Irma. New York has therefore before it an unusually fine operatic future. With two regular seasons of legitimate opera at the Academy, a season of Aimée, a season of the Capoul-Marie troupe, to say nothing of perennial "Pinafore," adult and juvenile, black and white, secular and ecclesiastical, there ought next year to be no complaint on this head.

—A writer in the London *Musical Times* for March advances a "Plea for the Flute." He refers to the great antiquity of the instrument, and the feats which in Greece and elsewhere are said to have been performed upon it. The great composers, he informs us, have written much good chamber music for this instrument, and it should therefore be more generally introduced as a parlor instrument, especially in view of the fact that the piano is gradually losing its monopoly in the family circle, and many young ladies are now learning to play the violin. On several grounds this "plea" appears to us somewhat ill-advised and unnecessary. England must be very different from America if it is necessary there to plead the cause of the flute. Here the flute seems to form a sort of intermediate link between the accordeon and the piano, and, owing to the ease with which it is learned, the number of players on it is legion. An amusing illustration of this is afforded by a certain orchestral society of students at a leading New England college. At the annual examination of candidates for admission four out of six are commonly equipped with flutes; and there is a tradition that in the dim past this "orchestra" once consisted of ten flutes, two violins, and a bass drum. But even if England is not thus blessed with flute-players, there is no particular reason why their multiplication should be advocated. Some of the older masters have indeed written concerted music for the flute, but from the time of Haydn the habit of so doing has become less and less frequent. The reason is not far to seek. Although the flute is not a positively vulgar instrument, like the melodramatic cornet, which moves the primitive emotions of the unæsthetic public, it yet lacks, to a great extent, those qualities which combine to make a first-rate musical instrument. The flute, one might say, has no soul, and differs in this respect most widely from the 'cello and the horn with their intensely emotional tones. Scientifically, Helmholtz has shown that this difference depends on the number and relative height of the harmonic overtones which accompany every simple musical sound; and he alludes to the old *bon mot* that to a musical ear nothing is more dreadful than a concerto for the flute, excepting a concerto for *two* flutes. In the orchestra the flute is not only tolerable but even valuable for the production of shrill, demonic effects on the high notes, or of sweet and calm pastoral effects on the lower notes. But for chamber music, where only a few instruments are used, the flute is too dreary and monotonous to be of any great value, since it lacks the lower overtones, and its power of dynamic expression is too limited. The neglect of this instrument in chamber music by modern composers is therefore simply an illustration of the eliminating action of natural selection; and all the eloquence of the *Musical Times* will not suffice to make a law of æsthetic evolution turn back on itself, and revert to a state of primitive simplicity *à la* Rousseau.

—In accordance with the hint thus afforded us, young men and women should be urged to bestow their time and labor rather on the bowed instruments than the flute. An abundant crop of amateur string-quartet clubs will be the best means of gradually raising ourselves to the rank of a musical nation. Unfortunately there are several great difficulties in the way of such clubs. Violin-players are easily enough obtained in any town, but it is almost impossible to secure respectable performers on the viola and the 'cello. The ambitious, "democratic" spirit of young Americans makes them all aspire to play the first fiddle, and thus the other instruments of the quartet are neglected. This difficulty will gradually disappear as the knowledge gains ground that in the best music harmony is even a more essential factor than melody, and that, moreover, in modern music the melody is not so exclusively assigned to the highest part as it was in the days of Haydn and Pleyel. On the other hand, amateurs are apt to be discouraged by the inherent difficulties of most chamber music, especially that of Beethoven, Schumann, and Rubinstein. In such cases it is best to leave classic music alone for the time being, and get some of the operatic potpourris for one, two, or three string instruments and piano, published, *e. g.*, in the Edition Peters in a comfortable and very cheap form. Operatic potpourris do not belong to the highest class of music, we grant, but neither do they deserve the supreme contempt which many pedantic music-teachers affect for them. They will serve as a means of elevating the taste of those to whom the highest forms of composition are as yet unintelligible; and they will also be the means of saving from oblivion many of those beautiful melodies which occur in operas that are now no longer tolerated on the stage. It would surely be a pity to throw away all these jewels together with the perishable stuff in which they were originally set. Arranged in an artistic manner they will give pleasure to the most refined musician, who would shudder at the mere thought of having his ears and intellect tortured by the stupid text and the miles of dry and meaningless recitative amidst which these fine melodies were for a long time buried.

THE FINE ARTS OF THE ITALIAN RENAISSANCE.*

MR. SYMONDS'S work consists now of three volumes, and there is promise of a fourth, to be devoted to Italian literature; the first volume, historical and preliminary in character, entitled 'Age of the Despots,' has already been reviewed in these columns.† Two years ago appeared the two volumes severally entitled 'The Revival of Learning' and 'The Fine Arts'; it is the second of these which is now republished, printed from the English plates with the addition of brief notes from author and publisher, and—what each of the English volumes sadly needs—an index. The volume is in many ways fitted for separate issue as an account of the state of the fine arts during an important and critical epoch. Much information otherwise widely scattered and to be sought for within the covers of many books, old and new, is here put together in a readable shape. The results of late archæological research and of recent critical examinations into historical authorities and monuments of art are here given with sufficient thoroughness. The whole book, indeed, is composed in the light of the most modern knowledge and opinion, and is quite free from the legendary story-telling tone, as if of a transcript from Vasari, which has injured some well-intending books lately pub-

* 'Renaissance in Italy. The Fine Arts. By John Addington Symonds.' New York: Henry Holt & Co. 1879.

† The *Nation*, vol. xxi. p. 249 (Oct. 14, 1875).

lished. The first chapter is devoted to an attempted contrast between the classical and the Christian spirit as embodied in fine art, and a statement of the inevitable protest of piety and of ascetic religion against representative art of any form, and peculiarly against its more developed forms. The author carries his argument far, and endeavors to show that all intense religious feeling, whether monastic or puritan in character, must share in this distrust of an art which draws its inspiration from the beauty and glory of this world. The purely classical and pagan development of the later years of the Renaissance is in this manner characterized as inevitable ; while the original character of the artistic revival as a "return in all sincerity and faith to the glory and gladness of nature, whether in the world without or in the soul of man," is strongly insisted on. As these considerations stand in Mr. Symonds's pages the assertions seem a little abrupt, a little uncompromising ; and yet they are evidently the result of mature deliberation, and, that they may seem so, lack only the statement of the drawbacks and of the qualifying exceptions.

Chapters second and third are devoted to an examination of architecture and sculpture in Italy, as developed during the latter part of that short period during which the Gothic style prevailed in the peninsula—a period shortened at both ends, beginning later and ending sooner than in Northern Europe—and as passing through different manifestations down to the time of Cellini. These are interesting chapters; the account of the earliest work of the Pisani is particularly good ; and the few words said of those unique buildings, neither Gothic nor classic in style, the lovely first-fruits of a natural and non-classical renaissance, destroyed almost in its commencement by the revival of classical learning, are good and right, although the full significance of those works of art, perhaps, escapes our author. This, however, is preliminary ; the real purpose of the volume, as proclaimed in the first chapter, is to dwell upon painting as the one fine art peculiarly suited to the genius and to the circumstances of the Italian revival, and, therefore, carried to a perfection not equalled at other times and places. Two-thirds of the volume is devoted to Italian painting, with occasional episodes, as when Michael Angelo's life is related, at perhaps disproportional length, and Cellini's whimsical and violent acts are used to explain certain moral aspects of the Renaissance rather than to aid in any way the enquiry into the progress of art.

This book so constituted has the merits and the defects of a treatise by a literary man and student upon those strange, non-literary arts which are apt to baffle analysis and to contradict theories, and to lead the explorer on into no-thoroughfares of inference. This volume, like the previous volumes, is a collection of essays of very unequal value. That devoted to Cellini is little more than an abstract of his life and adventures, and the occasional remarks on his work are very inadequate; nor is this to be wondered at, for the art of Cellini was almost wholly decorative and, in a sense, technical, nor can its value be evident to one who views it from the standpoint of a literary taste. It is easy for a critic trained as Mr. Symonds appears to have been to despise such art as Cellini's. That Mr. Symonds does not despise it is a proof of the patient and self-distrusting mood in which, to his great credit, he is content to remain ; that he should treat it adequately is too much to expect. The essay on Michael Angelo is more valuable, because of the more visible sentiment and more impressive imaginative character of that great artist's work. A student, not particularly of plastic art, but of human thought in general however embodied, can see, or partly see, the meaning of Buonarotti—can love and admire splendid imaginings, vast, dreamy thoughts, only half expressed in rough-hewn marble, stately impersonations in cool frescos on shadowy vaults. But in this essay, as well as in all the chapters devoted to painting, it is the historical view that is of value—the well-arranged and well-worded account of the rise and fall of schools of art, the abstract of interesting facts not indeed inaccessible to the student, not remote, not now for the first time put into shape, but still out of the way of the ordinary reader of history, who by this means has put into his hands such an account of this embodiment of human activity as he needs to have by him when reading Sismondi, or Michelet, or Burckhardt.

The almost complete subordination of the other graphic arts to painting asserted in the earliest pages and maintained throughout is to be regretted ; if for no other reason, yet for this one, that a ready way of comparing the spirit of the Renaissance with that of the Greeks was thus left untried. Some attempt at this there is, indeed, in chap. i. Nor do we forget, nor even for a moment ignore, the immense difficulty of the task of conveying in words such an impression as would be at once accurate and intelligible of this subtile distinction. Another and perhaps equally important comparison, that between architecture and all decorative arts in the Middle Ages and after the revival, we miss and regret. On page 4 a very brief and summary statement of the universality of decoration in the fifteenth century in Italy leaves a false impression upon the mind of those readers for whom, as we have seen, this book is specially intended. The student who is not an artist, nor especially occupied in the enjoyment and examination of fine art, nor surrounded by its influence, needs to be told that this splendid abundance of ornamental art is not peculiar to the nation nor to the time. In a literal sense the Renaissance was heir of all the ages. The stone-carving, the wall-painting, the iron-forging, the bronze-chasing, the enamelling, the engraving, the illuminating, the stamping of leather, which was being done in the Italian cities when Giotto was alive and active, leads up to that of one hundred years later when Brunelleschi was alive and active, and so on to that of still a century later when Buonarotti was of middle age and Cellini was in his youth. It will be worth somebody's while to show how the arts of decoration centring in architecture and supremely affected by it are the same, and yet not the same, in 1320 and in 1520 ; to show how classical sculpture, dug from the ground, and classical fable, found in newly-deciphered manuscript, had given a new meaning to the details of ornament, while leaving for a long course of years its essential nature, its value, its decorative purpose unchanged. Mr. Symonds's book gives us nothing of all this, nor is that very surprising nor greatly to be regretted ; it is recorded here as a necessary part of its characterization.

It must be repeated that, untechnical and exoteric as is the author's view of fine art, there are yet sound conclusions to which he has come. He has had good tutors, and has known how to choose his advisers well, and to give credence to the credible. The pages before page 20 are very safe—they might be read to a class of pupils, and even required of them as a lesson to learn by heart ; after years of casting about and doubt and changing opinions, it is to such views as these that one comes at last. The valuable essays by Mr. Pater seem to be inspired by a more intense love of fine art and a more intimate knowledge of it, and yet for an accurate general statement of certain broad truths Mr. Symonds's preliminary remarks are perhaps unmatched by anything in the pages of his more minutely-informed fellow-student. In like manner, although one must go to Bryce's 'History of the Holy Roman Empire' for the shrewdest insight into the use and meaning of architectural remains, and for the reason why there is no mediæval architecture in Rome ; although one is driven to the second volume of the 'Stones of Venice' for an adequate account of Italian Gothic architecture—that misunderstood, much-beloved and vilified, wholly contradictory and wholly delicious art, misconceived by the architectural critics, and left to Ruskin's poetical hyperbole for a characterization right in spirit if vague in form ; although Mr. Symonds leads us into labyrinths of speculation in such passages as the attempted comparison (p. 312) between Correggio, Raphael, Leonardo, and Michael Angelo, with fanciful epithets for each, and is certainly less successful in special critical remarks than in the broadest general conclusions, yet it cannot but be considered a gain to have such just views of the whole field put into these simple and readable chapters.

After all, however, the volume on the 'Revival of Learning' is the best of the three. If the mysteries of artistic criticism are not wholly revealed to our author—as how should they be—the truths of literature and scholarship are much more open to his observation, and he is not a careless observer of them. His gift of historical research seems to be excellent, and in a department in which he is a lifelong student and a practical workman—that of scholarly literature—he speaks like one at home on his subject, weightily and with authority. The volume on the 'Revival of Learning' is still, like the others, a collection of detached essays rather than a connected narrative—rather than a logical and consecutive body of reasoning. The historical order is the favorite one ; this lecturer, that translator, and then this collector and his librarian are to pass before us in their order, and each is to have his share of critical remark and to receive credit for what he did to help along the revival. Perhaps one might prefer the reverse of this—perhaps the share of prominent individuals is a little overrated in these pages ; and one longs sometimes for a narrative of the tendencies of the age and the thoughts of the great body of scholars, illustrated by the appearance now and then of some great name in which these tendencies and these thoughts seem to find strong expression. But this is a mere hard judgment of the book because it is not something else—a bad kind of criticism. The volume as it is is valuable and instructive, and leads one to wish that the volume on the Fine Arts were the fruit of as much experience and practical knowledge as it is of long research, careful and patient thought, and sincere devotion to historical and critical truth.

RECENT NOVELS.*

WE suppose that such novels as 'Airy Fairy Lillian' are to be philosophically regarded as a reaction from the 'Jane Eyre' style of story, in which the reader is called on to sympathize in the intense mental struggles and grim determinations of plain women. Molly Bawn, and more especially A. F. Lillian (we really cannot reiterate this extremely silly title), are very young, very pretty women with unlimited capacity for flirtation, the description of which makes the staple of both books; in this instance occupying one hundred and fifty solid pages with what is little more than "marking time." There is small attempt at anything like development of character. Lillian is a pretty, luxurious, petted child, and the other personages have no other *raison d'être* but to admire, indulge, and make love to her. The book opens with a description of Lillian's grief and wrath when, at her father's death, his estate passes to a distant cousin. She sees no reason why she should leave the house, and vehemently argues that she can stay there in one wing while the heir inhabits the rest of the house. She consents, finally, to live with her guardian's mother, Lady Chetwoode; her guardian, Sir Guy Chetwoode, naturally falls in love with her "dazzling skin, creamy round arms, silky yellow hair, hands like snowflakes," etc., etc., etc. All the men who see Lillian fall madly in love with her, unless they are protected by some previous attachment, and after teasing, insulting, and generally maltreating her lover, Lillian marries Sir Guy and the story is done. We should not omit to say that the drama is enacted in the midst of "huge bowls of roses," "great silver urns," and trailing velvet dresses; that Lillian, when cross, throws Dresden china cups on the floor to relieve her feelings, and that there is a pervading sense of wealth and luxury throughout the book.

'High-Water Mark' is a very complicated and intricate story, notwithstanding the suggestion of simplicity given by the motto on the title-page. He (or she, the author's name gives no clue to the appropriate pronoun) takes no flight into aristocratic or foreign society, but testifies of what he has seen and known in his own land, and if the result is not altogether attractive, if American manners and life generally have an appalling crudity in the story, possibly their prototypes might be fairly taxed with the same. There is a great deal of conversation in the book in various styles—*e.g.*, the comic, "'You think you're dreadful smart, Frederic Lynne.' 'Why, sis, who 'd 'a thought you'd have spoke!'" Another style—the cheerful domestic—is as follows: "'You are not to trouble yourself about what the Bible does not say. It says enough for everybody's salvation if they choose to accept it.' 'Or for everybody's damnation if they don't,' said Fred. 'If we could clearly understand about the judgments spoken of in the Bible,' interposed Wilma," etc., etc. The main thread of the story consists of the life and adventures of two lawyers named Burr Courtenay and Charles Burns, who wait for clients, speculate in land, write verses which are insufferable trash, flirt mildly and confusedly, try politics, go to the war, and have unlimited high converse with each other, until finally one of them is frozen to death while driving with the other. Extreme *Langsamkeit* is the sensation most vivid in the reader's mind, but suddenly he finds the description of the storm, of Courtenay's death, and of Burns's conduct in the crisis forcible and simple, and he shuts the book recalling the bird-fancier's dictum: "One or two notes nightingale and the rest rubbish."

'Falconberg' is the story of the adventures of a young Norwegian who is driven from Norway by his father's unkind treatment, and also by misconduct of his own, he having in a moment of excitement forged his father's name. He comes to America, and, after some wanderings, reaches by chance a settlement of Norwegians, "put down in the official postal guide as Pine Ridge, but known to the settlers of Viking descent as Hordanger." Here he accidentally meets a robust and liberal settler, named Nils Amundson Norderud, who takes him (under an assumed name) to his house, where he treats him hospitably and exerts himself to find occupation for the stranger. Falconberg, or rather Finnson, becomes the organist in the little Norwegian church whereof his uncle, the Rev. Falconberg, is pastor. How he establishes himself, makes friends, falls in love, edits a newspaper, goes into politics, is a candidate for the legislature but is defeated by the inopportune disclosure of his former forgery and present false name, we are told in detail. All is condoned by friends and lady-love, and he joins Nils Norderud in the endeavor to Americanize the Norwegians. Their success is indicated by the description of a grand steamboat excursion and picnic of a dreadful nature, and we leave the hero with the best of hopes. Mr. Boyesen has remarkable facility in English, though his desire to be idiomatic leads to the occasional use of phrases which are not consonant with his usually good style.

As every effect presupposes a cause, it is clear that Madame Charles Reybaud had some reason for writing 'A Thorough Bohémienne.' It is charitable to suppose further that her reason was not a mere desire to add to the list of novels already in the world. Making this supposition, therefore, we have endeavored conscientiously to imagine why this book should have been written. As far as we can detect any idea whatever at the bottom of the plot, the intention of the author was to describe a gipsy girl rescued from gipsy life, yet so thoroughly wild *au fond* that she drifts back to her native condition by the law of her existence. This is well enough as an idea, but it is obviously in itself neither exciting nor new. It is an idea with which not a few poets and novelists, and many writers on prison discipline and penal reform, have made us familiar, and as an abstract truth of human nature had been quite as well stated by Mary Carpenter as it was ever likely to be by Madame Reybaud. The only excuse for making it the subject of a novel would be the interest or beauty of the treatment. If the gipsy were a particularly attractive gipsy, the struggle between her wild nature and the "sweet influences" of civilization, particularly if the latter took the shape of love and gratitude and other pleasing human sentiments, might become very interesting. But in the conflict raging in the breast of a rather unattractive gipsy, who is surrounded by decidedly stupid people, it is impossible to enlist the feelings of the most willing reader. Madame Reybaud's Bohémienne is the daughter of a travelling mountebank, and is taken up and adopted by the Kerbséjeans, a family possessing a château in Brittany. This family consists of the pretty Irene, her father the count, and the chevalier, an uncle of the count. The count is afflicted early in the book with intemperate habits, but these wear off as the story progresses. At one time he is very fond of Mimi, and apparently means to marry her; afterwards he seems to forget all about this. Mimi is of course in love with a man she cannot marry, and the man whom she cannot marry is in love with Irene. Notwithstanding these materials for a tragedy there is nothing very tragic about the story, which all ends in smoke. At the first blush we should have said that this must be Madame Reybaud's first novel, but we see from the title-page that she has written another. This would seem to indicate that her novels find readers, and if they do we must offer her our warmest congratulations.

'The Barque Future' is a tale of Finnish and Lapland life, translated from the Norwegian by Mrs. Ole Bull. It is a fresh, pleasant story, with genuine local color, quite refreshing among the many ineffectual efforts after original representation which result only in a distorted commonplace. 'Out of His Reckoning' is an absurd book; 'At a High Price' fairly clever, but disagreeable to our notions, as the chief love-affair is between an uncle and his niece, who is also his ward. 'Signing the Contract' describes a region concerning which we sympathize with the late lamented Betsey Prig—we don't believe there is no such place, though it is called the United States. 'The Secret of the Andes' is a book to enchant a boy: buried treasures, witches, murderers, a mysterious virgin queen, and a mountain that thunders responsively to any very "tall talk"; venal viceroys, and gold by the thousand ounces, all assist in the plot, and it is impossible to say that there may not be historical truth in the descriptions of conspiracy and revolution. The scene is laid in Quito, and dated 1592.

rus, it must stand or fall upon the merits of the correspondence; and though these give ample proof on every page of an excellent character and warm heart, they can hardly be supposed, even by those most interested in them, to have any literary value. Indeed, looking over the distinguished list of contemporaries whose names appear in the index, and who were friends and acquaintances of Baron von Bunsen and his wife, it is surprising to find in the correspondence so few traces of intellectual or sentimental impressions derived from contact and intercourse with them. We have had the curiosity to examine the references in detail, and the result has been almost depressing. For instance, to take a few well-known names quite at random: On November 19, 1840, Madame Bunsen writes to her intimate friend Abeken a letter in which she mentions having made the acquaintance of Agassiz; to identify him she describes him as "the naturalist"; this is all. In a letter to her son Theodore, dated August 19, 1865, she asks whether he ever met Ampère, and adds the characteristic sentence: "His was a singular and most engaging personality, and his death in the spring of this year struck me as cutting off another portion of the *Past* which deserves to live and will live in memory." In vol. ii. p. 105 Andersen is mentioned. He "read to us in the evening some of his own tales, and though, being translated into German, they could not produce the effect they must have in the original, we found them delightful." At page 440 of the same volume is a reference to Bismarck, and this does contain a critical remark which, however, we are bound to say is not put forward as original, and with which our readers are probably already tolerably familiar—to the effect that Bismarck had adopted the excellent plan of telling the truth for the purpose of accomplishing the same end other diplomatists attain by falsehood. This politically useful habit the excellent woman in her devout old age does not forget, with charming *naïveté*, to thank God for. We might go through the whole book in this way, and should consider ourselves very fortunate if in both volumes together we found five pages in reference to any of these contemporaries, however brilliant or renowned, of any general interest.

The fact is that Madame Bunsen, evidently remarkable as she was for the strength and beauty of her character, was not intellectually great, and had as a letter-writer none of that charm of style or faculty of description which makes the correspondence of women so often delightful reading. Her letters consist mainly either of dry details of fact, or semi-moral, semi-religious homilies addressed to her husband or other members of her family; or else letters written in the intimacy of married life which ought not to have been printed at all. What possible interest the public can be supposed to take in the descriptions given by Madame Bunsen in her letters to her mother of the appearance, health, size, etc., of her infant children we cannot imagine, and yet a considerable part of these volumes is taken up with matters of this sort. Many of the letters are letters announcing deaths, or letters of condolence written on learning the news of deaths of near relatives. What business these have in print it is impossible to understand.

The most interesting parts of the book are those describing the childhood of Baroness Bunsen. The first chapter, on "Family Influences," is written by Mr. Hare, who, if he is apt to be a little too much overcome with the solemnity of his task, does not forget that his first duty is to his readers. These "family influences" were somewhat peculiar. Madame Bunsen was collaterally descended from Mary Granville (Mrs. Delany), great-granddaughter of that Sir Beville Granville who fell in the battle of Lansdowne Heath, in 1643, with the patent of the earldom of Bath in his pocket. The early history of Mary Granville was, as Mr. Hare says, "a romance and a tragedy." At seventeen she was married against her will by her uncle, Lord Lansdowne (the friend of Pope and Swift), who desired to strengthen his political connection in Cornwall, to a Mr. Pendarves, a man of disagreeable temper and appearance, intemperate habits, and sixty years of age. By him she was carried off to Cornwall, where she was forced to take up her abode "in his dark, disagreeable, desolated castle, in which her head could not reach to the bottom of the windows." Her husband is described as having been almost always intoxicated, and when sober violently jealous, although his wife was a pattern of fidelity and submissive devotion. After two years of wretchedness he took her to London, where she was doomed to the constant companionship of his sister, who hated her. At length, after seven years of this married life, her husband died, and a will was found to have been made by him in his wife's favor; it was, however, unfortunately unsigned. Later in life she married Dr. Delany, and did not die until 1788, at the age of eighty-eight. It was the great-niece and adopted daughter of this lady who, about 1790, married Mr. Benjamin Waddington; and Frances Waddington, Baroness Bunsen, born in 1791, was the child of this marriage. According to Mr. Hare there were only two points of resemblance in the disposition of her father and mother—generosity and a scrupulous regard for truth. Extremely phlegmatic, Mr. Waddington "was without the slightest particle of imagination." He was a great reader, but "had no preference with regard to subject," and "kept no particular object in view. He would steadily read for hours with the most perfect satisfaction, and never appeared to skip a single page. Whatever work he began he regularly finished, and he seldom made the slightest comment upon it. Travels, biographies, and also works of fiction were perused with the same patient attention." Mr. Waddington's "time for conversation" was after dinner, a time which he selected to inform his wife of anything that had occurred during the day "either to interest or annoy him." In his wife, who was in every way a remarkable woman, he evidently had great confidence. "For some time he troubled and worried himself with farming, but finding that it did not increase his happiness, and very much interfered with his comfort to see everything going wrong, he gradually put his agricultural affairs into the hands of his wife, who, among other useful arts, had acquired a practical knowledge of the subject, and soon succeeded in establishing order and neatness in the farming department." Among other peculiarities he had "a peculiar aversion to the expenditure of any avoidable small sum," and did not make any concealment of the fact "that the payment of turnpikes was an object of consideration which often turned the balance against sending to the post-office." On one occasion he is said to have lost several thousand pounds from his determination to save the postage of a letter of enquiry as to the payment of a policy of insurance.

Chapter ii. contains some interesting "Recollections of Childhood" in the home of her parents at Llanover in Wales, put down by Baroness Bunsen in her eighty-third year, for the benefit of her daughters and granddaughters, from which Mr. Hare gives copious extracts. This and the next chapter, "Home Life at Hanover," are the best in the books, and make up, to a certain extent, for much subsequent tediousness.

The life of Baroness Bunsen after her marriage was not eventful, though it must have been both interesting and agreeable. Moving from capital to capital as her husband rose in favor with the court at Berlin, she lived the life of the wife of an accomplished and successful diplomat, occupied chiefly with her social and domestic duties. Her correspondence makes it clear that one of the marked traits of her character was caution, and it is this caution—which such a career was hardly likely to dissipate—that makes her correspondence so uninteresting. With the exception of her strong expressions of feeling as a wife and mother—and these we must be permitted to believe she could not have intended to be printed for the benefit of the public—she never throws aside her reserve. We are never allowed to know how the men and women with whom she was constantly thrown really thought and acted. Indeed, we doubt if Madame Bunsen herself ever knew. She never had much taste for analysis of character. People were for her simply divided into those she approved or disapproved (generally for reasons with which religion and the state were closely connected), and those whom she liked or went through life without liking (for her principles prevented her from ever being a "good hater"). The *fonds* of her character was really religion, and we fear that these volumes will not be likely to be received by the world as demonstrating that a life founded upon a religious basis so strong as to absorb most other impulses can be made a source of much literary interest.

The Natural Resources of the United States. By J. Harris Patton. (New York: D. Appleton & Co. 1879. 18mo, pp. ix. 115.)—Designed both for a class-book and for general readers, and published by a house which aims at accuracy, both statistical and critical, in its current series of primers, this little book invites careful examination. The compiler has aimed to give a brief physical account of the country and of its productions. The best part of his work is the description of metals and minerals, of iron, coal, lignite, gold, and silver, of building marbles and of timber. About concrete and tangible things Mr. Patton is, for the most part, concisely statistical and descriptive. Occasionally, too, he finds room for bits of curious information, as where, for instance, speaking of copper-mining in the upper peninsula of Michigan, he tells us that the pure copper there found is "from its very pureness more difficult to obtain in quantities that can be handled than that which is smelted from ore. First the mass must be dislodged by tremendous blasts of gunpowder or some explosive. But copper does not break to pieces by the explosion.

It only *tears;* and then it must be cut away by long chisels." But now we must notice some serious misstatements. Mr. Patton shortens the coast-line of Europe, for instance, and extends that of the United States. The respective figures are well known, and with at least approximate accuracy. The ratio of the European coast-line to the continental area is given by M. Reclus as one linear to one hundred and ninety-two square miles, or, including Great Britain and the larger islands of Europe, as one to one hundred and forty-three ; Guyot's estimate is one to one hundred and eighty. Mr. Patton, mentioning no authorities, assigns to Europe the low ratio of one to two hundred and twenty-four ; while for the United States, on the other hand, he finds the more favorable ratio of "one mile of shore-line to one hundred and thirty-one miles of surface." How is this pleasing result obtained? By counting the banks "of the Mississippi and its tributaries, ten thousand miles, as coast-line" ; the banks of European rivers not being counted at all in making the corresponding estimate for Europe. The actual coast-line ratio for the United States, allowing one thousand miles for the south shores of the great lakes, is about one to two hundred and thirty-two. Mr. Patton's patriotic statistics remind one of Matthew Arnold's description of the provincial spirit, "with its settled misconception of the value of one's own things." What should be said of a perversion of figures we will not stop to say.

Even more inaccurate is Mr. Patton's estimate of the arable land in the United States. Professor Whitney and other students of our physical geography consider the central mountain region—the "Cordillera," as Professor Whitney proposes calling it—of the United States and Territories as amounting to nearly one-third of the whole area. This vast mountain country includes Montana, the Black Hills of Dakota, Wyoming, Colorado, New Mexico, Arizona, the Sierras of California, Nevada, Utah, Idaho, and the mountain ranges of Oregon and of Washington Territory. Though in this region there are some arable valleys, by far the greater part of it is too much elevated and too poorly watered ever to support an agricultural population. Turning now to Mr. Patton, we read that "with the exception of a few rough mountains, nearly all of which are storehouses of the metals and coal, there is scarcely an acre throughout this wide domain that cannot be cultivated so as to pay liberally the laborer's hire." It would not be easy to get farther away from the facts than this. Jeffrey was blamed for "speaking disrespectfully of the equator," and we do not wish to slight the Cordillera ; but the truth is that, while parts of it are suited for grazing, it can never be "cultivated." The non-arable region, which Mr. Patton calls "scarcely an acre," is in fact an area of nearly a million square miles ; a region which repeats in its extremes of climate, its elevation, its lack of irrigation, and its consequent infertility, the important features of the wastes of Central Asia.

It would seem hard to make a more serious error than this in the physical description of a country ; and yet Mr. Patton has done it in this little primer. He repeats the popular misinformation about *sanitaria* for invalids, recommending for consumptives the climate of Aiken, S. C., as "mild, healthy, and balmy during the winter" ; that of Asheville, N. C., as "mild, dry, and equable" ; and that of Minnesota as "bracing, never debilitating." This is ground upon which the inexpert shall not enter with our approval. It is a question for the climatologist and for the pathologist ; and by them it has already been settled, to the following effect : that the coast climate of Southern California is the only climate within the national boundaries that is either "mild" or "equable," as compared with the Gulf Stream climates, during any one of the four seasons—the only American climate that can be recommended, as such, to consumptives. This is not the occasion to give the proofs of this statement at length, but they may be found by comparing the researches of Dove with the excellent and serviceable tables of American "Temperatures" and "Rainfall" compiled by Mr. C. A. Schott for the Smithsonian Institution. Mr. Patton should have said with more distinctive clearness than he has said that the coast climate of Southern California is a good one for persons affected with pulmonary complaints, being mild, equal, and equable the whole year round.

Petrus Martyr, der Geschichtsschreiber des Weltmeeres. Eine Studie von Hermann A. Schumacher. Mit einer Karte aus dem Jahre 1510. (New York : E. Steiger. 1879.)—A work on Peter Martyr, the earliest historian of America, can scarcely fail to excite deep interest, especially since it is the first of its kind. Peter Martyr, who was born February 2, 1455, at Arona, on the shores of the Lago Maggiore, is but rarely mentioned at present, although history is greatly indebted to his versatile pen. When Washington Irving wrote the 'Life and Voyages of Christopher Columbus' he freely drew from Martyr's writings, as did Alexander von Humboldt and Prescott, Raumer and Ranke, and many others. The book now before us does not profess to be a biography, although its title might encourage this belief. The author merely calls it a study, and a study it is ; one evincing great care, thoroughness, and immense application. It chiefly consists of two parts : the first and minor part treating of "Martyr's historical works" ; the second, of "Martyr's development as a historian." Whatever views one may hold as to historical methods, it must be admitted that Dr. Schumacher has accomplished his task in an extremely satisfactory manner, and not without artistic skill, although we might have expected a little more uniformity in the treatment of the subject. The great historical events of the latter part of the fifteenth and the beginning of the sixteenth century are worked into a harmonious background for the figure of Peter Martyr, who stands out in bold relief and in vivid colors. We see him leave his native country, following the Spanish ambassador, Iñigo Lopez de Mendoza, to the court of Saragossa, where he arrived during that fermenting epoch when the Spanish fleet, in rapid succession, discovered new tracts of coast-line, where the daring adventurers found new tribes of men, strange birds and beasts, pearls and precious metals, and a tropical vegetation of luxurious splendor. Induced by Queen Isabella, the Italian accepted the position of Latin Secretary at the royal court, and thenceforth Pietro Martire de Anghiera became Petrus Martyr Anglerius. During the first years of his sojourn in Spain he followed his sovereigns to the battle-field, and for some time was seriously in doubt whether to remain faithful to the pen or to exchange it for the more formidable sword. The temptation was great indeed ; but it was to his first love that he clung and thereby ensured his immortality. By assuming the garb of the priest the bonds uniting him to science were firmly riveted.

His career as an author dates from his stay in Spain, where he began to write his letters on Cristóbal Colon and those upon the sea, to the latter of which he owes the epithet "the Historian of the Great Ocean." His first work on the New World was not published until 1516. It consisted of thirty parts, or three decades, and it was dedicated by its author, who had reached the age of some three-score, to the youthful Charles V., who had just ascended the throne. A book of this kind could not but create an intense sensation, for all it contained was novel, and it may truly be said that the three "decades" of writings embraced two decades of history, such as gave new life to stagnating Europe. Four or five years elapsed ere the fourth series of decades were issued, which did not prove less successful ; but they were the last works published during the author's life. In 1526 his pen rested for ever. A tablet in the cathedral of Granada, erected in his memory, duly sets forth the merits of the former dean and counsellor of state ; and good care was taken not to forget to mention the circumstance that Martyr was a foreigner.

In judging Martyr's position as a historian we cannot for a moment be in doubt as to his rank. His merits are great. They can, indeed, scarcely be too highly spoken of, for, had it not been for his exertions, our knowledge of America from the time of its discovery up to the year 1511 would be limited to a few insignificant facts. Nevertheless he was only a narrow-minded savant of the Latin school, who in his writings sets forth the facts as they were communicated to him, almost entirely without comment. Had he not somewhat idealized his subject he would have been untrue to his Romanic origin. When he wrote the "Decades" his task was not only that of the historian but also that of the geographer ; for the conditions were such that the two offices could hardly be separated. In his time scarcely any one who laid claim to a thorough education could doubt the spherical shape of the earth ; for those who were not familiar with the cosmological views then dominating could never have understood Dante (comp. "Inferno," cant. xxxiv. v. 118, and "Paradiso," cant. i. v. 43–46). "Martyr," writes Dr. Schumacher privately in response to an enquiry of ours, "neither thought of Dante, nor had he any great cosmological ideas ; unfortunately he had neither seen Juan de la Cosa nor Amerigo Vespucci ; he was not even familiar with the letter written by Vespucci on the 18th of July, 1500." This must appear the more characteristic of Martyr, inasmuch as Columbus when he returned from his second voyage did not hesitate to pronounce the earth pear-shaped (comp. Navarrete, 'Coleccion,' tom. i. p. 227). We learn further that the aim of the present study was not to draw any conclusions, but merely to show how far Martyr's knowledge extended, and that it is merely preliminary to a more extensive work on La Cosa. We sincerely hope that Dr. Schumacher may soon find sufficient leisure to carry out his intention. It would indeed be a splendid task to compare the cosmological views of La Cosa with those of Vespucci and Columbus, to point

out how eminently vague and shallow the ideas of the latter were, and to give Vespucci his share of the credit so long withheld from him. Meantime we earnestly commend this solid monument of well-directed scholarship.

Dickens's Dictionary of London, 1879: An Unconventional Handbook. "Mr. Weller's knowledge of London was extensive and peculiar." —*Pickwick.* (London and New York: Macmillan & Co.)—This little book in paper covers costs only thirty-five cents. Its four-by-six-inch page is divided into three narrow columns; the print is too fine for comfortable reference, and made worse by the thinness of the paper, which allows the printing on the other side to confuse the eye. It is to be wished that inexpensiveness had not been carried quite so far; a seventy-cent book might have been much more than twice as good. It contains, however, an immense amount of curious and interesting matter, and that of so diversified and in some cases unexpected a character that the only way to deal with it is to set forth what we find in it that is especially noticeable, and what we miss that we had hoped to find. There are some useful maps; one, in outline, of the Thames from Teddington above London to Gravesend below, thus giving thirty miles of country east and west, and twice as much of the river in its windings. In this map it is pleasant to find, what the atlases do not give, the well-known names of Northfleet Hope and Fidler's Reach, and so on up the river to Blackwall Reach, Limehouse Reach, and the Lower and Upper Pool, until it seems as if we were coming from sea under the pilotage of Poor Jack. There is a skeleton plan of the London underground railways, a guide much needed by any visitor not familiar with their gloomy convolutions; there is a map of the railway stations around London, from Enfield to Epsom and from Windsor to beyond Woolwich; finally, there are maps of small pieces of London taken from its densest quarters, well conceived but not clearly printed, and almost impossible to use for finding any given street amid the tangle. They serve to remind the New-Yorker how little he has to charge his memory with in comparison with what the Londoner has to know, living in a town five times as large and one where most of the streets are only a square or two long, and where the seemingly-continuous thoroughfare is Charles Street, Queen Street, Short Street, and something else in the length of a quarter-mile.

Under the heading "Fog" is an account of a "London Particular," with an attempted analysis of its composition. Under "Gas" is a full and apparently thorough account of the rules and customs of the gas-companies and a store of advice for the gas-consumer. Under "Nuisances" is a list of the disagreeables which may be avoided or removed, (*a*) by application to the first policeman, (*b*) by appeal to a police court, or (*c*) by lawsuit only. Among these last is church-bell ringing, so that it appears that Londoners who live near noisy chimes have no ready way of stopping them, in which lack of power they will receive the sympathy of residents of upper Fifth Avenue. Under "Opium Dens" and "Ratcliff Highway" is something about the holes for smoking opium described in 'Edwin Drood.' Under "Black Eye" you are told who undertakes the speedy cure or concealment (which?) of that infliction. Under "Bohemia" is a definition of the free-and-easy life known by that geographical term. Under "Paintings" is a really wonderful thing—an alphabetical list of painters, sculptors, and architects whose works may be found in London, with the places where these may be found: thus, one is sent, to study Gainsborough, to nine different public institutions, some of which are the last places in which one would look. So that it will be seen that this book takes in a wide extent of information, while we have to say of it that in almost every case there has gone to its make-up a very intelligent sort of criticism. It is, therefore, matter of surprise that we find no mention of the Thames embankment as a recent construction of singular importance; not a word of Hampstead Heath or Hampstead, while many small places around London are described; no account of "Greenwich"—a brief mention of the hospital and school, indeed, but nothing about fish-dinners or the "Trafalgar" or "Ship"; no mention of the Temple, nor of Apsley House, nor of Smithfield, nor of Sergeant's Hall; and under "Cleopatra's Needle" mention of its whereabouts only, with nothing about its origin or value. "Gog and Magog" is a most unsatisfactory article. One finds "Rag and Famish," and a reference to the club which is so called, but under the Club title no mention of the nickname; and this is a real disappointment, for we had hoped to find that by-word explained. Under "America" one is referred to "United States" and "Dominion of Canada," but neither of those titles appears. This list of non-appearances and failures might be much prolonged, but it can serve only as a reason for asking the compiler and the publishers to give us a new edition, enlarged and greatly improved in style and appearance.

Rare Engravings and Etchings.

Frederick Keppel, of 243 Broadway, New York, has just received from London a large and unusually choice collection of Engravings and Etchings, including landscapes, fine portraits, and sacred and classical subjects, by the principal engravers of the seventeenth, eighteenth, and nineteenth centuries.

Correspondence is invited, and engravings will be sent, on approval, to any address on receipt of reference.

N.B.—Fine engravings can be selected, costing, when framed, from about $10, or attractive subjects in etching from $2, framed.

HENRY B. BULT,
PRINT SELLER,
RARE AND FINE LINE ENGRAVINGS,
ANCIENT PRINTS, PORTRAITS, ETCHINGS,
PRINTS FOR ILLUSTRATING.
706 BROADWAY, NEW YORK.

PHOTOGRAPHS of Gothic and Renaissance Architecture in Tuscany.—Mr. W. J. Stillman proposes to issue a series of permanent photographs of twenty-five subjects chosen from the most interesting works of Gothic and Renaissance architecture in Tuscany.

The prints will be 7 x 5 inches in size, mounted on card-board 10 x 14, and issued in a portfolio. Price $20 the set. The issue must be dependent on his obtaining subscriptions for not less than fifty sets. Subscribers' names will be received by Mr. CHARLES H. MOORE, Harvard College, Cambridge.

THE NATION.—Volumes and Back Numbers for sale. Address the publisher.

"The course of the *Nation* newspaper in its treatment of subjects connected with money, currency, financial legislation, and capital and labor, has always, I believe, been eminently sound and wise; and its files contain the greatest body of serviceable teaching respecting these subjects which can be found in this country. It has also many valuable studies of some of the changes which have been going on during the last fifteen years in our laws, in our methods of political action, and in the character of our people. It is a necessity for clergymen and all students of our national thought and life."—REV. J. B. HARRISON, in the *Christian Register* of August 17, 1878, in an article on the American Literature of Capital and Labor and the Organization of Society on the Principles of Justice.

The Nation.

NEW YORK, THURSDAY, JUNE 12, 1879.

The Week.

THREE months of bill-framing, bill-passing, caucussing, and sustaining vetoes have convinced the Democrats in Congress that they cannot get along without the President. On Thursday, therefore, they resigned themselves to the inevitable, and brought into the House, not the Legislative Appropriation Bill shorn of the obnoxious rider, but a bill containing the appropriations of the current fiscal year (ending June 30), with numerous exceptions tacked on at the end, and with the omission of the rider as well as of all provision for the expenses of the Federal courts, which are to run the gauntlet of the White House in a separate measure. The Republicans making no opposition, it was passed on Monday by 118 to 21, the latter number representing the total army of thick-and-thin "revolutionists," of whom four were from the North, two from Missouri, and the rest from south of Mason & Dixon's line. On Thursday the Senate passed, after a warm debate, by 30 to 18, the bill repealing §§801, 820, 821 of the Revised Statutes, and making new provision for the drawing of jurors. Mr. Edmunds played, as he has done so much of late, the rôle of recording angel to the Democratic party, by offering amendments sure to be defeated, but sure to cause a flutter in the enemy's camp and to make voting them down uncomfortable. His principal test of this kind was a proviso that no disqualification on account of race, color, or previous condition of servitude should be allowed in a United States *or State* court. When objection was made to the insertion of State court, Mr. Edmunds showed that the law of 1875 contained the identical prohibition, but he did not mention that Mr. Thurman's motion to strike it out at the time was supported by Senators Schurz, Ferry of Connecticut, Carpenter, Tipton, Sprague, and other Republicans. However, the Democrats rejected the amendment even without the State court. Mr. Edmunds and others objected with reason to the feature of the bill which directs that the special commissioner who makes up the jury-list with the clerk of the court shall be a "well-known member of the principal political party opposing that to which the clerk may belong." On Thursday the House passed the Supplemental Appropriation Bill, for judicial expenses, embodying also the Senate Jurors' Bill, amended for the better, and including the prohibition against color discrimination in the Federal courts.

The Senate Committee on Privileges and Elections resumed last Saturday the examination of the witnesses in the Kellogg-Spofford case. The principal witness was a mulatto who calls himself De Lacy and says he is of Irish parentage, his grandfather having been "Sir Hugh de Lacy." He was himself one of the negroes who, having been first a member of the Packard Legislature which elected Kellogg to the Senate, afterwards went over to the Nicholls Legislature and there helped to elect Spofford. He was called as a witness for Spofford to prove that money had been paid to secure Kellogg's election, he having made an affidavit to that effect. On taking the stand, however, he denied all knowledge of the subject, though he very frankly admitted that he had agreed to make such a statement, and that it was all a lie, and that he rather liked to tell a "social lie" once in a while, though statements made under oath he regarded in a different light. He disavowed the affidavit, calling the attention of the Committee to the fact that the name De Lacy was spelled *De Lacey;* though he afterwards admitted that he sometimes spelled it in this way "when in a hurry." Charles Cavanac swore that De Lacy offered to him to make the affidavit he denied on the stand, and had told him his story of bribery by Kellogg. Thomas Murray, a negro, related a conversation with him in which De Lacy asked how much money "there was in it," when Murray told him that he, Murray, expected to make $2,500 out of it. He subsequently explained that he expected to make this because "it would be worth $2,500 to have the good people of his community with him." John Seveignes, another witness, "descended from an old French family," swore that he was a member of the Packard Legislature in 1877 and voted for Kellogg; that he had made an affidavit to the effect that he was not present when Kellogg was voted for, and that this affidavit was "a blunt, straightforward lie," but that it was made from an honorable desire "to show how things were done." The Committee, unaided by the press, might have some difficulty in making out the exact value of such testimony as this, and we may therefore call their attention to the simple rule adopted by the *Tribune* and *Times*—*i.e.*, all testimony which makes in favor of Kellogg is true, all the rest is false. The witnesses are generally arrested and committed for perjury as soon as their testimony is ended, and are, curiously enough, generally custom-house officers.

The prospect of the appearance of philanthropic Northern steamers on the Mississippi to carry colored people away to Kansas has so alarmed the planters, that a convention of those of Washington County have drawn up an address to Northern "business men and benevolent societies," protesting against their lending countenance to any such scheme, on the ground that, though the negroes were not badly treated in Mississippi, their imaginations would be so fired by the proposal to carry them to "fresh woods and pastures new" that even the well-to-do would abandon their homes, and utterly disorganize the industry of the State. There is doubtless a great deal of truth in all this; but the sober and sensible and conservative planters who sign addresses of this kind ought to know that a little personal activity on their part in putting down lawlessness in the State would, in a very few years, make it as absurd to send steamboats to carry off its laborers as to send them up the Connecticut River for a similar purpose. The negro is such excellent material for electioneering purposes at the North that Southerners need have little hope of taking him out of politics until they police themselves better.

The movement which these Mississippi planters dread is the one promoted by General T. B. Conway, who is collecting subscriptions to enable him to take a steamer down the Mississippi to carry off intending emigrants, whom he is going to deposit in Wisconsin, General Butler having promised him 17,000 acres of land for the purpose; and he has, he says, agents in half a dozen States engaging employment for colored emigrants among the farmers. We sincerely trust, however, that none but the really destitute will avail themselves of General Conway's munificent offers. We are quite sure that a negro who owns anything will be better off in his own home than on General Conway's boat or General Butler's land-grant. It is a curious fact that at the meeting held in aid of the Conway movement in this city on Monday evening the only person who spoke of war and seemed to be prepared for battle was a clergyman—the Rev. Dr. Newman. He assumed that the use of the Mississippi as "a highway" by the Conway boat would be resisted by force, and announced, amid thunders of applause, that in that case "the people of the North would make it a highway." In fact, within a few weeks an extraordinary number of ministers have been heard sharpening their swords.

The Ohio Democratic platform is a commonplace rather than a "ringing" document. It demands "free and fair elections," insists that the laws enacted by Congress under pretence of "regulating the manner of Congressional elections" are unconstitutional

and ought to be repealed, and that they are also "instrumentalities of fraud, force, and corruption"; declares that impartial juries are necessary to the preservation of liberty, and that juries have been "packed," and demands that they shall be so "packed" no longer; that the Republican minority in Congress, and the President by his use of the veto power, have shown a spirit of faction; urges Congress to refuse to appropriate a dollar "to pay soldiers, marshals, deputy-marshals, or supervisors of election, to interfere with or control the elections"; castigates the Republicans; reaffirms the financial principles of the party—*i.e.*, that the issue of money is a function of Government, that the national banks ought to be broken up, and Treasury notes substituted for bank-notes; denounces the demonetization of silver as a fraud in the interest of the bondholders; deplores the rapid increase of the interest-bearing debt, and demands that "it be put in process of extinction"; defends the Legislature against Republican attacks, and insists that the right of expatriation must be recognized by the German Empire. General Ewing, their nominee for Governor, was a distinguished officer in the war, and his selection is for this reason chuckled over as an effective mode of getting round the Stalwarts; but he is also one of the foremost Greenbackers in the country. The Ohio Nationals also held a convention on the 4th instant. The delegates are said, by the correspondent of the Cincinnati *Gazette*, to have been on the whole "an exceedingly fine-looking, earnest, business-like set of men." There is no doubt they are earnest, for the platform demands the immediate repudiation of the national debt, and this has already led to a bolt; so that the probable effect of the party in the campaign is very difficult at its present stage to estimate.

There is nothing new in the Presidential field beyond the rapid decline of the Grant "boom," and the abandonment of the scheme of welcoming him with a monster procession across the continent, known of late as "the hippodrome." Mr. Sherman's pretensions attract more attention than anybody's, and the New York *Times* maliciously calls attention to the fact that, as the Republican party at the South now consists almost exclusively of Treasury officials, Mr. Sherman will be able to send up solid Sherman delegations from all the Southern States to the convention. How any paper can be so evil-minded and uncharitable it is difficult to imagine.

A most entertaining paragraph in the Boston *Journal* alleges in reply to the *Nation* that the sectional controversy was not revived by the Republicans in 1876. We are glad to read a statement of this kind in a Stalwart Republican paper, because it shows at least the existence of a certain shame; but unhappily there is not one word of truth in it. Republican speakers and press, beginning with Vice-President Wheeler's opening speech in Vermont, spoke of hardly anything but the Southern question, to which, at the cost of much obloquy, we kept calling attention every week as dangerous and discreditable. The finances and civil-service reform and almost everything else were totally ignored. We may call as one witness on this point whose testimony the *Journal* will not question the eminent Mr. William E. Chandler. That statesman, being much dissatisfied with the new President, published a letter to the New Hampshire Republicans in the last week of December, 1877, in which he reproached Mr. Hayes with perfidy on the ground that his "campaign was carried on, so far as methods and utterances were concerned, in no respect differently from the campaigns of 1868 and 1872"; "'the bloody shirt,' as it is termed, was," said he, "freely waved, and Governor Hayes himself urged prominent public men to put forward as our best argument the dangers of rebel rule and a solid South." In fact, we can recall nothing in recent political history more audacious than the pretence that it is "the Brigadiers" in the present Congress who have revived the sectional controversy.

The way the revival of the controversy was arranged by the Republican chiefs was instructively illustrated in Mr. Wheeler's case. His letter of acceptance, written in July, 1876, following the line of the platform, was moderate and conciliatory, giving the principal place to the currency and civil-service reform question. A month later he delivered the opening speech of the campaign in Vermont, doubtless having in the meantime received his instructions, and we cannot describe its nature better than in our own summary of it in our issue of Aug. 31, 1876:

"Mr. Wheeler spoke in Vermont, and devoted himself exclusively to reminiscences of the rebellion, showing how many 'ex-rebels' there were in the House last winter, how bitter and unrepentant they were, how completely identical in spirit they were with the 'Missouri Border-ruffians' twenty years ago in Kansas, how entirely the South was in the hands of these men; and he alleged, as of his own *knowledge*, that the Southern people 'regarded the amendments of the Constitution in reference to slavery, and the laws for the protection of freedmen, as the French provinces did their cession to Prussia at the point of the bayonet.' He described the issue in the present canvass as 'the old issue' of the war, and represented the approaching election as a sort of continuance of 'the work so effectively done by your bayonets at Gettysburg.' Not one word of allusion to reform of any kind in the Government; not a hint of the need of any reform."

In truth the twist given to the canvass, after Mr. Hayes's nomination, was the wickedest thing done by politicians since the attack on Fort Sumter.

The investigation by the Pennsylvania Legislature of the charges of corruption brought against some of its members in connection with the Pittsburgh Riot Relief Bill has ended, as such investigations are pretty sure to end, in the failure of the attempt to expel the guilty members. The bill appropriated $4,000,000 to pay for part of the losses growing out of the railroad riots of 1877, and in itself it would seem as if there was great propriety in the State of Pennsylvania taking upon itself the payment of these losses, since it was certainly responsible for the unexpected proportions the riot assumed. For two or three days a mob of ruffians and thieves held complete possession of the city of Pittsburgh, and although it was patent from the beginning that the county authorities were either in sympathy with the rioters or powerless to restore order, they were allowed to burn and sack to their hearts' content. The responsibility for such things must necessarily rest upon the State which permits them, and there was nothing more pitiable connected with the riots of 1877 than the helpless appeals from large and powerful States to the general Government, for aid in repressing a disturbance which a well-organized militia would have been perfectly competent to cope with.

All this, of course, has nothing to do with the question of the means used to forward the passage of the Riot Relief Bill, which seem to have embraced the most unblushing corruption of members of the Legislature. Most of those approached appear to have succumbed, while the testimony taken also disclosed facts implicating a number of officials outside the Legislature. The cases of these gentlemen the Legislature evidently considered more important than its own; for, after refusing to unseat the members involved, it immediately proceeded to direct the institution of criminal proceedings against the officials in question. The Philadelphia *Bulletin*, which takes a very severe view of the matter, thinks that the worst of it is that, under the biennial system now in force in Pennsylvania, it will necessarily be a year before the people have an opportunity of expressing their opinion of the transaction. It must be admitted that this is an objection to the biennial system which has been hitherto overlooked. Biennial sessions have generally been advocated because they would give the public only half as much legislation as it had had before. Whether this is a compensation for the loss of the annual opportunity to make bad members of the Legislature take "back seats," is a question for publicists to consider.

The Supreme Court of Tennessee has rendered a decision declaring the act of that State repealing the charter of the city of Memphis constitutional. It will be remembered that the

Legislature created in the place of the old municipal government a new organization, known as a Taxing District, consisting of various bodies charged with the duties ordinarily performed by branches of a city government, some of the members being appointed by the governor with the consent of the Senate or the courts, others being chosen by the qualified voters. The duration of the new system was limited to two years; and, practically, the result of the act was to put the city government into commission for that time. It was contended that this was a departure from democratic usages, on the ground that it violated the rule that taxation and representation should go together; that inasmuch as the "Taxing District" was merely the city under a new name, the taxes must be levied by the corporation itself. The court, however, held that wherever compulsory taxation is found necessary to compel a city to perform properly its duties as an agency in State government, or to fulfil any obligation legally or equitably resting on it in consequence of the action of such a body, the State has ample power to provide for the necessary taxation, and *the people to be taxed have no absolute right to a voice in determining whether it shall be levied*, except through their representatives in the Legislature. The decision announces no new principle of law, but merely applies well-established principles to a novel case. The case has an important moral, however, for the thousand and one cities and towns scattered through the United States which have pushed their right of creating debt dangerously near the point of insolvency.

There was an active speculation during the week in silver bullion in London, where the price advanced from 52¼*d.* per oz. to 52⅝*d.* to 52½*d.*, from which it subsequently fell to 51½*d.*, the closing price. The speculation there was assisted by a demand for China to pay for silk, and by reports that the German Government had decided to withhold sales for the present. No one there or here took much account of the Warner Silver Bill, because it was understood that it could not become a law. Here the price of bullion changed, so that 412½ grains, the amount in a standard dollar, was worth as much as about 89½ cents, and as little as 87 cents; at the close the bullion value of this dollar was $0.87001. Exchange on London, where the discount rate in the outside market advanced to 1½ per cent. from 1 per cent., was firm at little below the gold-coin exporting point. Although below, one firm shipped $700,000 gold coin during the week, for reasons outside of those which govern the general market. Early in the week U. S. bonds declined, but in the latter part there was more demand for the 4 per cents. The national banks have the choice of taking these bonds—the only class of which there is an adequate market supply—or of giving up their note circulation. All first-class railroad investments were strong even to stocks, the most notable example of which was New York and New Haven, which pays scant 10 per cent. annually, and for which 171 was at one time bid. The working of the money market was towards ease, although the surplus bank reserve was increased so as to amount to only about $5,000,000. The money lost to the market in the last few weeks has, however, gone into the Treasury, and will come back again in payment for called bonds and July interest. The Stock Exchange was quiet. Mercantile business was active for the season; and the outlook for the staple crops South and West was good.

The promoters of the Emma Mining Company in England continue to receive hard treatment in the courts. Messrs. Lewis & Son, the metal-brokers in Liverpool, were sued by some of the purchasers of the stock for the sum they paid for their shares, on the ground that the defendants had conspired with Trenor W. Park and others to sell the mine for more than it was worth. The plaintiffs got a verdict for the full amount with interest, which the full court, on appeal, refused to disturb.

The weight which should be attached to Mr. McCulloch's speculations about the growth of the bi-metallic movement in England is illustrated by the statement of the last number of the *Economist*, that "the defection of the Liverpool Chamber of Commerce shows how practical men, who ought to be superior to such delusions, can bring themselves to believe in the efficacy of legislative enactments that 15½ grains of silver shall be worth exactly 1 grain of gold, and will keep them so." Moreover, the Calcutta *Englishman*, the leading Indian paper, treats the Liverpool Chamber's resolutions as a delusion also, and wonders how sensible men can imagine that by declaring silver to be worth so much more in relation to gold the world's monetary wealth would be correspondingly increased. In Mr. Stanhope's recent statement of Indian finance, too, although the annual loss on exchange through the depreciation of silver was acknowledged to be about £3,000,000 sterling, the only suggestion of bi-metallism as a remedy came from an obscure member, to whom nobody replied but Mr. Lowe, and he somewhat slightingly.

The Indian financial statement was not very satisfactory, and was only made palatable to the House of Commons by the announcement that a decided reduction in expenditures had been resolved on. There was a deficit in the year 1877–8 of £3,543,057, apart from nearly £5,000,000 allotted to public works. In the current year, although the revenue has been increased by nearly £7,000,000, the deficit was £1,355,000, still leaving the public works aside. The causes of this continued deficiency in spite of increased taxation are partly the military outlay caused by the Afghan war, and partly the loss on exchange. The consequence is that the outlay on public works has had to be greatly reduced, and the reserve fund for provision against famines has been swept away; and as taxation has been carried to its last limits there is nothing left for it but to cut down expenses. This is to be effected by military reforms and the employment of more natives in the civil service, as they can be had for less pay than the Europeans. How valuable the treaty with Yakub Khan is, does not yet clearly appear. The Indian Government does not guarantee his title, and what his title is worth without a guarantee has yet to be seen.

The confession of the Government in England that expenditure must be reduced in India, which disarmed the Opposition in the debate; the peace with Yakub Khan, by which he surrenders no territory (the occupied passes do not belong to him); pays no indemnity, but receives $300,000 as long as he observes the treaty, and has his territory guaranteed against foreign attack (but not against home disputes, and his brother is now in the field against him), and obtains, as far as England is concerned, undisputed possession of his throne; the transfer of the management of the South African campaign to Sir Garnet Wolseley, and the submission to the retirement of the Turks from the Balkans and the cessation of all talk of "reform" in Asia Minor, are generally accepted in England as the abandonment by the Ministry of "the Imperial policy," and as preparation for the elections by the old Gladstonian plan of peace and retrenchment. In fact, they see the truth of the Duke of Argyll's remark, that "they are beginning to be found out."

The troubles in Eastern Rumelia, now that the Sultan has agreed not to occupy the Balkans, have dwindled down to the question of what kind of head-covering the new governor, Aleko Pasha, is to wear. The Sultan, who clings all the more tenaciously to the signs of power as the substance of it is vanishing, insisted on his wearing the fez, a red cap which has for forty years been the official head-dress of the Turkish Empire, to show that he was a Turkish officer. The Bulgarians, on the other hand, wished him to wear the "stove-pipe" hat of the western world, to show that he was not a pasha of the old type. Aleko himself appears to be a thorough Bulgarian at heart, and determined to administer the province for its own benefit, so he has adopted a compromise, suggested it is said by the Russians, by wearing the Bulgarian calpak, or fur cap of the peasantry.

THE NEED OF "SMARTNESS" IN POLITICS.

THE Democrats have been encouraged in much of their policy during the past three months by the reflection that they have been only imitating the action of the Republicans, in cases where the latter happened to be bent on something to which the President for the time being was opposed. But they have overlooked the fact that even in "coercing the President" the Republicans showed themselves practical men—that is to say, they never began to coerce a President without being perfectly sure that they would end by getting the better of him. They never undertook such a task as the Democrats have undertaken without having a two-thirds majority in both houses, and thus being able to overcome the veto beyond any manner of doubt. Undertaking with a bare majority to pass measures to which the party to which the President belongs was opposed, would only have been justified by positive information that the President would disregard his party obligations sufficiently to sign them. But that the Democrats had no such information when they began the late struggle, was shown by the fact that they fastened their various amendments to the appropriation bills, which of course would not have been necessary had they known that the President agreed with them. It may be said that even in the absence of such information they were fairly justified in trying their luck with such legislation as their constituents called for, or as in their judgment the interests of the country seemed to require; but in that case also there was no need to present this legislation in the form of a menace by which the moderate portion of the country was sure to be alarmed or provoked.

They might have satisfied their constituents or their own sense of duty by putting the proposed changes in the law in the form of independent bills, and then, had the President vetoed them, they had a ready defence for taking no further action in the fact that they are not two-thirds of either house. Not being two-thirds of either house, their sole remedy for the veto lay in an appeal to the country at the polls. For although it has often been asserted, apropos of the present controversy, that the power of legislation under the Constitution resides in the majority of both houses of Congress, this is not strictly correct. It resides in two-thirds of both houses. Anything less than two-thirds only possesses the power of legislation in conjunction with the President—or, in other words, only possesses it conditionally. In case it disagrees with the President its remedy is to ask for a popular decision.

This decision the Democrats might have demanded with considerable *éclat*, for the Republicans were not at the outset steady, consistent, or united in their opposition to the change in the Army Bill. The principal objection of many of them to it was that the persons proposing it were bad fellows with evil designs. The Democrats might have met this triumphantly by a course of studied moderation, instead of which they at once proceeded to justify their opponents by putting their schemes in such shape as to warrant the belief that they meant, if they could not carry them, to leave the Government without funds. The Republicans have been guilty during the past eighteen years of a great many high-handed measures which will ill bear examination in quiet times, but they have never been guilty of attempting anything high-handed which they were either afraid to perform or totally unable to perform, and they thus saved themselves from ever becoming grossly ridiculous. Their quarrel with Andrew Johnson, for instance, which presented many situations like that in which the Democrats now find themselves, was marked by many ludicrous features, but it was carried on vigorously by men who knew from the outset what they could do, and did it. The impeachment may seem to constitute an exception, but when it was undertaken there was every reason to believe that the requisite two-thirds vote in the Senate would be forthcoming. It never would have been undertaken if there had from the outset been not the smallest chance of a two-thirds vote.

It must be admitted, as the world goes, that next to a reputation for high principle, the best thing for a party to have is a reputation for shrewdness. Parties, like individual men, can achieve considerable success merely by being thought able to manage their affairs well, even on a low moral plane. Society puts up a good deal too much with clever knaves, but knavish blockheads it cannot abide. The Democratic party, as a correspondent points out elsewhere, has deplorably little to boast of in the way of moral character, but it could achieve considerable success in spite of this if it were only managed with dexterity and force. If its leading men were agreed even on a bad policy, and pushed it with vigor and efficiency, it would derive a certain respectability from it. If the party had had a two-thirds majority in the present Congress, and had used it to repeal all the obnoxious legislation of the war—or, to speak more correctly, all legislation intended to bear specially on the South—the country would have accepted it with resignation if not with content. People would have bowed to a display of real power even if they condemned the use made of it. But the Democrats have talked and acted as if they had a two-thirds majority when they had really only a majority of twelve or fifteen, and the result has been at the last a kind of mental collapse, which disgusts people even more than immorality. The effect of this collapse is made all the greater by the fact that the public has been used now for a great many years to a strong government. That is, it has been used, whether for good or ill, to seeing the party in office a powerful, determined party, which knew what it wanted and how to get it. The love of strong government thus produced finds expression among the Republicans in the Grant movement, and there is no doubt the Democrats too have been considerably affected by it. The latter would, perhaps, object just now to a strong executive, but they are no more ready for a weak, vacillating legislative majority, or for party managers who do not know what they are driving at and handle their tools clumsily, than the Republicans are. The Democratic rank and file were undoubtedly vexed and humiliated by the way the chiefs allowed themselves to be "euchred" in the last Presidential canvass and count, and in the after-negotiations for the purchase of the carpet-baggers; and this vexation and humiliation are likely to be much increased by the recent performances in Congress. The only excuse for not being practical in politics which the average American voter will accept, is goodness. He pardons simplicity and stupidity in a truly good man; but he cannot pardon it in a man who sets up to be as smart as anybody, and full of resource, and not particular about means, and yet allows himself to be foiled by his enemies in everything he undertakes. The Democrats might have retired from the present attempts at legislation with excellent materials for an appeal to the people, had they retired before a simple veto on an independent measure. But they retire now, in spite of all they can say, with the air of being very weak and of having been found out; which is a very unpleasant predicament for either a party or a man.

RELIGIOUS BELLICOSENESS.

A CORRESPONDENT, writing from Illinois, whose letter we publish on another page, takes a somewhat gloomy view of the future relations of the Northern and Southern States of the Union—gloomier, we feel sure, than the facts will warrant. But that he has touched on one of the great obstacles in the way of the restoration of harmony can hardly be denied. The principal one we still hold to be the humane interest of the North in the condition of the negro. This would be, however, we have little doubt, a healing influence rather than an irritating influence, if the negro's condition imposed the same duties and responsibilities on all parts of the Union. But it is one of the misfortunes of the negro problem that it presents itself in a different way to each of the two great divisions of whites who have to effect a common solution of it. The Northern people, who have the fairest conception of the negro's rights and take the most hopeful view of his future, and have much more experience and patience than Southerners in dealing with helplessness and misfortune, have and can have no direct part in his social training. Moreover, they are completely exempt from the conse-

quences of his mental and moral defects—almost as much so as if he lived in Mexico.

The place of actual contact with him and direct experience of the difficulty of working with him would, however, be readily supplied by sympathetic imagination if it were not for the way in which his emancipation was brought about. If the Southern whites were simply countrymen of another region afflicted with an immense mass of ignorance and pauperism, there would be a larger amount at the North of that silent toleration which is now accorded to the groans of the Californian over the Chinese, and of the Western man over the Indians. Good people in this part of the country might not approve of their state of mind about the negro or of their method of dealing with him, but there would be a great deal of covert patience with it, and a great deal of reluctance to criticise it in too absolute a temper. The fact that the Southern white was recently a public enemy deprives him of the benefit of this toleration and turns all presumptions against him, and makes all his difficulties with the negro wear the air, not of struggles of an ill-trained man with a social problem which would disorganize any State at the North, but of efforts to get rid of the legitimate consequences of a bloody revolt brought on by himself. These things make the situation at the South in many ways unique, and suggest the question whether any change so likely to exert a wholesome influence on public opinion could occur as the diffusion of the negroes through the whole country in equal proportions. In this way the responsibilities and duties which his emancipation has created would be diffused, and it is only through the actual pressure of duties and responsibilities that political judgment is steadied and clarified, and political temper sweetened. If this could be done—that is, if the migration from the South could be greatly enlarged, and directed to other States as well as Kansas—we should probably witness the complete disappearance of the colored man from politics, because no part of the country would be left in the very undesirable position of a mere critic of the doings of other parts in his behalf.

But it is none the less true that, as our correspondent says, a good deal of the continuance of the bellicose spirit is due to the permanence among religious people of what may be called the mediæval view of war. In the Middle Ages the public enemy was not simply a rival or competitor or disputant; he was a criminal person, on whom defeat was a piece of divine chastisement. The object of fighting him, too, was not simply to dispossess him of something, or to prevent his seizing something, but to make him suffer. The war against him was carried on partly in the spirit of a crusade and partly of a family feud, and no end of it was considered satisfactory which did not leave him in a state of wretchedness. In the eyes of the modern statesman and professional soldier, however, war is simply a necessary mode of settling a controversy—a rough, brutal, and unsatisfactory mode, the rancor and destructiveness of which ought to be confined within the narrowest limits possible. This view, however, is somewhat hard for men who make the cultivation of moral earnestness their first duty, and they find it all the more difficult the deeper their sense of close relation to the Almighty.

It is very difficult, too, for any man who approaches duties or responsibilities in the absolute temper which a strong sense of Divine guidance gives, to bring himself to believe that when he passed three years in anything so solemn and serious as killing people, he was simply engaged in deciding which of two ways of working out a political question should prevail. There is something shocking to such a man in admitting that his enemies were, perhaps, after all good fellows, and that as long as the question was settled, the fewer of them there were killed and the sooner we made friends with the survivors the better. The following extract from the refusal of the Rev. J. H. Acton, of the Methodist Episcopal Church, to deliver an oration on Decoration Day, which curiously corroborates our correspondent's view, is clearly the utterance of one who fought as the Hebrew or mediæval soldier fought, not that he might live afterwards in peace and friendship with his enemy, but that he might get rid of him eternally. He cannot understand his being allowed to show himself in Congress any more than a Zulu can understand the European custom of taking prisoners:

"We are still on picket. The war is not over. The distant mutter of the conflict can still be heard. We are yet to lay other treasures away in the grave, murdered on the altar of revolution. We cannot insult our comrades; over their graves, before the God of the nation, we have sworn allegiance to the cause for which they died, and stand ready for the next bugle-call. But we have never scattered flowers and never will until the right shall finally triumph, and the enemies of our common country are driven from the place of power. Let the dead sleep. We are ashamed publicly to speak of their heroism in the history of to-day. They have passed beyond the stench and corruption, the flies and the maggots, the hunger and thirst under burning Southern suns, and no longer ask aught of us. Our heart aches. It is all a huge farce. A righteous indignation consumes us. The Government is heartlessly cruel; it called them to sacrifices a thousand times more terrible than the Juggernaut, and has forgotten the purchase price. The enemies who followed them with bloodhounds now seek the life of the nation, and orate the principles of the rebellion in the Senate chamber. No! We scorn this empty offering. Turn out these rebels; tear down their flags; send traitors where they belong; and God will carry the flowers in the deft fingers of the sunshine and the raindrop, and will weave wreaths and garlands by the agency of the winds, and will make melody by the orchestra of all nature. Until then we shall leave our harp on the willows, and continue to cry out, 'How long, O Lord! holy and true, dost thou not judge and avenge our blood on them?'"

Of course this way of looking at war is really utterly uncharacteristic of the American people. The way peace was made and the vanquished South was treated was perhaps the most striking illustration possible of the completeness with which the modern idea of war has taken hold of the popular mind. There is least rancor between the men who fought in the opposing armies, and not enough among any class of men to make it possible to inflict pains and penalties on anybody. But there is enough earnestness among the more religious classes to give, in combination with the memories of the war, a bellicose cast to their humane interest in the blacks, and make it easy to divide parties on the old war lines. The more thoughtful and better educated ministers are, of course, not to be placed in this category. A man who puts much mind into his religion, and who has looked back much on the long march of the race in the past, knows that after the solemn and sacred duty of fighting which every man owes to his country and kind, comes the equally solemn and sacred duty of laying aside the fighting spirit. It is no service to either God or man, and can be no service, to keep cherishing the recollection that you did a good thing at one time in blowing the heads off certain of your fellow-Christians and tearing out their stomachs with shells, or to think every time you look at the survivors that it would be a good thing if you could get a similar chance at *their* bodies. It is not in this way that religion and humanity have been most helped. They owe their greatest advances to the gladness of those who fought that fighting was over, and to their strong and often painful efforts to put aside all thoughts and all words and all passions which seemed likely to make fighting again necessary.

Considering how easily the spirit of hatred between communities is cultivated, how prone men are to it, what unnumbered woes it has inflicted on mankind, and what a terrible struggle all the intellectual and moral agencies of the world have had in subduing it, there is something almost ludicrous in the spectacle of a minister of Christ recalling his feats on the battle-field in a burst of dithyrambic passion, and encouraging people to look to more slaughter as a means of improving the moral condition of their enemies. For the fault we all find with the Southerners now is not that they are maintaining an institution we do not like, or that they are meditating a political revolution, but that they are not better men, more law-abiding, more faithful to their contracts, and kinder to the poor and dependent. There is a touch of satanic irony in the appearance of professing Christians as promoters of a desire to improve them by lacerating their bodies with deadly weapons and burning their houses.

THE LONDON THEATRES.

LONDON, May 24, 1879.

MR. MATTHEW ARNOLD, in his volume of 'Mixed Essays,' lately published, in speaking somewhere of some of the less creditable features of English civilization, alludes to the British theatre as "probably the most contemptible in Europe." The judgment is a harsh one, but he would be a bold man who, looking round him at the condition of the London stage at the present moment, should attempt to gainsay it. I have lately made a point of gathering such impressions on the subject as were easily obtainable, and a brief record of them may not be without interest. The first impression one receives in England on turning one's attention at all in this direction, is that a very large number of people are doing the same. The theatre just now is the fashion, just as "art" is the fashion and just as literature is not. The English stage has probably never been so bad as it is at present, and at the same time there probably has never been so much care about it. It sometimes seems to an observer of English customs that this interest in histrionic matters almost reaches the proportions of a mania. It pervades society—it breaks down barriers. If you go to an evening party, nothing is more probable than that all of a sudden a young lady or a young gentleman will jump up and strike an attitude and begin to recite a poem or a speech. Every pretext for this sort of exhibition is ardently cultivated, and the London world is apparently filled with stage-struck young persons whose relatives are holding them back from a dramatic career by the skirts of their garments. Plays and actors are perpetually talked about, private theatricals are incessant, and members of the dramatic profession are "received" without restriction. They appear in society, and the people of society appear on the stage; it is as if the great gate which formerly divided the theatre from the world had been lifted off its hinges. There is, at any rate, such a passing to and fro as has never before been known; the stage has become amateurish and society has become professional. There are various explanations of this state of things, of which I am far from expressing disapproval; I mention it only because, superficially, it might seem that the theatre would have drawn strength from this large development of public favor. It is part of a great general change which has come over English manners—of the confusion of many things which forty years ago were kept very distinct. The world is being steadily democratized and vulgarized, and literature and art give their testimony to the fact. The fact is better for the world perhaps, but I question greatly whether it is better for art and literature; and therefore it is that I was careful to say just now that it is only *superficially* that one might expect to see the stage elevated by becoming what is called the fashion. They are in the truth of the matter very much more in France. In France, too, the democratizing, vulgarizing movement, the confusion of kinds, is sufficiently perceptible; but the stage has still, and will probably long have, the good fortune of not becoming the fashion. It is something at once more and less than the fashion, and something more respectable and permanent, and a part of the national life. It is a need, a constant habit, enjoying no fluctuations of credit. The French esteem the theatre too much to take rash liberties with it, and they have a wholesome dread, very natural in an artistic people, of abusing the source of their highest pleasure. Recitations, readings, private theatricals, public experiments by amateurs who have fallen in love with the footlights, are very much less common in France than in England, and of course still less common in the United States. Another fact that helps these diversions to flourish in England is the immense size of society, the prevalence of country life, the existence of an enormous class of people who have nothing in the world to do. The famous "leisure class," which is the envy and admiration of so many good Americans, has certainly invented a great many expedients for getting through the time; but there still remains for this interesting section of the human race a considerable danger of being bored, and it is to escape this danger that many of the victims of leisure take refuge in playing at histrionics.

In France (as I spoke just now of France) the actor's art, like the ancient arts and trades, is still something of a "mystery"—a thing of technical secrets, of special knowledge. This kind of feeling about it is inevitably much infringed when it becomes the fashion, in the sense that I have alluded to, and certainly the evidences of training—of a school, a discipline, a body of science—are on the English stage conspicuous by their absence. Of how little the public taste misses these things or perceives the need of them, the great and continued success of Mr. Henry Irving is a striking example. I shall not here pretend to judge Mr. Irving; but I may at least say that even his most ardent admirers would probably admit that he is an altogether irregular performer, and that an artistic education has had little to do with the results that he presents to the public. I do not mean by this, of course, that he has not had plenty of practice; I mean simply that he is an actor who, in default of any help rendered him, any control offered him by the public taste, by an ideal in the public mind, has had to get himself together and keep himself together as he could. He is at present the principal "actuality" of the London stage, and his prosperity has taken a fresh start with his having at the beginning of the winter established a theatre of his own and obtained the graceful assistance of Miss Ellen Terry. I say I shall not pretend to judge Mr. Irving, because I am aware that I must in the nature of the case probably do him injustice. His starting-point is so perfectly opposed to any that I find conceivable that it would be idle to attempt to appreciate him. In the opinion of many people the basis, the prime condition, of acting is the art of finished and beautiful utterance—the art of speaking, of saying, of diction, as the French call it; and such persons find it impossible to initiate themselves into any theory of the business which leaves this out of account. Mr. Irving's theory eliminates it altogether, and there is perhaps a great deal to be said for his point of view. I must, however, leave the task of elucidating it to other hands. He began the present season with a revival of "Hamlet"—a part, one would say, offering peculiar obstacles to treatment on this system of the unimportance of giving value to the text; and now, for some weeks past, he has been playing the "Lady of Lyons" with great success. To this success Miss Ellen Terry has very considerably contributed. She is greatly the fashion at present, and she belongs properly to a period which takes a strong interest in æsthetic furniture, archæological attire, and blue china. Miss Ellen Terry is "æsthetic"; not only her garments but her features themselves bear the stamp of the new enthusiasm. She has a charm, a great deal of a certain amateurish, angular grace, a total want of what the French call *chic*, and a countenance very happily adapted to the expression of pathetic emotion. To this last effect her voice also contributes; it has a sort of monotonous husky thickness which is extremely touching, though it gravely interferes with the modulation of many of her speeches. Miss Terry, however, to my sense, is far from having the large manner, the style and finish, of a *comédienne*. She is the most pleasing and picturesque figure upon the English stage, but the other night, as I sat watching the "Lady of Lyons," I said to myself that her charming aspect hardly availed to redeem the strange, dingy grotesqueness of that decidedly infelicitous drama.

The two best theatres in London are the Court and the Prince of Wales's, and the intelligent playgoer is supposed chiefly to concern himself with what takes place at these houses. It is certainly true that at either house you see the London stage at its best; they possess respectively the two most finished English actors with whom I am acquainted. Mr. Arthur Cecil, at the Prince of Wales's, has a ripeness and perfection of method which reminds me of the high finish of the best French acting. He is an artist in very much the same sense that Got and Coquelin are artists. The same may be said of Mr. Hare at the Court, whose touch is wonderfully light and unerring. Indeed, for a certain sort of minute, almost painter-like elaboration of a part that really suits him, Mr. Hare is very remarkable. But the merits of these two actors, and those of some of their comrades at either theatre, only serve to throw into relief the essential weakness of the whole institution—the absolute poverty of its repertory. When Matthew Arnold speaks of the "contemptible" character of the contemporary English theatre, he points of course not merely at the bad acting which is so largely found there; he alludes also to its perfect literary nudity. Why it is that in the English language of our day there is not so much even as an unsuccessful attempt at a dramatic literature—such as is so largely visible in Germany and Italy, where "original" plays, even though they be bad ones, are produced by the hundred—this is quite a question by itself, and one that it would take some space to glance at. But it is sufficiently obvious that the poverty of the modern English theatre is complete, and it is equally obvious that the theatre is all one—that the drama and the stage hold together. There can be no serious school of acting unless there is a dramatic literature to feed it; the two things act and react upon each other—they are a reciprocal inspiration and encouragement. Anything less inspiring than the borrowed wares, vulgarized and distorted in the borrowing, upon which the English stage of to-day subsists, cannot well be imagined. Coarse adaptations of French comedies, with their literary savor completely evaporated, and their form and proportions quite sacrificed to the queer obeisances they are obliged to make to that incongruous phantom of a morality which

has not wit enough to provide itself with an entertainment conceived in its own image—this is the material on which the actor's spirit is obliged to exert itself. The result is natural enough, and the plays and the acting are equally crude.

There can be no better proof of the poverty of the repertory than the expedients to which the Court and the Prince of Wales's have been reduced during the present winter. The Court has been playing a couple of threadbare French pieces of twenty and thirty years ago—a stiff translation of Scribe's "Bataille de Dames," and a commonplace version of a commonplace drama entitled "Le Fils de Famille." Scribe's piece is a clever light comedy—it is still sometimes played at the Théâtre Français ; but it belongs at this time of day quite to the dramatic scrap-bag. There is something pitiful in seeing it dragged into the breach and made to figure for weeks as the stock entertainment at one of the two best English theatres. At the Prince of Wales's they have been playing all winter and are still playing Robertson's "Caste"—a piece of which, in common with the other productions of the same hand, it is only possible to say that it belongs quite to the primitive stage of dramatic literature. It is the infancy of art ; it might have been written by a clever under-teacher for representation at a boarding-school. At the Criterion there is a comedy entitled "Truth," by an American author, Mr. Bronson Howard. Even the desire to speak well of American productions is insufficient to enable me to say that Mr. Bronson Howard offers a partial contradiction to Matthew Arnold's dictum. "Truth" may be an "original" drama ; I know nothing of its history ; but it produces the effect of the faint ghost of any old conventional French vaudeville—the first comer—completely divested of intellectual garniture, reduced to its simplest expression, and diluted in British propriety. XX.

SOME RECENT PESSIMISTIC THEORIES.

BERLIN, May 11, 1879.

THERE is probably no word in common use of such vague and indeterminate sense as the word "pessimist." A trenchant critic, a political malcontent or member of the opposition ; a philosophic man of what the phrenologists call the purely bilious type, who can no more help questioning ultra-utopian expectations, whether of this or another life, than he can stop thinking ; a scholar of retired leisure, whose greatest enjoyment is in seriously contemplating the enjoyment of others—all these we often see disposed of under the same category as the homeless, penniless, consumptive Leopardi, who seems to curse Nature herself as not merely indifferent but hostile, that his daily prayer for death was not sooner answered ; or Lenau, who cultivated a pantheistic *Weltschmerz*, wandering among primeval forests ; or the now only amusing Schopenhauer, who, had he been logically loyal to his own premises, would have committed suicide by starvation. Pessimism of some type is fast becoming the confessed creed of those who experience the inevitable reaction of a precocious culture, or find themselves falling behind in the struggles of survival ; of those whose superficial mental culture has left the heart untouched by all the great enthusiasms of humanity, and who have, perhaps unconsciously, adopted the maxim of the cynic, *Dum ridet philosophatur;* of those who have been suddenly awakened to a realizing sense that their early ideals, standards, and creed have been lost without being replaced by others, that the present is all man is sure of, and that they are unfairly handicapped in the world's hunt for pleasure and money. All this is infinitely removed from the tone of those who, from experiencing the limitations of knowledge and the perplexities of duty which only those know who have faced ultimate problems of science or of conduct, have had their mind and character tempered with a serious earnestness to which the current optimism of the day seems shallow and flippant. With this reminder we will leave the reader to determine for himself among the following speculations how much is temperamental, pathological, or truly philosophical, a task for which even Mr. Sully has given us very inadequate categories.

Julius Bahnsen is the only genius among the philosophic pessimists. In a series of papers appearing at intervals during the last ten years,* written in the most bizarre style, full of original, tropic imagery, the sentences fairly shattered with dashes, parentheses, etc., and in which all the best *aperçus* must be laboriously read in between the lines, he has elaborated a system of philosophy which teaches that "self-torture is the self-end" of all things. The phrase that this is the worst of all possible worlds he takes in bitter earnest, and instead of finding a wholesome tragic stimulus in the fact, as Hartmann says we should, he finds it depressing to the verge of desperation. The misery is universal and endless. His miserabilism is not merely pathological, but sometimes actually hysterical. There is an immanent teleology in his universe, but it is not merely alogical but anti-logical, and even anti-causal. Its development is dialectic in a sense, and its self-expositions are disintegrating. Sin, disease, and imperfection are alike guilty, for they result from the "prenatal acts of choice of our germinal individuality," which determined even our existence. Yet we know nothing of the beginning or end of things ; no man has torn the veil of Maya from more than his eyes. Characters are the ultimate forms of existence we know in the world, and he describes with wonderful sagacity and acuteness sixteen ground types, each of which is further distinguished by different degrees of energy and by "eucholia and dischola." If the world is monistic and develops, it is best to fancy will its substance and the idea its accident. It is true that all the antinomies are from the *Gemüth*, which, while it is the great oracle of pantheism in the soul, nevertheless compels the author to the eternal self-torture of making psychological analyses of his own mind and heart with increasing fineness and painfulness, until he has come to hate the very word healthy.

Another popular work by a friend of Hartmann* argues that the "harmony of the cosmos is the result of an indirect selection by the elimination of those heavenly bodies unfitted to survive." Myriads of ripe and unripe worlds were resolved back into cosmic mist by collisions, and the few billion stars we know of are the sporadic survivals, which chanced to have, or to be attracted into, the fittest orbit-paths. Countless others have wandered off into space or fallen back into their suns without attaining a steady balance between centripetal and centrifugal forces, while still more, revolving in parabolic or other orbits, were soon crumbled by the great difference of temperature between perihelion and aphelion. Venus, Earth, Mars, Moon, asteroids, meteors, comets, gas represent the decaying phases of planetary life. Assuming sensation as a fundamental property of matter, he argues that in a universe of perfect harmony the sum of atomic pain is reduced to a minimum, but as every series is sure to be sooner or later, as ours now is, a declining one, so we must face the fact that our world is slowly but surely approaching the "absolute pain of atomic disintegration." Although the physical organization of the inhabitants of other planets may be quite different from our own, we still know through the spectroscope enough of the physical conditions of life upon them to be sure that there, as here, evil and pain preponderate as a general law of nature.

In another large volume written three or four years ago, and published under an assumed name,† it is urged that God must be conceived as the primal undifferentiated ground and substance of all things. Not content with even such a negativity, he willed that, instead of his blank and empty being, absolutely nothing should exist. Creation and the world-process is the gradual accomplishment of this divine self-decreed annihilation. Instead of Schopenhauer's will to live he postulates a *will to die*, as the equally universal and immanent agent of all change. In all we do we are unconsciously willing death. The individualization of being—from atoms up to man and human institutions—and the friction and conflict between these specific forms of existence are characterized with great detail as the well-chosen and effectual means of this torturing "suicide of the absolute." The author exults that he has no children, and that nature has never seduced him to commit "that act which is the epitome of the world process." Celibacy is the highest or "absolute duty" for all.

Among the politico-social speculations of pessimism we will notice but two. The first is a pamphlet conspicuous in the window of every book-shop, and which in two or three months has reached a sixth edition.‡ It is written in a racy and extravagant style "from the stand-point of a resigned pessimism." Since political disabilities were removed from the Jews in 1848, Germany, we are told, has waged a relentless thirty years' war with her immense Jewish population. The latter have slowly monopolized the fine arts, the more experimental sciences, the larger industries, and at last the German parliament, and more than three-fourths of the German political press. The secret of Bismarck's successes is that he knows how to play into the hands of Jewish interests. The hostility against Wagner's music is all dictated by Jews because he represents pure Germanism. Semitic toughness and genius have been too much for

* 'Beiträge zur Charakterologie.'

* 'Der Kampf um's Dasein am Himmel. Versuch einer Philosophie der Astronomie. Von Dr. Karl Freiherr du Prel. 1876. Pp. 369.

† 'Philosophie der Erlösung.' Von Philipp Mailänder.

‡ 'Der Sieg des Judenthums über das Germanenthum; vom nicht confessionellen Standpunkt aus betrachtet.' Von W. Marr.

the Teutonic spirit. The materialism of public opinion, which is manufactured only in the interests of speculation, the dead formality of the recent issueless parliamentary debates upon proposed usury laws, the articles of the Berlin Congress, and the hard times since the war with France, especially the last seven lean years, are all due to Jewish agency and influence. Germany is already subjugated under a foreign yoke. The decomposing mission of the "absolute individualism" of the Hebrew race, who are the "moneyed Internationals" of Western Europe, will end with the helotage of its native population in a sort of occidental New Palestine. Thus, and not by a return to Jerusalem, will prophecy be fulfilled. As the Christians penetrated and at last revolutionized the pagan world, so the Jews are revolutionizing the Christian world after and in return for two thousand years of persecution and dispersion. To the advent of the pure Slavic races the author looks for ultimate deliverance from impending "Jewish Cæsarism."

Another recent, scholarly and much read work* contains some pessimistic strictures on the United States. America, it is said, is not an illustration of the westward course of empire, but it presents an entirely new line of development, with new problems, new ideals, and new dangers. Our politics, moreover, is of a scarcely higher order than that of South America; party rule has become the rule of "bosses," which are compared with the "tyrants" of Greek history. Corruption, moral, social, and political, is sure to result from suddenly increased facilities for intercourse, which causes a struggle for survival among the customs, ideals, and convictions of races, localities, etc. Only an ethnically pure people can survive the influences of modern life. This we are least of all nations fitted to do. The stultifying effects of religious superstition, and the disposition to judge of the value of education solely by the advantage it gives in money-getting, and the practice of abortion, are much exaggerated and condemned. The decrease in the ratio of native births and the preponderance of female infants, it is urged, indicate a stage of national physiological decay, while the position of woman, whether emancipated and on the platform or at the *head* of her own household, is calculated to give a prominence and an authority to the sentimental and personal view of things most prejudicial to rational culture and to progress.

The above views are perhaps all about equally extravagant. Most of the many writers upon the subject consider the condition of the universe far less desperate. Dr. Hartsen (Catholic) and Rev. A. Knauer (Protestant) admit that the world is as depraved and miserable as any pessimist could wish, but only to argue therefrom the certainty of blessedness in a future life; while I. Volkelt, admitting the present truth of pessimism, thinks that, in the future, happiness will come to preponderate over pain, because while "experience is pessimistic, reason is optimistic in spite of experience." Dr. L. Weis believes that pain has been in excess in the past, but that now the balance begins to incline slightly towards the side of happiness.

After turning all these dreary pages we are less able than ever to treat the problem seriously. We cannot decide whether wretchedness preponderates by a show of hands, we are told, for there are many *unconscious* pessimists; nor have we any test of the quality or measure of the quantity of happiness, for, if pleasures may be imaginary, so may pains. Some of the above theories concern intellectual problems of vast moment, but they do not affect the question whether happiness is to be tediously cultivated as a virtue or an art, or whether it is simply the natural and abounding "sense of life, transcending every special form of pleasure." And yet, when we find such books as we have characterized marked and dirtied by use in the public libraries, and so eagerly discussed in periodicals and in cultivated society, we are compelled to believe that the deepest and broadest of all possible philosophical problems are gradually taking shape and form; and that a new, comprehensive, and *popular* answer to the ultimate questions of life and destiny may before long become imperative for the preservation of moral and social order between modern civilization and lawless democracy.

* Hellwald's 'Cultur-Geschichte,' Bd. II.

Correspondence.

PURE LINE.

To the Editor of The Nation:

Sir: May I find place in your columns for brief answer to a remark in your review of my article on "Art in Engraving on Wood"—viz., that "the detail and definition of Bewick and his school seem opposed to the practice of tint-drawing which Mr. Linton recommends."

On the contrary, the drawings of the Bewick school were, I believe, without exception, tint-drawings; the details and defining lines left absolutely to the artist-engraver. My purpose in writing that article was criticism of the "new departure," and I had not space for more than a passing, and perhaps insufficient, explanation of the value of Bewick's work and the meaning of *drawing with the graver*. I may yet find opportunity of adding to what I have already said on that subject. More seems needed, if only to prevent such misuse of words as occurs in this same June number of the *Atlantic Monthly*, where the editor, reviewing the new edition of Longfellow, says that "all but two of the pictures here are executed in pure line," adding the publishers' assurance of the same character to be maintained throughout the work. If this means only that the fine-tooth comb will not be used, so far well; *pure line*, however, has an exacter meaning, which the plausive and promising reviewer may have yet to find out. W. J. Linton.

New Haven, Conn., June 2, 1879.

JEWISH OFFICE-HOLDERS IN GERMANY.

To the Editor of The Nation:

Sir: Respecting your remark in your article in No. 727 of the *Nation*, entitled "Reaction in Germany," "It will be long before an Israelite can be minister in Germany," I beg to state that the Minister of Finance of the Grand Duchy of Baden, Mr. Ellstaedter, is a Jew. He has held the position for the last fifteen years, antedating at least seven years the "Semitic" era of German Parliamentarism.

While I admit the existence of great prejudice against the Jew in Germany, still, according to my humble opinion, the German people would gracefully submit to the infliction of at least Mr. Bamberger, should it please Jupiter Bismarck to so dispose. He may try for a year or two the Egyptian theory of seclusion, but eventually he will have to return to the "Semitic theories." He cannot suppress these theories, nor can he get rid of their propagators by the simple processes of the Middle Ages, and it may come to pass yet that he will have to choose his support among the children of Jehovah.

Most respectfully yours,

J. Schoenhof.

New York, June 6, 1879.

GEGENBAUR'S ANATOMY.

To the Editor of The Nation:

Sir: The statement in the *Nation* of last week that Parker was ignored in Gegenbaur's 'Anatomy' was mistaken. Repeated and full references are made to him, as will be seen on pages 455, 457, and 463. Parker's contributions to our knowledge of the development of the skull are of the utmost value, and the omission of his name in such a work would have indicated a serious one-sidedness in the references, which run up to over two hundred. As an indication of the general fairness of the references in this book, and as showing the work the different countries are doing in this direction, the following comparison is made with the references in Huxley's 'Anatomy of Invertebrated Animals' (1877). The number of names in the latter amounts to one hundred and fifty:

	Germany and Austria.	Great Britain and Ireland.	France.	Russia.	Netherlands.	United States.	Scandinavia.	Italy.	Switzerland.
Huxley	38	21	17	6	5	5	2	3	3
Gegenbaur	41	19	18	4	4	3	4	3	2

This is based on the residence of the persons referred to, the numbers indicating the percentages. If the comparison were made upon the last ten years alone, the older references being discarded, the United States would be represented by a slightly greater number. X.

[Our correspondent—who, though he does not sign his name, is a well-known American comparative anatomist—has our thanks for showing the need for qualification of the statement concerning Parker. The remark referred to the "General Bibliography of Vertebrates" upon pp. 412 and 413, where his name does not occur. We had overlooked the references at the end of sections, and on page 444, in addition to those mentioned by our correspondent.

Even here, however, the great work on the 'Shoulder-girdle and Sternum' is referred to under "Sternum" only, and we look in vain for allusion to the papers on the skulls of birds (1873 and 1875), urodela (1876), sharks and skates (1876), and pig (1873), all of which were published, or widely announced as presented, before the date of the author's Preface.

As to the proportion of American references, we can only regret to believe the correctness of our correspondent's figures. But the student of vertebrate anatomy in this country will certainly be surprised at the lack of reference to Agassiz's volumes on turtles, to Wyman's 'Development of the Skate' and 'Nervous System of the Frog,' or to the anatomico-palæontological labors of Leidy, Cope, and Marsh, although fossil "birds with teeth" are mentioned. In short, we believe that for both justice and the highest usefulness the bibliography should have been either approximately complete, as in Owen's 'Vertebrates,' or confessedly rudimentary, as in Huxley's volume upon the same group.—Ed. Nation.]

SOURCES OF SPANISH-AMERICAN HISTORY.

To the Editor of The Nation:

Sir: Your correspondent "A. D." speaks of Mr. Edward Everett Hale's omission of some of the sources of Spanish-American history, especially in regard to documents touching the early history of New Mexico and Arizona. With the exception of the narratives of Cabeza de Vaca and Castañeda's story of Coronado's march, and the itinerary of Father Kino, I know of little of consequence that has been published.

The object of this note is to call the attention of archæologists to a large mass of historical material that exists in Mexico. The first explorers and missionaries to New Mexico were Franciscan friars. This was also the case in Arizona, but they were there subsequently supplanted by the Jesuits. The father-house and headquarters of the "Friars Minor" was at Querétaro, in Mexico. Among the archives of these enterprising religious at that city there was, and doubtless is, a large mass of documents of the greatest interest touching the early Spanish-American history of New Mexico especially. These, with the monuments of the order, will in time pass into decay or be forgotten. It would not be difficult for an American antiquarian to procure copies of these. Nor do I think it would be expensive.

There has been no ecclesiastical record of any consequence left by the order in New Mexico. The present secular clergy of the country have never cared a straw about such things. Everything was sent back to Mexico, and there is a rich mine for the archæologist.

Your obedient servant,

Lewis Kennon, A.M.

Fort Bayard, New Mexico, April 27, 1879.

[Mr. Kennon is correct as to the Franciscans having been *the* missionaries of Mexico. But Castañeda and Father Kino are not the only published works "of consequence." We can point, for instance, to Herrera, also to Gomara, Oviedo y Valdés, to the fragments of the 'Historia de la Nueva-Galicia' written by Fray Antonio Tello, published in the second volume of Sr. Icazbalceta's 'Coleccion de Documentos para la Historia de México,' and to the 'Historia de la Nueva-Galicia,' by Don Fray Matias de la Mota-Padilla.

The great convent of the Franciscans at the City of Mexico was, in September, 1856, barbarously sacked by order of the "liberal" government, and the archives could only be saved in part. The same thing had happened to the convent of the Jesuits in 1750, at that time by order of the royal government of Spain. In 1792 the following documents relating to New Mexico were gathered in the great convent "de N. S. P. S. Francisco de México" and sent to Spain, where they formed a part of the collection of Juan Bautista Muñoz: "Relacion del Nuevo-México," by Father Gerónimo de Zarate; "Restoration of New Mexico," by Diego de Vargas Zapata; "Report on New Mexico," by Fray Alonzo de Posadas; two volumes of papers on New Mexico, numbering 372 pages; several other documents on New Biscaya, Sinaloa, and Sonora. Of the collection then formed three copies were made, consisting each of thirty-two volumes. Two of these copies remained in Mexico, and one of them is still in the General Archives, complete with the exception of the first volume. The copy which once existed at the Franciscan convent has disappeared completely, the several volumes being scattered into private hands at various times. It is doubtful, therefore, if, aside from the Spanish copy and the Mexican copy, much of importance can yet be *easily* found. There is no doubt, however, that vast materials are still in existence which it will be troublesome to gather. If the enterprise called the 'Biblioteca Mexicana,' edited by Señor Vigil, continues to prosper, we may yet hope for the speedy publication of much valuable material.—Ed. Nation.]

PERMANENT CAUSES OF SECTIONAL DIVISION.

To the Editor of The Nation:

Sir: I remember that the *Nation* not long since, in an article upon Southern frauds, spoke of the "humane feeling" of the North towards the negroes as being, "after all, the most persistent force in Northern society." It has been a frequent thought of mine for many years, and one that I have more than once expressed in nearly your own language, that hatred of the Southern whites is the "most reliable force in Northern society." And in passing I will call your attention to the confirmation of my view of the matter furnished by the expressions collated in your article of a month ago, entitled "Hoosier Notions of a Republican Chief Magistrate." I predicted when Mr. Hayes entered upon his policy of pacification that he would fail utterly in bringing his party over to his views, for the reason that you cannot take the animating spirit out of a body and expect it to live. There is certainly a very large section of the Republican party—and it is the section which gives vital force to the party—to which there is no more chilling thought than that of pacification. It does not believe the Southerners capable of "being good," nor does it desire any such consummation. Some of them hail the report of a Southern outrage as a "Copperhead" hailed a Southern victory during the war, and, in my opinion, would be willing—yes, anxious—to have just as many negroes murdered, every week in the year, as might be necessary to keep the North roused to the point of for ever voting the South down.

This feeling, according to my observation, has its fountain head in the churches. For, although I was born in a section of Connecticut where Democratic opinion prevailed in the churches, I have never seen anything like it elsewhere. Undoubtedly four-fifths of the members of Protestant churches are Republicans. In the Methodist, and perhaps one or two other denominations, I should say nine-tenths are Republicans. Now, if I can read the churchly and clerical mind, I should say, further, that an unwritten article of its creed, and, in these sceptical days an even more binding than any written one, is, that Southern people are sinners, and that it is the duty of good Christians so to vote as to teach them that fact. This they have uniformly done. They did it when slavery existed, and even when they held slaves themselves, and they do it now. They did it as Federalists, as Whigs, as Republicans, and will do it again under some new name whenever the time comes. The strength of their animosity is such that it hallows, in their minds, the character and words of such men as Chandler, Morton, Logan, and Grant. Who does not remember how often, in his worst days and to the very last, Methodist conferences all over the country continued to endorse Grant? The same thing frequently happened in the case of Morton. And here in Illinois such an ignoramus as Logan is a pet of the Methodist Church. Bishop Fowler (now of New York) calls him a "Titan." And is it not plain, to-day, that these men—yes, and Republicans generally—wish to remand as many Southern States as is possible to negro and carpet-bag government? Take South Carolina as the extreme case. How many Republicans are there who, in full view of the disgraces of the past, in full view of legislative halls filled with men in whose presence John Morrissey and John Logan would pass for statesmen, in full view of the millions of debt saddled upon that State by the Parkers, Kimptons, Chamberlains, *et al.*—how many are there, I say, who would not to-morrow remand that State back to the same or an equally ruinous administration under plea of regard for the negro's rights? In fact, is not that precisely what their representatives are striving for in Washington at this moment; and is not the party gaining in strength daily upon this issue? And is not the President who displaced Packard and Chamberlain steadily yielding to them? Between two sections, one striving to force the other back to such a *régime* as that of from 1868 to 1876 in South Carolina, and

the latter resisting, is it possible that love or harmony can exist? *Ought* it not to be, rather, a death-struggle?

This seems, of course, like a Democratic argument; but it is not intended as such. Certainly there is little enough in the figure cut by that party at present to attract any one to it. When it surrendered to the greenback idea it deliberately abdicated all claim to respect, and destroyed its promise for the future. I have already spoken of the fact that the religious if not the moral forces of the North are mainly Republican, and full of animosity to the South. The Democratic party has so far lost its own self-respect, to say nothing of that of others, that its support is hardly more a help than a hurt to any cause. Its lack of moral force, even when in the right and in the majority, is illustrated daily before our eyes. A year ago the party redistricted Ohio, and indulged in a far from flagrant gerrymander. The State had been gerrymandered by the other side for a long period, and this was a clear case of tit-for-tat, such as might have been expected; yet to read three-fourths of the papers one would suppose the Democrats had for the first time in our history perpetrated a new and most outrageous political trick. Indiana had been for fifteen years and more outrageously gerrymandered by Mr. Morton and his followers, on both State and national representation. Yet a late attempt to retaliate in a less degree was long delayed and partly failed in a Democratic legislature, simply on account of the superior hue and cry which Republicans are always able to raise before the public. We see the same thing illustrated again in the case of contested Congressional seats. If the Democrats unseat an opponent, Republicans, fresh from their long series of similar practices, with the memorable case of Senator Stockton among them, make such an uproar as drowns Democratic defence at once, and persuades the country that the Democrats are inventing new and unheard-of villanies. Again, we see it in the case of the present contest in Congress. The attempt by the Democrats to compass the repeal of acts which, when passed, were so objectionable as to divide the party passing them, and were finally forced through by the same unparliamentary means now used to repeal, is denounced as "revolutionary" and unprecedented and monstrous, and the country seems to believe it. So little moral force, so little hold upon the public, has the Democratic party, people will hardly listen to it. The presumption is always against it. To use a negative illustration, it is somewhat in the position of an inebriate who would fain reform. To be seen taking a glass of wine injures his standing more than for a usually sober man to make an open night of it with his friends. This weak, discredited Democratic party is the only important influence which binds the sections—North and South—together. Remove it, and, for one, I fail to see what would be left but two warring sections which must, sooner or later, come to blows.

Returning now to the point at which I began, I repeat that it seems to me there is, and always has been, an inveterate animosity between the two sections. It is fully reciprocated at the South. At the North it is confined to about one-half the people; but that is the most influential, ruling half. At the South the feeling is almost unanimous among the whites. We once thought, or said, that slavery was the cause of it; but we see that it was not. It existed before the Revolution. It is not now declining. Was it brought over the ocean, an inheritance from Roundheads and Cavaliers? Is it ever to come to an end; and can these two great sections remain always united as things now are? We have heard much of the clasped hands over the bloody chasm; but it has been political ruin, and in many minds a smirched reputation, even to such old anti-slavery leaders as Chase and Seward, and Sumner and Greeley, and Adams and Trumbull, with many others who have attempted the feat.

For one, when I think about it all, I have my doubts as to the future. I query if the war was a finality. I even speculate as to whether the year 1961 will witness North and South a united nation. To speak seriously of a new civil war like the last is to entertain a terrible thought. Yet "the new rebellion" is daily dinned in our ears by vile demagogues who actually seem to try to provoke it. And I do not doubt there are thousands of shouting "loyalists" who positively desire it at the same moment they assure us it has already begun. Yet I think it may be safely doubted whether, even if assured of success, the North would be willing to enter upon such a task again. One such four years' test in a century is enough for any people.

Contemplation of such possibilities will perhaps raise the question whether our greatest danger lies in the semi-religious, sectional prejudices of Republican pietists, or in the economic ignorance of the Democratic rag, tag and bobtail. A study of history sheds a deal of light upon such a question. *

Notes.

HENRY HOLT & CO. will shortly add to their Leisure-Hour Series 'Maid, Wife, or Widow?' by Mrs. Alexander, and 'Delicia,' by the author of 'Miss Molly.' They announce that the important work on Yale College, in two volumes 4to, illustrated, now ready, will not be sold through the trade. We were in error in saying last week that their edition of Symonds's 'Renaissance' was printed from the English plates, the fact being, as we are informed, that the type was set and plates made in this country expressly for the edition. Our remark will, perhaps, be allowed to pass for a compliment.——J. B. Lippincott & Co. have in press 'Bodines; or, Camping on the Lycoming,' a practical guide to "camping out," by Dr. T. S. Up de Graff; and 'Great Authors of all Ages,' a selection of prose extracts by S. Austin Allibone.——R. Worthington publishes immediately a translation of the 'Souvenirs of Madame Le Brun,' the beautiful and accomplished artist whose long and happy life was nearly equally divided between the last century and the present. Her portrait will adorn the volume.——The notable features of the Supplement to Harvard College Library Bulletin No. 12 are a continuation of the Calendar of the Lee MSS., and conclusions of the catalogue of the Sumner Collection, of the bibliographical list of the Floras of Different Countries, and of the list of accessible scientific apparatus in our colleges, etc. The novelties are a list of the early editions of Spenser's poems; and Halliwelliana (by Mr. Winsor), brought down to 1851.——We have received from A. C. Armstrong & Son Part III. (Lenoir-Robbie) of the American Catalogue, the completion of the first volume of which is confidently expected within the next four months. It is unnecessary to repeat the praise which this admirable enterprise elicits at each new stage of its progress; but it is well to remind the general purchaser how far the catalogue is from being confined to original American works. The admirers of Moore, for instance, will find recorded here a great choice of editions, of which some are only nominally American.——We learn from the *Academy* that C. Kegan Paul & Co. have in preparation 'John Keats: a Study,' by Mrs. Owen; and from the same journal that an ineffectual attempt was made to procure a Civil-List pension for Keats's only sister, Mme. Fanny Keats de Llanos. An award of £150, however, having been made from the Queen's Bounty Fund, the memorialists have treated it as the nucleus of an adequate fund, and, having subscribed themselves, invite co-operation. Mr. W. M. Rossetti, 56 Euston Square, London, N. W., is of the committee to receive and acknowledge subscriptions.——*Polybiblion* for May has notices of several recent French works relating to this country: the Comte Louis de Turenne's 'Quatorze mois dans l'Amérique du Nord,' which takes an unfavorable view of our condition; Christophe Allard's 'Promenade au Canada et aux États-Unis,' too much given, we are told, "à l'admiration banale des voyageurs naïfs devant les Humbugs Yankees"; and 'Le Fondateur des Missions du Missouri-Central,' the Jesuit father Hélias d'Huddeghem, namely, who came to this country in 1833. *Polybiblion* also notices the publication by Didot of Montesquieu's 'Grandeur et Décadence des Romains,' with the hitherto unpublished notes of Frederic II., after the original captured at Potsdam by Napoleon. In the "Variétés" the bibliographical notes on the royal flight to Varennes in June, 1791, are concluded; and in the "Questions" a well-known scholar announces that he has encountered the word *philologie* in an unpublished letter of Joseph Scaliger's of 1577—a much earlier reference than Littré's, who quotes from Rollin's 'Ancient History.'——The annual meeting of the National Education Association will be held at Philadelphia on the last three days of July, and in connection with it the Spelling-Reform Association will also hold a session under the presidency of Prof. March, July 29 and 30. Addresses on the condition of the reform in America, by Prof. March, and in Germany and Europe by Prof. Brandt, are promised.——The twenty-eighth annual meeting of the Association for the Advancement of Science will be held at Saratoga in August, commencing August 27. Several geologic excursions, on Lakes George and Champlain, are contemplated. The headquarters of the Association will be at the United States Hotel.——J. W. Bouton announces that he has made arrangements for furnishing the *Gazette des Beaux-Arts* to American subscribers at the yearly rate of fifteen dollars, postage included, along with the weekly *Chronique des Arts*. Mr. Bouton is also the agent of the *Portfolio* and of *L'Art*.

—Dr. Elliott Coues's Bibliographical Appendix to his 'Birds of the Colorado Valley,' which we lately reviewed, has proved the occasion of one of the highest compliments paid of recent years to American science. A memorial has been addressed to him, signed by Professor Flower, Huxley,

Darwin, Mivart, Wallace, Gould, Sclater, Guenther, Newton, and numerous other eminent English zoölogists, declaring his special fitness to undertake a complete Bibliography of Ornithology, and urging the importance—the indispensableness, in fact—of his visiting the older European libraries in order, for the non-American portion, to consult every work mentioned at first hand. They express the hope that the same official liberality which has permitted Dr. Coues to remain in Washington for the prosecution of his bibliographical labors, will grant him leave of absence and provide the means for carrying out the wishes of the memorialists; and they promise him a warm welcome to England and every assistance in their power. Such a call ought to be irresistible, and we have every reason to believe that it will be heeded.

—We are requested to state that the family of the late William Lloyd Garrison desire the loan, with the privilege of copying, of such of his private letters as have a *biographical* importance, especially for the early years of his life. These letters will be carefully returned according to the instructions of the lender. They may be sent to Mr. Francis J. Garrison, care of Houghton, Osgood & Co., Boston.

—Director James T. Gardner's Report for 1878 of the New York State Survey recalls afresh the suggestive comparison between the accurate survey of the Moon's surface and what has hitherto passed for the survey of the first State in the Union. Two sheets accompany the report, embracing the interior belt from Albany to Rochester, on which the labors of the Survey have been chiefly bestowed. On these are set down only those "points, boundaries, and topographical features whose geographical positions are precisely known by trigonometrical measurement." So astonishingly few are these that, the United States Survey of the Lakes and the United States Coast Survey being excluded, the work of Mr. Gardner and his assistants during the past three years is all that saves the map from being a *tabula rasa*. But let us come down to particulars:

"The measurements embrace an area of about two thousand square miles in one of the most wealthy and populous parts of the State, containing two important cities and nearly two hundred villages and hamlets; yet every one of these towns is misplaced, from one to two miles, on all existing maps of the State, no trigonometrical determinations of latitude and longitude having ever before been made in the region."

"In the State Engineer and Surveyor's office there is no record of the true bearing and length of the lines which bound so important a county as Onondaga. After a careful search among the original notes of the lot surveys, I am unable to ascertain the area of this county within ten thousand acres."

"We have no reliable data by which to draw the course of even such rivers as the upper Hudson, the Mohawk, the Delaware, the Susquehanna, the Chemung, the Clyde, Seneca, or Oswego; nor do we know where to trace the shore-lines of Lake George, Oneida Lake, or the beautiful lakes Skaneateles, Owasco, Cayuga, Seneca, Crooked, or Canandaigua.

"The positions of such important places as Utica, Rome, Binghamton, Owego, Elmira, Canandaigua, and hundreds of other towns and villages, are equally undetermined in latitude and longitude, and cannot therefore be placed upon the map correctly."

"Our map shows that the distance from Albany to Auburn is a mile and a half less than given by French [1860]; that the breadth of the State from Pennsylvania to Lake Ontario is three-quarters of a mile broader; and that the spot where French has placed the city of Oswego is really covered by the lake. No one can tell the endless errors, in minor detail, of a chart whose misplacements are counted by miles at the most important cities, and which puts the warehouses of Oswego in five fathoms of water. Yet such is to-day the best map of the State of New York."

In view of these facts, it is shameful that the work of the Survey has been retarded by delay in making the modest annual appropriation of $15,000, so that the season of field-work has been shortened, and even some economies prevented. Mr. Gardner cannot forbear to express his delight in the revelations each season of the "grandeur, beauty, and variety of the landscapes" observed in the prosecution of the work:

"Ideas of the aspects of the State derived from maps have, in my own case, proved to be so false and vague that I find in this survey the attractive novelty of exploring an unknown region. Colorado was not a greater surprise to me than has been the structure of my native State. . . . The configuration of a part of Central New York is as unique and as unknown to science as that of any part of the Rocky Mountains."

—The most entertaining papers in the Proceedings of the Massachusetts Historical Society for 1878, which have not been noticed by us before when published in pamphlet form, are the "Narrative of Jolley Allen," written by himself, and "Tutor Flynt's Journey to Portsmouth," written by his companion and driver, David Sewall, then an undergraduate in the class of John Adams, for whom this account seems to have been written in the author's old age. Jolley Allen was a noted Boston Tory: his nervous and ungrammatical style shows the querulous old man with admirable distinctness, and, to believe his own tale, he certainly was maltreated by the Americans as well as by fortune, from the time when the Boston Committee called on him to see where he bought his tea until he got safely on board the British fleet at New York. It would be a long story to tell how he put to sea with wife, children, and household goods in a ship whose captain and crew had never been on salt water for a week, and how the patriots of Cape Cod sacked his vessel, the General Court at Watertown completed his ruin, while the crowd at the court-house threatened him with unheard-of punishments, and the mobs of Shrewsbury marched him about in terror of his life; he lost his property, his wife, and eldest son, but he preserved his loyalty. The article deserves to be read as a lively sketch of one side of the Revolution which is not much dwelt on by American writers, and it is full of humorous incidents and human nature. Tutor Flynt's journey took place in 1754, when that somewhat famous bachelor was nearly eighty; it was made with a single horse and "chair," and along the route the travellers availed themselves of the hospitality of the clergy who had been educated at the college, and of whose family and social life we have here pleasant glimpses. Tutor Flynt is amusingly portrayed as a social man, given to much punch and the ladies' society, not above a questionable joke from the Scriptures when in his cups, and not too severe in the discipline of his classes if his own anecdotes are to be believed. Besides these articles there are some interesting letters of Andrew Eliot describing the days of the siege in Boston, a letter of Paul Revere describing his famous ride, Colonel Hutchinson's Orderly-Book, and memoirs of the Hon. B. R. Curtis, George Bemis, Hon. James Savage, and the historian Motley. There is a fine portrait of Motley, and the usual full index. The entire volume is one of extraordinary interest.

—Miss Ada Cavendish, like many other successful English actors and actresses of the present day, is asserted to have made her first entrance into theatrical life through the hospitable portals of burlesque. If true, this may almost be said to create a presumption in her favor, as so many instances at once recur to the mind of the theatre-goer of remarkable translations from the world of burlesque to that of tragedy and comedy. In fact, from a certain (perhaps heterodox) point of view, burlesque affords, in the present condition of the English stage, not a bad school of acting for beginners. As there are no traditions or preconceptions connected with it, no one can make a success in it without having some positive theatrical talent; and if this talent be of any magnitude, it is sure to push its possessor into better and more ambitious attempts. With regard to Miss Cavendish, however, we do not feel sure after seeing her in "As You Like It" whether Shaksperian comedy is exactly the kind of acting that her reputed success in burlesque qualified her for. The part of *Rosalind* is one which fires the ambition of all young actresses, as that of *Hamlet* does all young actors; we doubt if, on the whole, *Rosalind* is not the more difficult of the two parts to make a hit in. Mr. Lewes, in his clever essays on the stage, says somewhere that he never saw an altogether bad *Hamlet;* the play itself possessing such a profound and sombre interest and being so full of theatrical merits that it carries along any decently good actor, so as to make him seem for the time almost a distinguished tragedian. But with a light and fanciful comedy such as "As You Like It" there is no middle ground between success and failure. *Rosalind* is either before you in flesh and blood, or she is not there at all; and we do not mean to deny Miss Cavendish a great deal of ability as an actress if we say that she never once puts *Rosalind* before us. The part, difficult as it is, on account of the amount of fancy, grace, and vivacity required of the actor, is made still more out of ordinary reach by the extreme fastidiousness and prudishness of a modern audience. *Rosalind*, this erratic princess who takes to the life of an outlaw in man's attire, is not the product of a fastidious period, and is not herself a fastidious person. She says many things and listens to many more, without thinking any harm, which no well-conducted daughter of a modern matron who formed one of such an audience as is brought together by a Shaksperian revival would dream of saying or listening to; and yet she is throughout a most charming woman. To make her witty, vivacious, graceful, mischievous, and fascinating; to avoid making what she does and says jar upon the taste of a sensitive audience; this is the task which any one undertakes who plays the part of *Rosalind*. Miss Cavendish does not, to our mind, succeed. She is heavy when she attempts vivacity, phlegmatic when she should be sensitive, and masculine when she ought to be feminine. Sometimes she faintly suggested *Rosalind*, but rarely more.

There is no originality in her conception of the part, except possibly in the scene where she receives the news of *Orlando's* wound, in which, for some reason best known to herself, she listens to the announcement with complete indifference, sitting down to hear all about it, and finally *getting up* to faint, at her cue. All this was quite unintelligible to us, though Miss Cavendish no doubt has some theory to base it on. The rest of the performance was only fair; Mr. Wheelock, who is an excellent actor in many parts, failing as *Orlando*, while Mr. Robinson made *Jaques* a very melancholy person. *Jaques*, however, has hardly ever been well done by anybody, and for a very good reason: that he is a character thrust into the play, without relation to the other parts, in order that he may make speeches. He has nothing to do with the action, and if the part had never been written, "As You Like It" would hardly have been worse, while the reputation of many very competent actors would have escaped a very trying ordeal. Mr. Gilbert took the part of *Adam*, which he of course performed creditably, though he is better as the "old man" of modern than of Shaksperian comedy. Mr. Becket as *Touchstone* and Miss Germon as *Audrey* were both capital.

—If Miss Cavendish makes a failure of *Rosalind*, we hardly know how to describe what she makes of *Miss Gwilt*. The character of Mr. Wilkie Collins's governess—perpetually vacillating between villany and virtue; exulting in one moment over the "splendid wickedness" of a fraudulent personation of the widow of *Allan Armadale*, and racked the next with remorse for her crime; plotting with real gusto a peculiarly devilish murder with her rascally old friend the Doctor, and securing the forgiveness of her husband by her not unnatural willingness to bring her career to an abrupt termination on finding that it is his life she has been attempting to take instead of his friend's—this strange and unreal mixture of good and bad passions seems even more strange and unreal on the stage than in the pages of Wilkie Collins's grotesque but interesting novel. Miss Cavendish certainly makes some strong points with it. When, at the crisis of her fate, certain that her husband knows her guilty secret and that she is lost, she falls nerveless and unresisting into the hands of the tempter who makes her his tool, and obeys him in a sort of evil trance, in which we seem to see a person who has suddenly but finally parted company with her conscience, the acting of Miss Cavendish struck us as having a certain originality and vigor. Her scornful contempt of her betrayer, *Captain Manuel*, was also very good, and the applause of the audience at many of these "points" shows unmistakably that she has touched some sympathetic chords. But the "points" are the whole of the performance. In the intervals between them she is simply an ordinary actress (with a fine voice) going through her part in a commonplace manner. Indeed, if it were not for the other parts the play would be irredeemably dull. As a matter of fact, the other parts were unusually well done; Mr. Hardenbergh as *Captain Manuel*, Mr. Weaver as *Doctor Downward*, Miss Boniface as *Miss Milroy*, Mr. Lee as *Armadale*, and Mr. Wheelock as *Midwinter*, all acting with great evenness and spirit.

—The three lectures upon Etching by Mr. Seymour Haden, at the Royal Institution, London, just concluded, were a surprise to a very mixed auditory, in which the scientific rather than the professional element prevailed. Mr. Haden repeated and dwelt on the old dictum that the poet with the pencil as with the pen is born and not made. He insisted that the artist should preserve "first conceptions." He was very earnest, and almost exhausted all there was to be said on the subject, in urging that etching should be restored to its proper place in art; and he was at much pains to lay down the marked difference between the art of Engraving and the art of Etching, contrasting the burin and the etcher's needle. From his own portfolio he brought fine work in etching by Rembrandt, Claude, Vandyke, and Turner. The whole process was then described and illustrated, much to the delight of the audience, for the lecturer etched a plate and had it printed before them. In short, the lectures were not only of the highest order, but were a great success, and are to be repeated this fall in some of the principal towns in the North of England. We may add here an illustration of Mr. Haden's extreme conscientiousness in all that he has to do with his favorite pursuit. Only a few months ago two of his etchings were included in the sales at the Hôtel Drouot, and were secured, after a severe competition, running the price up to three or four times their ordinary price, by a gentleman who, having obtained them on the spot from the auctioneer, deliberately tore one of them to pieces. The purchaser represented Mr. Haden, and by his instruction had destroyed the print as one too inferior to be preserved, and not marked so as to certify that it had passed Mr. Haden's review and was deserving a place among a collector's treasures.

—The formal reception of M. Henri Martin as the successor of M. Thiers by the French Academy met with an unexpected obstacle, owing to the fact that M. Émile Ollivier chanced to be the "receiver" on behalf of that body. To begin with, M. Martin had introduced into his eulogy of his predecessor a description of the famous session in which Thiers denounced, amid the abuse of the Bonapartists, the folly of declaring war against Prussia, as the Empire was on the eve of doing. This led, of course, to a counter-recital on the part of M. Ollivier, and, to avoid a disagreeable scene, M. Martin consented to omit the obnoxious passage, when, of course, M. Ollivier would have to make a corresponding retrenchment. The latter, however, had gone somewhat further in his defence of himself, as it may truthfully be called, and attacked M. Thiers's conduct under the circumstances as not being that of a patriot or a Frenchman. He ought, declared M. Ollivier, to have stood by the Empire as did General Changarnier, the type of the perfect patriot and true Frenchman. The commotion which such sentiments would produce in the reception audience was only too plainly to be foreseen, and when the speaker refused to modify so much as a line of what he had written, the committee to whom the two discourses were referred, consisting of men like Jules Simon, Dufaure, Mignet, Legouvé, Sardou, decided by 7 to 1 to refer the matter back to the Academy, which, as the Cable reports, by 13 to 12 decided to replace M. Ollivier with M. Xavier Marmier. So the reception, which had been set down for May 29, will have to be postponed again.

—A Mr. Albert Last has published a pamphlet on 'Die Schäden in der literarischen Production Deutschland's,' in which are to be found some interesting statistics of the German book-trade. The alleged bad condition of the same he accounts for on the ground of over-production. At the beginning of the century there were in Germany (including German Austria) 250 bookshops; in 1820 there were 500; to-day there are 5,200. In the year 1851 there were published 8,000 volumes; 1870, 10,000; 1874, 12,070; 1876, 13,356; 1878, 13,912. In England, in the last-named year, there appeared but 5,314 works. The worst of this over-production is that much more time is required for a clever writer to make himself known than would otherwise be the case. Spielhagen's reputation, for instance, was so long in establishing itself that before the publication of 'Problematische Naturen' one of his books was actually sold as waste-paper.

—The value of the older commentators on the 'Divine Comedy' for the history of Florence and Italy during the thirteenth and part of the fourteenth centuries has long been appreciated. Dr. C. Hegel has recently instituted a careful comparison between them, and published the result in a work entitled 'Ueber den historischen Werth der älteren Dante-Commentare' (Leipzig. 1878. 8vo, pp. 115). He passes in review some fifteen works from the 'Chiose anonime,' published by Selmi in 1865, and probably written during the lifetime of Dante, to the comment of Vellutello, published in 1544. The most valuable, according to the author, are the comments of Jacopo della Lana, Benvenuto da Imola, and the so-called *ottimo* (especially as to Florentine history)—the second named of course in the original Latin version. Dr. Hegel has not seen Professor C. E. Norton's review of Tamburini's Italian translation, or he would have warned students against it. He himself generally cites the extracts printed by Muratori, 'Antiquitates italicae,' i. p. 1034–1298. Two commentators who have heretofore enjoyed a high reputation for historical value, Francesco da Buti and the *Anonimo fiorentino*, are pronounced of little worth. Dr. Hegel gives where possible the sources of the various comments, and reveals an immense amount of borrowing by one from the other. In the appendix he adduces what appears to him an additional proof of the genuineness of the chronicle of Dino Compagni. The *Anonimo fiorentino* mentioned above, and probably of the beginning of the fifteenth century, in several passages relates historical events in almost the same words used by Dino, whose opponents see in this another proof of his falseness, believing that the writer of the chronicle, whoever he was, borrowed part of his material from the *Anonimo*. Hegel, however, shows that the *Anonimo*, like the other commentators, drew largely on Villani's 'Istorie fiorentine,' and uses that material in the same manner as he employs the passages contained in Dino, sometimes beginning with Villani and finishing out his narration with Dino. Hence he concludes that the *Anonimo* borrowed from Dino or from Dino's source. An undoubted citation from Dino's chronicle as early as the beginning of the fifteenth century would do much to confirm its authenticity. The author confesses, however, "that the chronicle as a whole in its contents and form is a problem hard to solve, whichever side one takes in the question."

THE DUKE OF ARGYLL ON THE EASTERN QUESTION.*

THE Eastern Question—which, broadly stated, is the question whether the Turks shall be allowed to remain in Europe—sprang into existence when the Turks crossed the Dardanelles in 1356; after more than five centuries, its final settlement seems now to be approaching with the return of the Turks to Asia during the latter part of this century or the beginning of the next. It is more than three hundred years since the tide of Turkish conquest began to ebb, but it is only within the last fifty or sixty years that it has been apparent that the Ottoman Empire was crumbling to pieces from the vices and corruption into which its ruling class had fallen. The jealousies of the different nations interested in the fate of the Turk have, however, prevented any agreement as to the manner in which he shall be succeeded, and so he has been allowed to remain a chronic source of disturbance to the peace of Europe. At intervals of about a generation the Eastern Question has passed from the chronic to the acute stage; and it is the diplomatic history of the latest of these acute periods, now barely terminated, which the Duke of Argyll traces in detail in the two volumes before us.

As a member of the Cabinet which carried on the Crimean War and framed the Treaty of Paris, the Duke begins his book with an elaborate argument to explain the meaning of the "independence and integrity of the Ottoman Empire," which was the fundamental idea of that Treaty. He contends that "dependence and independence are relative terms," and that no nation whose independence must be guaranteed by others is in reality independent at all, in the sense in which great nations are independent; that the meaning of these words must be gathered from the circumstances under which they were framed—viz., at the end of a war waged by the Western Powers to establish the principle "that the fate of Turkey was to be a matter of European and not only of Russian concern"; and therefore that the words simply mean that the affairs of Turkey in its downfall shall be considered and regulated by Europe collectively, and not by Russia acting alone.

This explanation is interesting, considering the source from which it comes; for when, on the occurrence of the Bulgarian massacres in 1876, the united voice of Christendom cried out that such damnable outrages should cease—with the destruction of the government which permitted them, if no other means were efficacious—the English Cabinet took the ground that express treaty stipulations (as well as considerations of policy) prevented them from exercising any pressure upon the Turks stronger than that of moral suasion and advice. The Duke of Argyll now endeavors to show that this construction of the Treaty was a false one, but his argument is simply that the words must be taken in a Pickwickian sense. When the long period of Turkish misgovernment culminated in the massacres of 1876, it was perfectly competent for England to denounce the Turks as having persistently and flagrantly violated the engagements which they made in the Treaty of Paris, to demand sufficient guarantees for the protection and good government of the Christians, and to support its demands by force—the only argument which the Turks appreciate. Such a course would have prevented the war between Russia and Turkey, and would probably have led to the supplanting of Turkish authority in many districts by European commissions; but it would have torn up the Treaty of Paris, as Russia desired. To pretend that while such measures were being taken the independence of the Ottoman Empire was being respected, is a contradiction in terms. In fact, the two cardinal features of the Treaty of Paris—viz., the admission of the Turks into the European concert, and the guarantee of the independence and integrity of their empire—were two as false and fatal steps in the settlement of the Eastern Question as any which have been made by England's Cabinet during the recent war.

Having attempted to elucidate the Treaty of Paris, the Duke then proceeds to recapitulate the action of Turkey during the succeeding twenty years; it is the old tale of horrible misgovernment and perversion of justice with which every one who reads is familiar. He then comes to the Bosnian insurrection, the Andrássy Note, the Berlin Memorandum, the Bulgarian massacres, the Constantinople Conference, the London Protocol, and finally the declaration of war. Throughout all these negotiations the Duke considers the policy of the English Cabinet to have been weak, shiftless, and vacillating, while that of Russia he regards as manly and upright, justified by the highest considerations of duty and policy, and by the terms of existing treaties.

The Duke of Argyll's argument, briefly stated, is that the fate of Turkey must be decided by Europe collectively, and not by Russia alone in her own interests. To this there is probably not a dissenting voice in all England; but the Duke holds that the surest way to counteract Russia in any ambitious schemes she may have for her own aggrandizement is for England to compel the Turks, by force if necessary, to put an end to her misgovernment, for England to make the cause of the Christians her own, and not throw them into the arms of Russia for lack of any one else to espouse their cause. The Tories, under the lead of Beaconsfield and Salisbury, hold, on the contrary, that the only barrier to Russia's advance lies in strengthening the Sultan, overlooking as much as possible, in view of greater considerations, the faults of his government, and hindering and thwarting Russia in every way. The whole of the Tory party, however, could not be brought to the point of supporting these views by war, and the only result, in the Duke's opinion, of the halting policy actually followed has been to strengthen Russian influence in the East instead of diminishing it, and to cause the Christians throughout Turkey to look upon Russia as their only deliverer and upon England as the firmest friend of their hated oppressors; while, since Russia was allowed to crush Turkey without armed interference by England, the influence of the latter Power over the millions of her Mohammedan subjects has been just as much diminished as if she had openly taken up the cause of the Christians.

The Duke is very severe upon the Cabinet for their double dealing and inconsistency in the secret agreements which they made before entering the Berlin Congress, and he sums up the result of that Congress and its Treaty as it is already viewed by a large party of the Tories themselves—viz., that every material advantage which Russia gained by the war was confirmed to her by the Treaty, while the separation of the Bulgarians by a "strategic frontier" of no strategic value into two portions, of which one should be free and the other subject to the Porte, has only laid the seeds of future trouble and wars.

The Duke of Argyll very properly treats the present war in Afghanistan as only "the Afghan part of the Eastern Question." His views on this subject are again interesting from the fact that he was Secretary of State for India in Mr. Gladstone's cabinet from 1869 to 1874. He recites at great length the relations existing between the Indian Government and Afghanistan from the first Afghan war in 1841 to the commencement of hostilities last November, endeavoring to show that the uniform policy of all the Indian governments up to the second year of Lord Salisbury's installation as Secretary for India and the inauguration of the "Imperial policy," had been to treat the ruler of Afghanistan with kindness but with firmness; to offer him substantial guarantees for his defence in case he was attacked by Russia, to abstain from interfering in his dynastic quarrels, to respect his independence so long as he remained friendly, and to avoid injuring his pride by forcing British resident agents upon him. This policy, the Duke maintains, has been wholly overthrown by Lord Salisbury, and especially since Lord Lytton has been Viceroy; and the course pursued towards the Amir has been that of bullying him into receiving British agents and forcing him into a position of hostility; and in so doing the British Government

"has paltered with the force of existing treaties; it has repudiated solemn pledges; it has repeated over and over again insincere professions; and it has prepared new treaties full of 'tricky saving clauses.' Finally, it has visited on a weak and unoffending native sovereign in Asia the natural and necessary consequences of its own incoherent action in Europe. The policy which brought the Russian army to the gates of Constantinople is the same policy which brought the Russian mission to Cabul."

To American readers the Afghan question is only of interest in its bearing upon the settlement of the Eastern Question, which involves the peace of all Europe and thus affects the whole civilized world. The unfortunate ruler of Afghanistan merely stands between two great Powers who are liable to come to blows, and he is in danger of being pulverized in their contest. When Russia thought that England was preparing to wage war upon her after the Treaty of San Stefano, she made preparations to strike England in India, and for this purpose began to negotiate with Afghanistan to secure the passage of her troops through that country. When the Treaty of Berlin removed the source of danger, Russia withdrew. England then made demands upon the Amir which he declined to accede to, and England proceeded to enforce them. Russia has not thought it necessary to interfere against these demands; and so the Amir suffers the consequences of his unfortunate situation.

The Duke's long and somewhat heavy narrative is valuable from the fact that it is drawn almost wholly from the Blue-Books published by Parliament, to which reference by volume and page is made in every

* 'The Eastern Question, from the Treaty of Paris, 1856, to the Treaty of Berlin, 1878, and to the Second Afghan War. By the Duke of Argyll.' 2 vols. 12mo, pp. 426 and 520. London: Strahan & Co. 1879.

case; and it thus forms a sort of hand-book of ready reference to the diplomatic proceedings during the last four years affecting the subject of which it treats.

HAGEMAN'S PRINCETON.*

LOCAL chronicles are always welcome as fresh material for broader and more ambitious history, and they have a human interest as far as they repeat and fix the details of human life. In this instance a village and villagers whose influence has been out of all proportion to the population supply the theme. Princeton's fame is a threefold union of martial, political, and educational renown. It embraces the lustre of brilliant victory; the credit of notably shaping the destiny of the young nation, and the distinction belonging to a time-honored seat of learning. The name, whose special significance is now forgotten, was bestowed in 1724, nearly thirty years after a Quaker colony bought and settled on large tracts of land on the neighboring water-course of Stony Brook. To those Friends, whose meeting-house and family names remain, but whose peculiar faith has now nearly faded out there, much of the prosperity of Princeton is due; and its annals are completely free from the injustice and bloodshed of Indian wars that stain so many pages of pioneer history. An accident of topography made it a Revolutionary battle-field, whose celebrity is due to the critical state of the country relieved by an exceptional victory. But nearly all of its higher and more lasting fame followed the thoughtful liberality of its citizens which in 1752 fixed there the infant college. For the college infused patriotism as well as learning, hence Princeton's Revolutionary and civic record. The college opened the way for the seminary, hence its theological reputation. The college atmosphere was that of letters and repose, hence its charming society. The dominating idea, the promotion of piety and sound learning, gave the college a succession of distinguished presidents, culminating at the Revolution in Witherspoon, a statesman as well as a divine. Following liberal influences, Princeton supplied seven members to the Provincial Congress, one of whom reported June, 1776, the State constitution that remained in force till 1844, and she gave two illustrious signers to the Declaration of Independence, and in all five members to the Continental Congress. The State government was organized there August, 1776, the village remained its seat till late in 1778, and there the Council of Safety held frequent sessions. In fact, all through the Revolution Princeton was a military and political focus, until in 1783 Congress itself retired thither from the menacing Pennsylvania soldiery at Philadelphia. During that five months' session the definite announcement of peace was received and the Continental army was disbanded by proclamation, and it was from Princeton that Washington published his farewell orders.

A chair of divinity was early established in the college, and the successive presidents prepared many candidates for the Presbyterian ministry. Princeton thus became the natural seat of the great theological seminary of the Presbyterian Church, founded in 1811. Wise and accomplished teachers have spread its fame far beyond denominational bounds, and, however opinions may differ as to its special tenets, the vigor of thought and depth of learning of Princeton theology have never been questioned.

The distinctive British stock of Princeton received a foreign graft from a mixed Protestant and Catholic colony of Gallic refugees that settled on its northern border in 1795. Of their names, now nearly all mere memories, Peter Anthony Malou's, whose career was full of romantic contrasts, was the most notable. But the constant exercise of a liberal but delicate charity by one of their direct descendants keeps, and will long keep, their warm and generous blood in grateful remembrance. Another refugee about the same period, but of different type, was Wolfe Tone, whose American residence was Princeton, whither his widow returned after his death.

As would be expected from its antecedents, a continuous succession of names eminent for secular and clerical erudition, and for high social and political place, and personal wealth and private and organized benevolence, have adorned the village. Besides its Revolutionary characters and its special scholars it has furnished at least two members to the early Federal House, five to the United States Senate, and diplomatists, judges, and two famous sailors to the public service. It was foremost in the organization of Colonization, Bible, Temperance, and local benevolent schemes, conspicuous and characteristic among which is the existing disinterested charitable institution to "assist indigent youth in obtaining a liberal and Christian education without regard or reference to their future profession, occupation, or employment." The New Jersey system of common schools found its earliest and most ardent supporters there, and there originated the State Agricultural Society. Princeton families have been more constantly represented in the army than is usual in a Northern village, but her most distinguished warriors were Commodores Bainbridge and Stockton, both natives, whose fame is public history. Stockton's naval career covered a wide range, and included as an episode the acquisition of the territory of Liberia for the Colonization Society, and was crowned in the conquest of California. His prompt appreciation of Ericsson's genius, and his controlling influence in transferring that engineer to this country, which is one of his greatest merits, the author fails to notice; nor does he seem fully to realize that the building of the *Princeton* man-of-war, the embodiment of Ericsson's science and Stockton's energy, was a pivotal point in the history of naval construction.

The features distinguishing Princeton from other country towns are those that make its actual history so attractive, but for their complete representation they require industrious research, enthusiasm in the subject, and vivacity of style. In this work the author has presented the salient points and has noted much of the minutiæ. The general outline of the early settlement is clear; the battle is concisely and intelligently described; the steps leading to the establishment of the college and of the seminary are well recited, and the careers of those institutions are fairly followed up; and the history of the First Presbyterian Church is admirable. The record as a whole is trustworthy, and it is accurate except as to a few minor particulars. For instance, to Dr. Breckinridge is given credit belonging to Dr. Maclean in establishing the Witherspoon Street church; from the notice of Betsey Stockton, a most estimable colored woman, is omitted the impressive fact that she taught the first school opened for the common people on the Sandwich Islands; Bishop Hare, of the Episcopal Church, is properly to be included among the prominent natives; the names Van Arsdale and Van Polanen are misspelled; a very curious transposition to the mercantile marine is made of a gentleman whose title of captain was derived from active military service, and whose walk and conversation in no respect savored of the sea. These and similar errors and omissions local criticism will probably correct against a second edition.

But, disregarding these minor oversights, there are positive transgressions that seem hardly possible of perpetration by the resident of a college town. Witness this: "This character of the climate of the State is confirmed by its proximity to the thirty-eighth parallel of north latitude, which is the point of the average temperature of the earth, and where the Great Pyramid of Egypt is located, the orientation there being more accurate than in any other observatory" (i. p. 13). Apart from the error of eight degrees of latitude in the position of the pyramid, does it seem possible to frame a more inexact, grotesque, and inconsequential sentence? So (i. p. 3) reference is made to "Hassler's Triangle-post" in such a way as to imply that it was "a height sometimes used to convey, by signal, intelligence . . . before the days of railroads and electric telegraphs." This obvious confusion of the Coast Survey "triangulation point," fixed on Mt. Rose by Mr. Hassler, with the old semaphore line that also had a station on Rocky Hill, is unworthy a local historian. Such eccentricities of statement are, however, less numerous than those of style or expression. For instance, in the preface Princeton is spoken of as possessing a "notoriety" which most of her lovers would prefer to call renown or fame, and then, curiously or carelessly, "notorious" is the somewhat mild epithet applied (i. p. 167) to the disorderly Pennsylvania soldiers of 1783. "The tidal wave of prosperity had *flown in*" (ii. p. 151); "It was he . . . *assisted some* by . . . who accepted" (i. p. 32); "what a mighty *stride it has taken* upward and onward since President McCosh has *taken the helm*" (ii. p. 296); and, with a persistence that shows the errors are not the printer's, quarter (mercy) is written quarters; Halle, Hallê; Lord Stirling, Sterling, etc. As mere narrative the style is very unequal. Occasionally it is easy and limpid, at times jerky and fragmentary, and again it is positively obscure.

One of the final chapters is devoted to Princeton authors and their productions, and, by an inclusion which at the ballot-box might be called repeating, the catalogue embraces not only publications issued or prepared at Princeton, or, at the furthest, by her emigrated children, but also comprehends all the writings of those who may at any time have had an actual, although temporary, residence there, whether published before their arrival or after their departure. Thus, valuable papers by Professor Young while at Dartmouth, by Professor Guyot while still abroad, by Professor Henry at the Smithsonian swell the list at the expense, it seems to us, of absolute fairness. Under these conditions there is counted an aggregate of five hundred and seventy-five volumes

* 'Princeton and its Institutions. By J. F. Hageman.' Philadelphia: J. B. Lippincott & Co. 1879. 2 vols., pp. 359, 449, 8vo.

from seventy authors. The theological works issued from Princeton are numerous and important, and for nearly fifty years the *Princeton Review* was a constant and eloquent exponent of Princeton philosophy. But until very recently the literary sterility of the college gave color to the undergraduate tradition, that a provision in the charter forbade any of its professors while in possession of his office publishing a text-book or other volume.

RECENT POETRY.*

THESE six new dramatic idyls which Mr. Browning has given us are less marked than his later works by that perversity of manner which has so alienated his American readers that his last volumes have not been reprinted in this country; they are forcible, intense, clear-cut; they show the old grasp of the striking aspects of character, the familiar masterly touch in detail, but yet it goes almost without saying that they are hardly worthy of the companionship of those earlier idyls in which Mr. Browning found the freest scope for his powers in all their variety and fulness. One of them, 'Tray,' is not dramatic or idyllic in any sense, but is a poor satire; 'Pheidippides" is the story of the Athenian runner who was sent to Sparta to ask aid against the Persians, and on his return met the god Pan, who promised victory, and this poem rises to a lyrical fervor which none of the others possesses. But the four important idyls are "Martin Relph," "Halbert and Hob," "Ivàn Ivànovitch," and "Ned Bratts," all of which are analyses of the retributive power of conscience. The latter two are the most varied and striking. Ivàn Ivànovitch was a Russian carpenter. While at his work one day in winter, amid a group of his neighbors, a sledge came up drawn by a dying horse and holding a senseless woman; on reviving she tells how she had set out from a burning village with her three children, and had been pursued by wolves, which stole her children from her one by one, pulling them out of her arms with teeth and paw; as her story goes on it becomes clear to the bystanders that she has flung out her children to save herself, and as she falls at Ivàn's feet—

> "Solemnly
> Ivàn rose, raised his axe—for fitly, as she knelt,
> Her head lay; well apart, each side, her arms hung—dealt
> Lightning-swift thunder-strong one blow—no need of more!
> Headless she knelt on still; that pine was sound at core
> (Neighbors were used to say)—cast-iron-kernelled, which
> Taxed for a second stroke Ivàn Ivànovitch.
>
> "The man was scant of words as strokes. 'It had to be:
> I could no other: God it was bade 'act for me.'"

The villagers gather with the Stàrosta and the Lord of the Land to judge the murder; the latter calls for sentence according to human law, but the Stàrosta, an old priest of a hundred years, has learned other wisdom, and, after one of those long, closely-reasoned discourses in which Mr. Browning delights, proclaims Ivàn "God's servant"; the neighbors find him at home building a toy Kremlin for his children—

> "They told him he was free
> As air to walk abroad. 'How otherwise?' asked he."

The other idyl we have chosen for mention opens in the court-house of Bedford, "quality-crammed," on a "broiling, blasting June," the judges sentencing "rank Puritans caught at prayer in a cow-house," gentry betting on the results of the trials, when in comes "publican Ned Bratts and Tabby his big wife too," "brass-bold, brick-built of beef and beer," "worst couple, rogue and quean, unhanged—search near and far"; in the midst of the hubbub, the heat and the sweat, they confess to murder, theft, adultery—tell how they have been converted by Bunyan's book, and ask to be hanged before they have an opportunity to fall from grace. Here is the tavern hag's account of Bunyan's words to her:

> "Then all at once rose he;
> His brown hair burst a-spread, his eyes were suns to see;
> Up went his hands: 'Through flesh I reach, I read thy soul!
> So may some stricken tree look blasted, bough and bole,
> Champed by the fire-tooth, charred without, and yet, thrice-bound
> With dreriment about, within may life be found.
> . . . . . .
> Woman, that tree art thou! all sloughed about with scurf,
> Thy stag-horns fright the sky, thy snake-roots sting the turf!
> Drunkenness, wantonness, theft, murder gnash and gnarl
> Thy outward, case thy soul with coating like the marle
> Satan stamps flat upon each head beneath his hoof!
> And how deliver such? The strong men keep aloof,
> Lover and friend stand far, the mocking ones pass by,
> Tophet gapes wide for prey; lost soul, despair and die!
> What then? "Look unto me, and be ye saved," saith God;
> "I strike the rock, outstreats the life-stream at my rod!
> Be your sins scarlet, wool shall they seem like; although
> As crimson red, yet turn white as the driven snow."'"

So the judge gave credit for the conversion to the peaceful years of Charles's "pious reign," and the couple were "happily hanged"—

> "Where Bunyan's statue stands facing where stood his jail."

Both of these idyls are worked out with a realism extraordinary even for Mr. Browning, so that the vividness of the description is sometimes sickening, as in the account of the death of the Russian mother, or the vigor of it sometimes unnecessarily gross, as in the talk of Ned Bratts to his wife. It will be seen that the poems are not idyllic in any ordinary sense of that word, nor are they dramatic in the sense that they are free from the author's personality. But there is no need to quarrel with terms; nor is there room for any but the old regret that Mr. Browning has mastered his art, not by subduing himself to it, but by dyeing it with his own nature.

The 'Poems' of Mr. Holmes describe his intellectual struggle rather than give the clear solution of his experience. The modern scepticism, with the attraction which nature-worship in some of its many mystical forms possesses for the poet who has lost hold of traditional faith, is the source and burden of most of his verses. In "Nature Lost and Found" he has expressed some moods of this spirit which have not often been revealed, but there is a haze over his thought even in this, which is one of the most carefully wrought of the poems. In others, where there is simple natural description or sentiment, he is more pleasing. This from "On Snowdon" will illustrate his style:

> "the darkness of the night
> Slowly became a pale and lifeless light.
> That touched with frosty red each orient cloud;
> And ever, as the circling mists allowed,
> A wilderness of mountains filled the sight—
> Black island masses, round whose shores were tost
> Billows of vapor—surgings of a sea;
> While to the West, in one vast crescent sweep,
> Ran fifty leagues of dimly outlined coast,
> Whose rocky headlands murmured voicelessly
> The white-lipped moanings of the eternal deep."

The finest and most vigorous poem, it seems to us, is "Standing Still," the reflections of a common soldier under fire for the first time, and ordered only to hold his post. It is seldom that minor poetry rises to such a level of refinement, correctness, and thought as is shown throughout this volume.

'Briefs by a Barrister,' is so named, we are told, "more to assert the often-denied right of the Bar to express itself otherwise than in prose, than to mark the character of my verses." These verses were written as "relaxation," but they will be fortunate if they serve any of their readers so good a turn. "A Geological Romance," composed in college, is a creditable attempt by an undergraduate to write amusingly for undergraduates; but the other poems hardly deserve equal praise. Some are in the worst taste; these lines will indicate what the Barrister is capable of in the way of refinement:

> "There would I with my love recline,
> And pledging to our love divine
> In brimming cups of ruby wine,
> I'd lull her soul to ease and rest,
> *Until with love and wine opprest*
> *She pillowed lay upon my breast.*"

Every one knows that Alexander, "with love and wine at once opprest," sank on the breast of the "lovely Thaïs," but the example of Dryden will hardly excuse our poet. In execution he is either negligent or ignorant, and his intelligibility suffers both from the printer and from his own hand. This is his average of sentiment, and illustrates his finish:

> "Ah, laughing eyes that can grow sad
> Now gay and now how meek
> Your language sweeter far than words
> How can I gaze and speak?" (*sic*).

The right of the Bar "to express itself otherwise than in prose" hardly gains from such work.

'Nadescha' is a graceful story of Runeberg's, translated with more knowledge of Swedish than of blank-verse. It has the flavor of the soil which is always delightful in poetry from the North, and gives some indication of the talents of one of the best writers of modern Sweden; it is to be regretted that the technical part of the work is not better done.

Foreign Classics for English Readers. Edited by Mrs. Oliphant. Montaigne, by the Rev. Lucas Collins, M.A. (Philadelphia: J. B. Lippincott & Co.)—This set is as important, no doubt, as the original set of ancient classics. Our readers know the plan of both series: the presentation in a small volume and in readable style of an outline biography, an analysis of the writing, and a critical examination of the author and his work. This plan has been generally closely followed, although the

'Poems. Second Series. By Edmond G. A. Holmes.' London: C. Kegan Paul & Co. 1879.

'Briefs by a Barrister. Occasional Verses. By Edward R. Johnes.' New York: G. P. Putnam's Sons. 1879.
'Nadescha: A Poem in Nine Cantos. By Johan Ludvig Runeberg. Translated from the Swedish by Marie A. Brown.' Boston: Published by Marie A. Brown, P. O. Box 900. 1879.

great differences in the nature of the tasks and the peculiar views taken of them by the different editors have brought it to pass that some are vastly more valuable than others. Thus, in the ancient series, the 'Cæsar' by Mr. Trollope always seemed to us a masterpiece, for with scarcely a quotation, and in a continuous narrative, the great man and his writings are brought to our intimate acquaintance. With Montaigne and his essays this plan would hardly have done so well; and yet the complete division of this volume into chapters on "The Essayist in his Library," "Montaigne in Office," and the rest, is annoying. Cæsar lived the two-fold life of man of action on the broadest stage and man of letters; but Montaigne lived one life only that is a life for us, and we had rather have seen his views and opinions and the whole body of his published thought, analyzed, divided, and subdivided under appropriate headings, than to be put off with so little about his 'Essays,' and so disproportioned an amount of information about the man and the small events of his earthly life. Of all writers Montaigne is the most discursive and his work the least systematized. A good index of seventy octavo pages, in an edition beside us, fails to provide easy access to the mazes of his thought. And it is the more to be regretted, therefore, that it did not commend itself to the editor of this volume to devote his space to a fuller account of what Montaigne has to say. The most modern of essayists; the thinker who (as indeed Mr. Collins points out) saw two hundred years ago nobility and pathos in the lives of the poor, and proposed them in their patience and uncomplaining simplicity as a model to himself; the despiser of accusations of witchcraft, the denouncer of judicial torture, the advocate of the claims of dumb creatures to merciful treatment; the non-partisan in a day of civil war, the non-sectarian in a day of bloodshed and tyranny in the name of sects—this prince among critics and students deserves to be introduced to the modern world more completely than is done in this volume. Nevertheless, the long quotations are carefully translated from the crabbed original, and the view taken of the author's manner of thought, and of his opinions, and of his oddities is calm and just; we have read every word of the two hundred pages with pleasure.

MRS. ALEXANDER'S
NEW STORY,
Maid, Wife, or Widow?
Will be published on Saturday in the
LEISURE-HOUR SERIES.
HENRY HOLT & CO., NEW YORK.

F. W. CHRISTERN.
Foreign Bookseller and Importer,
180 FIFTH AVENUE, NEW YORK.
The principal publications of Charpentier, Didier, Didot, Hachette, Levy, etc., on hand; also, complete sets of Tauchnitz's collection of British Authors and Teubner's Greek and Roman Classics. Catalogues mailed on demand. European Periodicals received weekly.

Heliotype.
Permanent Photographic Book Illustrations.
THE HELIOTYPE PRINTING COMPANY are producers of Book Illustrations by the Heliotype, Photo-lithographic, and Photo-engraving processes. Employed by the United States Government in illustrating Scientific and Medical Reports, by Scientific, Historical, and other learned Societies, by the leading publishers, and for illustrating Town and Family Histories, etc., etc.
Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings and Sketches, Views and Portraits from Nature, Medical and Scientific objects, Antiquities, etc., etc.
For terms and specimens apply to the
HELIOTYPE PRINTING COMPANY,
220 Devonshire Street, Boston, Mass.

Fragrant Vanity Fair.
A NEW CIGARETTE,
Gotten up in honor of the Paris Award. Each Cigarette bears cut of the Paris Medal and brand, Parisian style. Our Tobacco and Cigarettes are better than ever, and unsurpassed for Purity, Delicacy, and Excellence. Special size Cigarettes, with any NAME, MONOGRAM, CREST, or DESIGN, to order, at $5 for 500. Samples on receipt of postage stamp. Samples of our Asthmatic and Catarrh Cigarettes, each, 25 cents by mail.
WM. S. KIMBALL & CO., Rochester, N. Y.
Peerless Tobacco Works.

Pratt's Astral Oil.
PERFECTLY SAFE.
Especially adapted for use in the St. Germain Student Lamp
CHAS. PRATT & CO,
Box 3050. NEW YORK

PATENT
Prepared Gasolene
FOR GAS-MACHINES.
Made by a new method; an absolutely pure article. Does not deteriorate in quality as the process of evaporation within the machine progresses. Every barrel guaranteed.
Address the manufacturers,
CHARLES PRATT & CO.
(Established 1770),
128 Pearl Street, New York.

THE
Meriden Britannia Co.
THE LARGEST MANUFACTORY OF ELECTRO-PLATED WARE IN THE WORLD.
Salesrooms, No. 46 East Fourteenth Street,
UNION SQUARE,
NEW YORK.
We take much pleasure in referring to the reputation we have for many years maintained for manufacturing SPOONS AND FORKS BEARING THE TRADE-MARK "1847, ROGERS BROS."
Particular attention is invited to our *Patented Process of Electro-Plating Spoons and Forks*, by which the parts most exposed to wear receive an EXTRA COAT OF SILVER. This feature renders these goods more economical and durable than those of any other manufacture, while the increased cost is relatively small. This method of plating we apply to the 4, 8, and 12 oz. plate, as required.
To protect the purchaser against imitations, it should be observed that the Improved Spoons and Forks bear our Trade-Mark, "1847, ROGERS BROS., XII."
FIRST PREMIUMS awarded at all Fairs where exhibited, from the World's Fair, 1853, to American Institute Fairs, 1873, 1874, and 1875, inclusive, and at the Philadelphia Exhibition, 1876.
Extract from the American Institute Report:
"Their Porcelain-lined, Double-walled Ice Pitchers are A1, and possess *all* the qualities the company claim." . . . "We consider the goods made by this company to be by far *the best* made in this country, and we believe in the world."

North Carolina and Virginia Bonds.
We will forward our Circulars concerning the New Funding laws of Virginia and North Carolina, and give detailed information to all holders who apply. Correspondence solicited.
THOS. BRANCH & CO., Bankers, etc.,
Richmond, Va.

WE ARE NOW FUNDING the Bonds of Virginia and North Carolina.
We will send the new bonds promptly in exchange for the old.
Forms for funding and all information furnished on application.

The Nation.

NEW YORK, THURSDAY, JUNE 19, 1879.

The Week.

THE Congressional chapter has been as dull as a revolutionary anti-climax must needs be, and was made additionally solemn by a farewell exchange of views between Messrs. Blaine and Hill on the mighty question of the latter's loyalty to the Union, past, present, and future. The House discharged its proper business for the session on Wednesday week when it passed the Army Appropriation Bill with only 30 nays, of which 11 were Republican. The sixth section of the vetoed bill had been tamed down into a prohibition of the use of the money appropriated in transporting or in any manner supporting troops intended to preserve peace at the polls. Mr. Springer failed on Monday to pass, under a suspension of the rules, a bill declaring it unlawful to employ the army or navy for this purpose; the party vote standing 108 to 82. For the crude and unsatisfactory House Legislative Appropriations Bill, somewhat improved in committee, a faint-hearted attempt was made in the Senate by Mr. Beck to supply a substitute; but party discipline prevailed, and the bill passed on Friday by 32 to 23. Saturday was spent in debating the so-called Supplemental or Judicial Appropriations Bill. With the help of Mr. Hill it was amended so as to allow Federal judges anywhere at discretion to draw from the State jury-boxes instead of on the partisan plan also prescribed, and the bill was passed on Monday by 27 to 15.

The bill to prevent political contributions by civil-service employés, which was introduced in the House on Saturday, is by no means an admirable measure viewed merely as legislative handiwork. It is, too, open to suspicion as being proposed not by the party in power but by the Opposition, to whom it would give a great advantage in the elections of the next two years. Mr. Conger, of Michigan, went so far as to call it "the most infamous measure ever presented by a political party." All this, however, need not prevent it from serving as an excellent touchstone for both parties, and for the President himself if it should ever reach him. Mr. Hayes's order to office-holders seemed infamous to the Stalwarts, as everybody remembers, and we can all wait patiently for the result of this first sign of activity on the part of the select Committee on Civil Service Reform.

The attack made on Mr. Bayard as Chairman of the Senate Finance Committee is, perhaps, too confidently relied upon as a sign of an impending split between the Eastern and Western Democrats. The Warner Silver Bill had got into the hands of the Senate Finance Committee, which decided to do nothing about it this session, so his Democratic colleagues proposed a resolution discharging the Committee from the further consideration of the measure—or, in other words, taking it out of their hands. This, under Congressional usage, is a sort of insult; so Mr. Bayard and Mr. Kernan threatened to resign if this plan was carried out, and it is now reported that it has been abandoned. The Silver Democrats are, in fact, between the devil and the deep sea. They want to pass the Warner bill to satisfy their constituents at the West, who are silver mad, and at the same time they are afraid to break with the rich Democrats of the East, on whom they have to rely for campaign funds, having no office-holders to levy on. This last seems to be the most important consideration at present, so Mr. Bayard will probably be allowed to have his way. His theory is that he ought not to remain in a committee after it plainly appears that he does not represent the views of his party. This is not the prevailing opinion in Congress, however. Ordinarily the power of committees over measures in their hands is treated as little short of absolute; a view which, as the Boston *Advertiser* has pointed out, has its inconveniences. But the notion that there is likely to be a split among the Democrats is hardly justified by experience. It seems as if nothing could split either of the great parties at present. One will put up with anything in order to keep power, and the other will put up with anything in order to gain it. Union is kept up by allowing difference of opinion on every subject except one, and that is the propriety of letting the rival concern get the offices. There are among the Republicans as bad silver-men as Warner, but it does not injure their standing in the party a particle, and seeing this the Democrats are not going to be any more rigid.

The House Committee on the Judiciary made last week a long report on the President's veto of the Military Interference Bill—so long, indeed, that its utility as a part of the campaign "record" against Mr. Hayes and his party is seriously impaired. It first recites the history of the veto of the Army Appropriation Bill, which it dismisses with a cutting rebuke to the Executive for presuming to lecture Congress about attaching political riders to appropriation bills. Then, after noticing how much stronger ground the President took in his second veto than in his first, in spite of all the Democratic concessions to suit his prejudices, it examines and seeks to confute his objections in detail. His assertion that troops had not been and would not be used, under his Administration, to interfere with any State election, receives the proper comment that he might change his mind or have a less scrupulous successor; but nothing is alleged to justify the extreme urgency which the forcing of an extra session of Congress implied. Nor is a single instance adduced to prove the abuse under Grant of the permission to keep the peace at the polls; all such abuses being, as we believe, referrible not to the statute sought to be amended, but to the general view of the powers of the Executive at the South, which Grant inherited rather than originated. The Committee argue at length that the Interference Bill, if a law, would have been no hindrance to Washington in suppressing the Whiskey Rebellion, Jefferson in dealing with Aaron Burr, Jackson in cowing nullification, or Lincoln in meeting the rebellion. They also endeavor to show that the Interference Bill, by expressly repealing all laws in conflict with its prohibitions, ties the hands of the President in the execution of certain laws referred to in the veto not more than does the existing statute, with its specification of the emergencies that alone legalize the presence of troops at the polls. Finally, they deny that there is any such thing as a "national election" or a "national peace," even in connection with the power to execute a legal process, quoting on this point Mr. Evarts while Attorney-General under Johnson; and hence they conclude, against the President's hypothesis, that a situation could not arise in which Federal troops, lawfully called in to preserve the peace at a State election, would be debarred from securing the peace at a national election at the same time and place.

The *Times* has some excellent though sneering remarks on Mr. Thurlow Weed's habit of writing up silver and bi-metallism in the papers, by which he has undoubtedly done some mischief. We alluded to it when the Bland Bill was before Congress. Mr. Weed is a very old man, and has many titles to respect, but knowledge of the silver question is not one of them. He has passed a long life in politics, but he never was noted for attention to questions of finance, and a man does not become an authority on finance, as many people seem to think, simply by growing old, any more than by being a ready speaker, as other people seem to think. Authority on this as on other subjects is gained by experience, by reading and reflection, and not by the practice of "politics," either of New York or any other State. An old man who has not examined a question is no better off as far as the question is concerned than a

young man; is likely to be worse, because he is likely to approach it with a less flexible judgment and less keen perceptions. A man may have voted for every President of the United States and attended every nominating convention ever held, and yet have nothing to say about silver and gold that is worth listening to. In the matter of care in forming opinions the old ought to set the young a good example.

The negro "exodus" to Kansas has unquestionably run its course for the present, and it is now clear both that it was highly local in its character, and that the extent of it has been very much exaggerated. The reports received at the New Orleans cotton exchange from ninety correspondents show labor to be unsettled only in thirteen districts; Louisiana has lost fewer hands than Mississippi, and has even gained some emigrants from its neighbor. Governor St. John, of Kansas, states that "something over 3,000 colored people," mostly in destitute circumstances, have come there from the South. The Topeka correspondent of the Lansing (Mich.) *Republican*, a Stalwart sheet if there be any, cannot learn that more than 3,000 or 4,000 have entered Kansas since the first arrivals at Wyandotte, and believes that most of these "will find when it is too late that they have made a great mistake in leaving their old homes." What he hears of the older negro colonies in the State is not encouraging, and benevolent efforts to found new ones by providing lands and assistance while making a start are sure to fail, and would prove a curse to the colored people themselves. "It would engender idleness, encourage a spirit of reliance upon others, and bring about a state of things injurious to both the givers and receivers of this intended bounty." At the South the most encouraging symptom is the activity of the Cotton Planters' Association, whose headquarters is in Vicksburg, and whose aim is to unite the cotton-planting interest in behalf of the best methods of cultivation, diversity of crops, improved stock, and some practical plan of labor immigration. The President and leading spirit of this organization, according to a writer in the Boston *Herald*, is fully impressed with the evils of the tenant, share, and credit systems in which both whites and blacks are miserably involved.

One of the most marked and unmistakable signs of the revival of business is a strike on a great scale among the spinners at Fall River. A reduction of fifteen per cent. in their wages was submitted to in April, 1878, on the understanding that it would be restored with the return of better times. They have now decided, in view of the rising market, that the better times have come; but the manufacturers hold that the better times, as they understand it, will not have come until they have recovered some of the heavy losses of the past five years. The actual loss sustained by the mills at Fall River, apart from the depreciation, or in some cases total "wiping-out," of the stock, is calculated at $4,000,000. The wages at present paid by the various mills amount to $310,000 monthly, which the operatives are now preparing to sacrifice, and in addition to this they have resolved to get rid also of their savings, or run in debt, by pledging themselves to their own support for three weeks without taking aid from the Union. The movement is said to be mainly promoted by foreign labor-agitators, and it promises enforced idleness for many weeks to twelve or fifteen thousand men, women, and children, and the suspension of production amounting, in the case of thirty print-cloth mills, to 149,500 pieces weekly. All these strikes are, of course, in reality an attempt to manage very complicated business enterprises through universal suffrage; and the history of the co-operative movement in England seems to make it certain that in the existing state of human nature they cannot succeed—that is to say, co-operation in consumption has been an enormous, almost bewildering, success. The co-operative associations of the Rochdale type are immensely wealthy, and do a business of from $60,000,000 to $75,000,000 yearly, but not one of the producing associations has succeeded. The reason is plain enough. The talent needed for production is rare and has to be highly paid, and the men who have it, as a general rule, will not work for others, and least of all for mass meetings composed of people who grudge anybody higher salaries than they themselves can make by handwork, or than they get mere clerks for.

A murder strikingly resembling that of Mr. Nathan some years ago was committed during the week upon an elderly lady, Mrs. Hull, in her bed on the parlor floor of her house in West Forty-second Street. She was alone on that floor, in the back part of the house, and her room was easily accessible from the basement. As she had a good deal of jewelry the temptation to murder her, to any murderously disposed person who knew how she passed her nights, was strong; but it does not appear to be clear that her death was really intended by her assailants. She was gagged as well as tied, and the gagging may have suffocated her accidentally. Sleeping alone on the lower floor of a New York house, the rest of the family being up-stairs, is substantially the same thing as sleeping alone in the house, and no woman ought to attempt it. There is, therefore, nothing very remarkable about the murder, and nobody would have considered it very remarkable if Mrs. Hull had been awakened by burglars in her room, and they had threatened and gagged her until they got off with their booty; and in the present state of our criminal jurisprudence a burglar's temptation to commit murder when discovered is very strong. What gives the case most of its peculiarity is the treatment of it by the press. Some of the papers blame the police a good deal for not laying their hands at once on the murderer, apparently on the theory that the policeman is a sort of guardian angel who ought to watch over each citizen while he sleeps, or at all events meet assassins when they are leaving his chamber. Others again have undertaken the job of finding the murderer themselves, and will have it that it was the unfortunate lady's husband, a doctor over seventy-four years old, who killed her. What his motive was they do not as yet reveal, but they intimate that if we concede that he is guilty they will supply his motive by and by. In the Nathan case they charged the dead man's son with the crime, and were disgusted with him because he would not confess it.

All this is due to the deadly influence of the dread of "beats." This passion impels every reporter to go straight to the most sensational view of every subject because it may turn out to be the correct one, and in that case the glory and profit of having first propounded it will be very great. Should it prove incorrect, nothing worse will result than a certain amount of suffering to some individual or family. When somebody is murdered, of course the murder is better news if committed by some near and dear relative than if committed by a total stranger, and accordingly the reporter, if he has any chance at all, fastens it on a husband or wife or son. One who has had no experience of a calamity of any kind in his domestic circle which has a "newsy" look, has no idea of the fierce impatience with which the reporters now assault the house, the regular employés of the daily papers being reinforced, and indeed often swept away, by bodies of private collectors, who gather up news on speculation and sell it to the city editors. We know of a case in which a house had to be defended against them by the police, after they had threatened to kick the door in. To men in this temper anybody is capable of a murder or robbery, and has to keep a very civil tongue in his head to escape being charged with it.

The financial markets show a tendency towards a halt in the active speculative movement that has prevailed during the last few months; the result, perhaps, of unusually high prices, of doubts about the result of the Western harvest, and of the closing of speculative accounts in anticipation of summer recreation. Government bonds, however, maintain their late activity, and, as the supply of four per cent. certificates is rapidly declining, it is anticipated that the market will soon revert to the control of the loan syndicate, with the result of higher prices for the fours. The money market has returned to its usual summer ease. Currency is flowing freely into the city banks, and the last weekly statement showed an increase of $1,724,000 in the surplus over legal re-

serves. On demand loans the rate of interest ranges at 2¼ to 4 per cent. Owing to the rapid gain in the imports with a concurrent decline in the exports, and also to the return of called bonds from Europe, the foreign exchanges wear a firm aspect, and rates have ranged so closely upon the point at which specie can be exported that $850,000 of gold coin was exported during the week ending on the 14th inst. The information conveyed by the British Minister at Berlin, that the German Government has suspended its sales of silver, and probably permanently, has been the occasion of an active speculation in silver at London, under which the price advanced to 52⅝*d.* per oz.; the rise, however, was not maintained, and the quotation fell back to 52*d.*, apparently under a suspicion that strained inferences had been drawn from the official announcement. At the close of the week the value of the bullion contents of the 412½-grain silver dollar was 87.78 cents. The defeat of the Warner Silver Bill has not visibly affected the value of silver, while it has afforded marked satisfaction in financial circles, as at least the postponement of a serious threatened derangement of our currency system.

The blows which England is receiving in outdoor sports, it is safe to say, are likely to prove nearly as depressing as—to a portion of the public more depressing than—the financial and commercial difficulties of the day. Men who can hear of the decline of foreign trade and the sufferings of the landed interest with equanimity, have been plunged in gloomy foreboding by the American triumphs in shooting and horse-racing, and those of the Australians in cricketing. The final and easy defeat of Elliott, the champion sculler, by Hanlan, the Canadian, will come on these people with a great shock. One of the sporting papers says that these calamities are all due to excessive luxury, but how this drawback is to be got rid of it is hard to see. Nobody is willing to practise self-denial in the hope that some unknown man's stroke or wind, or somebody's horse's speed or bottom, may thereby be improved. English defeats in these things, like the loss of her foreign markets, are in reality signs of the levelling-up of the world. Peace and freedom gave her a century's start in nearly everything, but as these things have begun to come to other peoples, they begin to work and play as well as she.

The troubles in the French Assembly—in the last row two members came to fisticuffs, and Paul de Cassagnac was suspended for three days for insulting the Government—are due to the fact that the members of the Right, though they sit and vote, really do not acknowledge the right of the Republicans to be there and to carry on the Government. The fact that they were lawfully elected under the constitution and the laws with them goes for nothing. They deny that such bad men can acquire the right to govern by any process. In fact, this state of mind is not unlike that of our Stalwarts towards the Brigadiers. They will not even acknowledge the authority of the majority to regulate the proceedings of the Chamber. A vote of censure on a member for disorderly behavior entails a fine of a quarter of his month's pay. When this is inflicted on one of their number they subscribe the amount or purchase a present for him with it, in order to fortify him in his rowdyism and insubordination.

M. Emile Ollivier, the *enfant terrible* of the French Academy, who refuses to make Henri Martin's reception speech unless he is allowed to have his fling at M. Thiers, has written a long letter to the Academicians, which he published first in the newspapers, in which he instructs them in a very magisterial tone on the law and usage of reception oratory, and cites numerous precedents showing that criticism derogatory to defunct members had been permitted to those who had welcomed their successors. The whole letter is very characteristic in its want of perception, and the *Temps* points out to him in the cruellest way that there is no precedent for an attack before the Academy on the memory of a statesman who had freed France from an invading army and reorganized her government, by an orator who had plunged her without preparation or cause into a war which had brought her to the verge of ruin.

Prince Bismarck already begins to feel the inconvenience of his alliance with the Ultramontanes, who have begun calling for the reward of their support. When the Liberal President of the Reichstag resigned the other day, in consequence of his differences with the majority of the Chamber, the first vice-president elected was an Ultramontane; but the party refused to permit the election of a familiar of Prince Bismarck's, named Lucius, as the second vice-president, and the Prince had to submit. Their organ, the *Germania*, now says that Dr. Falk, the author of the ecclesiastical laws, must be got rid of, and that this would be the opening of a "beneficent reaction," and that the Chancellor must not flatter himself that the party will sell him its birthright for a mess of pottage. It seems, however, as if he would not surrender Falk to them, nor yet repeal the obnoxious laws; but some arrangement is believed to have been made by which they will not be executed at all, or not executed with rigor.

The Khedive has apparently been frightened, on calm consideration, by the prospect of French and English, and probably especially of French, displeasure, and has cancelled the grand plan by which, under native administration, he was to pay the bondholders in full. He now remits the whole matter of security and rate of interest on the consolidated debt to France and England. It is not likely that after this fresh display of weakness he will be long able to hold his throne.

The naval portion of the war between Chili and Peru apparently furnishes the same kind of instruction to professional men as all the others which have preceded it since ironclads came into fashion. In the Austro-Italian battle of Lissa the victory was won entirely by ramming, and the sole order of the Austrian Admiral Tegethoff was "to ram everything grey." All the ironclads which have come to grief in time of peace, too, have done so through the ramming of their consorts. The best work of our war even was ram work. In fact, so far as experience has yet gone, the tremendous artillery of the ironclads, on which such enormous sums have been expended, is of little value. It cannot keep an enemy off or sink him. In the late South American battle two Peruvian ironclads, the *Huascar* and *Independencia*, went in search of the Chilian fleet, and found it. The *Huascar* received three broadsides from the Chilian *Esmeralda* without damage, and then sent her to the bottom with a single ram. The *Independencia* went in pursuit of the *Covadonga* despatch-boat, which led her close in shore, and she speedily touched a rock—or, in other words, was rammed—and went to the bottom like a lump of lead, carrying her crew with her. This leaves Peru with no navy but the ram *Huascar*, which will probably be able to give a good account of her enemies as long as she does not use her guns, but rams boldly. In fact, the slightest touch of a ram seems to dispose of the largest ironclad afloat instantaneously. Worse news than all this could hardly reach the great naval powers of Europe, and especially England.

The Panama line having been decided on for the ship-canal across the Isthmus, the work seems likely to be taken in hand, mainly by French capitalists, who have been enchanted with the results of their venture on the Suez Canal, particularly as M. de Lesseps is to father the new project. He announced at a meeting of the International Literary Congress in Paris, the other day, that he had made a sort of experimental preliminary call for two million francs, in shares of five thousand each, and the whole had been subscribed in two days, without the publication of a single advertisement. The interest of the United States in this scheme is as great or greater than that of England in the Suez Canal, and England made the huge mistake of having nothing to do with the latter. We trust our Government will not be equally neglectful, and if the good faith of the enterprise had not been called in question by those who know how the decision as to a route was reached, investment in the shares would not be a bad thing, or a very bad use to make of the precious silver dollars now in the Treasury.

THE IMPENDING TROUBLE OF THE SILVER PROPHETS.

IF silver shall go back again to 59 or 60, the point at which it would circulate at par with gold—as seems now not at all improbable—it will be very interesting to watch the effect on the various advocates of remonetization. It will be remembered that silver stood at this point when the double standard was abolished by the Act of 1873, and that at the time it was passed there was not, and had not been from 1862, any silver in circulation in this country even as small change. For this reason the legislation in question, though it was very carefully considered in Congress, excited no attention whatever out of doors; indeed it had little practical importance beyond giving a certain increase of stability to the standard of value. Nobody paid his debts, or made his contracts, or settled his accounts in silver, and for fourteen years nobody had even carried silver tokens in his pocket. It was consequently not surprising that, for two years after the Act passed, the public remained in complete ignorance of its existence. In 1875, however, silver began to fall in value and continued to do so steadily. As soon as this was perceived—but no sooner—there arose the agitation which resulted in the Silver Bill of 1878. It was then discovered, and proclaimed, that the demonetization in 1873 was brought about by a conspiracy of European bankers and moneylenders and bondholders, who sent an agent to this country named "Ernest Lloyd" to corrupt Congress and the press, and whose efforts were crowned with success. Their object was to enhance the value of their bonds and of all evidences of debt, and, in short, to enable them to create a "corner" in gold, to the great detriment of the American people.

Mr. Murat Halstead, the great Western apostle of the silver movement, wrote a letter in these columns on the 22d of December, 1877, in which he declared that "the money-changers," when they brought about the demonetization of silver, "had knowledge" that it would depreciate, it being an axiom "that silver demonetized in the very country that produced it would decline in the metal market," and that "they couldn't help knowing it." He evidently wrote in a state of great excitement (he was then producing, according to one of his local contemporaries, "sixteen silver articles a day"), and we were therefore able to point out to him two important facts which he had overlooked. One was, that the demonetization of silver in this country could hardly have caused the decline, even if silver had been in use here, because the decline did not begin to show itself for two years after the demonetization. The second was, that silver was not in circulation in this country when the demonetization occurred, even as small change, and had not been for eleven years, and that "the axiom" of the metal market which was running in his head was, not that silver would decline if demonetized by a country producing it, but that it would decline if thrown out of circulation by a country using it. The demonetization of a metal by a country not using it produces little more effect on the metal market than a declaration signed by a large body of teetotallers that they will drink no more champagne produces on the wine market. We also pointed out to him that the probable cause of the decline was the demonetization by Germany, which actually threw an immense quantity of silver coin on the market as bullion, and this happened to come at a time when there was a great increase in the production of the mines. That a man of Mr. Halstead's perspicacity should not himself have perceived all this appeared very strange, but it was one of the not uncommon results of discussing or approaching financial questions in a state of great mental exaltation. It is now somewhat diverting to read in the Cincinnati *Commercial* that "the price of silver is advancing, and that there is reason to believe it will before long be placed close alongside gold at the American ratio"; and that "the advance in part is caused by the failure in the German supply." "Hitherto," it calmly says, "the Germans have been breaking the market, and now it seems they have no more to sell, and may even want to buy." The editor also candidly acknowledges that "he has for some time been disappointed in the silver market," and well he may be, considering that he held in 1877 that it was the Act of 1873 which had caused the decline, and has found that our remonetization, far from stopping the fall, produced no effect on it whatever. Usually a prophet who has made such dreadful mistakes as these either hides himself in the bushes until the affair blows over, or else abandons prediction and goes into some other business. But one of the peculiarities of the Silver Prophet is, that the course of events never abashes him in the least; so Mr. Halstead actually calls on "the Congressmen and journalists of the northeastern shore of this continent to begin to study to accommodate themselves to the facts about the silver question, and learn to treat it as it is treated in other countries—as a question of history, law, and science." To a student of manners this is one of the richest incidents in recent history, but we are not now studying manners.

What we wish to point out is the probability—which Mr. Halstead, to do him justice, himself appears to perceive in the article from which we have quoted—that the bulk of his supporters will probably desert him in case silver rises to 59 or 60. He belongs to the comparatively small body of silver fanatics who think untold good will result to the world from keeping the volume of the metallic currency large. The bulk of his supporters belong to the very large body of by no means fanatical persons who were made furious by the discovery in 1875 that the Act of 1873 had deprived them of the power of paying their debts with a depreciated and depreciating coin. Their interest in silver is due solely to the fact that it is much lower in value than gold. It is this motive which lies behind all the frantic efforts of the past two years to bring about unlimited coinage of silver. If now the old ratio between gold and silver should be restored by the withdrawal of Germany from the market, or by a great falling off in production, or by an increased demand for the Eastern trade, such as is likely to arise from the failure of the French and Italian silk crops, or by all these agencies combined, it is all but certain that we shall witness the sudden cessation of the silver movement—or, in other words, a return of the state of the public mind about silver which existed previous to 1875—that is, absolute indifference. There would then be little or no silver in circulation except as small change, because as long as there was nothing gained by handling anything so bulky nobody would use it, and if it rose above the legal ratio in gold it would be all exported.

The most that can be said about the rise at present is that it is not unlikely; that it would be for the moment a great blessing we need not say. But if it occurs it will be a most striking and effective illustration of the soundness of the opinion which has for years past been gaining strength, both as to the defectiveness of silver as a standard of value and of the uselessness of attempting to maintain a double standard. We wish we could hope that it would be an equally effective illustration of the danger and folly of blind fury about questions of finance. But we fear that, owing to the extraordinary faculty possessed by politicians of forgetting disagreeable things, and making others forget them, the most valuable lesson of the silver craze will yield no fruit. Those who have been most prominent in spreading the "conspiracy" story, and extolling silver as *par excellence* the poor man's money, as distinguished from gold, the banker's, usurer's, and bondholder's money, will a year or two hence laugh over this curious episode as heartily as they laugh over the activity of the French and Fenians in discovering "traitors" and "spies"; or else drop it from their recollection as successfully as Mr. W. D. Kelley dropped his own prominence in the very "fraud" in 1873 which he passed last year in furiously exposing and denouncing. These things do not increase one's respect for human nature, but the recital of them at least often enlivens the winter evenings.

INTERFERENCE OF THE CROWN IN BRITISH POLITICS.

THE last number of the *Fortnightly Review* contains an article from Mr. Henry Dunckley on the recent resolution of censure on the Ministry moved in the House of Commons by Mr. Dillwyn, touching the alleged interference of the Queen with Sir Bartle

Frere's doings in South Africa, and, indeed, touching the alleged growing disposition of the Crown to meddle in politics. Mr. Dillwyn's resolution would have failed, of course, in any case in the presence of the strong Tory majority, but it was covered with discredit through the refusal of the leading Liberals, including Mr. Gladstone and Lord Hartington, to have anything to do with it. It had in their eyes the fatal defect that it was capable of being construed as a reflection on the Queen. In fact, the discovery that it was open to this construction seems to have overwhelmed even Mr. Dillwyn himself with confusion. Mr. Dunckley, the Manchester journalist, whose remarkable pamphlet a year ago first called attention to what he considered the undue growth of the royal power under Lord Beaconsfield's instigation, now comes out with a defence of Mr. Dillwyn, which this gentleman had not the courage to make for himself in the House of Commons, and which no one else ventured to make for him, viz.: that even if the motion did touch the Queen personally it was proper that it should do so, because the nature of the evil is such that it cannot be cured without a certain kind of criticism of the sovereign herself, in spite of the maxim that "the king can do no wrong." Mr. Dunckley, too, heaps much ridicule on the delicacy displayed by the Liberal leaders in approaching the subject.

The cause of offence is that Sir Bartle Frere, a man of headstrong temper, and, as appears from his own despatches, of very advanced Jingo views regarding the destiny of England in South Africa, entered into recklessly, if he did not purposely set on foot, a war with Cetewayo, the king of the Zulus, without the knowledge or consent of the home Government. For this he was sternly rebuked in despatches from the Colonial Office, and directed to let annexation alone. But at the same time that he was receiving this unpleasant missive from his chief, Lady Frere was receiving a private letter from the Queen, expressing deep sympathy with "her noble-minded husband" in his difficulties. The effect of this letter was, it is alleged with much plausibility, to counteract in Sir Bartle's mind and that of his adherents the effect of the official despatches, and, indeed, to form a party among the Colonists to back up Sir Bartle and the Queen against the Ministry. Other incidents of a similar character, such as the receipt by the Queen of long and expensive private despatches from Lord Lytton, giving an account of the movement of the troops in Afghanistan, have been adduced in justification of the alarm which the extreme Radicals feel or affect to feel over the encroachments of the Crown.

There is no doubt, however, that Mr. Dunckley's letter would probably never have been written, and the discussion over the bounds of the royal prerogative never have arisen, if it had not been for the publication of the memoirs of the Prince Consort by Mr. Theodore Martin. The extraordinary frankness of these volumes, the fulness and freedom with which the life of the royal family and their motives of action in small as well as in great things are laid before the public, make them a complete novelty in literature, and probably the most attractive morsel which could have been offered to English society in its present condition.

The portion which has attracted most attention is the picture of the part played by the Prince in English politics. He brought over with him on his marriage an elderly German physician, Baron Stockmar, who had long been the friend and domestic adviser of the Coburg family, and was expected to be a useful guide for the Prince in his new and in many ways trying position in English society. Stockmar had a full supply of views on the English Constitution, which he dealt out in the most solemn fashion day by day to the young couple, and which the Prince, with true German thoroughness and conscientiousness, forthwith began to reproduce in ponderous "memoranda" on all the leading questions of the day, addressed to the ministers for the time being, and the composition of which the Queen watched with delighted interest. Under this process the Stockmar theory that the Crown had been deprived of its due prominence in affairs gained ground steadily, and before the Prince's death he had come to regard himself and the Queen, as his correspondence shows, as in a certain sense the Government of the country, and the Cabinet as a span of dull but necessary oxen, whom he had to goad into action and rouse to a sense of their duty. The most unpleasant passage in the memoirs is the account of the friendship which the royal couple contracted for Louis Napoleon immediately after the *coup d'état;* and probably few readers have noticed without something like pain the absence from the letters and journals and "memoranda" of the slightest expression of regret over that monstrous crime, or repugnance for its author.

The main importance of this episode, however, lies in the light it throws on the extraordinary favor which Lord Beaconsfield has enjoyed at court ever since he first took office. He is a man of essentially the same type as Louis Napoleon, and indeed began life in much the same way. He is flashy, unscrupulous, adroit, with a deep-seated contempt for parliamentary government and a passionate love of theatrical effects, and with a profound veneration for power in its coarsest forms and deep admiration for its trappings. His gross flattery, his gaudy rhetoric, with which he appears to have begun to ply the Queen from the very outset in his private accounts of the parliamentary debates, and his eager acceptance of the Stockmar view of the position of the Crown, have combined to give him a position at court such as no minister in this century has held, or, we may perhaps add, would have consented to hold. That he has been using his influence to embody in practice the fantastic views of government propounded by Disraeli the younger in his novels, Mr. Dunckley and those who agree with him have little difficulty in showing. That the Queen has been led by his counsels, and probably by his flatteries, into a certain amount of indiscretion in her correspondence with high officers, is perhaps also true. But for the difficulty which the Radicals experience in applying a remedy neither Lord Beaconsfield nor his Cabinet is to blame, but the present constitution of English society. The reason why the Liberal side of the House of Commons shrinks from even the appearance of censuring any practice in which the Queen has personally taken part, is social rather than political. There is not much left in England of the kind of loyalty which made the great Chatham kneel at the king's bedside when transacting state business with him, but another kind has sprung up which is perhaps a stronger force, and is much more widely diffused. We mean the reverence for the Court as the head of "society," and the power by which "social position" can be given or taken away. No matter in what calling a man is working in England to-day, the thing he seeks most earnestly as the crown of his labors is recognition in the Court circle for himself and his family, and the Court circle is now so large that loss of good standing in it has come to have the air of a terrible penalty, from which everybody shrinks. When the Prince of Wales mentioned Miss Thompson's picture at a public dinner he gave her fame and fortune, although every one in the room knew that his judgment of pictures was not valuable. In like manner an expression of his displeasure or dislike, and *à fortiori* of the Queen's, directed against man or woman would be a blow that hardly any one has the courage to face, so much loss or inconvenience and mortification may it involve. Even statesmen of the highest rank flinch from it, and the resistance to the interference of the Crown is left to those who are prepared to confess that they do not pretend to have achieved what the English would consider the highest success in life.

In fact, it is no great exaggeration to say that there is, since the wide diffusion of the suffrage, a perceptible leaning in favor of personal government among the wealthy and well-to-do classes—that is, the classes who have made money and want to enjoy it in an easy, elegant, and secure way. Political life grows more and more difficult for them under the parliamentary system, and, to put the matter somewhat roughly but concisely, they rather like to be ruled by somebody who gives good dinners, balls, and decorations. In England, the Disraeli view of limited monarchy is greatly aided by the unquestioned purity of the Queen's character, and by the length of her reign. She is an older politician than any man now prominent in public life except Lord Beaconsfield himself, and has known the ins and outs of every great

question which has agitated Europe for over forty years. Hardly any man who has made any mark in England, and is still on the stage, can recall the time when she was not on the throne, and when the loyalty of the country was trying to resist the influence of the lives of her uncles. The mere lapse of years has, therefore, given her an authority with which her natural powers have had nothing to do, and the frank way in which she has laid the story of her life before the world has deeply touched the popular imagination, for it puts in striking form the old truth that the palace is no better defence than the cabin against death and sorrow. A clever charlatan, with a theory to work out and personal ends to serve, could in fact hardly have found a more effective instrument than a sovereign like Queen Victoria, whom he had induced to believe in him.

THE DIDOT SALE.

PARIS, May 30, 1879.

THE sale of the great library of M. Firmin Didot is continuing this year, the family of M. Didot having wisely distributed it over several years. Though the passion for fine books and bindings has never been as intense as it is now, the floating capital which can be invested in books is limited after all, and it is not safe to throw too many books on the market at the same time.

M. Firmin Didot was somewhat of a glutton as a bibliophile. I have carefully examined this second series of manuscripts and prints which is selling this week at the Hôtel des Ventes, and I came to the conclusion that time was a necessary element even in the creation of a library. Surely there are wonderfully fine things in the collection which is now being dispersed. What library would not be adorned by a book like the 'Heures d'Anne d'Autriche,' which was sold yesterday afternoon at the price of $5,800? Who would not like to possess the pretty little manuscript called the 'Prières de Bussy-Rabutin'? I remembered the verses of Boileau about "les saints qu'a célébrés Bussy" when I turned the vellum pages on which Bussy had painted beautiful miniatures of Anne of Austria, of the Duke of Buckingham (as Saint Stephen), of Condé, of Mademoiselle de la Vallière, of Louis XIII., etc. The text of this profane prayer-book was only written on four pages; the others are still white; and on the four pages I mention the text has been scratched. Bussy was an admirable soldier, but his profanity and his verses on Louis XIV. in the 'Histoire amoureuse des Gaules' condemned him to perpetual exile in his château in Burgundy.

To return to the collection of M. Didot: it is impossible to praise too highly the manuscript of Charles VI., which will be sold in two days. This magnificent "missal" was executed for Charles, the King of France, and belonged afterwards to Henry V. of England, to Henry VI., Henry VII., and Henry VIII. It is a very fine specimen of our school of Touraine. After the Reformation it was sent to Antwerp and sold to the Abbey of Tongerloo, in Belgium, with a copy of Leonardo da Vinci's "Last Supper," executed for Henry VIII. The missal remained in this abbey till 1869; at that date it was sold by the monks, who were anxious to make a present of money to the Pope, and M. Didot was the happy purchaser of it.

Among the books and manuscripts of the Didot collection there are, however, many which a very fastidious bibliophile would not much approve of. M. Didot committed often the great mistake of repairing old books. Such repairs are always very dangerous; it is better to have an historical binding, with the wounds and injuries of time, than to see it repaired by an ignorant and coarse hand. We only trust in Paris a valuable old book for such repairs to one man, who has made a specialty of it, as he is attached to the Bibliothèque Nationale, with the special function of repairing its books. In his spare hours the excellent L—— makes a few repairs for a few bibliophiles, but he works discreetly—never attempts to conceal too much, never alters the character of a work. M. Didot has unfortunately employed a very able book-doctor, if I may use the word, who lived chiefly in England at one time, where he worked much for M. Libri and for some eminent bibliophiles. This French artist, for he is a real artist, has not the conscience of our good book-doctor of the Bibliothèque Nationale; he can even be said to be full of imagination; he likes to change lead into gold, to turn an ordinary book into an historical book by the addition of arms, devices, monograms, etc. Such transformation cannot be too severely condemned. M. Didot did not care enough about the quality of modern bindings; when he had as good a book as the original edition of the 'Characters' of La Bruyère he ought not to have had his copy bound by anybody but a first-rate binder. The chief service which M. Didot has rendered to the world of bibliophilism has been his incessant and almost ravenous collection of what we call the 'Livres à figures,' illustrated books. He found out early that engraving, even in the more modest form which it assumes in books, is really a form of art, and may become one of its highest forms in the hands of great artists. M. Didot applied himself particularly to the study of the French engravers.

M. Duplessis, son of the *conservateur* of our great National Library, who is at the head of the Department of Engravings, will soon publish through Hachette a large work on 'Engravers and Engraving.' Few men are as competent to treat this subject. He has added to the second volume of M. Ambroise Firmin Didot's Catalogue a short notice on the engravings in books, or what we should call now the *illustrations*. In some of the oldest manuscripts are found attempts at real engraving; the National Library has a manuscript which has been traced to the period which followed the year 1406, and in which are two engravings surrounded with writing; there are several engravings made by Israel van Meckenen, and painted by hand, in another manuscript of our Library, a book of 'Horæ' on vellum, made in 1466 for Jean le Bon, Count of Angoulême. It is well known that in the works which go under the name of *xylography* the text is engraved on wood as well as the figures. Many books have been written on the first xylographic works. The collection of M. Firmin Didot possessed a few of these rare works. The most important is an 'Ars Moriendi,' the only copy known of an edition which is not quite similar to the first edition of this book by Heinecken. There is no complete copy existing of this first edition; there are some parts wanting in the copy of Munich, in the copy of Memmingen, in the copy of our National Library. The edition of M. Didot was probably made in the Netherlands; the costumes are those of the low countries, and some good judges attribute the drawings to Laurens Coster.

These first books, or embryos of books, called xylographs, so humble, so poor when you compare them with the magnificent manuscripts adorned with golden letters and miniatures, are nevertheless of the greatest interest. They represent the first efforts made for the popularization of ideas; the manuscripts could only belong to the "happy few," the xylographs were intended for the people. M. Didot had, besides his 'Ars Moriendi,' two copies of the 'Historia Sancti Johannis Evangelistæ, ejusque visiones apocalypticæ' of the first and of the second edition; he had the only known Italian xylographic work, 'Opera nova contemplativa,' an imitation of the so-called Bible of the Poor. The engravings are by Giovanni Andrea Vavassore, called Vadagnino; one of them is a faithful copy of an engraving of Albert Dürer's published in 1509. It is well known that Dürer applied his great genius to the illustration of books. His 'Life of the Virgin,' his 'Great Passion' and his 'Little Passion,' his 'Apocalypse' are works of art of the highest importance. Dürer shines like a star of the first magnitude among much smaller stars; still the names of Hans Burgkmair, of Jobst Amman, and a few others are still remembered, and the books which they adorned are much prized, especially in Germany. Bibliophiles are very great admirers of the books illustrated by Hans Holbein; his "Simulachres de la Mort" and "Icones Historiarum Veteris Testamenti" are, so to speak, necessary in any good library. The "Simulachres" appeared first without any text, and these first impressions are of the greatest rarity.

In Italy the printers of the fifteenth and of the sixteenth century did not fail to employ the numerous artists of the time for the ornamentation of the books which they published. Engraving on metal was first introduced by Nicolò di Lorenzo in the 'Monte Santo di Dio' of Antonio Bettini of Siena. In 1481 there appeared an edition of Dante's 'Divina Commedia' with some engravings by Baldini, made probably after the drawings of the admirable Botticelli, one of the most original masters of the time (see the Museum of Florence and the National Gallery of London). This charming Florentine art, which has no better representative than Botticelli, has left numberless traces in books; title-pages, ornamental letters, small cuts betray constantly the genius of the creative period of the early school of Florence. The greatest artists did not disdain to draw models for the printers; the prayer-books of the time, the printed sermons, the ponderous works on theology, on liturgy, everything, in short, bears the mark of the power and genius of this incomparable period. Firmin Didot wisely collected all the specimens he could find of this charming Italian art. The common bibliophiles generally are contented with the most famous specimens; the best known is perhaps the 'Songe de Poliphile.' M. Duplessis places on the same line with this famous

work the 'Metamorphoses' of Ovid by Buonsignore (Venice, 1497); the Plays of Terence, printed in 1499 by Lorenzo de Soardi; the Histories of Herodotus, translated into Latin by Laurentius Valla (Venice, 1494); the edition of the 'Decamerone' of Boccaccio published in Venice in 1492; the 'Fasciculus Medicinæ.' Venice had no especial privilege, though it turned out more books than any other city at first. Rome, Milan, Ferrara soon competed with Venice; in Florence the sermons of Savonarola were illustrated by great artists. Bernardino Luini, the divine Luini, the pupil of Leonardo da Vinci, illustrated a 'Life of Saint Veronica' (1518). How many others could we not name!

In the Netherlands we find Rembrandt and Rubens among the illustrators of books. Rembrandt made an etching for the tragedy of his friend the Burgomaster Six, 'Medea'; he made six etchings (the rarest of his work) for a book published in 1655 in Amsterdam by his friend the Jew Menasseh ben Israel. We could name hundreds of smaller, of very humble names among the illustrators of books in the Netherlands. In my opinion there is very little merit in most of these books. I consider them greatly inferior to the works of the Italian schools. In England and in Spain the art of engraving was not so constantly applied to the ornamentation of books; but the taste for illustrations in books having once become popular in England, has never since ceased to be so; and a school was founded in England which can boast of many famous names, Hogarth, Bewick, Stothard, Rowlandson, Cruikshank, etc.

THE VIVISECTION QUESTION IN GERMANY.

BERLIN, May 25, 1879.

THE development of physiology during the last quarter of a century in Germany has been by general acknowledgment unprecedented in the history of science. Instead of being united with anatomy in one professorship in the universities it is now often argued that it is too wide a field for a single specialist. In determining the curriculum of the large new Institute in Berlin, "the palace of the queen of natural science," according to the director, it was debated whether a year's course of lectures of five hours a week on general physiology must not be superficial, and whether the work should not be divided, as Pflüger and others have suggested, among its several constituent departments. A physiologist, it was said, must be by turns physicist, chemist, mathematician, toxicologist, microscopist, and now, by general consent, even philologist, like Brücke, and philosopher, like Wundt. The younger men who now overcrowd the market, and occasion the liveliest competition, devote themselves mainly to some one of its sub-specialties. The Berlin Institute is the largest of some half a dozen well-equipped and independent establishments of the kind which have been built in Germany during the last ten or fifteen years. Besides several auditoriums with every convenience for experimentation, and for bringing microscopic and other preparations under the eye of each student, it contains large and fully furnished laboratories for physical and chemical work and for vivisection, intricate webs of electrical wires connected with constant batteries in the cellar, a magneto-electric machine of several horse-power worked by steam, and extensive basement apartments for frogs, rabbits, dogs, guinea pigs, pigeons, etc., all cared for by nearly a score of servants, famuli, and assistants, and all directly under the care and inspection of the Government, with fully detailed records of all original work published in the various physiological archives. The pre-eminence of German science is nowhere more supreme than here.

These are the men and institutions against which the anti-vivisection movement is directed. The question is comparatively recent here, and has very different features from the agitation in England, as a result of which vivisection is there allowed only to a very few eminent men by Government license and under severe restrictions and liabilities. An illustrated brochure of nearly eighty pages, entitled the 'Torture Chamber of Science,' was published about the beginning of the present year, which has had an immense sale, already been translated into five foreign languages, and reached a sixth stereotyped edition. It is written with striking journalistic art by a young nobleman, who is one of the directors of the Dresden Anti-cruelty Society. Public sentiment has been so aroused by the discussion thus evoked that eminent physiologists like Ludwig have been threatened on the street, and one of his more timid friends expressed to the writer his fear that the trouble might become as serious as in the case of Prof. Schiff, who was lately obliged to remove from Florence by a league of workingmen who threatened his life. The author has turned many hundred pages of archives, and describes the roasting of live rabbits, the effects of curara, the throwing of dogs with extirpated brains into water-vats, etc. He conjectures how many animals different physiologists have sacrificed, charging one by name with having tortured to death fourteen thousand dogs, gives a long list of contradictory or doubtful results reached by different experimenters, describes and illustrates affecting scenes where animals have pleaded for life, and students have turned away sickened not only from the vivisectorium but from the study of medicine, and concludes that the evil he describes is one of the greatest moral stains upon modern civilization, making physicians unsympathetic and often careless and hard-hearted. Physiology, it is said, can scarcely be called a science as yet, and the contributions of vivisectionists to the understanding and amelioration of human suffering have been almost nothing. It is as if one sought to learn the secret of Raphael's art by cutting up his canvasses. Science, it is said, will be brought into popular disfavor, and ladies are exhorted to give up the patronage and acquaintance of all physicians who operate on live animals, and to become themselves members of anti-cruelty societies, now too often controlled and even presided over by "hypocritical vivisectors."

There is no doubt that, after making all allowance for the extravagance and sentimentality, and even the ignorance of many errors in the statement of fact, in such arguments as the above, there is sometimes unnecessary cruelty. It is largely a matter of individual character whether a physiologist carefully informs himself beforehand of all the results of previous experiments and of the anatomical situation, and specifies sharply in his own mind the question he wishes to determine, and the method of the least possible suffering by the use of anæsthetics when possible. Restrictions by competent authorities also cannot possibly be too great or numerous. But to one who is acquainted in laboratories and with their directors, the general charge of inhumanity is simply absurd. There are now very much fewer private experiments or experimenters than formerly. Nearly all studies are made by specialists and in institutes, with the greatest publicity, and thus contribute their moiety to general progress. In order best to observe, one must be collected and rapid, and for the moment unsympathetic; but every investigator knows that pain is always a disturbing element, and must be reduced to its minimum. Moreover, a clumsy or cruel experimenter is condemned nowhere more severely than by his own co-laborers. For ourselves, we cannot but regard the anti-vivisection feeling here as born of the same sentimentality of ideal over-refinement, wealth, or idleness which prompts the Brahmin to sweep his path before him lest he tread unconsciously on a worm, or a well-known Berlin clergyman to eat the flesh of only *large* animals, that he may share with many others the accountability for the taking of life; and which in this matter makes common cause with social democracy if the latter, as we suggest, may be defined as the consensus of the incompetent upon properly professional questions.

How much animals suffer when compared with men in the same conditions admits as yet of no psycho-physic formulation, and perhaps never will, but all indications drawn from the structure of their brain are that it is far less. Nearly all that is known of mitigating their pains and of curing their diseases is due to physiology. Their most inexcusable tortures are for man's amusement—the chase, pigeon-shooting, etc.—but how much more reprehensible these are than the excessive care lavished on lap-dogs, favorite race-horses, etc., we leave for moralists to determine, and content ourselves here with enumerating a few of the most general results which the practice in question has already contributed to the cure and prevention of disease. In certain cases of cramp, attended by dilation of the pupils, vivisection alone has been able to teach that the trouble is in the cervical sympathetic nerve, and designated both the nature and place of the application of the remedy. Since Bernard found the cerebral point, the puncture of which caused diabetes, a long series of experiments on living animals have led to a new and far more successful treatment of this disease. The methods and conditions of the transfusion of blood, of the removal of diseased kidneys and ovaries, of artificial nourishment by stomach fistula, sub-periosteal resection, the application of the artificial larynx, have all been learned by experiments on animals. The possibility of such operations could never have been first proved on human subjects. According to official statistics over twelve thousand men die annually in India from the bite of poisonous serpents. Professor Burdon-Sanderson conceived the idea of seeking an antidote by experiments on animals. Perhaps nothing could be more painful, and the discovery is not yet complete, but there is increasing reason to expect that it will soon be. After trichinæ were observed, and official microscopic examination of pork introduced, it became essential to know in what part or parts of the body the parasite was to be sought for, and

it was found that hams, carefully examined, were often still infected. By experiments on living animals the development-history of the worm is now so thoroughly known that a single examiner, by the inspection of a part of the diaphragm, can tell at once and with certainty whether or not meat is marketable. Such are but a few of the immediately practicable ways in which animals have been offered to save human lives.*

It cannot be denied that there are very many details respecting the functions of the brain, the stimulation of circulatory centres, various secretions, reflexes, etc., in which eminent authorities disagree, and which can be decided only by experiments on living animals, but the incontestable fact remains that whenever physiology is thoroughly cultivated it has almost re-created the study and practice of medicine. Helmholtz, who has never published investigations requiring vivisection, and who may be called an impartial and competent judge, in speaking of the wonderful technique which its methods have developed, adds that the practice has made accessible to scientific observation a great number of most profound problems which a few decades ago seemed quite hopeless. Following the example of Claude Bernard, French professors often try to combine original observations with demonstration in the class-room, while in Germany it is held that a few fundamental experiments on living animals are indispensable for "heuristic" purposes alone. Every medical student has a struggle with his instinctive feelings in making acquaintance first of dissecting-rooms and museums of morbid anatomy, then of hospitals, and especially of surgical cliniques; but every one knows these feelings must be repressed, or he will never have the steady hand and eye which give poise and self-control in a critical emergency. The half-unconscious knowledge of this is no doubt at the bottom of much of the demonstrative and offensive, but often utterly insincere, affectation of hardheartedness by young medical students. It is not only as necessary but, we think, as natural for a good physician to grow more rationally sympathetic as for a moralist to cultivate conscientiousness. Vivisection is cruel, but disease, man's greatest enemy, is more so ; and if we were to retort in Herr von Weber's style of argument, we might ask him if he would refuse to torture a favorite dog for even a forlorn hope of saving the life of a member of his family ? We shoot noxious animals, slaughter calves and appropriate the mother's milk, etc., with the conviction that it is our duty to make way for the higher organization. For the same reason the physiologist has not completed his task when he has told us how animals grow ; he must also describe the important changes which take place between injury or the death of the brain and the beginning and progress of decomposition. No science has such problems and possibilities before it, and we consider the controversy we have attempted to epitomize as one of the most important of the many battles which science has waged with sentiment.

* See 'Die Vivisection im Dienste der Heilkunde. Von Prof. R. Heidenhain.'

Notes.

CHARLES SCRIBNER'S SONS announce for early publication the 'Life and Letters of Madame Jerome Bonaparte,' edited by Eugene L. Didier.——We learn that Dr. Emil Bessel's 'Nordamerikanische Nordpolfahrt' (Leipzig : Engelmann; 1879), whose success has been most gratifying—the whole edition of 5,000 copies having been taken up in a week—will be re-written in English by the author for this market.——A. D. F. Randolph & Co. issue immediately the 'Life of Prof. Albert Hopkins,' prepared from his journal, letters, and published articles.——'Bimetallism,' by Hugh McCulloch, will form No 17 of G. P. Putnam's Sons' "Economic Monographs."——Mr. Frank L. Pope's article on the "Life and Work of Joseph Henry," with special reference to his electrical discoveries, has been reprinted from the *Journal* of the American Electrical Society in pamphlet form (New York : D. Van Nostrand.)——The latest (No. 8) of the series of 'Personal Narratives of the Battles of the Rebellion,' published in Providence by S. S. Rider, is Dr. Wm. F. Hutchinson's account of the battle of Mobile Bay, the writer's post of observation being the deck of the *Lackawanna*. This paper was read before the Soldiers and Sailors' Historical Society of Rhode Island more than two years ago, and therefore before the appearance of Commodore Parker's compiled account, which we reviewed last fall. As showing what discrepancies occur in contemporary histories, we may mention the omission by Dr. Hutchinson of all reference to the *Lackawanna's* ramming the *Hartford* by mistake instead of the *Tennessee*. A heliotype interior view of Fort Morgan, and a diagram of the battle, accompany the text.——In the June number of the *American Naturalist* Mr. Richard Rathbun gives a very clear and highly interesting account of the late Prof. Hartt's determination of the origin of the Brazilian sandstone reefs. The *recife* of Pernambuco is naturally selected for detailed description.——The first number of vol. ii. of the New London *Boat Race Bulletin* has appeared in anticipation of the coming contest between Yale and Harvard on the 27th instant. This paper, gratuitously distributed, was a very effective auxiliary in the excellent management of the race last year. It contains a map of the entire course, and much other desirable information.——A useful work, called a 'Glossary of Terms and Phrases,' and intended (we quote the *Academy*) to include technical, historical, geographical, proverbial, and allusive words and phrases occurring with more or less frequency in general English literature, is announced to be published by C. Kegan Paul & Co.——It is proposed to publish immediately in five octavo volumes a complete collection of the fanciful extravaganzas of the venerable but still vivacious J. R. Planché. There are forty-four of these little plays, of which the first was originally brought out in 1828 and the latest in 1871. They are to be illustrated with portraits of the author and of the principal actors whose skill contributed to their success, including, of course, those of Madame Vestris and the late Charles J. Mathews. Mr. Planché has undertaken to revise for the press and contribute prefatory and marginal notes giving much curious information of the original actors and managers. This side-view of the history of the past sixty years of the London stage is of much interest. The entire profits go to the author. Subscriptions may be sent to Mr. Samuel French, publisher, 89 Strand, London, or Union Square and Fourteenth Street, New York.——Edmond Scherer, long connected with the Paris *Temps* in a literary capacity, has left that journal for the *National* on account of political differences.——A new book by Count Moltke, 'Letters from Spain,' is announced.——B. Westermann & Co. send us the prospectus of a new German monthly to appear in 1880, viz., the *Literaturblatt für germanische und romanische Philologie*, conducted by Drs. Otto Behagel and Fritz Neumann, with whom Dr. Karl Bartsch will be associated. It will not be addicted to any school or tendency.——The Russians, as might have been expected, have made a profitable use of their sojourn in Bulgaria and Rumelia, and by geodetic and astronomic observations have laid the basis for really reliable cartography of this part of Turkey. The results, according to *Globus*, are expected to be published next year.

—At the instance of the Harvard Club of this city, a considerable number of the alumni lately put forward Dr. H. W. Bellows as their first nominee for a place on the Harvard Board of Overseers. Their candidate was, however, thrown out of the count on the ground of his ineligibility as a non-resident of Massachusetts ; but inasmuch as the alumni are not bound at the approaching election on Commencement Day to vote only for the Nominating Committee's list of declared favorites, the Club has just issued an address urging that the vote for Dr. Bellows be renewed at the polls. They also reargue at great length the legal question of eligibility, and show with much force and justice that remote parts of the country are, thanks to railroads and telegraphs, practically as near the college as Western Massachusetts is, so that non-resident Overseers might easily attend the meetings, and would do so at short summons in case of emergency. They might have added that probably only those whose disposition and ability to attend were notorious would be selected. The weak point of the address and of those which preceded it is the failure to demonstrate the evils of the present exclusive system, whether it be legal or illegal, or the gain to accrue from the extension of eligibility to non-residents. Is it really a misfortune that the great majority of the Overseers reside in Boston and its suburbs ? Does it tend to keep the college management old-fogyish, or on the other hand expose it too unrestrainedly to that radical spirit of innovation which we associate with the modern Athens ? Does it diminish the claims of the college on the munificence of non-resident alumni ? Does it make them indisposed to send their sons to their Alma Mater ? If not, where is the grievance ? We, for our part, see no objection to the liberty demanded by the Harvard Club, but we think we do see decided advantage in maintaining the active interest and participation of Bostonians (in the largest sense) in the college at their doors. They furnish, and always will, the most compact and influential contingent to every college class, and on them the college has relied, and always will, for steady pecuniary support, extraordinary contributions, and the most valuable legacies and endowments. This condition of things may be susceptible of improvement, but it does not seem to us alarming.

—The tenth annual report of the Massachusetts Board of Health commends itself, like its predecessors, to every intelligent person who has any

regard for his own or the public health. The papers on "Coal-Gas from Heating-Apparatus," "Common Defects in House-Drains," and "Ventilation"—the last highly to be praised for its scientific quality—should interest and will instruct every householder or housebuilder; the last two are copiously illustrated. Professor Edward Hitchcock, of Amherst, describes the system of physical education at that college, and shows the attendance on gymnastic exercises to be to that at college-prayers as 95.36 to 84.50 per cent. Dr. Henry P. Bowditch returns to the important subject of the growth of children, as observed in the public schools of Boston; and recalling the fact deduced from his discussion in the eighth report, that "children of American parentage are taller and heavier than children of the same age of Irish parentage," narrates the result of an attempt to discover whether easier circumstances or race should be considered the more important factor. To this end the statistics were tabulated for each nationality according to the occupation of the parents. From this it appears that "in general the children of the professional and mercantile classes are larger than those of the laboring classes," especially in the case of Americans; but generally also this difference is not so great as that between American and Irish children of the same social class. So far the stock seems of more importance than the mode of life, but Dr. Bowditch gives reasons for thinking that in the Boston community the latter factor "is at least equal to, and possibly even greater than, that of race." The general report of the Board marks continued progress in sanitary regulation with a proportionate effect upon the death-rate of Massachusetts. The abolition of the office of coroner and of coroners' juries has fully justified its advocates, and the new method of trained "medical examiners" in connection with the courts is estimated to cost the State one-third less than the old system.

—*Art-Interchange*, the journal published by or in the interest of the Decorative Art Society, offers $140 in prizes for three designs or sets of designs. There is a first and second prize for a design for a "portière," presumably to be embroidered, though that is not stated; a first and second prize for designs "for a set of twelve tiles or six dinner-plates"; and, finally, a first and second prize for designs for a "set of twelve dinner cards." The names of the judges have not yet reached us. A recent number of *Art-Interchange* contains the other necessary information, and all this can be had by addressing the editor of the paper, 140 Nassau Street. Every such attempt is worthy of all encouragement, provided there is a premium offered for simplicity and directness, for designs in harmony with the purposes of the object to be decorated and with the material it is composed of, for ornamental effect rather than for a display of skill in drawing from nature. But as to this particular contest it seems an awkward arrangement which allows competitors to send in at their pleasure either the completed *portière*, plates, cards, or tiles, or merely drawings. The case is nearly this: there will come in an hundred designs which are really very bad, for one or two tolerable ones; the one or two tolerable ones will differ from one another broadly and decidedly, one having more apparent originality of conception, another a more purely decorative feeling, another less originality and less decorative effect but much greater excellence in drawing the figure. Now, the difficulty which the judges will have in awarding the prizes here—a difficulty which will be greatly increased if, as is probable, no one design seems to them at all admirable or unusually good—will also be increased by the necessity of comparing a set of drawings on paper with a set of finished paintings on pottery. Probably it will be still worse in the embroidered *portière*, if it is to be embroidered. To compare finished work with the needle with a drawing on paper, however carefully made, will be very difficult. The editor of *Art-Interchange* expects that well-known artists will enter the lists, and compete for these prizes. If they should do so, if (to name a very few) Mr. La Farge, Mr. Colman, Mr. Palmer, Mr. Lawrence, and Mr. Lathrop from among the painters, with a similar number from among the younger architects of European training, were actually to strive for these prizes, our inferences and assumptions as briefly worded above will not be altogether verified; but there is small chance of that. Where there are only two prizes for the whole number of competitors they must be great prizes indeed to induce men who have any profitable work on hand to compete for them. If a manufacturer should order a dozen tiles of one of the artists named above he would expect to pay twenty dollars apiece for them, let us say. Now, it is true that the premiated designs of this contest may remain the property of their makers, for all that appears in the published "Rules," but then their profitable use is not certain. No, all the designs submitted will be the work of people having plenty of leisure, who, except in rare cases, are not the ablest people.

—The prize print of *L'Art* this year is an etching by M. Lalauze of Makart's famous painting of Charles V.'s triumphal entry into Antwerp. This is the picture which was so especially a matter of general admiration at the Paris Exhibition of last summer; all across the Austrian art-gallery it stood, thirty feet by eighteen, or thereabout, with a half-dozen chairs secured to the floor along the line of supposed best points of sight. This also is the picture to which Mr. Comstock objects, as agent for some society for the encouragement of good morals. It was a colored photograph of it that he ordered taken out of a Fulton Street window. As for the picture, it has its merits, although we are of those who prefer to it the Catharine Cornaro by the same artist, which was at Philadelphia, and although there are assuredly as many disagreeable and doubtful tendencies as there are good points in the work of this so-called modern Paul Veronese. As for the etching, it is not a masterpiece. Mr. Lalauze's work has never seemed to us of the first rank. It is rather matter of surprise that Mr. Hamerton finds room for so extended a mention of his pretty little pictures for children, and this large work, with its somewhat harsh black and white contrasts and not very perfect disposition, is not more than fairly good either as a piece of engraving or as a reproduction of the painting. A right good *un*colored photograph would probably be a better thing, both as a picture and as a record.

—The *Gazette des Beaux Arts* is, as we said last week, definitely received into the slowly enlarging circle of European journals with American agencies. The five numbers for the months of the present year up to May are at hand; they have no announcement of Mr. Bouton's store as the New York publication office, but we may look for that hereafter; meantime, the way to complete this adoption of the stranger as a compatriot is to fill up the subscription-lists. The *Gazette*, all allowances made, is the first of art journals, and it is time that it should be at home in America elsewhere than in a few clubs and public reading-rooms. Beginning in 1859, the first two or three years made four volumes apiece, so that when, in 1868, an end was put to the "first series" there were not twenty but twenty-five volumes to bind. There are two index volumes accompanying this first series. The second series, which is still current, was marred by the war of 1870–71. We are now on the eleventh year of it, but instead of twenty stout octavos there are only eighteen as yet, this year bringing with it the nineteenth and twentieth volumes. There is an eight-page sheet called *La Chronique des Arts et de la Curiosité* coming this year regularly every Saturday, though it has not always been published so frequently. This gives the news of the day in matters of art—discoveries, publications, important sales, and gossip of many kinds—and is given to subscribers of the *Gazette*. One thing must not be forgotten: the size of these books. The *Gazette* and the *Chronique* each measure seven and a half by eleven inches, or a half-inch wider and an inch higher than *Scribner's Monthly*. This moderate size makes them possible to handle, whether as unbound numbers, without the certainty that their weight and size will tear them to pieces, or as bound volumes, without the immediate need of a table to support them. Nor does the reader of the current numbers, nor he who consults the encyclopædic set of accumulated volumes, find anything to regret in the small size. The page is big enough for sufficient illustrations. Larger ones than these pages allow are not needed to "illustrate" any paper, or to convey any requisite idea. The supposed need of much larger pictures is rather that the public who won't take an art journal to read and bind may at all events subscribe in order to get a number of prints "fit for the portfolio or for framing" pretty cheap. It is a pity that the newly-announced Boston *Art Review* should have adopted so large a page—as big as our own, if we are not mistaken.

—While the Théâtre-Français is undergoing needed repairs—which we hope will include an improvement in its ventilation—the entire Comédie-Française has gone to London, where it acts nightly at the Gaiety Theatre for six weeks from June 2. While some of the London journals hold up the visitors as models to be aped in everything, others are moved to self-vindication, not to say self-assertion. The *Saturday Review*, for instance, has had a long article contrasting Miss Ellen Terry with Mlle. Sarah Bernhardt, not to the disadvantage of the former. Now, Miss Terry is a very clever and charming woman, who acts very brilliantly when she feels in the mood, and at other times impresses one only as an intelligent amateur, while Mlle. Bernhardt, whatever her artistic deficiencies and eccentricities—and they are not a few—is, at all events, a trained actress with a wonderful gift of delivery, of *diction*. The comparison evidently is not without its comic side; indeed, there is abundant food for laughter in the attitude of the London press towards

the Comédie-Française, the writers apparently having no real appreciation of the relative importance of the company or of its individual members. Perhaps the most amusing article is one contributed to the June number of the *Theatre*, a very well conducted dramatic monthly magazine, by a Mr. Edward Rose. His essay on "Our Visitors" is preceded by an editorial of welcome, an account of the origin of the company, with fewer blunders than such compilations usually contain, a "sonnet de bienvenue" in most extraordinary French, and a biographic sketch of Mlle. Bernhardt, with photographs of her in "Ruy Blas" and in the male attire she wears in her studio. Mr. Rose, after remarking that this is in "some respects the best of Parisian companies," takes up the leading members of it. Mr. James has called M. Got "perhaps the first of living actors." Mr. Rose praises him, but "he is not a great actor; one is apt now and then to grow tired of him." . . . "In pure low-comedy parts . . . he is downright dull." M. Delaunay is praised also, but "he wants repose, is too conventional—hence his manner, though charming, is not the grand manner." At first M. Coquelin seemed to Mr. Rose "to possess that amount of versatility which enables a man to play all parts pretty well," but he was led to think better of him on seeing him in a low-comedy part. The paragraph devoted to the younger Coquelin—an actor of great comic force in farce and caricature—deserves to be quoted entire as a delightful specimen of insularity:

"There is one actor only in the *troupe* who yet needs to be mentioned—the one who, as an eminent critic said, seems destined to 'restore to the French stage the lost art of character-acting' [!], the one young comedian of the Français whom it is always interesting to watch, whose performances one does not know by heart before one has seen them—Ernest (the younger) Coquelin. His style always seemed to me, as contrasted with that of his companions, curiously *English*; and this because his strong point is the one in which our actors (inferior as in many other respects they may be) unquestionably do beat the French—originality."

—Among the short articles in the *Revue Historique* for January is an account of the revolt of the Jacquerie in Beauvaisis, in 1358, by J. Flammermont; it is a graphic and intelligible narration of the origin of this affair and its general course. The author differs from the historian of the Jacquerie, M. Siméon Luce, in two points—the date of the outbreak at Saint-Leu, which he fixes at May 28 instead of May 21, and its occasion. M. Luce attributes it to the instigations of the agents of Étienne Marcel, who was now at the head of the Paris insurgents; M. Flammermont regards it as growing out of one of those disputes between soldiers and peasants of which the history of wars is so full. He points out that the dauphin had issued an ordinance calling upon the peasants and others to defend themselves against the outrages of the lawless soldiery, and shows by a narration of the affair at Saint-Leu that it bears every appearance of being in pursuance of this order: the aggression would seem to have come from the other side. He does not in any way extenuate the horrors of the revolt, but ends with the statement—which is too often overlooked—that the reaction, after the suppression of the insurrection, "was more abominable and bloody than the revolt itself, and the nobles and the brigands of the great companies committed as many and even more excesses than the Jacques themselves." The correction of the date is of some importance, as M. Luce had crowded the entire history of the insurrection into the week between May 21 and 27, while the present account gives it twice the space—from May 28 to June 10, when the insurgents were defeated at Clermont. It moreover gives, he asserts, a better arrangement to the events of the insurrection.

—Prof. Willems, of the University of Louvain, favorably known by his 'Droit public romain,' has lately published a thick volume entitled 'Le Sénat de la République romaine.' It is not a complete treatise, being devoted only to the composition of the Senate; its powers are reserved for a second volume, in which he promises to disprove Mommsen's theory of the *patrum auctoritas*. In the present volume he takes issue with Mommsen in regard to the time when plebeians were admitted to the Senate; with great plausibility, it must be admitted, as he connects it with their holding curule offices, which was not till the close of the fifth century B.C. This view is, however, connected with a theory of the origin of the plebeians which we cannot admit, as he derives them exclusively from the clients, from which it would follow, of course, that none of the class would be qualified by wealth and intelligence to have seats in the Senate as early as the first years of the Republic. The most valuable part of the book is the careful analysis of the composition of the Senate at two different epochs—B.C. 179 and 55. At each date we have an approximately complete "blue book" of this important body, containing a list of members classified by rank, with a brief biography of each. This presents the same graphic view of the *personnel* of government of the respective periods that Mr. Masson gives, in his Life of Milton, for the Long Parliament. The lists illustrate completely what we know from other sources as to the Senate and the orders in the state. In 179 there appear to have been 304 members, of whom 88 were patricians; in 55 the proportion of patricians had fallen to 43 out of 415.

—The third volume of Marquardt's 'Römische Staatsverwaltung' (being the sixth volume of Marquardt and Mommsen's 'Handbuch der Römischen Alterthümer) has been published, and treats of the *Sacralwesen*, or Public Worship, that being an integral part of administration under the Roman system. The volume is not materially enlarged—594 pages against 568 of the earlier edition; it is, however, in great part rearranged and rewritten. The new arrangement is a great improvement in the way of simplicity and clearness. It consists now of four divisions, besides a very short introduction. The first division, The Epochs of the History of the Roman Religion, contains four epochs: the Kingdom, the Republic before and after the Punic Wars, and the Empire. The second division, The Organization of the Worship, falls into three groups: the worship of the Family, the Gens, and the State. Then follows The Individual Priesthoods, a long division, nearly half of which is devoted to the College of the Pontifices, with the priesthoods dependent upon it (Rex, Flamens, Vestal Virgins, etc.); the entire division containing eleven sections. The fourth division, The Games, is by Ludwig Friedländer, author of the 'Sittengeschichte,' and contains four sections—one general, one on the Circensian games, one on scenic games, and one on the amphitheatre. Two more volumes will complete the work: vol. iii. (Mommsen), 'Bürgerschaft und Senat'; and vol. vii. (Marquardt), 'Privatleben'; the fourth volume is now in the press.

A NEW YORK TORY DURING THE REVOLUTION.*

AARON BURR only expressed what all men thought, in saying that the history of the American Revolution could never be truly written. He spoke bitterly, contrasting his branded and broken life with the deserved fame of better men among his contemporaries. This book is a contribution to its story, heated with the passions of the time, from one of that class which suffered worse than defeat in the exile and ruin inflicted by their countrymen. It lacks method, gravity, reflection, candor—almost all the qualities of a history. But it has the one element of truth in what it baldly tells—it shows insight into character, and its vehemence and spite suggest due correction for what it infers or implies.

The author was a native of Queens County, connected with the aristocracy of the colony, and one of the judges of the Supreme Court of the province just before and during the war. He resents the indignity thrown upon the bench when he was defeated in the hope of promotion to its second seat, by the appointment as chief-justice of William Smith, that accomplished trimmer, whose family connection screened him from due punishment for treachery to both sides, and whose doubtful loyalty was overpaid by the chief-magistracy of Canada. No forgiveness appears in these pages, which deepen with a vindictive skill all the blots in that enemy's career. Himself an unflinching loyalist, Judge Jones fell under the ban, suffered imprisonment, robbery, and at last exile and attainder, retiring to England, where he employed the few years of his life after the war in composing this indictment against nearly all who were engaged in it. Coming as an heirloom into the possession of the late Bishop Delancey, the manuscript was left by him to his son, under whose conscientious care it is now edited, and published by the Historical Society with the means provided from a fund bequeathed to it for such purposes by John D. Jones, a kinsman of the writer.

The condition of New York City in 1752 is described as one of peace and harmony. All that threatened its happiness was the conspiracy of three young lawyers, William Livingston, William Smith, and John Morin Scott, "to pull down church and state, and raise their own government and religion upon its ruins." This conspiracy, aided by certain other matters familiar to historians, which the author leaves unnoticed, continued to inflame and excite the people until the passage of the Stamp Act, in 1765. Its speedy repeal (which quieted the many) taught far-seeing thinkers, and the restless and ambitious too, that what was now concession must at the next encounter become defeat. An impious thought for those, independence grew for these to be a faith and a purpose. These pages do not trace the working of the leaven, but the obduracy of so much of the lump as it could not permeate.

The author has a clear view of the importance and energy of the ec-

*'The History of New York during the Revolutionary War. By Thomas Jones. Edited by Edward Floyd Delancey.' Published for the New York Historical Society by D. Appleton & Co. 1879.

clesiastical tribunes of the day. A graduate of Yale College, he belabors Alma Mater as the nurse of sedition, faction, and republicanism. With the zeal of a loyalist churchman he assails the Presbyterian clergy as promoters of discord and preachers of wrath. What part conscience had in their preaching and what the pride of dissent, can never be known, but it was a force, and not the weakest of the forces that undermined the throne. "Without the Presbyterian clergy," John Adams once said to Josiah Quincy, "the Revolution never would have succeeded." The author takes less account, among such forces, of the pure logic of democracy, dismissing contemptuously, as party cries, the talk of the rights of man and the doctrines of equality. Nor does he pay much heed to the constitutional principles which were the life and justification of the struggle. On the other hand, he does full justice to the generally loyal feeling of the people at its beginning, to the hopes and efforts for conciliation, and to the wretchedly inadequate agencies employed for that object by the mother country.

For the royalists' conduct of the war after it became flagrant he has nothing but contempt, expressed with a civilian's rashness, but justified by contemporary military judgments. Both sides meet impartial condemnation. In the writer's opinion the success of the Revolution was due to no courage or capacity in its military leaders or its civil guides in Congress. Faction in Parliament and the imbecility of English commanders gave its occasions and invited its triumph. The armed chiefs were sybarites on one side, tyros on the other, and blunderers on both. The American army, Congress, and officials might all have been bought. Negotiations conducted by craft on the one part against raw incapacity on the other ended in a peace disgraceful to the power that conceded, and with little promise of good to the power that won it. We should never learn from these pages that Franklin was anything more than a trickster, that Washington ever won a battle or displayed one unperverted virtue, or that Jefferson existed at all. Their criticism paints Howe (and in fainter colors Clinton) as a general who slighted information, wasted opportunity, failed to combine, neglected to strike, omitted to pursue. Having the end of the war within his grasp on several distinct occasions, he refused to close his hand upon it, lest he might lose his hold on the state and profit of his position. This bitter civilian's judgment is supported by the authorities of the time. The Duke de Lauzun and Count Fersen, less prejudiced witnesses, are hardly less severe; and the lately published memoir of the Count de Deuxponts confirms their censure.

Many things combined to make the condition of loyalists in New York more intolerable than in the other colonies. The city was a nest of families wherein the larger quarrel of rebellion drew venom from private enmities. The wave of war rolled to and fro throughout the populous colony, from Montauk to Fort Stanwix and Lake George, and family feuds fed it at Albany as in New York. The long military occupation of the city, with courts suspended and government interrupted, wore out the inhabitants, while the war, carried on as the author describes it against the British treasury, lived by levy with impartial severity on loyalist and rebel alike. Moreover, the Republican party in New York was better compacted and older in growth than elsewhere; its leaders more practised, if not more statesmanlike, than in other colonies, and their followers, of mixed population, more audacious. Partisan violence at the outset was more common, and, irritated by long repression, partisan vengeance in the end more cruel than was the case in other provinces.

Two-thirds of the property-holders of New York, the richest city of the colonies, were loyalists. Some of these being in England at the outbreak of the war, remained there to lose their property at its close. Many who left the city during its brief occupation by the patriot forces refused to return at peace to rescue their fortunes at the risk of their lives. By far the greater part remained under the protection of the authority which had its seat here throughout almost all the struggle. They gained little help from that authority, and learned at last to look to it with little hope. Much of the book is taken up with surprising details of the various devices of violence and extortion invented by the king's agents to peel those miserable people. In and near the city the regular tribunals were suspended, and so-called police courts, set up under military management, became mere machines for exaction. In the city the loyalists were squeezed; on their farms throughout Long Island and Westchester they were harried by foragers and plunderers of both sides, sometimes carried off prisoners to Connecticut, now and then killed in fray or cold blood. Throughout the colonies, in Carolina as in New York, the writer assures us they were worse used by the English troops than the rebels were. At the peace the greater number, of course, submitted to the new order of things. Many families emigrated to the West Indies and to Canada, evacuation being humanely protracted by Sir Guy Carleton till transports could be provided for those who flocked to this port, to the number, it is said, of 100,000. In the northern provinces of New Brunswick and Nova Scotia the descendants of these refugees form at this day the strength of the population, their leaders having been rewarded by the crown with important offices. Has New York gained or lost by exchanging these wanderers for the immigrants, so different in quality, who came afterwards to fill their places?

The great Tory landholders suffered most severely. An act of attainder, passed in 1779, menaced their lives and confiscated their lands to the use of the State. Other statutes, passed in 1784, in violation, or at the least in evasion, of the treaty of peace carried out the cruel purpose of the first. These laws are an indelible stain on the history of New York. The great De Lancey estate, lying in the heart of the city, assessed to-day at a valuation of sixty-three millions, was parcelled into lots, sold, and paid for in the depreciated currency of the time. There exist in New York fortunes built up out of speculation in the ruins of that one. Scarcely any more curious chapter of New York's private history could be written than one which should begin with the record of the Commissioners of Forfeitures. Nor is it easy to find a parallel for the story of vicissitudes which befell a family crushed and exiled from its native seat by religious persecution, to find its ruin repeated in a later generation and another hemisphere through political fury.

It would be the first instance in the history of civil strifes if the families then controlling New York could be parted asunder by a sharp line as loyalist and rebel. So intermixed were they through alliances that each party, often conveniently, found kin in the other's camp. As a general fact, however, the De Lancey connection, Episcopalians, landholders, and officials, were on the king's side; while the Livingstons, Presbyterians of provincial estates or lawyers in the city, held to the people's. Neither of these names was Dutch, but it would be a mistake to infer that the blood of either race was not. It was wholly so on the spindle side. The descendant of Norman nobles, coming over in 1686, and the adventurer (in the old and better sense) of Scotch stock, landing in New Amsterdam in 1674, chose wives, as their merit warranted, from the good and rich Holland families, and among such families at that day the range of choice was large. Kinship and cross-marriages resulted in intricate family connections between the two parties. The persistence of original New York names is remarkable. Of those given in the notes as recorded on the list of the Committee of Sixty in 1774, and on the longer one of signers of the "Petition to be restored to the King's peace" in 1776, not many, in their identical form, are extinct, and fewer still if they are traced through the female line. Our author's simple rule disregards lineage—his censure is all for liberals, his praise all for tories, nor does station silence his reviling, nor sex check his insinuations.

In some of his elaborate and careful notes the editor takes pains to correct the wrong done to certain memories by the work itself. Others are piously devoted to the praiseworthy task of rehabilitating certain names long marked by ignorant prejudice with the common slur of toryism. A few, and it is to be regretted that they are not fewer, give particularity and detail to the hints of the text upon misfortunes or faults known as painful traditions in the families they concern, and useless to history. In general, the pains and research bestowed upon the notes, making them far the most interesting part of the publication, deserve hearty praise, as do the form and dress of the volumes. Very likely they will provoke controversy; but whether accepted or contested they are a valuable and in some respects unique addition to the literature of the subject they illustrate.

The Recorder of Birmingham: A Memoir of Matthew Davenport-Hill; with selections from his correspondence. By his daughters, Rosamond and Florence Davenport-Hill. (London and New York: Macmillan & Co. 1878.)—We took this volume up with such dreary anticipations as to its character that, having read it, we feel almost as if an apology were due to its authors at the outset for our suspicions. Memorial volumes by near relations constitute, as a rule, a class of literature by itself which has to be judged by special rules. The tendency of the authors of such books is always to print much that had far better remain in manuscript, and at the same time to leave out much that would really interest the public. Their relation to the public is apt to be a false one, for, instead of having for their first aim to interest their audience, they generally proceed upon the assumption that interest must be aroused

when their own feelings are so deeply enlisted. Consequently, as a general thing, however valuable as a memorial for family or friends, such books are rarely very much more, while in their revelations of the most secret and sacred passages of their subject's life they frequently shock the reader's taste. We say all this at once to discriminate absolutely from such memorial literature the life of Mr. Hill. If it did not bear his daughters' names on the title-page we should hardly have guessed that it was the work of members of his family. It is a well-written biography of a lawyer who eminently deserved to have his life written, composed with great simplicity and good taste. The book might have been shortened with advantage, but there is no other respect in which it could have been improved.

Matthew Hill was born in 1792 and died in 1872, at the age of seventy-nine. Although not a famous lawyer, he was a man of remarkable abilities, and filled the judicial positions to which he was called with success. He was connected with several celebrated cases, among others that of the Baron de Bode, of which a very clear statement is given in an appendix, and the libel suit of the Duke of Beaufort against the proprietors of the *Spectator*. For some years he sat in Parliament for Hull, where he took part in the passage of several measures of more than temporary importance.

Mr. Hill's life covered a period marked by the most enormous changes in the whole system of English law. Born in the reign of George III., and living far into that of Victoria, coming on to the public stage at about the time of the beginning of the agitation for reform which secured its first great popular triumph in the passage of the Reform Bill of 1832, but which did not spend its force till a generation later, he lived in an atmosphere of reform, and was, like his friend Lord Brougham, by temperament and disposition, and soon by habit, rather a reformer than a lawyer. His mind turned from the first not so much to the legal aspect of the questions that came before him as to their relation to the happiness or improvement of mankind. In abstract questions of law, or in the applied art of trying cases, he seems to have taken little interest. The improvement of the criminal law, the reformation of delinquents, the equal and exact administration of justice were matters of the gravest importance to him. In fact, he was by no means an obscure member of that school of English law reformers which fell heir to the teachings of Bentham, and in a great measure carried them into practical effect. Their work was so thoroughly done, and the system they overturned was so barbarous, that we are apt now to overlook the importance of the services they rendered to humanity. It is difficult nowadays to imagine a state of society in which prisoners accused of offences punishable with death were not allowed counsel ; in which the difficulty of repressing crime was met by constantly enlarging the list of capital offences; in which large classes of society were deprived by their religion of the benefit of the laws of the country of which they were subjects ; in which truth was no justification of a libel, and parties could not be witnesses in their own behalf. In the first half of the century in England law-reform was a crying necessity. Mr. Hill had his share either as a writer for the press, or in Parliament or on the bench, in advancing almost all the great reforms of this kind, as his correspondence with Brougham bears witness. Later in life he shared the fate of most reformers, of finding most of the causes which he had at heart as a young man triumphant, and being obliged to look about him for new ones. By a singular process of reasoning he persuaded himself that a prohibitory law was the goal to which reformers ought to direct their efforts. This was in 1855. During the remainder of his life he was more or less identified with the cause of temperance.

Of Mr. Hill's private life and character this book gives a pleasing account. A man of generous sympathies, amiable disposition, and unflinching courage, he seems to have endeared himself to all who knew him, and to have enjoyed the respect and consideration of many of the most distinguished men of his time. We find him corresponding with Brougham on the ticket-of-leave system ; on the temperance question ; on criminal procedure ; on popular recreation, and a host of other subjects coming under the head of law-reform, or what is now called Social Science.

As in the case of most lawyers, Mr. Hill's life was spent without much external incident. Consequently his daughters' memoir can hardly be said to have much narrative interest. It contains, however, several good stories, and an entertaining account of Mr. Hill's childhood and early life. In 1814 he made his first journey to Paris. Having heard of the then universal bargaining over prices in French shops, he adopted the novel plan of notifying the shopkeeper that he understood the custom ; that it was not to his taste ; that, considering it a waste of time, he had brought a book, which he would proceed to read until the proper time had elapsed, when, if the shopkeeper would state the price which otherwise would have been arrived at by chaffering, he would make his purchase. This plan seems to have worked admirably. An amusing anecdote relating to Mrs. Siddons belongs to this period. Some child remarked of the actress that people called her tall, though she was not so in fact. Mrs. Siddons replied : "No, my dear, I am not tall, but I have a tall manner." On his admission to the bar Mr. Hill chose the Midland Circuit, and some reminiscences are given of the Circuit mess, the most singular one being the fact that drinking claret seems to have been regarded as a crucial test of the character of a new member ; not, of course, on the score of temperance, but because claret being then a highly-taxed wine, it appears to have been thought that men of extreme views might avoid drinking it in order to escape from contributing to the revenues at the disposal of the government. The somewhat antique social condition of the lower classes of the population in the counties embraced by the Midland Circuit may be inferred from a conversation between a Dudley man and a Stourbridge man, vouched for by Mr. Hill as true, on the subject of a candidate for office :

"*Dudley Man.*—Oi say, surree, hew dust thee vowt for ?
"*Stourbridge Man.*—I caw tell ; I've not made up my moind.
"*Dudley Man.*—Whoysna vowt for —— ? Thur best feller ee the wurrld ; damned his own feyther at foiv' 'ear ode !"

In 1848 Mr. Hill went to Paris for a short time, and on his return stayed at Brougham Hall. The following anecdote we have never seen in print before :

"Brougham gave a dinner to Sir Walter Scott, and asked Wellington, Croker, and John Bankes to meet him. Scott was the hero, and was expected to talk ; but Croker went off at score, and nobody could edge in a word. Bankes, a rival talker, did not attempt it, but worked hard at his dinner, watching, nevertheless, his opportunity. At length Croker left an opening, into which Bankes rushed, and held it for a long time. At last, however, Croker getting another innings, addressed to the Duke a full narrative of the battle of Waterloo, correcting him when by signs Wellington showed that he had the presumption to differ from his teacher. From Waterloo Croker got to percussion-caps. But now he was on forbidden ground.

"'Croker,' exclaimed the Duke, 'you may understand the battle of Waterloo, but I'll be damned if you know anything of copper caps !'"

On the occasion of another visit to Brougham Hall Lord Brougham, speaking of Erskine, cited an impromptu riddle of his which is new to us, and which we commend to our readers' ingenuity :

> "I never can die, though I may not live long ;
> I seldom do right, though I cannot do wrong ;
> My jowl is quite purple, my brain is quite fat ;
> Come, riddle my riddle, what am I—what, what ?"

Impressions of Theophrastus Such. By George Eliot. (New York : Harper & Bros. 1879.)—In her later work George Eliot has moralized at such length as to weary the best-natured of novel-readers, and make them wish sometimes that she had put her wise saws into an appendix, and so facilitated judicious skipping for those who do not care for such seasoning of their afternoon amusement. In this book she has dropped all pretence of a story ; so those who care only for her narrative may go by on the other side with an easy conscience. Theophrastus Such is a satirical moralist, and displays in the first chapters, where he talks of himself, an eccentric and amusing individuality ; he is a man known to enquiring strangers as "the author of a book which you have probably not read," and who assigns to his awkward feet, long upper lip, and bad gait his failure to get recognition. He is of little consequence, however, being only a ventriloquist trick to deceive the audience, and as the book goes on the author speaks in her natural voice, without much attempt to maintain the characterization with which she began. The town-people she has met and the contemporary opinions to which she has listened are the objects of her satire—bores and the thoughts of bores, in other words. She has set up warning placards, as it were, on the broad way of stupidity, or over the demesne of the literary man-eater, or on the hat of the pitiable fellow who always carries it in his hand and twirls it deferentially in a mistaken effort to please. The characters she describes, natural, lifelike as a party in any parlor, resemble, nevertheless, those mild-eyed, moving advertisements who, in obedience to American ingenuity, perambulate the thronged streets of New York. The youthful Ganymede, "so young," precocious, with the brilliant future, who at forty is "the sad survivor of his own manifest destiny," but is still pardoned by able pens because he is so "remarkably young," in conformity with "the high Homeric precedent for keeping fast hold of an epithet under all

changes of circumstances"; "the half-breed," who set out to be a literary philanthropist after he should make money, and finds himself with millions and can't get himself recognized as a literary philanthropist, remembering the youthful vision and ill at ease in the cushions he never meant to occupy; "the watch-dog of knowledge," who "equips himself with a penknife to give the offender a *comprachico* countenance, a mirror to show him the effect, and a pair of nailed boots to give him his dismissal, all this to teach him who the Romans really were, and to purge enquiry of incompetent intrusion, so rendering an important service to mankind" (a character illustrated well by the author's story of Pummel: "What is the cause of the tides, Pummel?" "Well, sir, nobody rightly knows. Many gives their opinion, but if I was to give mine, it 'ud be different")—so the catalogue goes on with the man of bad temper, the ready writer, and other incompetent or malformed individualities which the reader will recognize and apply to this or that acquaintance too readily, perhaps, for it is only in the looking-glass that it is difficult to recognize a bore.

Much space is devoted to scourging the current opinions of the professedly cultivated, such as the wish to have lived in the time of Leonardo or of the Æolic lyrists, and the doctrine of compensation for one's apparent failure by a rise in his spiritual value, which is termed a very odious sort of self-cajolery. But the opinion that Sir Gabriel Mantrap, who was concerned in companies "ingeniously devised by him for the punishment of ignorance in people of small means," is a moral man because he is, as Melissa says, "an excellent family man—quite blameless there, and so charitable round his place at Tiptop," is a falsehood which calls out a most vigorous denunciation and the healthiest comment on the present meaning of morality in society; and the prejudice against the Jews receives, in what is the most powerful chapter of the book, a sound drubbing of such vigor as shows a true pleasure in wielding the whip. It is a piece of forcible argument, brilliant declamation, and open scorn, with so much heart in it that we fancy it was called out by the criticisms on the weakness and visionary scheme of Daniel Deronda, and is a defence of his nobility and wisdom; and this is almost certain from the conclusion:

"Every Jew should be conscious that he is one of a multitude possessing common objects of piety in the immortal achievements and immortal sorrows of ancestors who have transmitted to them a physical and mental type strong enough, eminent enough in faculties, pregnant enough with peculiar promise, to constitute a new beneficent individuality among the nations, and, by confuting the traditions of scorn, nobly avenge the wrongs done to their fathers. There is a sense in which the worthy child of a nation that has brought forth illustrious prophets, high and unique among the poets of the world, is bound by their visions. Is bound? Yes; for the effective bond of human action is feeling, and the worthy child of a people owning the triple name of Hebrew, Israelite, and Jew feels his kinship with the glories and the sorrows, the degradation and the possible renovation of his national family."

This various criticism of contemporary life, there is no need to say, is full of intelligence and pith, animated, marked by exactness of illustration and aptitude of allusion, not overburdened with philosophic or scientific references, and penetrating to the core of matters; but it deals only with the absurdities, ignorance, and stupidity of men, and the race makes but a sorry figure before its spectacles, frequently merely through inevitable failure. Here and there a short colloquy recalls the novelist, and there is a fine passage on the peculiar attraction of English scenery; but it is in the main a fund of experience, a collection of maxims, a transcript of morals and manners, which is full of suggestion to the reader, and may help him if he be not himself too hardly struck, and will, at any rate, afford the novel amusement to the bored of transforming their torturers into comic actors.

Travels with a Donkey in the Cévennes. By Robert Louis Stevenson. (Boston: Roberts Bros. 1879.)—This is one of the pleasantest of outdoor books, an excellent description of the places and people the traveller saw in the little-known and picturesque Cévennes, and an amusing narrative of the adventures he met with in his twelve days' journey, in which he tramped with no companion but a donkey to carry his pack, and no purpose but to go where civilization would not din in his ears. He is communicative, almost familiar, like one (to use his own illustration) who writes a letter to friends, sure of their good-will and their interest in himself. At first his own haps and mishaps, arising from his inexperience, or from peasant surliness, or from nature's lack of consideration for the camper-out, fill his daily journal with the human nature, the barrenness and poverty of Vélay and Upper Gévaudan, until he reaches his first resting place, the Trappist Monastery of Our Lady of the Snows. Notwithstanding the common report of Trappist rigor, he found this monastery a tolerably comfortable abode. The vow of silence is remitted to those who entertain visitors, and the traveller found it easier to begin than to break off conversation. "They were full," he says, "of kind and healthy interest in all sorts of subjects—in politics, in voyages, in my sleeping-sack—and not without a certain pleasure in the sound of their own voices." In the cell of one brother he found the Waverley Novels, in the library were Veuillot, Châteaubriand, the 'Odes et Ballades,' and Molière. Each had his special employ of his own choice; one bound books, another made roads, another was a photographer. It is true the workingman's day is there eighteen hours long, the meals but two, and from September to Easter only one each day, scanty and eaten of sparingly with voluntary denial of a small *carafe* of wine; but the monks were "firm of flesh and high in color," noticeable only for an extreme brilliancy of eye. Death, however, is a frequent visitor, when the Trappist lies down in his habit as he lived, and at the last moment the monastic bells ring out for joy that another soul is with God.

After leaving this monastery Mr. Stevenson walked on through the country of the Camisards, "the Cévennes of the Cévennes," the scene of that prolonged and bloody Protestant revolt which, as he happily says, makes so romantic a foot-note in the world's history. He adorns his pages with reminiscences of that time, and brings out fairly the difference between the Scotch Covenanters and these Southern Covenanters, who resembled them so closely in their belief, moods, and actions, and dealt much more in blood, yet differed from them in the cheerfulness and peace which were transmitted, the author thinks, from the climate and landscape, and forbade the gloom and superstitious terror that oppressed the North with a waking nightmare. He tells an old and beautiful story, one of the most beautiful in all the history of martyrdom, how Pierre Séguier, who had led the attack on Du Cheyla's house, and had given the first of the fifty-two wounds with which his body was pierced, on being captured and tried replied to his judges: "My soul is like a garden full of shelter and of fountains"; and with these words went to his torture. In the midst of this country and these associations the journey comes to an abrupt end, having been one well worth recording and reading for its humor, sentiment and romance, its graceful sympathies and fine perceptions, as well as for the instruction it so pleasantly and modestly conveys.

Cassell's Illustrated History of the Russo-Turkish War. By Edmund Ollier, author of 'Cassell's Illustrated History of the United States,' etc., etc. Vol. I. From the Commencement of the War to the Fall of Plevna. Including an historical sketch of the Russian and Turkish Empires. (London and New York: Cassell, Petter & Galpin.)—No date is attached to the title-page of this volume, but the contents indicate its publication, in parts at least, before the termination of the war, as Montenegro, Servia, and Rumania are still spoken of as dependencies of Turkey, and some speculations show that the issue of the struggle was still a matter of doubt to the author when he wrote his earlier chapters. The book is thus one of those hasty compilations of contemporaneous history, executed in instalments during the course of the events which they are to record. One of the necessities of such compilations is to devote much space to preliminary matter and extensive retrospects, which, while giving the reader the introductory information required for a good understanding of the subject, furnish the writer the time required for studying the passing occurrences. This plan Mr. Ollier has pursued with due regard to the extent of his work and the wants of that portion of the public for which it was undertaken, namely, the mass of readers to whom rudimentary knowledge, presented in a plain and pleasant form, is much more acceptable than more strictly literary information presupposing some study and demanding close attention. The whole history of both Russia and Turkey, from the foundation of those empires to the outbreak of the war, is sketched at length in a number of chapters. To demand strict correctness from ephemeral compilations of this character would be applying an unfair standard of criticism. Comparatively speaking—with due consideration of the position which it pretends to occupy in the world of books—this history is well enough executed as far as its narratives go, barring the spelling of names, which betrays the levity common among compilers from newspaper files. The war events and political complications are related with laudable minuteness, in a pleasant, unadorned style, without any attempt at creating effect by sensational coloring. Of course, there is no critical sifting of materials, and generally that correspondence of the London *Daily News*, *Times*, or *Telegraph* is chosen in preference as the exclusive authority which at the

time appeared the most striking or the fullest. The author knows none but English authorities. What must render the book specially attractive to its class of readers is its large number of illustrations, some of which are good, and most of which are tolerably instructive. What chiefly impairs its value as a work of historico-political information is its extraordinary partiality for the Turks as against their enemies, a partiality which is productive of a vast amount of talk against Mr. Gladstone, Carlyle, the *Daily News*, Count Andrássy, the Triple Alliance, etc., and of many forced apologetic efforts in behalf of the Crescent. Some points, however, are well taken, and the author's bias, fortunately, does not lead him to the suppression or garbling of facts.

Lectures on French Poets. Delivered at the Royal Institution. By Walter Herries Pollock. (London : C. Kegan Paul & Co. 1879.)—These four attractive lectures, excepting the first upon Béranger, illustrate the beginning of the romantic school of France, which in these later days is fulfilling the prophecy of De Musset, here quoted : "There, tell me if imaginative literature can live when people so brutalize their readers and themselves. Do you not see that this housemaids' literature will generate a whole new world of ignorant and half-savage readers ? I know well enough it will die one day of its own excesses ; but before that it will have disgusted finer minds with reading." This disgust is turning many from the school already, but its history is well worth study for the light it throws on French social conditions for the historian and the moralist, and because its errors and eccentricities so forcibly confirm the laws of art. Mr. Pollock has not attempted much criticism ; his work is biographic rather. He introduces us to the men who founded the school, describes the great contest of 1829, and the early years of its strength, and aims at interesting those who are unfamiliar with it, and leading them to read. His purpose and method are both excellent ; he lets the poets reveal themselves by their own words and acts, and has woven his narrative very skilfully of delightful quotation and instructive comment. The lectures are not profound, and contain little that is original or not commonly known to those acquainted with French literature ; but for those who enter with little or no preparation on the reading of Victor Hugo and De Musset the author has done commendable service. The lecture on De Musset is from the hand of a friend of the poet, and his life is interpreted with more truth and human sympathy than in Henry James's late essay ; one sees the source and excuse for the increasing number of De Musset's lovers, for a less strong word would not express the abandonment of many of his admirers. Victor Hugo is less finely described; he is too great and of too varied power to be treated adequately in the space given to him. The lecture on Béranger is very good, and for the same reason as that on De Musset, because the author quotes freely. The secret of Béranger is made plain at the beginning : "I have sometimes thought," he says, "that if contemporary writers had reflected that henceforth it is for the people that letters must be cultivated, they would not have envied me the little palm which their neglect has enabled me to gather, and which, I doubt not, would have held its own among even more glorious rivalry. When I say the people I mean the mob—I mean even the lowest grade of the populace." No wonder the people loved him, and that from his faith in them he drew courage as well as inspiration. We again commend the book to those who have not read or, reading, have not enjoyed Béranger, De Musset, and Victor Hugo.

Handbuch der Archäologie der Kunst. Von Dr. Carl Bernhard Stark. Erster Band, Erste Abtheilung. (Leipzig, 1878. New York : L. W. Schmidt.)—This is the first part of the first volume of a comprehensive work on the archæology of art, to be completed in three octavo volumes. It contains one of three books which are intended as an introductory and systematic essay on archæology, a science whose limits, according to the author, have hitherto been arbitrarily restricted, in striking contrast with the latitude implied by the very derivation of the term. The recent discoveries of hitherto unknown civilizations of antiquity, the ever-widening and light-shedding studies of historic and prehistoric times have considerably changed and expanded the lines of demarcation. The history of the study of archæology on general principles is, as the author assumes, almost a new chapter in science. Unlike his great predecessors in this field, Winckelmann, Wolf, Müller, Gell, Leake, Wilkinson, and others, who dealt with special groups only, Dr. Stark intends to establish on a broader basis a general system.

In the six paragraphs of the first chapter he explains his ideas of the limits of the archæology of art ; its relation to classical philology, to æsthetics, and to the theory of art in particular ; its connection with the general history of art and of ancient civilization ; and, lastly, he gives a very ingenious and extended account of the origin and historical development of the name and system of the science of archæology. The word ἀρχαιολογία was in use among the ancient Greeks, who understood by it the knowledge of a past period, quite distinct from the present, and strictly limited to the oldest history of a nation, of its government, religion, manner of warfare, physical and other characteristics. The Romans expressed the same idea by the word *antiquitates*. The Greek term occurs in Plato, Thucydides, and other writers ; the Latin in Juvenal, Tacitus, and Suetonius. The second chapter classifies the science with regard to its propædeutic, historic, and typological bearings. The third and last chapter of the first part is the most considerable, and by far the most interesting, portion of the volume. The author begins with a review of archæological studies in the fifteenth and sixteenth centuries in the spirit of the Renaissance. The genius of Petrarch and Boccaccio, which had already influenced poets and scholars, began to exercise authority over all men of culture, and particularly over students of the plastic arts. Colas di Rienzi, in his attempt to re-establish the old splendor of the Roman Republic, appealed with impassioned language to the noble architectural monuments of those days as witnesses of the greatness of that time. The ancient statues in Padua and in the gardens of the Medici in Florence became the models of Michel Angelo and his contemporaries. The study of medals and coins had its origin in this period of struggle for the regeneration of arts and letters. As the first literary fruit of this stirring epoch the works of the great Florentine, Leon Battista Alberti (1404–1472)—'Breve compendium de componenda statua,' 'De pictura libri tres,' and his principal work, 'De re ædificatoria'—deserve foremost mention. Dr. Stark proceeds to review the progress made during the seventeenth and first half of the eighteenth centuries, giving detailed accounts of, and copious extracts from, the writings of the pioneers of the science in Italy, France, the Netherlands, England, and Germany. The concluding portion of the chapter leads us to the epoch immediately preceding our own, which introduced into the study of archæology the broad principles of the general philosophy of the beautiful, of which Winckelmann may be considered the author. It reviews the discoveries of Herculaneum and Pompeii, the Greek monuments in lower Italy and Sicily, the necropolis of Etruria, the ruins on the coast of Dalmatia, and the beginning of the great state collections in Europe. It gives a careful analysis of the systems of Winckelmann, Lessing, and Wolf, as well as the influence of ancient art upon Goethe's character and writings, and finally treats of the removal of the Elgin marbles to the British Museum, of the school of French archæologists, and the Musée Napoléon.

The notes, which form about two-thirds of the volume, indicate the sources from which Dr. Stark has drawn his information. They bear evidence of the immense amount of conscientious labor bestowed by him on a subject which in our day has few rivals in comprehensive interest.

Essays of To-Day. Religious and Theological. By Wm. Wilberforce Newton. (Boston : A. Williams & Co. 1879.)—Both in style and matter these essays would properly be called sermons, for they have in them much more of the pulpit than of literary skill or interest. They are the product of reading rather than thought ; the author reports what he has found valuable in other men's books, and he does it very well, to judge from his quotations. Taine has impressed him more than any other secular writer, but the books of theology and church history which belong to his calling are the main sources of his knowledge. The essays on Savonarola, Lacordaire, and Edward Irving seemed to us best, particularly the latter, which is a clear, sympathetic, and interesting account of a man whose life is more touching in its tragedy than any other in the religious biography of the century. The essay upon the Schoolmen is also excellent, and contains a good deal of well-arranged information for those who know only the names of the great doctors. In the theological essays there is little of interest to the general reader. The author shows a liberal conservatism, and apparently looks for a reform in the direction of less dogmatic statement in creeds, but insists on the necessity of retaining distinctly the fundamental truths, such as the personality of God. He calls Matthew Arnold's philosophic theology "charlatanism," and classes it with "Turnerism in painting, Carlyleism in history, and Wagnerism in music." The clerical temper is strong in him, and he displays not unfrequently the clerical habit of allowing his logic to evaporate into rhetoric. "See the way," he says, "in which, in this suffering world, God has written it as a law in our nature that it is only by sacrifice the best results of character can be obtained, and then who can refuse this same

privilege to the Almighty?" He is showing the reasonableness of the Atonement, but a sceptical mind might suggest a query as to how sacrifice is a "privilege" to the Almighty when its value is stated to lie in its power to better character. This is an illustration of a common fault. The essay on original sin contains an admirable résumé of the opinions of Coleridge and Müller. It seems to us a misfortune that these latter essays, of which the interest is so professional, should have been bound up with the earlier and more generally useful essays.

Life Questions. By M. J. Savage. (Boston: Lockwood, Brooks & Co. 1879.)—These seven Sunday morning addresses are reprinted, at the request of the author's friends, from stenographic reports. They are not put out as a careful consideration of the questions propounded, or as contributing much that is novel to the discussion of them, but as advice befitting an educated man talking to a congregation upon money, culture, love, good society, the world, the body, work and play. Mr. Savage's well-known position in religious matters prepares the reader for some sensational radicalism which to the orthodox might seem profane, as when he speaks of morality as "simply a sentiment," or where he dwells very strongly on physical culture, so that to judge from that lecture he would seem to have the cure of bodies rather than of souls for his special business in life. Here is an interesting sentence which shows his great sympathy with medicine, and his sense of its necessity as a sort of preliminary to theology:

"It is said you must live on Graham bread, oatmeal mush, on this thing or on that; or you must not eat more than one kind of thing at a meal. Do not think these are unimportant things, not dignified enough to be spoken of in the pulpit. I tell you they reach to your mind and to your morals; they reach to your theology; they reach clear to heaven, so far as you are concerned, and are of fundamental importance, touching your religious and moral life a good deal more, sometimes, than what you think about the Bible, or think about Sunday, or think about any other religious institution whatever."

His advice is to eat as many things as you want and can get—a conclusion so broad that there will be no need of detailed consideration of diet, and the ground for "the Bible" and "Sunday" is left tolerably clear and open. After medicine play seems to occupy his thoughts, as we are oppressed by our inherited Puritanism, which numbs our power of stopping work and must be eradicated; but how, he confesses he does not know. This is, we believe, a novel consideration in the problem of the number of hours which should constitute a day's work. On other subjects, where the originality of the view is not so unquestionable, Mr. Savage's advice is clear, timely, direct, and well-considered, coinciding with the common sense of most educated men.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Adams (H.), Writings of Albert Gallatin, 3 vols.	(J. B. Lippincott & Co.)
Alexander (Mrs.), Maid, Wife, or Widow?	(Henry Holt & Co.) $1 00
American Catalogue, Vol. I., Part 3, Lenoir-Robbie	(A. C. Armstrong & Son)
Appletons' General Guide to the U. S. and Canada	(D. Appleton & Co.) 2 50
Arnold (W. T.), Roman System of Provincial Administration	(Macmillan & Co.) 1 75
Blaikie (W.), How to Get Strong, and How to Stay so	(Harper & Bros.) 1 00
Bowditch (W. I.), Woman Suffrage a Right, swd.	(Cambridge)
Bucke (Dr. R. M.), Man's Moral Nature	(G. P. Putnam's Sons) 1 50

Fine Arts.

THE USES OF A MUSEUM OF ART.

THE *Times* of Sunday, May 25, contained an article about the Metropolitan Museum of Art in which it was charged upon that institution that it had done nothing but collect and house works of art. This, by itself, does not seem a very formidable indictment; it is like an accusation against a shoemaker that he does nothing but make boots and shoes. It is generally thought a virtue to stick to one's own business. But there is a good deal of pressure upon the Museum just now, all intended to persuade or to browbeat the trustees into adding to their cares the organization of art-schools, and this paper in the *Times* is a part of that influence. In it the "public-spirited members of the Board of Trustees" are assured that "their present Museum is not arranged for the best interests of the commonwealth." It is pointed out that South Kensington has its home schools and its branch schools throughout England; that Boston has its art-school, organized in connection with the Boston Museum of Fine Arts; that it is the duty of the New York institution to take the same course, either alone or by inviting the co-operation of the Cooper Union, the Students' Art League, the Academy of Design, and the Society of Decorative Art, those four institutions being separately named. It is asserted that in this way the Museum would become more popular, and that if it would "look farther than to the mere acquisition of this or that collection of ceramics, paintings, or antiquities," its appeals for money would be listened to.

In all this the objects and the uses of a Museum of Art are, we think, overlooked or belittled, as a consequence of an ardent and proper advocacy of other means of education. Schools of art are good things, and are not entirely unknown even to this community. Schools for the instruction of those who would be painters or sculptors already exist—few, indeed, but their importance is universally admitted, and it is only the ease with which the great schools of Europe are reached that delays a little longer the foundation of many more. Schools for mechanics, to teach them drawing and modelling, power of observation, knowledge of form and feeling for color, can hardly be said to exist as yet; but serious undertakings are in progress, and the only cause of backwardness in this movement is the actual difficulty of it—the difficulty in deciding what is to be done, the absence of good instructors and those who can advise, the uncertainty lest more harm be done than good in turning out half-taught, and therefore conceited and bumptious, "designers" instead of trained workmen. The post-graduate courses of the great colleges are beginning to provide definite instruction in the theory and history of art, and practical instruction also so far as drawing goes, and in some cases more than that; some of the colleges, indeed, include in their regular curriculum a fair amount of teaching in these directions; the public schools in many parts of the country give only too much time to drawing-lessons by means of an ingenious "Drawing-without-a-master" apparatus, supposed to enable a teacher who may know nothing about drawing to teach it. If it must be granted that art-education has not reached any very great development with us as yet, that is true of all the branches of the higher education. There is always the tendency in America to confuse the teaching everybody a little with the teaching a few completely, and to fill the community with persons who have been taught just enough to make them hasty and presumptuous in pronouncing upon all the subjects of thought and training.

It is just here that the Museums of Art should be brought into the body of teaching as standards of right and wrong, tribunals of appeal. Silent teachers, they are not less eloquent because of their silence. Their mission is to get together works of art of all schools and epochs; to exhibit them well, so that they can be seen easily, clearly, on all sides, closely, in a good, pure light; to catalogue and describe them as thoroughly as possible, so that every five minutes given to the examination of an object of art and to the study of what the catalogue says about it shall be a positive lesson in historical criticism, in design, in technic, or in all combined. Museums as museums have no other object than this. Direct art-teaching by means of lectures, ateliers, lessons of all sorts, may organize itself outside, and in more or less close connection with the Museums; but there are serious questions that must be answered before a Museum itself undertakes to provide teaching other than the teachings of its collections and catalogues.

But of all those questions there is only one that ought to be considered now in connection with the New York Museum of Art—the question whether the organization is ready to grapple with a new and most difficult, most harassing, most ungrateful task, when the old and already familiar duty is only in part discharged. The Museum's collections are small; they are limited to the Cesnola discoveries, a collection of paintings of which some are of real value and importance, and a very few other acquisitions. To increase them should be the first object of all friends of the institution and of sound knowledge and love of art. The Museum's collections, small as they are, were not half exhibited in the Fourteenth

Street building, as was inevitable; now, in the new quarters, it is to be hoped there will be opportunity and care united to remedy that evil. The Museum has done little in the way of catalogues and hand-books of instruction, and that from obvious reasons; it takes time to study such a collection as that made by General di Cesnola, and it takes trained skill to elucidate and describe it, neither of which has the Museum had as yet. In short, the Museum is on the point of a new departure, with a much larger and probably fire-proof building, with a regular director, and, we suppose, a sufficient staff of assistants. New and rapid development is possible to it. To arrange and display in the most perfect fashion all it now possesses, to call together loan collections, whether for definite fixed times or in the old way, ever changing and ever renewed, to describe and explain the Museum's property perfectly and the loan collections as well as may be practicable, and to take all honorable and worthy means of gaining the favor and approval of those who can give, so that what with donations and bequests in kind, and with subscriptions in money, the collections shall steadily grow and increase—such, we take it, are the obvious duties of the Museum of Art. The trustees and the officers have their work cut out for them, if they undertake only this in a vigorous and thorough-going spirit. Let others found the needed school or schools, and the school and the museum can then aid one another to grow and to teach.

The Gazette des Beaux-Arts,

COURRIER EUROPÉEN DE L'ART ET DE LA CURIOSITÉ

(A MONTHLY ILLUSTRATED AND CRITICAL JOURNAL OF THE FINE ARTS).

The subscriber, having effected special arrangements with the publishers of this celebrated journal, is now enabled to offer it at a material reduction in price—to wit:

YEARLY SUBSCRIPTION (including the *Chronique des Arts*, weekly), FIFTEEN DOLLARS, sent postage free to any part of the United States. *Payable strictly in advance.*

*** For twenty-one years the *Gazette des Beaux-Arts* has enjoyed a European reputation. From the very first it has been the channel through which have flowed the best artistic talent and critical eloquence of the day. Each monthly part consists of about ninety pages, embellished with a luxury of fine cuts and reproductions, besides which there are inserted every month a number of magnificent Etchings, by the first living masters of aqua-fortis, which have made the *Gazette* supreme in the annals of the art—the finest efforts of JACQUEMART, FLAMENG, RAJON, WALTNER, LALAUZE, MONGIN, GAILLARD, LAGUILLERMIE, etc. This publication, in fact, is the established classic of Art in periodic form. Besides its monthly parts, forming over 1,000 pages per year (size, 11¼×7¾ inches), the *Gazette* supplies, gratis, a weekly supplement called the *Chronique*, containing art news, notices and prices of important sales, and current topics of interest.

N.B.—Subscription (commencing with January Number), accompanied by draft for amount of subscription, must be addressed to

J. W. BOUTON, Importer and Bookseller, 706 Broadway, N. Y.,

Agent for L'ART, Revue Hebdomadaire, and the PORTFOLIO, edited by P. G. Hamerton.

The Nation.

NEW YORK, THURSDAY, JUNE 26, 1879.

The Week.

THE Army Bill was the subject of much hot debate in the Senate (in the course of which Mr. Lamar and Mr. Conkling fell to calling each other liars and cowards), and of some well-considered speeches—by Mr. Carpenter among others—till the small hours of Saturday morning, when it passed by the usual party vote. Senator Burnside alone among the Republicans refused to oppose it, and by so doing put himself in accord with the President, who signed the bill on the ground, it is understood, that it deprives the Executive of no real powers. He also signed the Legislative Appropriations Bill, which had been agreed to in conference on Wednesday, the 18th; but the Judicial Expenses Bill, about which the two houses had adjusted their differences on Saturday, he returned with his veto on Monday, and the veto was, as heretofore, sustained. The House, making the proverbial misuse of its idle time, passed on Thursday a bill directing the Secretary of the Treasury to recoin trade-dollars, not deficient in weight and not "chopped" in China, into standard silver dollars; to coin no more trade-dollars, and to reckon the recoinage apart from and in addition to the monthly silver coinage enjoined by the Bland Bill. This is a measure which Secretary Sherman has publicly opposed, and which it may be supposed the President will be advised by him to veto. But it is by no means certain that the Senate will adopt it, since Mr. Bayard's successful stand against the admission of the Warner Bill. The Stalwart Democrats in the House offered on Tuesday a resolution for adjournment next day, but the party could not be held to the irreconcilable policy, and only eighty-one votes were mustered for it, against one hundred and three opposing.

The proximate cause for the row between Mr. Conkling and Mr. Lamar was probably a misunderstanding. Mr. Lamar had not, it would seem, concurred in the agreement the disregard of which led Mr. Conkling to charge the majority with bad faith; and if Mr. Lamar had been on good terms with Mr. Conkling this fact would doubtless have been brought out in an amicable way, and "the subsequent proceedings" would not have taken place. But Mr. Lamar's mode of meeting the imputation by an expression of contempt not only for the charge but for its author, showed that a deep-seated hostility had long existed between himself and the New York Senator. The mode in which the latter met him, by pronouncing him a hypothetical "liar, blackguard, and coward," did not support the statements so frequently made by the reporters as to the commanding ability and inexhaustible mental resources of Mr. Conkling. In fact, the only mark of superiority to an enraged 'longshoreman which he exhibited in the fray was his putting in the supposition that if the affair had not occurred in the Senate, etc., the 'longshoreman would have dealt with Mr. Lamar by a direct proposition.

The President has vetoed the Judicial Appropriation Bill on the ground that in forbidding any department or officer of the Government to incur any liability for the payment of general or special deputy-marshals "for service in connection with elections," and in making no appropriation for the payment of such officers, it deprives him of the means of executing laws now on the statute book and which it is his constitutional duty to execute, and the execution of which can be called for by any two citizens of any city or town having over twenty thousand inhabitants. The object of the majority in inserting this provision in the bill is to prevent the operation of laws which they are unable to repeal, but he points out with great force that there are only two lawful ways of overturning legislative enactments: "One is their repeal; the other is the decision of a competent tribunal against their validity." Neither of these being within the reach of the majority, there is something perverse in attempting to accomplish their object by reducing the Executive to helplessness in the presence of a duty of which they acknowledge they cannot relieve him. It must be said, however, that the veto would have more weight if there was any possibility of the President being called on to perform this duty before Congress meets again in December. As there is not, it must be treated as simply a contribution to the controversy now raging over the powers of the General Government in the regulation of Federal elections.

The failure of the silver-men in the Senate to draw Mr. Bayard from his position on the Warner Bill and compel him to report it, gives him a fresh claim on the respect of the friends of honesty in all parties. It probably makes more true than ever the saying that of all the men now prominent in public life he would probably be the easiest to elect to the next Presidency, but that he would probably be the hardest of them all to nominate. No Democrat would draw so heavily on the Republicans, and no Republican would draw off so much of what is best among the Democrats, and it is quite certain that any candidate with whom the managers on either side are entirely satisfied will win by so close a vote as to make the count a source of well-founded anxiety.

There has long been a suspicion in the public mind that Mr. Hill, of Georgia, better known, perhaps, as "Ben" Hill, was really a Secessionist, and had been so during the late war, and had even favored secession from the outset. Mr. Blaine is entitled to the thanks of the community for having, by a frequent and laborious catechization of Mr. Hill during the present session of Congress, confirmed the worst fears of the Northern public on this subject. There appears, in fact, to be no longer any doubt that Mr. Hill was a Secessionist. The acuteness, persistence, and knowledge of human nature which Mr. Blaine displayed in dragging this fact to light place him in the front rank of American statesmen. How Hill feels, now that he stands before an afflicted and amazed people in his true colors, is probably known only to himself and his wife. Few will gaze at him without invoking blessings on the head of James G. Blaine, who found him out. With Blaine to discover the Secessionists and Chandler to "give them fits" after they are uncovered, he must be a gloomy man indeed who feels anxious about the future of the country. We feel authorized in saying, for the satisfaction of the dyspeptic croakers, that Chandler will blackguard Jeff. Davis again whenever it seems necessary. All reports to the effect that he "dursn't do it again," or is sorry he did it, are unmitigated falsehoods.

Mr. Blaine has written an elaborate letter to the New York Chamber of Commerce in reply to an invitation from them to address them in explanation of the cause of the decline of the American shipping trade. The sum and substance of it is that American ships disappeared from the ocean partly owing to the substitution of iron for wood in ship-building, and partly owing to the depredations of the rebel cruisers during the war; and their restoration is prevented by high taxation, and want of such encouragement from our Government as foreign ships receive in the shape of subsidies and postal dues. He would therefore pass a general law offering a fixed rate of subvention to all persons putting American ships into the carrying trade, under certain conditions, between fixed points. The reason he gives for singling out this trade for special encouragement is that we must depend on it for our supply of seamen and for our capacity to produce fighting ships in case of war. His scheme, of course, will not bear examination from a purely economical point of view. The business of carrying goods at sea differs in no respect, economically, from the business of carrying goods on

land. If foreigners are willing to carry our goods to market at lower rates than we can do it ourselves we are the gainers as purely as if they came here and carried freight for us on a railroad at lower rates than those now charged. If they can only do this by the aid of subsidies from their own government, these subsidies are really granted in large part for our benefit; in fact, they cheapen transportation for us. Instead of being annoyed or aggrieved by them, we ought to be thankful, as they enable some of our products to reach markets from which they would otherwise be cut off. There is, therefore, from the economical point of view, something almost ludicrous in the proposal that our Government should spend money in enlarging the carrying trade when it is already overcrowded and the loss in it is borne voluntarily by foreign governments.

The political view is less easily disposed of, but it ought to be examined separately. It may be that subsidizing steamers would increase the supply of sailors and keep yards in existence in which we could get men-of-war built on demand. But do we need more sailors? With our enormous coast-line and protected coasting trade, have we not already as large a seafaring population as we are ever likely to need for military purposes? Is it true that the encouragement of private yards by subventions is an economical, effective, or necessary mode of supplying vessels of war in the remote contingency of our having to fight a maritime power? In other words, is there no other mode, and, if there is another, is it not a better one? On these points Mr. Blaine throws no light whatever. What has made the carrying trade at sea always a source of mental confusion is the fact that ships carry the national flag, and therefore it seems to many people as if there was something profane and unpatriotic in applying the ordinary commercial rules to them, and treating them like a railroad train. A good many subsidies have been granted in this country to railroads, but it was to induce their construction in regions in which it seemed doubtful whether they would pay. The notion that a subsidy ought to be granted to somebody to make a road alongside one already in operation, doing a large business at low rates and paying satisfactory dividends, has never entered any one's head, and would not enter it but for the flag.

Mr. Whitthorne, of Tennessee, has written a letter to Mr. Goode, the Chairman of the Committee on Education and Labor, urging a Congressional investigation into the material progress made by the South since the war. We have more than once, during the "outrage" agitation, spoken of the importance of this, and have called attention to the fact that all investigations thus far made by Congress have been purely political, and directed to matters connected with elections. An examination of the industrial condition of the country, however, is the only one which would throw real light on the condition of the colored laborer. All the volunteer testimony on this point, from independent observers of high character, such as Colonel Higginson, Mr. Edward Atkinson, and Mrs. Stowe, recently published, concurs in maintaining that the negro population has made and is making remarkable progress; but the politicians have thus far carefully avoided taking evidence about the amount of property the negroes own, the wages they earn, and the protection afforded them by the courts. We do not vouch for the accuracy of Mr. Whitthorne's figures, but, if accurate, they are very striking. Here are a few: For the eight years preceding 1861, 27,142,285 bales of cotton were produced at the South; during the last eight years there have been produced 33,226,531 bales; while the number of acres of cotton under cultivation in 1871 was 7,557,579, in 1878 there were more than 12,000,000. He calculates at $200,000,000 the value of products of Southern labor which go to purchase the merchandise and manufactured goods of New England, New York, New Jersey, and Pennsylvania. He even goes so far as to assert that the amount of wages paid the laborer in the South is considerably larger, in proportion to population, than that paid at the North.

This may or may not be, but the subject appeals powerfully for examination to all upright and conscientious men at the North, and particularly to those whose interest in the negroes' condition is leading them to second the efforts of unprincipled politicians in keeping alive the flames of civil discord. We must remind them, too, that the evidence of the thousands of murders and "outrages," by which their indignation has been stirred during the past four or five years, has been in the main furnished by the kind of witnesses who testified a few days ago before the committee in the Spofford-Kellogg case. It has been almost invariably gentlemen like the grandson of "Sir Hugh de Lacy," of Ireland, who bring in the stories of long rows of colored people hanging on the trees by the roadside, and of the infants thrown into the flames by the red-shirt bayonets, and of the aged colored clergymen shot on their knees at family prayers. When perjurers of this class are rewarded for their "bloody particulars" by places in the custom-house it is not wonderful that the stream of horrors is so strong and full and permanent, and that they actually come into court and confess their mendacity with a broad grin. The bit of casuistry furnished by one of them, that he "had as much right to perjure himself as the Democrats to burn his house," we fear was suggested to him by some of his white friends at the North in 1876, who maintained gallantly that the Democratic outrages in the country districts justified the Returning Board in New Orleans in cheating in the count.

Judge Christian, of Virginia, has discussed the matter of summoning negroes on juries, in reply to a petition of some colored men, in a way which shows that the Civil Rights Act cannot really be used to give negroes a right to be summoned without some serious straining of the law. To summon a man because he is a negro Judge Christian has no difficulty in showing is just as much a violation of the law as to leave a man out because he is a negro, or to summon him because he is white. He says he summons men not because they are either white or black, but because they are qualified, and it would be hard to prove the contrary. Judge Rives, who caused five county judges to be indicted for not summoning negroes on juries, laid it down that this plea might be met by the presumption that where a judge habitually abstained from putting negroes on the panel he did so on account of race and color, and in violation of the act. But this, again, might be upset by showing that the negroes of a particular county supplied no men of sufficient intelligence and capacity. In fact, if the object of the act was to put negroes on juries, it is, as we pointed out some time ago, fatally defective in not directing the summoning of negroes on every State jury. Whether if it did so it would stand the Constitutional test, is another question.

The commissioners appointed by the Mayor to lay out rapid-transit routes in the upper wards of the city took it upon them also to lay out one along Central Park in Fifty-ninth Street, and another from Harlem to the Post-office. As the latter, above Forty-second Street, is identical with the existing tracks of the New York Central, no one else can take advantage of it, and its obvious object is to enable Mr. Vanderbilt to extend his road below the Grand Central Depot to recover, if possible, the Harlem traffic taken away by the cheaper Third Avenue through-line. As proposed, it would run down Fourth Avenue, along Union Square, and through Lafayette Place (in front of the Astor Library) and Centre Street, cutting through the blocks when necessary. Fortunately, the consent of the Park Commissioners is needed before the Central Park and Union Square can be invaded, and if the Common Council, to whom the report of the commissioners has just been referred, accept it, there will still remain the Mayor's veto, which must be overcome by a two-thirds vote. He has been visited by very respectable delegations of property-holders, who have shown the inevitable loss which they must sustain if the franchise is granted without compensation; that capital now eagerly seeks investment in rapid-transit enterprises, once regarded with so much distrust, and can afford to pay for privileges conceded; and that, so far as the Fourth

Avenue route is concerned, it violates the obvious intent of the law to allow the stock of the railroads organized under it to be open to public subscription on equal terms. The grant in this case would not be to the public, but to the corporation which owns the New York Central and Harlem roads, and, in fact, to one person—Mr. Vanderbilt.

We hope there are very few residents of New York who relish the idea of any further extension of the elevated railways, even the most justifiable. It seems incredible that any one should be content to surrender another rod of street or avenue to a system which no amount of use can make anything but a necessary nuisance. It may have to be done, but it ought to be done with a wry face; and when it is proposed to destroy one of the three remaining central avenues, we ought not to be expected to forget that it was the comparative inferiority of Third and Sixth Avenues and their connections which made the existing railways seem at all tolerable. But with a rapid-transit connection at the Grand Central Depot it cannot be pretended that there is any necessity for a Fourth Avenue line, the result of which, if not disastrous to property values on the avenue, could have but one effect on the blocks intermediate between it and Third Avenue. As for the Fifty-ninth Street route past Central Park, it condemns itself.

The murderer of Mrs. Hull has been discovered in the person of a colored man named Cox, with a tinge of rose in his cheeks. As we conjectured last week, he entered her room to steal, and when she woke up strangled her to prevent her giving the alarm. He fled to Boston with the plunder, but had not wit enough to stay away from the pawnshops, and pledging some of the jewelry led to his detection. He confessed everything when Mrs. Hull's watch was found on him. His arrest and confession make the newspaper speculations as to the origin of the crime very queer reading.

The financial markets have been dull during the week. Money in London became easier for borrowers, and the actual discount rate fell to 1¼ per cent., and Government securities there advanced. Here the money market was made easier by the prepayment of called bonds, the Treasury disbursements on this account having amounted to about $5,000,000. There has been a decline in the rates for bills on London, so that there is no fear of gold exports, which circumstance, together with the heavy Treasury interest and bond disbursements early in July, warrant the expectation of a very easy money market. The market for U. S. 4 per cent. bonds was heavy early in the week, the price falling to 102⅜, and strong at the close, when the price was 102¾ to 102⅞. The principal buyers were the banks, which hold 10-40 bonds as security for their notes, and which must replace them within a short time or give up their circulation. Silver bullion fell in London from 52⅛*d.* to 51⅝*d.* Here the gold value of 412½ grains of silver at the close of the week was $0.8739.

Weston, the pedestrian who has been known to the public on both sides of the Atlantic for eighteen or nineteen years as a walker of long distances, has accomplished the feat of carrying off the Astley champion's belt, which Rowell took away from this city only a few weeks ago. The triumph is the more welcome because in these trials of endurance hitherto the duty of upholding the American fame has generally fallen into the hands either of pure-blooded Irishmen or American citizens of Irish parentage, thus preventing the contest from throwing any light on the much-debated question whether the stamina of the Anglo-Saxon race had undergone any diminution in this country. The interests of American pugilism are, in fact, attended to almost wholly by Irish gentlemen, and O'Leary, who brought the Astley belt to this country, and Ennis, who made such a gallant effort to prevent its being carried back by Rowell, were to all intents and purposes Irishmen. Weston, however, is a genuine Yankee, born and bred in Rhode Island, and his making the best time on record—550 miles within six days—is a pure gain for the United States, and a consequent source of despondency to the United Kingdom, which on this occasion was represented by "Blower" Brown. But the London public, doubtless knowing what was coming, stayed away in a shabby manner from the spectacle, so that the profits on the gate-money only amount to $3,000, in contrast to the $18,000 or $19,000 of the late contest in this city. According to the sporting Froudes and Macaulays of the daily press, however, the interest in the affair in this city has all along been maddening. The historian of the *Herald* says that "quiet and respectable men" on Saturday night "shouted themselves hoarse for joy," and "the crowd" subsequently "leaped for joy."

The French Republic is doubly fortunate in the death of Prince Louis Napoleon and in the recovery of his body. A distinguished contributor of our own, in an article which was in type when the news arrived, pointed out, by a curious coincidence, the likelihood that if the Zulus killed him and his body was not recovered "claimants" would arise to personate him for many a year, with stories of his having been taken alive by the savages. It is a happy circumstance, if anything can be called happy in a tragedy so miserable, that his remains were found on the field where he fell. If his business in life—the calling, one may say, for which he was trained—had not been the disturbance and vexation of a sorely-tried people, who have already sacrificed hecatombs of young men to gratify the ferocious ambition of his family, there would probably be many mourners over his untimely fate. As it is, he will be actually regretted by few outside the circle of friends of his unhappy mother. He appears to have been really anxious for active service, as his going on a reconnoissance into the country of such an enemy shows. The stories as to the part Prince Napoleon will now play are conflicting, but it seems most probable that he will neither assert his claims nor oblige the more ardent Imperialists by laying them aside and permitting his son to take his place.

Alsace-Lorraine, after nine years of existence as a conquered dependency of the German Empire, though with representation in the Parliament, has at last received a government of its own and becomes a member of the Confederation. It is to consist of a governor, appointed by the Emperor, with ministers, two consuls, one local and the other imperial, also appointed by the Crown, and a legislature, elected by indirect popular suffrage—some of the members in two degrees, others in three.

France and England have united, as might have been anticipated, in asking the Khedive to abdicate, and Austria and Germany have joined in a threatening communication to him with regard to his treatment of their bondholders. He has referred the two former to the Sultan, who says he will not depose him, but that he must settle with his enemies as best he can. Lord Cranbrook has denied vehemently, in a speech at Sheffield, that there is any coolness or difference of any kind between France and England on the Egyptian question or any other; but it is none the less true that England has lost the controlling influence in Egypt, which nobody disputed until the present Ministry came into power, and the fact will tell heavily against them at the general elections.

One of the surprising incidents of the existing situation in Russia is that she has just been able to raise a new loan of three hundred million roubles at 5½ per cent., and twice the amount called for was at once subscribed. As the Russophobists were all certain that her credit was virtually ruined for a long time by the war with Turkey, or that if the war had left anything of it, it was swept away by the Nihilist agitation, this expression of continued confidence in the financial future on the part of people with money to lend is exciting considerable surprise, and is likely to have a good deal of influence on the coming stages of the Eastern Question. The London *Times*, which has defended the British Ministry vigorously thus far, acknowledges that they will have some difficulty in explaining at the polls what they propose to do next in Turkey, the "reform" of Asia Minor having been virtually abandoned as a bad job.

POLITICIANS AND STATE RIGHTS.

THE average voter, who depends for his political ideas upon current discussions in the newspapers and in Congress, is at the present time in a fair way to have his mind hopelessly confused on the subject of the relations of the State and General Governments. All the speeches of his Congressman and all the leaders in his favorite newspaper lead him to believe that the political contest is assuming a new phase, in the reopening of an old question which he had supposed to be settled for ever by the war: that the Republicans on the one side are not going to concede any rights to the several States, and that the Democrats on the other hand are endeavoring to throw off all the authority of the General Government by a certain old and pernicious heresy known as "State rights." To whichever party he may belong, he is gradually imbibing the idea that according to Republican doctrine the separate States exist only by the sufferance of the Union, and have no rights whatever as against anything the General Government may choose to do. If he is a Republican, he feels that any one claiming rights for the States is at least a promulgator of dangerous theories whom it would be very unsafe to trust with political power.

A much better political education would be given him by showing that the relations of the State and General Governments are laid down in the Constitution with so much precision, and in words so simple and comprehensive, that there is really very little room for difference on any question of principle. The States have their well-secured rights, among which the chief is that of local self-government, and not one of them would give up these rights without fighting for them. The powers of the General Government are equally well defined, and it is safe to say that they will never be surrendered by any party which once finds itself in a position to make use of them.

Of course, when we leave general principles and come to the adjustment of special cases, the decision of which turns upon the respective powers of the General Government and of the States, there must frequently be room for differences of opinion respecting the precise limits of the two authorities. But if we look at the attitude which each party has assumed when such questions were before it, we shall find that there is not the slightest foundation for the view that one party is specially in favor of and the other opposed to State rights. If we wish to know what an individual or a party thinks of any principle or rule of conduct, we must note how he behaves towards it when it does not operate to his advantage. All the eulogies he may pass upon it when it is going to put money into his pockets or power into his hands, go for nothing with persons of average perspicacity. To find the actual position of the two parties on the question we must throw aside the "glittering generalities" and high-sounding phrases which politicians love to weave into their discourses, and examine only the acts and formal declarations of communities and authorities. We shall thus discover that whenever a State or local authority has been called upon to do something it did not want to do, and thought it could constitutionally evade, it has always become for the time a State-rights advocate, whether in the North or in the South, whether controlled by Republicans or by Democrats. We shall also find that each party reviles the other when the latter, being placed in the same position, takes the same privilege. The art of suddenly forgetting all the principles one has propounded when they are going to operate to the disadvantage of one's party or section, is now cultivated by politicians of all classes. Badly as the Democrats have behaved during the past six months, we question whether there is a single Republican leader who could say nay, if called up in church and made to answer on his conscience whether his own party would not do just what the Democrats are now trying to do, if it believed that a Democratic President was going to make an improper use of the army.

If we seek for proofs that the reserved rights of the States are as dear to Republicans as to Democrats we have only to compare their constitutions, their laws, and their acts under them. If we wish the most complete and comprehensive assertion of the right of each State to govern itself that any one could desire, we have only to read the fourth article of the declaration of rights in the constitution of Massachusetts:

"The people of this commonwealth have the sole and exclusive right of governing themselves as a free, sovereign, and independent State; and do, and for ever hereafter shall, exercise and enjoy every power, jurisdiction, and right which is not, or may not hereafter be, by them expressly delegated to the United States of America in Congress assembled."

No implied powers are here conceded to the General Government. The latter can exercise no powers except such as are "expressly delegated." The most ardent advocate of strict construction could not go further. If we desire statute proof that the Commonwealth of Massachusetts will never be backward in asserting her rights as a "free, sovereign, and independent State," we may find it in the action of Governor Rice when he refused to surrender Kimpton to the State authorities of South Carolina, under discretion given him, he said, by the State law.

During the last two sessions of Congress the questions to which we have alluded, considered as mere abstractions, have been discussed in a wider and more desultory manner than ever before. Statesmen have thrown at each other's heads great principles, selected without regard to any other consideration than their fitness for knocking down their opponents. Among these principles the one at which Republicans have professed most alarm is, that under our system there can be no such thing as a United States election, but that all elections, those of President and Representatives as well as of Governors and State Legislators, belong exclusively to the State. But are not the Republicans themselves the authors of this very doctrine, and did they not produce it two years ago when the Electoral Commission had to decide whether the votes of the Louisiana and Florida electors should be counted? In the discussion before the Electoral Commission it was asserted on the one side that the General Government, as representing the whole people, had the right to make the very modest enquiry whether certain State officers were legally appointed and had honestly performed their duty in selecting a President for the whole people. If a case could arise in which the whole Union had an interest in claiming a supervisory power over an election, surely it was before us when the question who should be President turned upon the proceedings, in a remote corner of the Union, of a half-dozen men about whom nothing good had ever been known. The claim was so reasonable that it could be set aside only by a statute of the most positive and binding character. Yet every Republican on the Commission denied the existence of any such right on the part of the General Government, and in doing so they formulated the very doctrine which they now profess to consider so dangerous. The real authors of the doctrine are not the Democrats of the present day, but Republicans as high in the party as Mr. Hoar, of Massachusetts, and Mr. Garfield, of Ohio. The former said, among other things:

"The appointment of electors and the ascertaining who has been appointed is the sole and exclusive prerogative of the State. The State acts by such agencies as it selects. The powers conferred by the State upon these agencies cannot be exercised by Congress. When the agencies which the State has selected have acted, the State has acted; no power can reverse its action for mistake in law or fact, for fraud, or for any cause whatever, unless it be a power higher than the State on whom the Constitution has expressly conferred such authority. But there is for this purpose no such power higher than the State, and the President of the Senate and Congress are but the mere servants of the State's will and registers of its action, with power only to open the certificates and count the votes of the electors whom the State authority has appointed and certified."

Mr. Garfield said:

"The preservation of the right of the States under the Constitution to appoint electors and to declare who has been appointed is, in my judgment, a matter of much greater importance than the accession of any one man to the Presidency."

We need not enquire whether this is or is not sound law, but we do affirm that both parties are estopped by the position they then took from pretending that the other has propounded dangerous and revolutionary doctrines. If we turn from the Republicans to the Democrats, we shall fail to find a single recent instance in which the latter were the champions of State rights when the assertion of such rights did not operate in some way to their advantage. Nor can we for a moment suppose that they will fail to use any power of the General Government when they have a chance to do so with profit to themselves. Their advocacy of State rights means simply that the other party is in power, and that the States which they control want to manage things in ways not satisfactory to other parts of the country.

END OF FRENCH IMPERIALISM.

THE death of the heir of Napoleon III. will probably prove the extinction of "Imperialism" in France. To the rank-and-file of the Bonapartists the late son of the late Emperor was the only person who represented the dynasty, and the only person through whom the restoration of the Empire seemed possible. Now that he is gone the struggle will undoubtedly to them seem hopeless, and they will turn without further hesitation to the acceptance of the Republic. Whether the elderly Bonapartist chiefs like Rouher will try to keep the cause alive is very doubtful; first, because the possible realization of their hopes is too far off, under any circumstances, for them to see it; and, secondly, because the law of their own making—the Senatus Consultum of 1870—passed on the eve of the war, gave the succession, in default of direct male heirs of the Emperor, to Prince Napoleon Bonaparte, the son of Jerome, and *his* heirs male. Against this the will of the late Prince, which Paul de Cassagnac is said to know of, passing over Prince Napoleon and giving the succession to his son Victor, is, of course, of no validity, even if it exists. Victor may perhaps prove a good person for the Imperialists to pin their hopes to; but his father stands between him and the throne by an instrument the authority of which it would be suicidal for them to dispute. Even a Bonapartist has to acknowledge the sanctity of *some* legislation, and nothing in his eyes ought to stand higher than a decree of his Senate, passed at the instigation of his Emperor. It is true the Senatus Consultum of April 20, 1870, which gave the Senate legislative power, took away its constituent power, and lodged it in the hands of the people through a plébiscite; but until the plébiscite is taken, undoubtedly the order of succession stands as settled in that year, and Prince Napoleon is the heir-apparent of the Bonapartist claims. But then the Bonapartists hate him. He never was in thorough sympathy with the Empire, the honors of which were almost thrust upon him, and he repudiated Imperialist ideas and claims when he appeared as a candidate in Corsica last year. The near prospect of a return to power might possibly lead him to accept the leadership of the party; but the chances of anything of the kind are too shadowy to tempt him into reappearing before the public as a pretender—a rôle in which he would be more than usually ridiculous. For various reasons he has never filled the imagination of the French people, and suspicions about his personal courage have been afloat ever since the Crimean War which would injure any Frenchman seriously, and to a Bonapartist "claimant" would be ruinous. A part he is not willing to play himself he is not likely to make way for his son to play, and the influence of King Humbert would doubtless be thrown strongly against any plan for converting his nephew into a professional enemy of the existing French Government.

Of the gain to the French people from the Prince's death there can be no question. To a country like France, in which political traditions have been lost, nothing is so needful as that some form of government shall have time to grow, and work itself into the habits of the people as fixed and permanent. To this there can be no greater obstacle than the existence of pretenders outside the state, intriguing through a faction in the legislature and in the administration, for the overthrow of the established constitution. It was the curse of England for full sixty years, and has been the curse of France now for nearly a century. That the Comte de Chambord has no children is a most fortunate circumstance, particularly as the younger branch of the Bourbons have shown sufficient wisdom to accept the situation and to live in their own country as peaceable citizens. We must not refuse to praise them for this, even if it be true that they have no hold on the people, and that not one Frenchman in a thousand knows that the Comte de Paris is the heir-presumptive to the old crown. Monarchical traditions have undoubtedly perished in France. No sovereign since 1789 has managed to die on the throne, except old Louis XVIII., and he would in all probability not have been able to do so had death not overtaken him while the country was still plunged in the exhaustion of twenty years of tremendous war. In fact, if there be a crown for which it seems useless as well as wicked to strive, it is that of France. Nowhere has the divinity that doth hedge a king so completely perished; no country, not even ours, is now so thoroughly committed to the experiment of a republic. It is not possible in our day to create a royalty any more than an aristocracy. It is essentially the product of time and of a sentiment which, even where it is strongest, and where no revolution has ever quenched or abated it, has to struggle for existence against the positivist spirit of the age—a spirit for which nothing is sacred, and which sternly demands of every man that he shall earn both his money and his honors by ability and hard work. Even if another Bonapartist pretender should now come forward in the person of Prince Victor, he would probably find by the time he was ready to claim his crown that he, too, had been forgotten, that the magic had gone from his name, and that he had passed into the category of historical curiosities in which the last of the Stuarts ended his days.

But Bonapartism in its last stage nevertheless must always remain one of the most interesting phenomena of modern history. The rise of the first Emperor had nothing in it for which the times and his own genius would not account. He made himself Cæsar because he was irresistible in war, and because there was no public opinion in France which required moral satisfaction. But the second Empire was imposed on a new France, which had had half a century of political experience and of constitutional government, and was imposed by a man who had no great exploits either civil or military to boast of. His followers, too, when they seized on the Government were not only obscure adventurers fresh from the billiard-room, the card-table, and the race-course, but they were the successors of statesmen of the first order who had long filled Europe with their fame. Moreover, the régime they set up was something absolutely new, and the way in which they made it work in one of the most highly civilized countries in the world was truly marvellous. It was not a military monarchy like that of the first Napoleon, founded by a conqueror, for there was not a great or even well-known soldier, or a man who had commanded in a great battle, among them. Nor was it an elective monarchy like that of old Poland, or like the Papacy, in which the votes are cast for one of two or more candidates, or, in other words, in which the elector has an alternative. On the Bonapartist plan the elector was asked to say whether he would accept a man already in possession of power, without receiving any indication of what would happen in case the noes were in a majority, and, indeed, knowing that if they were in a majority it would make no difference. All the Bonapartist plébiscites, or appeals to the people, which form so prominent a feature in their system, were made in this way, and it was something unique. The history of electioneering contains nothing like it. On its face it looks like what is known in this country as the submission of a constitution to the popular vote, but this submission with us always presents the elector with a real choice. He knows what will happen whichever side triumphs. The Bonapartists never even pretended that they would surrender anything in case they were defeated at the polls.

Another most curious feature of the system was the way in which it mixed popular sovereignty and the divine right of kings. This

also was unprecedented. The fundamental law of all European monarchies declares that the sovereign reigns by "the grace of God," but it assumes, and does not declare, that he also reigns by the will of the people. The third Napoleon, however, called himself formally "Emperor by the grace of God and the national will," and he boldly ascertained the national will at the polls by a process which determined the result beforehand. Consequently, under his system the grace of God designated the person for whom the people ought to vote. This was not all, however. The two Bonapartists who have reigned were men who obtained power before they asked the people whether they ought to keep it. This was true both of the Constitution of 1799 creating the Consulate, and that of 1804 creating the First Empire, as well as of those of 1852 creating the Presidency for ten years, and subsequently the Second Empire. The electors were thus asked to vote for a person of whom they knew something, and of whose merits and capacity they had some opportunity of judging. In spite of the fact that no alternative was offered to the noes, there was about this, perhaps, a show of reasonableness. But at this point the hereditary principle was introduced, and actually made to work in conjunction with popular sovereignty. For not only did the late Emperor reign by virtue of the will of the people, but his son, the unhappy young man who has just perished in Africa, claimed the crown by virtue of the same warranty as against all other competitors. So that his title to the throne, as asserted by his followers, was really a hereditary right to receive a majority of votes, which is something absolutely novel in public law. The majority cast for the present Government of France at the last election, therefore, counts for nothing in the eyes of the Rouhers and Cassagnacs. It gives the Senate and Assembly no authority or color of authority to rule France, and they treat them in the debates as mere usurpers and intruders.

It would be well, however, if the system for which the late Prince stood was nothing worse than illogical. But it was besides this a sort of incarnation of brute force, let us hope the last we shall witness in the politics of Christendom. The original conspirators who set it up had a hearty contempt, which they made no attempt to conceal, for intelligent opinion, and for all the arts by which it is in the modern world formed or persuaded. Their strongest tradition was that their chief should be a soldier, and that he should meet discontent with bayonets. The only mode of satisfying national aspirations which they understood was making war and spending heavily in embellishments and ceremonial. They approached the French fancy, in fact, on its meanest side, and left nothing undone to feed its most depraved tastes. They made no secret of the close connection in their minds of politics and sensuality, and most of them lived vigorously up to their theory. The young prince who has just been killed was taught from his earliest years that soldiering was the first of a sovereign's duties, and he was actually taken from the nursery to participate in a useless attack at Saarbrück, in which many men lost their lives, undertaken for the sole purpose of giving him what, in the disgusting cant of the Court, was called his "baptism of fire." This piece of barbarity alone, which was worthy of the worst days of Louis XIV., would have given the misfortunes which followed the air of tremendous and richly-merited chastisement. It was creditable to him and to his mother that he should have afterwards submitted himself to the wholesome discipline of a good English school; but it was characteristic of his race and of his politics that he should have perished as a military adventurer in a quarrel not his own, under the spears of savages who were defending their soil and on whose mercy, even if they were merciful, he had not a single claim.

THE FUTURE OF THE NEWSPAPER.

MR. WHITELAW REID'S address on the present condition and prospects of journalism, delivered last week before the Ohio Press Association, has attracted a good deal of notice. It is a subject on which he is fairly entitled to attention; for whatever view may be taken of the political course of the *Tribune* since the war, no one can deny that as a newspaper it has done a great deal to elevate the general tone of the press in New York, and to discourage the gross personality which marked its old incessant editorial warfare. With most of what he says we cordially agree. There are, however, certain points in his address which, as tending to confuse the minds of the public and of journalists themselves, are open to criticism.

It should be premised at the outset that Mr. Reid does not predict for journalism the tremendous future as an agency for the regeneration of society and the purification of politics that other prophets have fondly hoped for it. It is rather to do the things better which it now does, than to do any new things. It is to collect the news of the day, as it does now, and discuss it, as it does now. Its relations to parties are to be very much what they are now. It is to avoid on the one hand extreme partisanship, and on the other what Mr. Reid considers the affectation of independence; to try to "elevate the standard" of the party, but at the same time be careful to remember that no good can be accomplished in the government of a free country except by the intervention of parties. All these things, however, are to be done better than they are now done. On one point only Mr. Reid does permit his fancy to rove—for the art of reporting he predicts a brilliant future. Why, he asks, should the busy man read the history of yesterday at a greater disadvantage than the history of a hundred years ago? In order to inform himself about that, he is not forced to read official documents and dry reports; all this work is done for him. "Thousands of pages are searched to give you one, but on that one is all you need to know." For the history of the Dutch Republic we go to Motley; for that of England, to Macaulay, Green, or Froude. Why, then, shall not the newspaper of the future be that which shall still employ colossal capital to gather all the news, and "a staff of Greens and Froudes to tell it"? It is not only to the reporting of the great events of the world's passing history that the efforts of these gentlemen are to be directed, but to the daily events of their own city and country. In short, the future of the newspaper is to be that we shall have better newspapers—

"the story better told; better brains employed in the telling; briefer papers; papers dealing with the more important of current matters in such style and with such fascination that they will command the widest interest. There will be more care and ability in selecting, out of the myriad of things you might tell, the things that the better people want to be told, or ought to be told. There will be greater skill in putting these things before them in the most convenient and attractive shape. Judgment in selecting the news, genius in telling it—that is the goal for the highest journalistic effort of the future; and to do all this a staff of Greens and Froudes to do it. With this improvement, and as a part of it, there is to be a steady improvement in the character of the men who embrace the journalistic career."

Even now, according to Mr. Reid, "there is more good young blood tending to this than to any of the other professions. There is more movement in it than in bar, or pulpit, or whatever other so-called learned profession that you will; more growth, a larger opportunity, a greater future." These last statements are so very general that they are incapable of proof or disproof; but the assumption which underlies them, that journalism has attained or is rapidly attaining the rank of a liberal profession, is either true or not true. If it is true, it is highly important that we should know it. As a liberal profession, offering a career for young men of education, the press would occupy a position of power and influence greater than ever. The question is whether there is any truth in it.

It must strike any reader of Mr. Reid's address at the outset as rather singular that two-thirds of a discussion devoted to the future of a liberal profession should be taken up with such matters as the cylinder press, the effects of railroads on the "area of circulation," the Hoe press, cheap advertising, and the cost of paper and printing. In connection with a profession all this sounds much as if we should find a great part of a lecture on law devoted to the cost of "legal cap," steel pens, and stenographic reporting; or two-thirds of a lecture on pathology to the cost of the production and manufacture of drugs. It is clear, therefore, that if journalism is a profession, there is one respect in which it is very different from other professions—that it is closely connected with, and dependent upon, commercial enterprise; that it involves the use of a large amount of fixed capital. A further study of Mr. Reid's essay discloses the fact that the uses to which this capital is put are the collection and sale of news, and the discussion of the bearing of this news upon the interests of the public at large. By a very simple natural law (to the existence of which Mr. Reid alludes, though he naturally does not dwell upon it) a newspaper is enabled to sell its columns to venders of other articles than news who wish to bring their wares to the notice of buyers, for a price which varies with the number of persons reached—or, in other

words, the "area of circulation." Although it is perfectly true that a few newspapers may from particular causes constitute exceptions to the rule, the law, as a general thing, works with the uniformity of a law of nature, and is generally expressed among newspaper men in the form of a mathematical ratio between the cost per "line" of advertising and the circulation; so that middlemen find it safe to engage in the business of furnishing advertising by the quantity.

It is obvious, therefore, that the *sine quâ non* and foundation of this "profession" is circulation. As the circulation increases, advertising increases; and as advertising increases, the property becomes more and more valuable. The first interest of all concerned is, therefore, a wide circulation. It is generally the custom of writers on this subject to represent the interests of the editor as at war with those of the publisher, the editor caring only to make his paper valuable and interesting; the grovelling publisher caring only for advertisements, and hence interfering with the editor's free discussions of topics which may endanger this source of prosperity. Mr. Reid has something to say on this head, and, like most journalistic reformers, insists that the editor must have absolute control over the publisher, and never allow the latter's low mercantile instincts to interfere with the higher interests of the paper. But this distinction between the objects held in view by editors and publishers, however real and painful the effect of the antagonism may be in many editorial "sanctums," is of little or no consequence when the enterprise is looked at as a whole. The general interest in the enterprise is one and the same among all concerned. What is wanted is a commercial success, and this cannot be obtained without advertisements, nor these without circulation. The manner in which the business will be carried on, therefore, will be determined in general by the means which in any given community are found most effective in securing circulation. The motive most operative upon all those connected with a newspaper will, in the long run, be not the desire to make the world better and nobler, nor to mould public opinion, but at all hazards to get an audience. As a consequence, we should expect to find most newspapers securing an audience in matters of politics by following more or less closely the steps of one or other important political party, in matters of religion by following the path pointed out by some sect. So in matters of news, we should expect to find that sort of news treated as most important in which most people are for the time most interested, without regard to its intrinsic consequences; and, moreover, we should expect to find *news* itself on any subject of momentary interest regarded as of great value irrespective of its truth. In addition to all these means of obtaining an audience, we might not unfairly expect self-laudation and solicitation resorted to as a further means.

It follows from all this that Mr. Reid's "staff of Macaulays and Froudes" replacing the present "city editor" and news agencies is a vision which there is no reason for ever expecting to see realized. It is the first business of Macaulays and Froudes to spend years of patient research in arriving at the truth with regard to what is of all things the most uninteresting and unprofitable from the newspaper point of view—the Past; to enable them thus to engage in this unprofitable work millions of capital are accumulated for their education and a lifetime is spent in research. The results are momentous additions to the world's knowledge. But these momentous additions to the world's knowledge are of less immediate interest to the public as a general thing than the condition of the stock market or the last walking-match. There is probably nothing in the world of less intrinsic importance than the name of the particular horse which comes out first at the Derby, unless possibly it is whether "Blower" Brown or Weston can walk the greater number of miles in a given time. Yet no events are treated with more respectful and minute attention by the press, and for a very good reason—that the love of a contest of any kind, no matter between whom or for what, will always extend the area of momentary circulation. To secure Froudes and Greens for picturesque "descriptive writing" on such subjects as these would be an economical blunder, for which the sordid publisher might fairly call the impractical editor to account. Regarding its Green or Froude as so much "plant" on which the business must earn interest, their employment to do work which generally far inferior men could do as well would be a great waste.

A very slight attention to the actual conditions of a professional career will show how utterly unprofessional newspaper work must always be. A young man, for instance, who wishes to practise at the bar knows that if he acquires a certain amount of technical knowledge he will be admitted to advise clients and argue cases. By careful preparation and compliance with established rules he can, with a certain amount of education, be almost confident of a fair success. He is besides charged with important and responsible duties as an officer of court. Journalism holds out no such career as this. Success in it requires a peculiar combination of faculties, a sense of what the public are interested in, combined with a literary faculty, and a power of making use of other people's literary faculties, which nobody can acquire by study or imitation. It cannot be got by collecting "news," nor by writing brilliant descriptions of murders, hangings, or races. Some few men have this journalistic faculty, and they succeed, become "able editors," and undoubtedly secure the sweet incense of the flattery and consideration of their fellows to a degree that seldom falls to the lot of professional men. But the great mass of journalists do not attain this position. They do not attain any position. Most generally they remain all their lives collecting news or writing brilliant accounts of murders or hangings.

The thing that most seriously interferes with any development of journalism as a professional career is its necessarily anonymous character. It is established as well as anything can be established by experience that the power of the press is in exact ratio to the strictness with which the incognito of its writers is preserved. There is no more terrible moral engine of the world than reiterated anonymous attacks upon persons, institutions, or abuses by a widely-read paper. But it is essential for the success of this sort of warfare that it should never be known who are the authors of the attacks. It must seem always to be the loud, unanswerable voice of public opinion, and not that of some enterprising young journalist who has just graduated from Yale or Harvard. But this necessity is a most serious drawback to the press as a profession. A professional success in which there can be no gratification of ambition, no personal glory, holds out no very tempting bait. If lawyers and doctors were only admitted to practice on condition of their names and even identity remaining unknown, the professions of law and medicine would certainly not have the attractions they now possess. It is a very noticeable fact—one, too, which Mr. Reid would be the last to dispute—that with the growth of the press of this city in decency and sobriety the persons actually engaged in the editorial work upon them have withdrawn into retirement, and now avoid that parade of their names which formerly seemed to make the editor of a "great daily" such an important person.

That enormous improvement in the character of the press is still possible, and that editors may do much to heighten it by directing their efforts in many of the directions pointed out by Mr. Reid, there can be no doubt; but we do not think that any good can be accomplished by exciting hopes of the establishment of journalism on a foundation which does not belong to it. Its importance in modern times arises chiefly from the fact that it furnishes what the world has never had before—a constant medium for argument, explanation, exhortation, criticism, and debate by that class which inherits the world's best traditions of thought and conduct, and which before the invention of the newspaper could speak with but a muffled and indistinct voice. It is not a profession and cannot be made one.

Correspondence.

CUSTOM-HOUSE PRACTICES.

To the Editor of The Nation:

Sir: Would you enlighten one of your readers, and with him others, by unravelling the intricacy of custom-house practice as regards importation of foreign books for educational purposes? Having occasion lately to try and secure the valuable series of books known as the "Early English Text Society's Publications"—a series which can now be obtained only in the bulk and at second-hand—application was made to an importing firm as to the possibility of obtaining the series, in the name of a Southern university, for one of its professors. The books were in no case intended for sale or distribution, but were quite essential to the person concerned as professor of English in the aforementioned university and through him to the university course in that specialty. Could he, by a liberal construction of the existing law for the importation of books designed to benefit schools and colleges, conscientiously procure books free of duty in the name of such school or college, though paid for by himself? Further, is there any law authorizing custom-house officers in their port-of-entry *printed* forms to depart from the printed form and insert, for example, in a form lately received by your correspondent, after the words "for the use of said university" the *written* words "are its permanent property," and after the words "not in-

tended for sale" the words "or distribution"? The series mentioned is for the use of the university, but is not to be its permanent property, inasmuch as it is not intended for the university library.

Very respectfully, H.

A HARD-MONEY CANDIDATE.

To the Editor of The Nation:

Sir: All good citizens, of whatever political complexion, are, I think, sick to death of the Congressional wrangles—of Mr. Blaine's quixotic attacks upon Southern wind-mills and of their defence by Southern brigadiers; of Mr. Conkling's arrogance and blackguardism, and Mr. Lamar's attempt at rivalry therein. But these wrangles are likely to continue just so long as the present party-lines continue.

There is but one live question in politics to-day, and that is a question of finance. The contest, moreover, is not merely between hard money and soft money, but between honest hard money and dishonest hard money. And the dividing line of neither coincides with the dividing line between Republicanism and Democracy—if, indeed, there is any such line, for I personally fail to see wherein the two parties differ upon any subject of importance. There are as many soft-money Republicans as Democrats and as many hard-money Democrats as Republicans, and on the silver question there is a large element in both parties utterly wild in their theories. With what sort of consistency can hard-money—honest hard-money—Republicans in the East rejoice at the nomination or election of "Charley" Foster in Ohio? With what sort of consistency can Thurman and Bayard work side by side?

Party discipline is very powerful, and frequently compels the lion and the lamb to lie down together. It is only party discipline that has so long prevented a split in one party or the other. But has not the time nearly arrived when a new division should take place? Does not the stand taken by Senator Bayard afford a fitting opportunity for such a division? Why should not all believers in honest hard money, East and West, take him for their standard-bearer, and, uniting on that one issue, put him in nomination in 1880 as the honest hard-money candidate for the Presidency? He is the nearest approach to a statesman now in Congress, and if untrammelled by old party ties he would be a worthy successor of the present incumbent—and that, to my mind, is very great praise.

We should then know just where we stand. To-day it is impossible to tell how strong the silver or the greenback movement really is. But if the matter were put directly in issue before the public, the full strength of both sides would be brought out. We might, of course, find ourselves landed on the other side of the street, like the man who wanted to find out how hard his mule could kick; but, like him, we should have at least the satisfaction of having got at the bottom facts. We should have tested the mule.

There are a good many men, in Massachusetts at least, who would be glad to see something of this sort tried, and I believe that such a movement would find ready response from all parts of the country. It would put an end to the Grant "boom," and would give us all something to fight for, and a party for which we should not have constantly to apologize, and of which we should not necessarily be ashamed.

Very respectfully,

A Hard-Money Republican.

Boston, June 21, 1879.

STIELER'S NEW MAP OF THE UNITED STATES.

To the Editor of The Nation:

Sir: In your notice of Part II. of 'Stieler's Hand Atlas,' new edition, you gave expression to your astonishment, no doubt shared by most subscribers, that map 79, the N.W. portion of the United States and S.W. Canada, was called "West-Indien, Blatt 1." The title of this map, even in an abbreviated form, should have been more explicit, as the so to speak official title of it will be "West-Indien und Central-America bis zum südlichen Canada," and the whole map (in four sheets) is intended at the same time to take the place of the old general map of North America (one sheet in the former editions). It is on the scale of 1 : 7,500,000, one-half of the size of Petermann's map of the United States in six sheets, which, however, it is not intended to supplant but rather to supplement, as the important surveys of Lieutenant Wheeler and Professor Hayden, the Atlas of the General Land Office, Mr. W. L. Nicholson's, and many other special maps, published since Petermann's six-sheet map was first issued, have been used for this new four-sheet map, which thus for the first time, and especially in the two northern sections embracing the territory of the United States, embodies in a general map the results of very important special researches concerning this continent. The publisher acknowledges the mistake made in the abbreviated title, but trusts that the importance of just this map may plead in his behalf.

Very respectfully,

B. Westermann & Co.

New York, 838 Broadway, June 21, 1879.

Notes.

Roberts Bros. have in press 'Our Autumn Holiday on French Rivers,' by J. L. Molloy.——J. A. & R. A. Reid, Providence, announce 'Narragansett Sea and Shore,' a guide to those famous waters, by the Rev. Frederick Denison.——A 'History of the War Department of the United States,' by L. D. Ingersoll, will shortly be issued by Claxton, Remsen & Haffelfinger, Philadelphia.——Porter & Coates will publish a translation of Élie Berthet's 'Prehistoric World.'——'Through the Light Continent,' by William Saunders, a work on the United States in 1877-78, is announced by Cassell, Petter & Galpin.——'Cousins,' a new novel by the author of 'Mr. Smith,' will be the next addition to Henry Holt & Co.'s "Leisure-Hour Series."——Macmillan & Co. have in preparation a new net catalogue of the Clarendon Press series of educational works issued under the direction of the Delegates of Oxford University, as well as of their own text-books. Its appearance in the fall should be awaited with interest by all instructors, for a list of equal excellence and authority it would be hard to find in the English language. Nor need we confine the remark to teachers alone.——G. P. Putnam's Sons have printed in a handsome pamphlet the proceedings at the reception lately given the Rev. O. B. Frothingham by his church, on the occasion of his departure for Europe.——Among the other good services of the Boston Appalachian Mountain Club has been its endeavor to fix the true names of mountains; and in case of homonymy, not an infrequent thing in New England, to ascertain the rightful priority and strive to obtain recognition for it. In this way the question of the two New Hampshire Kearsarges came up, and appears to be still undecided by the Club. A convincing little pamphlet, asserting the superior title of the southernmost or Merrimack County mountain, has been published at Concord (*Republican Press* Association). It serves also the purpose of defending against Johnson's Encyclopædia the thesis that the corvette which sunk the *Alabama* was named for the same eminence. An account of the memorable fight is appended.——We have received from Miss Christine Ladd, of the Johns Hopkins University, a separate copy of her paper on the Pascal Hexagram which appeared in volume ii. of the *American Journal of Mathematics*. Miss Ladd's marked ability in this study has led to the trustees of the University voting her an honorary stipend, equal to that bestowed upon those who are appointed to fellowships, in order that she may continue her mathematical studies in Baltimore.——Some fruitless applications having been made by Americans to the English Fine Art Society for Mr. Seymour Haden's etchings, it should be generally known that his publishers are Hogarth & Son, 96 Mount Street, Grosvenor Square, London.——It is with great satisfaction that we record the formal presentation to the Government of the invaluable collection of Indian portraits and curiosities made by the late George Catlin. This collection was, a generation ago, one of the standing attractions of London, was afterwards exhibited in Belgium, and there fell into the hands of the late Joseph Harrison, Jr., of Philadelphia, who not only helped Mr. Catlin out of his financial straits by the purchase, but intentionally preserved for his country this most remarkable record of the American aborigines. His widow has now offered it to the National Museum, where it will be duly displayed.

—The fourth Library Convention, to be held at Boston next week (June 30–July 3), promises to be even more interesting than its predecessors. The first and third day are given up to the technicalities of the profession—to classification in catalogues and on the shelves, indexing, binding, ventilation, insect pests, and contagion, the catalogues of small town libraries, and similar subjects, which only librarians and here and there an outsider will care for. But on the second day questions will be discussed which claim the attention of every one who is interested at all in the cause of popular education, and feels either hope or anxiety about the result of the system of public libraries which has started into such rapid growth in the last two decades. These questions are, the relation of libraries and schools; how to make

them work together; whether libraries are doing, as some say, more evil by deluging the youthful mind with a torrent of sensational literature than good by furnishing real pabulum to the minority who want it; or whether, as others maintain, fiction is a justifiable and indeed necessary bait to entice the wild colts of our streets into a paddock where they can be trained to some useful work. Much can be said on both sides, and as we are promised papers by Mr. C. F. Adams, jr., Mrs. Kate Gannett Wells, and Mr. S. S. Green, and remarks by Rev. J. F. Clarke, Rev. E. E. Hale, Mr. S. Eliot, and Prof. Atkinson, no doubt something good will be read or said on both sides. At the previous conventions no subject so instantly aroused flagging attention, and called up a crowd of eager speakers, as this. The entertainments provided are a combination of the lighter features of previous years. An evening reception corresponds to the "spreads" of Philadelphia and New York, except that it is at a private house, and not at a library. For the afternoon visit to the Art Museums of those cities is substituted the somewhat more brilliant evening exhibition at the Boston Museum of Fine Art; the banquet given by the Lord Mayor of London is paralleled by an excursion down the harbor, at the invitation of the Mayor; and the Convention concludes with a trip to Plymouth and its Rock, that had no counterpart on previous occasions.

—Availing ourselves of the latitude with which our esteemed contemporaries of the daily press use the word, we may say that the literary end of the Grant "boom" has reached us in the shape of Parts 1 and 2 of Mr. John Russell Young's 'Around the World with General Grant' (American News Co.) The total length of it, we are told, will be twenty parts, making 1,280 pages; it will be obtainable only by subscription, and is expected to be completed by November 1. Unlike Mr. Sherman's modest and rational boom—a collection of speeches showing his capacity for civil administration—the present is tricked out with "heavy extra-calendered paper, manufactured expressly for this work," and "eight hundred illustrations designed and engraved by the best artists and engravers in America," also expressly for this work. As the pages are uncut, we presume these arts will prevail in the rural districts. The text is in truth as dreary as the typographical and artistic performance is excellent. General Grant is abruptly introduced as having well earned the foreign attentions about to be recorded, by (among other things) his "judicious direction of the Executive branch of the Government for eight years," and the narrative begins with the farewell hospitality of Mr. Geo. W. Childs. On shipboard, we are told, "the reticence which had characterized the manner of the Ex-President [*sic*] during the many years of his onerous and toilsome employment in the service of his country, dropped from him as though it were a mask," and the captain of the *Indiana* pronounced him "the most interesting and entertaining talker he had ever met." General Grant "smoked incessantly during the voyage," while Mrs. Grant "suffered slightly from *mal de mer*." Mr. Young's companionship was not constant during the General's stay in England, and when the newspaper reports are not handy he falls back upon Mr. Smalley's letters to the *Tribune*, Mr. Smalley having the advantage of being a host as well as a *convive* of our ex-sovereign. Neither was Mr. Young of the party when the Rhine tour was made, and he accordingly throws in a lot of padding about Alsace and the brutal Prussians and intriguing Bismarck, which has no relation to his subject, and must prove embarrassing to the book agent in German settlements. But "our lady readers," to whom Mr. Young occasionally alludes, will probably not mind this. Most of the work thus far consists of formal receptions, addresses, and replies. Part 2 breaks off at General Grant's arrival in Paris.

—Mr. Joseph Thacher Clarke, a young American architect, who is now abroad to examine the remains of Doric temples and to attempt to settle some of the many vexed questions in regard to their construction, has published as the fruit of his preliminary studies an essay upon "The Hypæthral Question—an Attempt to Determine the Mode in which the Interior of a Greek Temple was Lighted" (papers of the Harvard Art Club, No. 1, Harvard College, Cambridge, 1879). He brings to his work a wide acquaintance with the original sources of information and a careful examination of what has hitherto been written upon this question, which has long been in dispute, and finds all the old theories insufficient. He maintains "that the Parthenon, the temples of Olympia and Poseidonia, in short, all true Greek temples, were covered with a complete roof and ceiling, and that the light by which they were illuminated was artificial," and he makes in behalf of his theory a very consistent and forcible argument. It has been generally believed that Greek temples were lighted by an opening in the roof, but as to what this opening was there has been much difference of opinion. Mr. Clarke states each theory and criticises it in detail. He reminds us that there is no contemporary reference to an hypæthral opening; that the theory rests on a doubtful interpretation of a doubtful passage of Vitruvius, himself an untrustworthy author; that the danger to the interior from rain would have been very great, especially to the chryselephantine statues and the treasures, while great pains were taken to prevent moisture coming from the ground. He shows that Mr. Ferguson's theory of lighting by means of a clerestory is inconsistent with the very text on which the hypothesis of an hypæthral opening is founded, and calls attention to the lack of any remains indicating such a method of construction, and to the very imperfect light it would afford, owing to architectural difficulties; he recounts the æsthetic difficulties in such a construction, and the æsthetic advantages of artificial light for such an interior and such decorations as a Greek temple possessed; he recalls the fact that travellers who saw the Parthenon when still unimpaired speak of its darkness, and that all ancient representations of finished temples show an unbroken roof; and, in ways too various to be mentioned in detail, he reinforces and supports his arguments. Whatever may be the decision as to the worth of this theory it is a valuable contribution to the discussion, and exhibits a careful and thorough study which is as novel as it is gratifying in American contributions to the study of art. Mr. Clarke's paper is reprinted in the last number of the *American Architect*.

—A Southern teacher writes us privately as follows:

". . . I surmise that before the coming campaign is over the South is the only part of the country where such honesty and independence as characterize your paper will be tolerated. There is a great deal of sad truth in the letter of your Illinois correspondent; but, as you say, he goes too far. There is no more unrepentant rebel in the South than myself, yet I do *not* hate the North. My hostility is exercised only towards the Blaines, Chandlers, etc., and my sentiments towards them are only what the *Nation* expresses and implies. There has been a steady growth South in national patriotism in the last ten years. One Democratic Administration, under such a President as Bayard or David Davis, unmarked by the follies of the Democrats or the bitter partisanship of the Republicans, would bring about a state of things never experienced since the Revolutionary War—that the Southerner would feel as much at home in Maine as in Texas or South Carolina. Your correspondent mistakes a general feeling of resentment towards the Republican party, as the author of all the wrongs the South has endured, for a sectional feeling of hatred towards that part of the Union where the Republican party is in the majority. We know that the Republican party will attempt, if possible, the very things your correspondent speaks of in regard to remanding the South back to the state of things existent from 1868 to 1876, and I believe we would fight before submitting to it again. Hence the eagerness with which the South seeks to increase her power and influence in the Government—not to rule, as the 'Stalwarts' say, but to keep from being ruined. The apparent hostility between North and South is no greater than that between up-country and low-country in South Carolina. It did not 'ante-date the Revolution.' So far as *real*, it is due to the brutal and overweening vanity of Southern M.Cs. in Congress and their manner towards members from the North; to the infamous assault of Brooks upon Mr. Sumner, and the general defence of the same throughout the South; to the association in the mind of the Southerner of Abolitionist (with all it implied and Abolitionism meant for the South) and Northerner or 'Yankee,' and to the misunderstanding at the North that free speech, the natural inheritance of the modern Anglo-Saxon, was hated *per se* at the South, when it was because free speech on the slavery question meant insurrection and its attendant horrors.

"But all that has passed away for ever. There can scarce be found an intelligent Southerner who will not admit (though not to a Northerner) that slavery put us as a people behind all others of our race in civilization. The same sentiment is now held as to the Brooks-Sumner affair here at the South that was always held at the North. At the Commencement at the Biddle University (N. C.) for colored young men, Dr. Mattoon, President, there were present some old slaveholders, who expressed surprise, and even gratification, at the proficiency of the colored young men. In fine, the 'problem' of the New South is working itself out as well as the same conditions could possibly admit of among any people; and I beg leave to suggest that those who are interested in the solution of this problem send a circular letter to those in charge of all the educational institutions for colored people in the South, asking such questions as would bring out the truth."

—As the Democrats in Congress rely greatly on English precedent in denouncing the use of the army as a police, the history of the suppression of the Gordon riots of 1780 will help them to an impartial view of the question. Dr. Johnson wrote to Mrs. Thrale:

"There has been, indeed, an universal panic, from which the King was the first that recovered. Without the concurrence of his ministers, or the assistance of the civil magistrates, he put the soldiers in motion, and saved the town from calamities such as a rabble's government must naturally produce."

Lord Edmond Fitzmaurice, in his 'Life of Shelburne' (iii. 89), says:

"The ultimate suppression of the riots was owing to the courage of the Attorney-General, Wedderburne, who was rewarded with the Barony of Loughborough and the Lord Chief-Justiceship of the Common Pleas. While London was burning, the Privy Council was discussing whether the troops could fire till after the Riot Act had been read and one hour had elapsed. This was the theory embodied in a War-Office Order on the subject; the question, however, was if it contained the law on the subject. The Attorney-General gave it as his opinion that when a felony was being committed, and the Civil power lacked other means to repress it, the Military could interpose, without any formality whatever, not as soldiers but as citizens. 'No matter,' said Mansfield [whose house was sacked by the mob], 'whether their coats be red or brown, they are employed not to subvert but to preserve the laws and Constitution.' This doctrine, though probably correct, is clearly one which requires very close watching; as Dunning pointed out in some observations which he addressed to Shelburne on the subject."

The miserable condition of the police was of course the reason why the mob obtained such headway, and the necessity of reorganizing it upon a more efficient basis was strongly urged by Shelburne while the riots were still in their incipiency. At Bath, according to Samuel Curwen, an American loyalist residing in Bristol, the mob gutted the Roman Catholic chapel and the priest's house before the Hereford militia and a troop of dragoons stationed near by could be called in ('Journal and Letters,' p. 283). Bristol, on the other hand, "by a vigorous internal police taking early precaution dispersed a threatening storm."

—A subscriber sends us the following off-hand answer to the riddle of Erskine's which we quoted last week, ending "What am I—what, what?"

"You're a king. When you die
Vivat Rex people cry.
Though, fat-brained and bloated,
For sins you be noted,
Despite of all protest,
Rex peccare non potest."

—Three court-plaster illustrations on the usually staid cover of *Lippincott's* for July emphasize the three articles for which original designs appear to have been procured. Of these articles the best in all respects is Mr. L. Clarke Davis's "At and After the Play," a biographical sketch of Joseph Jefferson, the actor, with special reference to his impersonation of Rip van Winkle. Mr. Jefferson is, as is well known, a fine example of hereditary genius, being the fourth in a direct line of actors, of whom two besides himself were eminent, and having also inherited from his father a taste for painting which he has cultivated perhaps beyond the latter's excellence in that art. All but the first Jefferson have been intimately associated with the Philadelphia stage, for which, as Mr. Clarke shows, the legend of Rip van Winkle was first dramatized, probably by J. H. Hackett, and afterwards by Mr. Jefferson's half-brother, Charles Burke, himself an actor to whom Mr. Davis awards the highest praise. Mr. Felix L. Oswald's opening paper, "Rambles in the Backwoods of Mexico and Central America—Sonora," and "Stratford-on-the-Sound," are both agreeable papers, which do not, however, call for special remark, unless we ought to mention the mysterious "Stratford Knockings" of thirty years ago. Miss Porter's "My Village in the South" takes a new turn without ceasing to be romantic. In a review of Bigelow's 'Franklin,' Mr. Thomas Hughes endeavors to make some amends for the English underestimate of Poor Richard.

—*Harper's* opens with a jaunty pictorial description of Narragansett Pier, by Professor Charles Carroll. Mr. Howard Pyle apparently concludes his entertaining series on the "Peninsular Canaan" with glimpses of the peach country in Delaware. The inexhaustible literary resources of Long Island are exemplified anew in Mr. A. A. Hayes, Jr.'s "Romance of Easthampton," which seems intended to pass for a true story. Mr. S. G. W. Benjamin writes with his usual unprofitableness when dealing with such subjects on "Fifty Years of American Art," the period, namely, from the founding of the National Academy of Design and the death of Gilbert Stuart (in 1828) to last year. Both the text and the engravings recall the work of the older worthies of the brush, such as Huntington, Durand, Cole, etc., and their immediate successors. A centennial article describes in a somewhat wooden manner the taking of Stony Point in July, 1779. Mr. E. P. Whipple's "Recollections of Charles Sumner" have the quality of being least flattering when most apologetic; and as they are frank and truthful between times, they convey a very fair idea of that statesman's weaknesses. In Mr. Henry James, Jr.'s charming little story, called, rather improbably, "The Diary of a Man of Fifty," the dénouement is well concealed from the beginning, and the moral very unexpectedly enforced with a wholesome regard for the reader's feelings instead of for the narrator's. The scene is laid in Italy, and all the appointments show the practised observer with a gift for description.

—Professor Adolfo Bartoli, of Florence, whose important work, 'I Primi Due Secoli della Letteratura Italiana,' we noticed in the *Nation*, No. 464, has undertaken a more popular history of Italian literature, the first volume of which has recently appeared in Florence under the title 'Caratteri Fondimentali della Letteratura Medievale.' As the title indicates, it gives a survey of the general mediæval literature of Europe during the thirteenth and fourteenth centuries. To show what the condition of the human mind was during the Middle Ages the author examines what it produced. He considers rapidly, in eleven chapters, the chronicles in prose and verse and historical songs, works with moralizations, legends, religious lyrics, the religious drama, encyclopædic works, the poetry of the vagrant scholars, the *fabliaux* and the romance of Renard, the 'Romance of the Rose,' and Provençal poetry. He avoids all literary discussions, and presents simple facts. In this way he has made a very readable work, which supplements his more learned labor mentioned above.

WALTER BAGEHOT.*

MR. BAGEHOT'S death leaves a void in English literature which will not easily be filled. He was possessed of rare and peculiar intellectual powers, and he applied his talents to subjects which at the present day do not often form the study of men gifted with anything like his genius. The last fifty years have been a period of political change. Curiously enough, they have not in the main been a period of political speculation. Two men of marked originality have, the one in France and the other in England, thrown new light on the theory of politics. De Tocqueville's services to political science have now been fully acknowledged, though they can scarcely receive more ample acknowledgment than is their due. Mr. Bagehot's achievements have scarcely as yet been fully recognized, though students know that he has thrown more light on the essential character of the English Government than can be gained from the works of any other writer who has dealt with that well-worn but little understood subject, the English Constitution, and it will ultimately be perceived that he is, within a limited field, by far the most original political theorist who has appeared, at any rate in England, during the last half century.

Our present object is not, however, to estimate the value of Mr. Bagehot's speculations, but to point out what were the qualities of a genius which may be termed "singular" in the strict sense of the term, and left its peculiar impress on every line of Mr. Bagehot's works. The first and most obvious quality of his mind was originality. By this term we do not mean necessarily either strength or wide grasp of intellect. What we do mean is the power to look at all matters from points of view which are peculiar to the thinker himself. Take, for instance, Mr. Bagehot's whole account of the Edinburgh Reviewers. The subject is one which lends itself to truisms. One would be inclined to think that nothing could be said on the topic which was at once true and new. The moment that Mr. Bagehot takes the matter in hand the reader feels that a considerable subject is never really exhausted. Jeffrey, Horner, Sydney Smith, Lord Eldon, are each set before us in a new aspect. There is no attempt at overstrained paradox, but we feel that the true character of the Toryism which the reviewers overthrew, their own powers and their weaknesses, are made apparent by being subjected to the light of an original genius. The following sentence with reference to Lord Eldon tells, for example, more than can be learnt from half a hundred histories such as that with which the industry and good sense of Mr. Walpole have recently afflicted the world:

"We read occasionally in conservative literature (the remark is as true of religion as of politics) alternations of sentences, the first an appeal to the coarsest prejudice, the next a subtle hint to a craving and insatiable scepticism. You may trace this even in Vesey, junior. Lord Eldon never read Hume or Montaigne, but sometimes, in the interstices of cumbrous law, you may find sentences with their meaning, if not in their manner: 'Dumpor's case always struck me as extraordinary; but if you depart from Dumpor's case, what is there to prevent a departure in every direction?'"

This sentence, which is only one in a thousand examples of Mr. Bagehot's power of suggesting a whole view by a few brilliant touches, is remarkable as showing the close connection between his literary and his political criticism. The essay on the Edinburgh Reviewers happens to unite his interest in literature and his interest in politics. In truth they never seem far apart from each other. From 'Lombard Street' or 'Physics and Politics' may be picked out profound remarks on style, and

*'Literary Studies. By the late Walter Bagehot, M.A., and Fellow of University College, London. Edited by Richard Holt Hutton.' London: Longmans, Green & Co.

the criticisms on Lord Eldon easily suggest the kind of view which Mr. Bagehot was likely to take of the Constitution. The English Constitution with its paradoxes, its anomalies, its basis of sound sense, and (with due reverence be it said) its absurdities, was exactly the topic which suited Mr. Bagehot's powers. And his 'English Constitution' is a masterpiece.

Something, however, more than what is fairly meant by originality was needed for enabling any one to throw new light on a topic which is so well known that, like the character of an old acquaintance, it cannot be understood. This necessary something is freshness, or openness of mind, and this intellectual pliability and readiness to admit new facts and to receive new impressions was precisely the quality which next to originality was the most marked characteristic of Mr. Bagehot's mind. Any reader who wishes to see this particular trait displayed in the strongest light, though not from the most favorable point of view, should read the letters on the *Coup d'État* written in January and February, 1852. They are appended to the first volume of 'Literary Studies,' and form as remarkable a production as any young man of twenty-six ever published. When they were composed all England was filled with denunciations—and, let us add, most just denunciations—of the French President. He was known to be a knave. He was thought to be a fool. His villany was patent, and his success was uncertain. The English press, which a year or two afterwards adulated "our ally," were filled with high-toned indignation at a President who in betraying the liberties of France menaced the peace of England. Public indignation, partly genuine and partly, it may now be feared, factitious, made even calm critics incapable of fairly judging what were the sources of the President's power, and what were the chances of his success.

There was, perhaps, in England but one man except Lord Palmerston who perceived that the triumph of the *Coup d'État* was based on causes lying deep in the state of France and in the character of Frenchmen. This one man was the then unknown correspondent of the *Inquirer*. He went to Paris and studied the *Coup d'État* as a doctor might examine into the symptoms of a new disease, or a lawyer might study a strange case. Mr. Bagehot analyzed the condition of Paris with extreme interest and with impartial calmness. He perceived, what we now all know, that the shopkeepers were panic-struck with fear of socialism; that the workmen hated the middle classes; that the Conservatives were unpatriotic and the Republicans impracticable; and, to put the matter shortly, that the President had a hand full of good cards and the skill to play his own game. Mr. Bagehot, moreover, never lost sight of the fact that the object of government is to protect the lives and property of ordinary men, and that ordinary men, who are the vast majority of any country, will hate any party who menaces their lives and property, and rally round any despot who protects their interests. Hence in 1851 he perceived what was the strength of the President, and wrote of the *Coup d'État* just as ten years later the mass of political writers, taught by experience, wrote of the Empire. His whole theory is summed up in these sentences:

"Mazzini sneers at the selfishness of shopkeepers. I am for the shopkeepers against him. There are people who think because they are Republican there shall be no more 'cakes and ale.' Aye, verily, but there will though, or else stiffish ginger will be hot in the mouth. Legislative assemblies, leading articles, essay eloquence—such are good, very good—useful, very useful; yet they can be done without. We can want them. Not so with all things. The selling of figs, the cobbling of shoes, the manufacturing of nails—these are the essence of life. And let whoso frameth a constitution of his country think on these things."

Of "these things"—that is, of the connection between the commonest facts and the most general principles of politics—our author thought to good purpose, and therefore saw exactly those aspects of truth which generally escape theorists. His defect, to speak quite frankly, was that he "thought of these things" a good deal too much. Something must be allowed for the irony which runs through the attitude of a man who, being himself the cleverest of theorists, is never so happy as when he can show how great are the social benefits arising from commonplace stupidity. A good deal must also be allowed for the natural passion of a youthful author for the maintenance of ingenious paradoxes. But when every allowance is made, it must be conceded that Mr. Bagehot's attitude towards the *Coup d'État*, if it shows the strength also betrays the weakness of his genius. "I have seen so many ghosts," it has been said by a celebrated author, "that I cannot believe in ghosts." We might conceive Mr. Bagehot in like manner saying, "I have formed so many theories that I cannot believe in theories." Certainly his belief in the ordinary facts of life was out of proportion to his belief in moral principles. De Tocqueville, both from position and turn of intellect, failed like other French statesmen to understand the strength of the Empire; but his moral insight pierced through all the trappings of the Imperial system to the rottenness which lay at its core. In conversations with Mr. Senior, De Tocqueville, who died before the Empire showed signs of decay, predicted the very weaknesses which led to the catastrophe of Sedan. If indeed it were still the practice to work out literary comparisons, no more interesting topic could be chosen than a comparison between the French and the English political theorist. De Tocqueville, in beauty of style, in width of generalization, in a kind of moral dignity, certainly rises far above Mr. Bagehot. But the advantage is not all on the side of the French author. Mr. Bagehot was never a slave to his own generalizations. He was never afraid to bring his theories into contact with the commonest facts. He had a far greater knowledge of mankind than seems to have been possessed by a writer who, though he had been a Minister, has always something in his mode of thought which savors of the Professor. Whole sides of human experience which were open to Mr. Bagehot were unknown to De Tocqueville. Religious sentiment, as it exists in Protestant countries, seems to have been hardly intelligible to the man who joined in preparing the French expedition to Rome. The sentiment of nationality, which, for good and bad, has governed the politics of the last thirty years, must have been totally misunderstood by a Frenchman who saw in Garibaldi little more than a desperado leading a band of ruffians. De Tocqueville was so engrossed in working out the result of two or three fertile political principles as hardly to realize what were the motives which guided ordinary men in the political transactions of every-day life. Mr. Bagehot looked so sharply at the actual course of human action that his speculative conclusions were somewhat warped by his excessive appreciation of the influence exerted on what seemed the great issues of politics, by the petty motives and mean interests which govern the acts of vulgar and commonplace human beings. Yet, when this defect is allowed for, he remains, together with the eminent Frenchman with whom we have compared him, one of the few thinkers who in modern times have thrown on the theories of politics the light of originality and genius.

CARR'S ESSAYS ON ART.*

IT appears to be the opinion of a large number of the younger of the literati of the day that nothing is easier to write about than art. The general opinion amongst these self-made critics is that art is purely a matter of individual taste, and that any opinion confidently delivered is as good as any other. As much as can be expected is that they should make acquaintance with some artists, visit all the exhibitions, read Crowe and Cavalcaselle, Ruskin, Leslie's hand-book, and Sir Joshua's lectures, at once to show familiarity with the subject, and learn to justify the most contradictory opinions, and then, if possible, add the crowning grace of good English.

All this Mr. Carr does excellently well, and where it is merely question of condensing and reproducing the opinions to which the world of taste has consented on such painters and art as have been long subjects of study and criticism, what he had to say no doubt filled creditably its page or column in the periodical for which it was written; but whenever anything not canonized is to be treated, whenever the insight of a born critic is demanded, no dismasted ship was ever more hopelessly afloat than he. It is no doubt of high utility that some patient and scholarly student of art literature should redevelop from time to time the orthodox conclusions as to the old art, especially when collections of old masters are offered to people who don't know whether Bronzino was Venetian or Florentine, or whether Francia was earlier or later than Raphael—it may even be permitted to go on repeating that Michael Angelo added to the Greek perfections that of the expression of the soul—none of these things are dangerous to treat of or be mistaken about, and it don't matter whether the critic is wrong or right; only when the art of living men and art that may be developed or stifled by criticism, good or bad as the case may be, is in question, there is need of critics who know as much of the subject as at least a clumsy surgeon knows of the anatomy of a limb he must operate on.

A clever and prudent writer can always make a readable essay on the Greeks and Michael Angelo, using the labors of prior and classical critics; but the men of to-day whom criticism has not yet consented to unanimously are a dangerous theme to one whose opinions depend on other conclusions than his own. In Mr. Carr's essay on "Corot and Millet," though much has been written and was to be drawn on, he shows his utter inability to grapple with the most fundamental technical distinctions.

* 'Essays on Art. By J. Comyns Carr.' London: Smith, Elder & Co.

In this essay we should expect to find something which shows comprehension of the true aims of art, for of all modern painters two could not be selected who are more pronounced in their adherence to the purely artistic side of painting, in contradistinction to the naturalistic. Mr. Carr leads up to the inevitable Constable, whom it is an English tradition to put forward as the father of French landscape art, and whose pictures Mr. Carr would distinguish as "dramatic"—Corot being "lyric." Here is as good a passage of the nonsense uneducated people are capable of writing about art as the essay contains :

"From a single scene he selects only a few of the features important to his design—the rest are left half-concealed or wholly hidden. *And with this desire to select a few things out of many, to summon here and there as he wills the shapes and colors of the earth, the presence of atmosphere and the constant control of mist and cloud are valuable assistants. Behind these clouds the landscape rests under the dominion of the painter.*"

What sense there may be concealed in these oracular words, or what meaning to be extorted from them, we cannot divine.

"M. Jean Rousseau, writing in *L'Art*, has endeavored to claim for Corot the spirit of Greek art, and has boldly defended his position by pointing out in Corot's landscape these very nymphs that we have supposed the painter to have inherited. But the hypothesis is overstrained and will not bear consideration. . . . If Corot's vision of nature had been more passionate and intense, it would not have tolerated the presence of these unreal images of an antique world ; if his sympathy with the spirit of Greek beauty had been powerful, it would have created an appropriate scene in which to enshrine them."

Now, nothing truer could be said of Corot than that he works in the spirit of Greek art, and Mr. Carr only shows that his critical acumen never got to the point of distinguishing "Greek beauty" (*i.e.*, certain types of form which the Greek sculptors evolved through their feeling for beautiful form) from Greek art. Greek art is simply *pure* art, and all pure art is in the spirit of Greek art. It is (in painting, at least, for it is not wise to attempt too broad definition in such subjective matters as æsthetics) the expression of emotions by means of, and by any conceivable use of, the natural objects which excite those emotions, whether directly or indirectly. The sight of Niagara excited in Ole Bull's mind an emotion which expressed itself in a symphony ; to a great landscape-painter it would be a suggestion of pictures in which mist and mystery and the awe of mighty forces would find expression according to his nature. But the art is not in conveying an exact idea of Niagara, but in giving an adequate expression of emotion in harmonious guise. That which above all other things distinguished Greek art was its absolute unity—the subordination of every detail to the central and inspiring emotion ; its beauty was a fortunate accident which depended in some way on the Greek moral nature. If ugliness and a horrible ideal could excite the same exalted emotions as beauty, the art resulting might be equally great *as art*. "If Corot's *vision of nature* had been more passionate and intense," it is probable that his art would have been much more naturalistic ; it was the utter subserviency of nature to his artistic emotions which made him the great artist that he was. And no one has ever painted more entirely in the spirit of Greek art than he. He belonged to the race of Claude, not of Constable, nor has he any tie whatever with the latter except that both painted landscape. Corot's picture was ordered with a classical harmony and a completeness and entire subserviency of every detail to the whole which even Claude never attained. The only modern landscape-painters who in this respect equalled or surpassed him were Turner and Théodore Rousseau. All the facts in the landscape itself are not to him worth one tone in its proper place. He distinctly defied in every work the limitations of the scene—if, indeed, there was any scene implied—and made open profession of unreality ; and his nymphs were but so many tokens of his contempt for the realism of the naturalists. "Even these you shall accept and believe in," he seemed to say ; and no scene could have been more appropriate to shrine the unsubstantial creations of Greek imagination in than these evanescent passages of the world of dreams which Corot delighted in and maybe lived in. Mr. Carr has missed entirely the spirit and failed to appreciate the completeness of Corot's art; he only felt that it was harmonious and grey, and thought it was cloudy, when in fact rarely has a painter made less of clouds in his pictures than he—the unrealistic atmosphere he painted in having nothing in common with clouds except a common relationship to mist.

We forego the analysis of Mr. Carr's criticism of Millet, whose titanic powers fall still less within his measure.

Ocean Wonders : A Companion for the Seaside. Freely illustrated from living objects. By William E. Damon. (New York : D. Appleton & Co. 1879. 12mo, pp. x. 229.)—Mr. Damon is a devotee of the aquarium, and a lively writer. His book is mostly devoted to a description of the more curious and less familiar marine creatures. The sea-anemone, the squid, the octopus, the coral polyp, the barnacle, the sea-horse and the sea-cucumber, star-fishes, and hydroids and medusæ of multitudinous forms, these occupy the greater part of Mr. Damon's pages ; while, in describing corals, edible fishes, sponges, and seals, he touches the same ground, or soundings rather, as that of Mr. Simmonds's book on the 'Commercial Products of the Sea.' He gives an interesting description of how the white whale is caught alive upon the Nova Scotia coast for the public aquaria ; at great expense, he adds, for "a whale even twenty feet long." It can only be done by digging out and staking, at low tide, a basin into which the more playful whales may enter at the flood. At the ebb there is an exciting struggle : the hunters plunge into the mud with ropes and strive to secure the stranded animals, the whales endeavoring to get away to blue water, and knocking their captors to right and left by their plunges, while the vociferations of the pursuers remind one of the pleasant quaintness of the Roman de Rou :

"'Olicrosse,' sovent crioent :
E 'godemite,' reclamoent."

In a few instances, Mr. Damon says, the captors have succeeded in securing their prize uninjured. An enormous box, some four feet wide and high, and as long as the expected captive, they have already brought upon the ground ; this is "carefully padded with whole cart-loads of fucus and other sea-weeds, else the whale would beat himself to death in his struggles from surprise and anger." This box, with the contained animal, is then loaded upon a schooner and sent to Quebec, and thence freighted to any place that may require a whale. During the journey an attendant keeps the surface of the creature constantly wetted with salt water, and sees that the spout or "blow-hole" is frequently supplied from a dipper. "It is astonishing how tenacious of life is the white whale, and the amount of ill-usage and hard treatment it will undergo. Last season one was shipped in a box *without water* from New York to the Royal Aquarium in London, where it arrived alive, but, of course, not well. It was not surprising that it resented such treatment by dying four days after its arrival." Mr. Damon celebrates the intelligence, affection, and docility (for he can be not only tamed but educated) of the common hair-seal (*Phoca vitulina*). With the still more interesting creature, the fur-seal, our author, has had unfortunately no personal acquaintance.

Mr. Damon corrects not a few erroneous notions, as, for instance, about the coral polyp. "We have heard clergymen and others speak of the wonderful labors of the coral insect. In this short phrase are two fundamental errors. The coral-producers are neither laborers nor insects. Their simple and sole business is *eating;* and that a stony structure is the result is no more creditable to them than it is to a maple-tree to secrete sugar." Mr. Damon has succeeded in making the coral animal at home in his aquarium, and thinks that his is the only specimen so domesticated in this country.

There is an interesting chapter upon the octopus, or devil-fish, and its congeners, the cuttle-fish and the squids. The latter are used as food by aboriginal tribes from Alaska to Chili, and largely on the Chinese coasts ; but they have not commended themselves to the European palate. A party of English savants, at a dinner given for the especial purpose, tried to eat squid, but in vain ; not one of the guests could muster the stomach for it. The present writer, however, can testify from experience in the Pacific Islands that the squid's tentacles, roasted and eaten with salt, form an excellent relish. That the squid and the cuttle-fish protect themselves by the free use of their sepia-bags is a fact which Tom Hood learned, it seems, by the system of object-teaching. The poet was angling one day in Love Harbor and caught a cuttle-fish. Unaware that it was what would now be called by the frivolous an "ink-slinger," he "laid hold of it to unhook it, and received its full *jet d'eau* in his face." Being asked what he had on his line, he replied, "that he did not know exactly, but thought he had caught a young garden-engine." After this we hardly see how Mr. Damon can call this creature's manners "decidedly more genial than those of the octopus" ; this is to add a new black to the picture of the devil-fish.

We are told, too, that the latter enemy walks as well as swims abroad seeking whom he may devour. "I can assure the reader," says Mr. Damon, "that I have seen a full-grown octopus, at the Bermudas, spring up out of the water, only a few feet forward of the boat I was in, and run up a perpendicular rocky cliff for more than *two hundred feet !*" pur-

suing and quickly capturing one of those beautiful bright red crabs which are native to the locality, "and which had run up the rocks for safety. As to the speed of the octopus, it appeared to me to travel much faster than I could run." It is a pity to add anything after so lively a story as this, but we must not forget to say that Mr. Damon's abundant woodcuts are generally good, though sometimes a little sensational; that a good "practical" chapter on aquarium-keeping ends his book; and that if one will take it as pleasant reading, and not as scientific zoölogy, he may easily choose a poorer book for seaside enjoyment than these "Wonders."

X. THE TWO PATHS.

May be had at $75 the set (Messrs. Scribner & Welford advertise the same set at $162) on application to Mr. OSCAR ALLEN, at the Charles River Savings-Bank, Cambridge, Mass.

Morse on Banks & Banking.

LITTLE, BROWN & CO.

PUBLISH THIS DAY:

A New Edition of

MORSE ON BANKS AND BANKING. By John T. Morse, jr. 8vo, $6.

254 WASHINGTON STREET, BOSTON

Important New Publications

OF

G. P. PUTNAM'S SONS,

182 FIFTH AVENUE, NEW YORK.

1. *IS LIFE WORTH LIVING?* By W. H. Mallock, author of 'The New Republic.' Octavo, cloth, $1 50.

☞ Second edition now ready.

"Strong ground is taken against materialism, positivism, transcendentalism, and certain forms of Protestantism. The teachings of Tyndall, Huxley, and others are of serious peril, the author says, to the happiness of future generations, and he believes that a reaction is at hand which will result in a revival of faith and spirituality."—*N. Y. Times.*

"It is a book for thinkers, and especially for thinkers interested in scientific speculation and the problems they raise."—*N. Y. World.*

2. *THE GREAT FUR LAND:* Sketches of Life in the Hudson's Bay Territory. By H. M. Robinson, formerly U. S. Assistant-Consul at Manitoba. Illustrated. Octavo, cloth, $1 75.

"Mr. Robinson's book is both an entertaining and an instructive one."—*N. Y. World.*

"Mr. Robinson's narrative exhibits a freshness and glow of delineation, founded on a certain novelty of adventure, which commands the attention of the reader, and makes his story as attractive as a romance."—*N. Y. Tribune.*

3. *A BUNDLE OF PAPERS.* By Paul Siegvolk, author of 'Walter Ashwood.' 16mo, cloth, $1 25.

"The book is no less valuable for its wholesome ethical lessons than for its intelligent literary discussions. . . . No one can take counsel with the wise suggestions of this volume and not receive a fresh quickening of the moral sense and a judicious guidance in the pursuit of social excellence."—*N. Y. Tribune.*

4. *THE ROUND TRIP,* by Way of Panama, through California, Oregon, Nevada, Utah, Idaho, and Colorado, with Notes on Railroads, Commerce, Agriculture, Mining, Scenery, and People. By John Codman. Octavo, cloth, $1 50.

"This is really an unusually entertaining book of travel, for the author has taken for his 'points of observation' objects and things not often 'written up,' and enlarged upon them in an unconstrained, familiar fashion, so that the reader feels as if he were being entertained by letters written for his special benefit by a personal friend."—*Worcester Daily Spy.*

5. *ROMAN DAYS.* By the distinguished Swedish author, Viktor Rydberg, author of 'The Last Athenian.' Translated by Alfred Corning Clark. Octavo, illustrated, cloth, $2.

*** *Any of the above sent, post-paid, on receipt of price by the publishers.*

WANTED—Volume I. of Nation, or odd numbers of Vol. I. $5 for the volume. X., *Nation* office.

CHAPTER VII.

TEXAS, ... 548

From the North American Review.

At length the great work of Dr. Von Holst makes its appearance in an English dress.

It is far from creditable to the American public that so long a time should have been allowed to elapse before producing a translation of what is certainly the best book which any foreigner has yet written upon the United States, if indeed it be not the best book which has ever been written upon that subject, whether by foreigner or native.

International Review.

The work is not so flattering to our national vanity as De Tocqueville's 'Democracy in America,' but it is much more profound and thorough, and in like proportion more valuable. It is the most valuable work on the subject which has yet been written.

N. Y. Herald.

We feel that we have done but scant justice to the great quantity of valuable thoughts and information which this thorough, original, and suggestive book contains.

Washington Chronicle.

One of the most valuable contributions that have yet been made to our historical literature by any writer, either native or foreign.

Toledo Blade.

The book promises to be the most remarkable work on this country ever written by a foreigner, De Tocqueville's celebrated book not excepted.

Chicago Inter-Ocean.

A perusal of this first volume simply whets the appetite for more. We see ourselves as others see us, through the spectacles of this merciless professor, in a way scarcely calculated to bring about a very comfortable state of feeling as to the parts played by certain of our ancestors in the formation of this republic, and yet we cannot resist the desire to know what he thinks of the succeeding forty-three years, and of the present and the future. . . . Von Holst has given our political historians something to think about and to answer.

New Orleans Picayune.

We doubt if any writer, native here, could have given to his countrymen so clear, so impartial, so severely judicious an exposition of the subject treated.

Central Law Journal.

No student of the American political system can afford to be unacquainted with it. It is rich in historic materials and abounds with profound reflections.

Chicago Times.

It will be of interest to know what opinion this man—this impartial and analytical historian—has formed respecting that question which has figured more conspicuously than any other in American politics—that question out of which have grown some of the most stirring and tragic events in the life of the nation—the question of the relation of the States to one another and to the General Government.

Philadelphia Press.

As a spirited pen portrait of the nation by an able foreign artist, this work is worthy of attentive consideration.

Boston Journal.

It is a coincidence suggestive and not unpleasant that while we are indebted to a Frenchman for the best history of our civil war, we are receiving from a German what promises to be a very thoughtful and impartial Political and Constitutional History of the United States.

Portland Argus.

A work of this kind from the pen of so able and philosophical a foreign writer cannot but possess a high degree of interest to the American student.

Boston Post.

Though American citizens may not be wholly pleased with this analysis of their institutions and political systems, they may find considerable criticism which they will have to recognize as just. . . . It discusses the events of successive years with ability and comprehensiveness.

BAKER, PRATT & CO., NEW YORK.

INDEX TO VOLUME XXVIII.

JANUARY TO JUNE, 1879.

The Week.

AT HOME.

Adams, C. F., jr., resigns Government directorship of Union Pacific Railroad, 22—Army Bill, Hewitt's proposed substitute, 59; Army Appropriation Bill's provisions, 93; Army interference at elections, history of act forbidding, 223—Albany *Evening Journal* on Republican failure to reapportion N. Y., 76—Alston-Cox rencontre in Georgia, 173, 224.

Brooklyn bridge, committee report on, 362—Gen. Bragg on Southern claims, 75—H. W. Beecher denounces Tilden, 109—Gen. F. C. Barlow seeing a fair count under difficulties, 142—Judge Blodgett of Illinois escapes impeachment, 191—Cashier Barron's accounts and death, 192—Geo. S. Boutwell on the true Republican programme, 294—Ex-Judge Geo. G. Barnard deceased, 294—Boston *Journal* on Democratic revolution, 327, on the beginning of sectional controversy, 396—Senator Bayard attacked by silver-men, 411, triumphant, 427—J. G. Blaine exposes Ben Hill, letter to N. Y. Chamber of Commerce, 427, 428—Business, 2, 21, 41, 60, 61, 77, 95, 111, 128, 143, 158, 175, 192, 211, 225, 257, 295, 310, 329, 343, 361, 378, 397, 412, 429; funding of entire 5-20 6 per cents, 239; of entire 10-40s, 275, 344.

California, new constitution causing alarm, 240, adopted, 328—Cincinnati *Gazette* and *Commercial* rejoicing over resumption, 21, 40—Chicago *Tribune* on Senator Logan, 94—Rev. Dr. Cooke bull-dozed by *Tribune*, 1, 2, letter to Northern residents' convention, 256—Chinese immigration, House bill to limit, 59—Roscoe Conkling re-elected to U. S. Senate, 60, defeated on Custom-house nominations, 93, mind set free for other questions, 128, 174, speech on Army Appropriation Bill, 293, interchange of abuse with Senator Lamar, 427—Matt. Carpenter elected Senator from Wisconsin, 94—Cheyennes, flight and destruction of, 75, investigation report, 173—Cipher telegrams' investigation, 76, 94, 109—Charters, power of Congress to enlarge those granted by States, 141—Chittenden-Butler test case of reissue of greenbacks, 173—Civil-service rules for N. Y. Custom-house, 174—General T. W. Conway and the colored refugees, 377, 395.

Congress, XLVth, last session, assembles after recess; Edmunds resolutions to enforce Constitutional Amendments; joint rule for closing legislation; Indian Appropriation Bill passed (Senate); Williams and Mary College reimbursement bill defeated; mortality among members, funeral of G. Schleicher (House), 39—Arrears of Pensions Bill passed; debate on N. Y. Custom-house appointments; Democratic resolutions counter to Mr. Edmunds's (Senate); Three per cent. Certificate of Deposit Bill, Greenbacks for Customs Bill, substitute for majority Geneva Award Bill, passed; Potter Committee voted $10,000 to investigate cipher despatches (House), 59—Refunding Bill, Naval Appropriation Bill, Consular and Diplomatic Bill, Patent Bill passed; Hill on Southern claims (Senate); Bragg on Southern claims; Wright's Government Loan Bill defeated; Goode's Land and Education Bill debated; Anti-Chinese Immigration Bill passed (House), 75—N. Y. Custom-house appointments confirmed; Edmunds resolutions debated (Senate); Debate on Southern claims; Post-Office Appropriation Bill passed; Fairfax Seminary claim rejected; Army Appropriation Bill discussed; Sugar Bill, Arrears of Pensions Bill, bill to exchange gold for silver, blocked (House), 93—Edmunds resolutions adopted; Census Bill, bill to admit women to practise before Supreme Court, and Certificate of Deposit bill passed (Senate), 109—Army Appropriation Bill amendments; transfer of Indian Bureau rejected (House), 110—Anti-Chinese Bill passed; tobacco reduction carried (Senate), River and Harbor Appropriation, Pensions Appropriation, and Deficiency Bills passed (House), 127—Post-Office Appropriation Bill, with Brazilian subsidy, and Army Appropriation Bill, with railroad telegraph privilege, passed (Senate); Legislative Appropriation Bill, with abolition of jurors' test-oaths and supervisors of election, Anti-Chinese Bill, and Sundry Civil Appropriation Bill, passed; Anti-Resumption Bill defeated (House), 141—Census Bill passed (both Houses); Roach subsidy defeated, veto of Chinese Bill sustained (House); Jeff. Davis debate (Senate); deadlock on Army Appropriation Bill and Legislative, Executive, and Judicial Appropriation Bill; adjournment, 157.

— XLVIth, extra session, assembles; Speaker Randall re-elected (House), 191; officers changed, Secretary Gorham's case; Wallace resolution concerning U. S. marshals at November election (Senate); Hull seated over Bisbee (House), 209—Hoar's revolutionary resolution awaiting the pleasure of a caucus committee (Senate); Army Bill debate begun; Garfield's speech, 228, Frye and Chalmers (House), 224—Army Bill passed (House); Hoar's resolution tabled; A. D. White and C. King confirmed; debate on admission of C. H. Bell (Senate), 239—Blaine on the Army Bill; Bell admitted; Thurman chosen President *pro tem.* (Senate); New rules adopted; currency bills introduced as petitions (House), 255—Legislative, Executive, and Judicial Appropriation Bill discussion (House), 256, 275—Beck and Hoar controversy; Randolph on Grant's treatment of Hampton (Senate); Blackburn's revised menace; subsidiary Coinage Bill passed (House), 275—Army Bill passed; removal of Senate officers; Pendleton and Morrill on bill admitting Cabinet officers to Congress (Senate), 293—Legislative Appropriation Bill passed (House), 294—Resolution to investigate Kellogg's title (Senate); Failure to pass Army Bill over the veto; bill to prohibit military interference at elections passed (House), 309 (Senate), 327—Kellogg resolution passed; Edmunds on the Government's right to preserve the peace; Legislative Appropriation Bill (Senate); Warner Silver Bill; Eight-hour Bill shelved; Income-tax Bill not passed, nor Army Appropriation Bill; veto of Military interference Bill sustained (House), 327—Legislative Appropriation Bill passed (Senate), 343 (House), 361; Warner Silver Bill amended (House), 343—Yellow Fever Bill passed; bill for redemption of subsidiary coins (Senate), 361, passed (both houses), 377—Warner Silver Bill passed (House), 361—Rhode Island civil-service complaints; Committee on Pendleton Bill (Senate), 377—Bill to repeal jurors' oath passed (Senate); new Legislative Appropriation Bill and Supplemental Appropriation Bill passed (House), 395, (Senate), 411—Army Appropriation Bill passed; bill to prevent political contributions by officeholders; report of Judiciary Committee on President's veto (House), 411—Army Bill and Legislative Appropriation Bill passed and signed; Judicial Expenses Bill passed and vetoed; Bill to recoin trade-dollars passed (House), 427.

Democratic attempt to add new legislation to Appropriation Bill, 110, responsibility in a Congress of their own, 191, resolution, 209—Dunn, of S. C. Returning Board, testimony before Potter Committee, 128—Jeff. Davis pension debate in Senate, 157—John A. Dix deceased, 276—Judge Dundy's decision as to Indian civil rights, 344—Judge Dillon to leave the bench for a professorship, 362.

Elizabeth, N. J., bankrupt, 110—*Evening Post* on peaceful revolutions, 327.

Failures of 1878, 60—Funding of 5-20 6 per cents completed, 239, of 10-40s, 275, 344—Financial schemes before Congress, 343—Four per cents, corner in, 344—Freeman, the Mass. Adventist, case of, 363—Charles Foster nominated Governor of Ohio, 377—Free Religious Association anniversary in Boston, 378—Fall River strike, 412.

Georgia, Alston-Cox rencontre, 173, trial of Cox, 310—Wm. Lloyd Garrison deceased, 362—Geneva Award, Court of Commissioners revived, by House, 59, Senate substitute, 141, shelved, 157—Greenback reissue, test of legality, 173—Secretary Gorham loses his place in Senate, 209—Grant movement, 255, 327, effect of Grant and Hayes on Republican party's success, 328.

Hayes, President, letter to Collector Merritt, 110, 127, vetoes Chinese Bill, 157, Army Appropriation Bill, 293, Military Interference Bill, 327, Legislative Appropriation Bill, 377, Judicial Expenses Bill, 427, interview with General Conway, 377—Senator Howe defeated in Wisconsin by German influence, 94—Mrs. Hull murdered in New York, 412, 429.

Indian management, Sheridan-Schurz controversy over, 22, 39; one-half of Joint Committee favor transfer to War Department, 75, opposing report, 93; Cheyenne flight and massacre, 75, investigated, 173; habeas corpus allowed the Poncas, 344—Insurance superintendence in New York, 158.

Jewelry displays of women on the street, 128.

Kansas repudiators and the National Treasury, 39—Kingston (N. Y.) bull-dozing, 209—John Kelly ordered by Court of Appeals to pay N. Y. quota to Brooklyn Bridge; view of the charges against Police Commissioners, 210—Superintendent Kiddle resigns, 362—Kellogg-Spofford examination, 395.

Louisiana, Young Men's Progressive Association address on outrages, 22; temporary suspension of New Orleans banks, 211; repudiation in the Constitutional Convention, 378—John A. Logan made Senator from Illinois, and described by Chicago *Tribune*, 94—Mrs. Belva Lockwood's flower tribute, 110.

Missouri counties and courts repudiating, 39—Massachusetts women to vote for school committees, 256, 257—Mississippi Valley Labor Convention, 309, refugees not restrained by violence, 377, planters' protest against encouraging removal, 395, Cotton-planters' Association, 412—Memphis, Tenn., bankrupt, 110, withdrawal of charter, 142, 397—Franklin J. Moses, biography in N. Y. *Times*, 1—Hugh McCulloch on European remonetization of silver, 261.

New York Bar Association's charges against Sheriff, Register, and County Clerk, 23, Gumbleton's objections overcome, 40, removal, 256; Gov. Robinson's message, 39; Custom-house nominations confirmed by U. S. Senate, 93; robbery of ear-rings on Fifth Avenue, 128; Insurance Superintendent Smyth's protection of Globe Insurance Co., 158, 174; Police Commissioners called to account by Mayor Cooper, 192, attempt to reply by counsel, 210, Nichols removed, McLean substituted, 276, nominations rejected by Aldermen, 343; Kingston bull-dozing, 209; report of State Assessors, 210; N. Y.
